But when union dictators force wage costs far outrunning productivity gains, inflation is inevitable. With each round of wage and price increases, our dollar drops another notch in purchasing power. The wage earner who gets the increase soon finds that his new dollars, too, are siphoned off by a higher cost of living. And union members everywhere are hurt as badly as everyone else.

In the past 10 years, a 28 percent gain in industrial productivity has been overwhelmed by a 67 percent rise in wage rates. The difference between these figures is wage-push inflation. Inevitably, this has priced more and more American products out of export markets, and reduced our ability to meet foreign competition in our own domestic markets.

The Nation has been shocked by the colossal labor racketeering and corruption revealed in the hearings of the McClellan Committee. Our people—including the great body of union members—want these terrible abuses stopped, now.

But let us recognize that these abuses are but symptoms of a much greater problem.

Why are union racketeers contemptuous of public opinion? Because they operate within the framework of a tremendous concentration of power which aims to control the laws, and lawmakers of our land, and eventually the White House itself. Thousands of our businessmen and workers have been partially "brainwashed" into believing these influences cannot be successfully challenged, thereby weakening their will to resist, to stand up and fight for what is right.

This is a union boss monopoly power that equals any accumulation of vested interest to be found in history.

This monopoly draws upon huge financial resources—almost equal to the total resources of all the Nation's life insurance companies combined.

It is a power that permits a few entrenched bosses to spend millions of dollars of union dues money for political purposes, exactly as the leaders see fit, with no choice given the dues payers.

It is a power to impose at will an ever-rising cost of living upon our people.

It is a power that can systematically bludgeon American business until free competitive enterprise can no longer survive in America as a vital force.

This is a grave moral and economic problem to which our Congress should address itself with all earnestness. Many alarmed Members of the Congress are doing so. But, quite obviously, too many others presently are more concerned with the wrath of the union dictators than their duty to the American people.

Now, of course, whenever anyone questions abuses of union power, the affected bosses and their political cult rush to denounce him as antilabor.

But union members are no longer accepting that deceit. The overwhelming majority of workingmen and women and their leaders are devoted, self-respecting Americans. They know that anyone who is for a strong America, as I am, is for a strong union movement. They know that cleaning up union abuses is no more union busting than the legal cleaning up of pernicious business practices, years ago, was corporation busting.

They have had enough of union rackets, and corrupt unions, and corrupt and power-hungry union leaders. They have had enough of union elections rigged to deprive members of their rights. They do not want their own dues payments used to further political ideologies to which they may be firmly opposed. And they know that anyone who urges Government help to rid them of these abuses is prolabor in the deepest sense.

Fortunately for America, in these eventful times, there is wise leadership in our Government.

The fight to hold inflation in check, to keep our business economy growing, and to root out corrupt union elements, is being led by the President of the United States.

President Eisenhower prevented wild public spending from wrecking the economy when frantic pressure developed during the recent business slowdown. He insisted instead upon sound measures, with the result that our economy has moved soundly forward ever since. And, of most importance, our cost of living has been checked and has leveled off.

Our President is fighting to prepare the way for tax policies that can bring greater opportunity to every citizen through the sound growth of our economy

He is standing firmly for realistic legislation to assure America's union members honest and responsible union leadership.

Our Vice President, many Members of Congress, and many others in the Government, are equally vigorous in behalf of these issues.

Much, for example, will be accomplished by the President's new Cabinet Committee on Price Stability for Economic Growth. Good progress is being made under the able chairmanship of Vice President NIXON. I am proud to be a member of this Committee, and look forward to the work to be done.

We hear the question raised in Washing, from time to time, as to what constitutes bold leadership. That is a fair question. Let us take a look at it.

Which calls for the boldness of genuine personal courage and vision? To insist upon a balanced budget and a sound dollar—or to yield to the noisy pressures of special groups for more and bigger spending?

To seek diligently a fair tax code that will inspire our whole economy to grow—or to go along in order to placate everybody with a hand in the pork barrel?

To insist firmly upon labor laws the people desire and the Nation needs—or to try to fool the public with so-called labor legislation dictated by the union monopolists themselves?

These are the choices of leadership offered the American people.

Actually, commonsense policies are the policies the great majority of Americans want.

That fact is demonstrated by several recent polls of public opinion.

In one of the largest, these findings were made:

The large majority of citizens interviewed said the first requirement of responsible national leadership for 1959 is to help check inflation.

The three items they listed as most important for Congress to work on were: Holding down prices; prevention of inflation; and laws to clean up labor monopoly evils.

A higher percentage of union members listed these commonsense objectives than did even the general public.

In view of all these indications, then, why do the spenders, the taxers and the apologists for union abuses dominate the Congress?

The reason is just this: Far too few people take the trouble to let the Congress know what they think.

Congress is responsive to the will of the people. But how can the individual Congressman determine whether the public agrees with a particular proposal unless he hears from the public?

I think you will agree that this is an extremely critical problem. But let me ask you:

Have you let your Congressmen know where you stand?

Did you write to them when the big spending bills were up for debate?

The Members of Congress received plenty of letters, telegrams, telephone calls and personal visists. From whom? From the American people? Or from those groups who had a special interest?

The truth is that the Senate and House were bombarded by energized special interest groups. The arguments that poured in were one-sided. And the special interest groups won the first round.

Ladies and gentlemen, I am a Republican. But I am under no delusion here that I am speaking to the East Side Republican Club.

Some of you are Republicans; some of you are Democrats. Some are independents. But what I am urging is not a partisan proposition. I am not asking for partisan expression.

What I am asking, what I am saying, is simply this: Speak out. Let your voice be heard.

Not only to you as businessmen, but also to union members, farmers, the 42 million housewives who pay grocery bills every day; to teachers, professional men, students, retired people—to every citizen, I say:

How deep is your belief in this land of ours? Deep enough to speak up in its behalf?

Is it deep enough to give of your substance, your time and your genius to preserve it?

A hard and fateful struggle is being waged. Your voice and efforts are more than important, they are vital.

They are vital on specific current issues. They are vital on long-range issues. They are needed at campaign time, and between campaigns.

Sound political leadership must have the active support of those who want sound government.

Some State governments today face virtual financial collapse.

Why?

Because those believing in sound political leadership have stood aside as spendthrift politicians have joined forces with labor bosses in an orgy of reckless spending and more and more taxation.

And what permanent solutions are being suggested by those in control?

The only suggestions so far have been the wornout, old-fashioned soak-the-rich ideas; specifically, a call for a corporation's profit tax, and an income tax on so narrow a base that only a small percent of the citizens would have to pay the bills.

Nothing is being done to reduce expenditures. No studies are underway to see where the tax dollars of these States have gone and are going. Nothing is being done through long-range State tax reforms to make these States attractive once again to business and industry, and to help provide more jobs.

My friends, the citizens of these States are learning the hard way that more huge spending programs mean that the Government has to collect more in taxes to pay for them.

The more American business has to pay in taxes, the less it has left to invest in new products and new plants.

And certainly, the less business is able to invest in new production, the less it is able to create new jobs.

It is that simple.

Peaceful coexistence may have its virtues in some fields. But the welfare state and virile free enterprise cannot exist side by side within the same economy. And I don't believe for one minute that the union members of our country, any more than the rest of us, want to surrender their freedom to a welfare state.

Instead of increasing the tax burden, we need to carry out an essential revision in our Federal tax structure.

This task, we know, will be tremendously difficult. But it is part and parcel of the basic solution for stopping inflation and spurring our economic growth. It must be done.

We need to relieve the tax load being carried by the individual citizen and by our business system.

This great Nation has been built on the motivation of high levels of individual achievement. We have encouraged, with material reward, each citizen to perform to the best of his capacity.

Even the Soviets have taken note of this historic process. Russia, despite its Communist doctrine, now offers high incentives for outstanding individual performance in industry, science, and other areas of its society.

Consider, against this, the fact that we have been moving in the direction of destroying personal incentive.

We have steadily compressed the reward for doing something, thereby encouraging many to do little or nothing.

Take notice, for example, of what happened to the head of a family of four with an annual income of $5,000. Today he is paying almost 10 times as much in Federal income taxes alone as he did in 1939. And if he strives to increase his income, the penalty of taxation becomes increasingly severe.

Of equally great consequence is the effect of ponderous taxation on business initiative.

Our population is growing rapidly. In the years ahead, our people will need greater opportunities and millions of new jobs. Business is expected to create most of these jobs. Business expects to create jobs. Corporations today provide nearly three-quarters of all the nongovernment wages and salaries paid.

But new jobs can come into being only as billions of dollars are invested in new tools and capacity. Now, where is this money to come from? In the end, it must come from the earnings a company saves after paying all its taxes.

Today Federal taxes alone can take more than half of many a company's net income. Then follow State and local taxes. There are over 100,000 taxing authorities in our country. Their weight can seriously restrict the ability of business to meet its job-creating capital needs.

Much of our Federal tax code was hastily adopted during times of war.

A sensible, equitable, dynamic tax program is needed in its place. Such a program will keep Federal revenues up, not by taxing away incentive and means of growth, but by steadily increasing the tax base.

The present administration has made this clear. It has already embarked on a program of tax reform and reduction with the Revenue Act of 1954. The President's insistence on a balanced budget in 1959 is related directly to this goal. Putting our fiscal house in order, he has emphasized, is essential to a sound, progressive program of tax reform.

Obviously, this program cannot call for immediate and sharp reduction in all income tax rates. It calls for gradual reform and reduction. And it calls for equitable reduction for all taxpayers, large and small.

The ultimate tax pattern, in short, must be a completely integrated program that will meet the real needs of a dynamic economy.

And this kind of program will be achieved only if we avoid the pitfalls of grandiose spending for nonessentials, and other inflationary pressures which swell the costs of Government.

In summary, let me leave these thoughts with you:

We must maintain our initiative in military and world political strength.

We must be equally vigilant against the Soviet determination to defeat us politically with economic strength. This may well be the ultimate battleground the Kremlin has chosen.

To succeed, we must promote the sound maintain a philosophy of government that provides the greatest opportunity for all our people.

We must keep the cost of living in check, while our standards of living go up, with a stable dollar. This means a balanced budget, and control of pressure on prices resulting from the irresponsible demands of a few union dictators.

We must take steps to correct the union abuses that the great majority of workingmen themselves want corrected.

We must revise our tax system to permit our people to create the great economic expansion of which we are capable.

Here in this room today is a gathering of the finest sales abilities in America. Here are the executives who represent the sales growth of our whole economy—we must genius of many of our Nation's leading corporations.

Competition is your life. You are constantly devoting your best brainpower and energies to competing with others in your industry, possibly the fellow sitting at your same table today.

But may I suggest an even greater competition exists, in which there is more at stake for you, your company, its stockholders, and its employees?

It is the ever-pressing, huge and deadly competition you face with forces dedicated to government by presure groups and labor monopolists. It can defeat you, destroy you, as no industrial competitor could ever do.

There is nothing more important you can do than to devote some of your sales genius and best techniques to fighting this battle. Nothing is more essential to your company and its future.

Thousands of corporate mailings are made to stockholders every day. Why not employ these mailings to enlist their active support? Pressure-group government and labor monopoly power are definitely contrary to their interests.

I would dare to suggest that your companies, in these communications, tell your stockholders clearly how this struggle affects them, both as citizens and as owners of business. There are also many hard-hitting articles, speeches and other materials that could be included. Mailed regularly to the Nation's 10 million stockholders, they could be of ever-expanding influence throughout the country.

The same can be said of communications with employees. They, too, can see this great competition in progress, and they need to know from you exactly what is at stake and they should be told the truth.

What do you want for America? How deep is your belief in America? It is very deep, I am certain. But it can be effective only as you let it be known.

I urge you to take your place among those who will speak, and work, and fight for sound government and a stronger America in the years ahead.

My friends, the greatest era in history—the Golden Era of unlimited opportunity—lies ahead.

We can make it mankind's most fruitful period if we but solve the problems we face and move forward, as we can, united for the well-being of America.

We will do so if we but realize that the all-out economic war with the Communists calls for just as much unity of purpose, just as much devotion to country, just as much selfless effort, yes, just as much old-fashioned patriotism on the part of every American, as any military war ever did.

I am certain we can and will meet this challenge. We will do so best, I feel sure, by following the program of true liberalism I have outlined here today—a program based on free men organizing and conducting their lives in freedom and spreading freedom to everyone everywhere.

We have inherited the glory of this Nation, its strength and its freedom. Let us protect it—let us perpetuate it—and let us bear it proudly forward into the hands of our children.

SENATE

THURSDAY, MARCH 19, 1959

The Senate met at 11 o'clock a.m.

Rev. George M. Docherty, D.D., minister, New York Avenue Presbyterian Church, Washington, D.C., offered the following prayer:

Lord of all the earth, Almighty Father, our profoundest wisdom is fear of Thee; our mightiest achievements are obedience of Thy will; our noblest life is found in knowledge of Thee.

Grant to all of us on this spring-kissed morning the certainty of Thy protecting presence, and to lift high the deliberations of this day as an offering of the service of our lives to Thee.

Grant to these Senators a deepening perspective of their noble calling, that they may behold beyond the crosscurrents of daily debate and legislation the waters of the river of destiny that nourishes this culture. May they know themselves as soldiers in the conflict for freedom and justice, and in their day and generation to be found faithful.

O Lord and Father of all nations, the earth is one because Thou art over all; all children are Thine, for Thou alone art the Creator. We pray for the peace of the earth, for justice and equity at home, and beseech a blessing upon all our loved ones, wherever they may be.

This we ask in the name of Jesus Christ, our Lord. Amen.

THE JOURNAL

On request of Mr. JOHNSON of Texas, and by unanimous consent, the reading of the Journal of the proceedings of Wednesday, March 18, 1959, was dispensed with.

MESSAGES FROM THE PRESIDENT

Messages in writing from the President of the United States were communicated to the Senate by Mr. Miller, one of his secretaries.

COMMITTEE MEETING DURING SENATE SESSION

On request of Mr. MANSFIELD, and by unanimous consent, the Subcommittee on Constitutional Rights of the Committee on the Judiciary was authorized to meet today during the session of the Senate.

COMMITTEE MEETING DURING SENATE SESSION ON MARCH 26, 1959

On request of Mr. MANSFIELD, and by unanimous consent, the Internal Security Subcommittee of the Committee on the Judiciary was authorized to meet in New Orleans, La., during the session of the Senate on March 26, 1959.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. JOHNSON of Texas. Mr. President, under the rule, there will be the usual morning hour for the introduction of bills and the transaction of other routine business. I ask unanimous consent that statements made in that connection be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

APPOINTMENT OF ADDITIONAL MEMBER OF JOINT ECONOMIC COMMITTEE

The PRESIDENT pro tempore. At the request of the Vice President, the Chair announces the appointment by him of Senator JOHN F. KENNEDY, of Massachusetts, as an additional member of the Joint Economic Committee, authorized by Public Law 1 of the 86th Congress.

ADDITIONAL FUNDS FOR SPECIAL STUDY BY JOINT ECONOMIC COMMITTEE

Mr. JOHNSON of Texas. Mr. President, I should like to give notice that, as soon as we can obtain clearance from the minority side, we hope to have the Senate proceed to the consideration of Calendar No. 107, Senate Concurrent Resolution 13, to provide additional funds for special study by the Joint Economic Committee. The concurrent resolution is a very important one, and it will require action by the other body. I have been requested by the chairman of the committee to attempt to call up this measure at the earliest possible date.

So I should like to have all Senators on notice of the possibility that we shall bring up by motion Calendar No. 107, Senate Concurrent Resolution 13, to provide funds for special study by the Joint Economic Committee.

Mr. President, a parliamentary inquiry.

The PRESIDENT pro tempore. The Senator from Texas will state it.

AMENDMENT OF BRETTON WOODS AGREEMENTS ACT

Mr. JOHNSON of Texas. Mr. President, last evening I asked consent that the Senate vote on Calendar No. 98, Senate bill 1094, to amend the Bretton Woods Agreements Act, and on all amendments thereto, at not later than 3 o'clock this afternoon. I assume that if amendments are submitted, the Senate will proceed with the debate until 3 p.m.; and that at 3 p.m. the Senate will begin to vote, first, on any amendments, and then on the question of final passage. Is that correct?

The PRESIDENT pro tempore. Yes; without debate after 3 p.m.

Mr. JOHNSON of Texas. Let me ascertain how the debate is to be controlled and divided, and who will control the time.

The PRESIDENT pro tempore. The Senator from Arkansas is to control the time for the committee; the time for the opposition is to be controlled by the minority leader.

Mr. JOHNSON of Texas. That is my understanding.

I further understand that that debate will take place at the conclusion of the morning hour. Is that correct?

The PRESIDENT pro tempore. Yes; following the morning hour.

At this time, morning business is in order.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT ON AGREEMENTS CONCLUDED UNDER AGRICULTURAL TRADE DEVELOPMENT AND ASSISTANCE ACT OF 1954

A letter from the Administrator, Foreign Agricultural Service, Department of Agriculture, Washington, D.C., reporting, pursuant to law, on agreements concluded during February 1959, under title I of the Agricultural Trade Development and Assistance Act of 1954 with the Governments of Turkey and Uruguay (with accompanying papers); to the Committee on Agriculture and Forestry.

REPORT ON REAPPORTIONMENT OF AN APPROPRIATION

A letter from the Acting Director, Bureau of the Budget, Executive Office of the President, reporting, pursuant to law, that the appropriation to the Department of the Army for "Operation and maintenance, Army, 1959", had been apportioned on a basis which indicates the necessity for a supplemental estimate of appropriation; to the Committee on Appropriations.

RESTORATION AND DEVELOPMENT OF PIER FACILITY AT SOUTH PORTLAND, MAINE

A letter from the Assistant Secretary of Defense, reporting, pursuant to law, on a project for the restoration and development of a pier facility at South Portland, Maine, at an estimated total cost of $50,000; to the Committee on Armed Services.

REPORT ON EXAMINATION OF CONTRACTS WITH LIBRASCOPE, INC., GLENDALE, CALIF.

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on examination of the pricing of Department of the Navy contracts and subcontracts with Librascope, Inc., Glendale, Calif., dated March 1959 (with an accompanying report); to the Committee on Government Operations.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, or presented, and referred as indicated:

By the PRESIDENT pro tempore:

A joint resolution of the Legislature of the State of Montana; to the Committee on Labor and Public Welfare:

"SENATE JOINT MEMORIAL 4

"Joint resolution of the Senate and House of Representatives of the State of Montana to the President of the United States; to the Congress of the United States; to Senators JAMES E. MURRAY and MIKE MANSFIELD from the State of Montana; to Congressmen LEE METCALF and LEROY ANDERSON from Montana; requesting the reaffirmation of National Policy of Federal Financial Support for Education

"Whereas we, the Montana State Legislature, recognize the education of our youth as the most important responsibility of our local, State and National Governments, if our national defense, our system of free enterprise, and our devotion to the ideals of American democracy are to endure; and

"Whereas despite earnest efforts on the part of the several school districts of the State of Montana to meet the cost of providing adequate school facilities for an ever

expanding enrollment and despite the continued increase in State funds to help meet the cost of supporting public elementary and secondary schools, there continues to be a widening gap between need, and funds to meet the need; and

"Whereas the financial resources of the counties and the States are increasingly overburdened by using school costs and enrollments, to the neglect of other essential county and State responsibilities; and

"Whereas there continues to be a shortage of qualified teachers, since, despite all efforts to the contrary, teachers' salaries in Montana are inadequate to recruit and retain a sufficient number of good teachers to serve all the children: Now, therefore, be it

"Resolved, That the Montana State Legislature petition the United States Congress to provide sufficient funds through the proposed "School Support Act of 1959" (sponsored by Senators MURRAY, MANSFIELD and others, and introduced by Congressman LEE METCALF and others, including Congressman LEROY ANDERSON) in order that local and State control of education may be continued by providing, by means of the more equitable taxing authority of the Federal Government, a share of the Federal income to the several States in amounts sufficient to supplement State and local financial resources for this most important of all State services; and be it further

"Resolved, That we hereby respectfully petition the Congress of the United States to reaffirm the national policy of Federal financial support for education which has ample precedent in the school land grants given to this and other States nearly 100 years ago and without which even the present inadequate programs of public education could not survive; and be it further

"Resolved, That copies of this resolution be submitted by the Secretary of State of the State of Montana to the President of the United States; to the Congress of the United States; to Senators JAMES E. MURRAY and MIKE MANSFIELD from the State of Montana; to Congressmen LEE METCALF AND LEROY ANDERSON from Montana.

"PAUL CANNON,
"President of the Senate.
"JOHN J. MACDONALD,
"Speaker of the House."

A resolution of the House of Representatives of the State of Montana; to the Committee on Public Works:

"HOUSE RESOLUTION 8

"Resolution of the House of Representatives of the State of Montana to the President of the United States, Dwight D. Eisenhower; the Congress of the United States; JAMES E. MURRAY and MIKE MANSFIELD, Senators from the State of Montana; LEE METCALF and LEROY ANDERSON, Representatives in Congress from the State of Montana; the Committee on Public Works of the U.S. Senate; the Committee on Public Works of the U.S. House of Representatives; the Committee on Appropriations of the U.S. Senate; the Committee on Appropriations of the U.S. House of Representatives; the Secretary of the Army, Wilber M. Brucker; the Chief of the Corps of Engineers, Department of the Army, Maj. Gen. E. C. Itschner; the Director of the Budget, Maurice H. Stans; requesting the introduction and enactment into law of the necessary and proper legislation to authorize construction by the Federal Government of the Paradise Dam on the Clark Fork River in the State of Montana and authorize sufficient appropriations for the detailed planning and construction of the Paradise Dam.

"Whereas the Paradise Dam site located in Sanders County in western Montana on the Clark Fork River 4 miles below its confluence with the Flathead River near the town of Plains, Mont., is one of the best remaining undeveloped hydroelectric and storage sites in the Upper Columbia Basin; and

"Whereas the extensive studies and reports of the U.S. Corps of Army Engineers show an ultimate installed generating capacity of 1,008,000 kilowatts of electrical power and a storage capacity of more than four million acre-feet; and

"Whereas the studies of the Corps of U.S. Army Engineers shows that no alternative plans equal Paradise in the amount of electrical energy to be produced or in storage capacity and that Paradise offers much greater benefit and less detriment to western Montana than any alternative plans thus far presented; and

"Whereas bills to authorize construction of Paradise Dam have been drafted and have been subject to close scrutiny by the people of the affected areas and such draft proposals have included specific provisions for the relief of personal hardship which may result from relocation of people in the flooded area and for payment in lieu of any taxes now being received which may be lost to local governments as a result of the construction of Paradise Dam; and

"Whereas expansion of industry in western Montana has been stalemated since the construction of Hungry Horse Dam, and will remain stalemated until we go forward with the construction of Paradise and other dams on the Upper Columbia; and

"Whereas because of the detailed studies already made of the Paradise Dam site, an early start could be made on its construction once the project is authorized and appropriations made; and

"Whereas construction of Paradise Dam would give an immediate and substantial stimulus to business in western Montana and the whole northwest and great permanent benefit to all areas of Montana and the northwest in the development of industry, reclamation of arid lands, control of floods, protection of forest lands and recreation areas, development of fish and wildlife resources and generally in making for a more abundant life for all of the people of the northwest: Now, therefore, be it

"Resolved by the House of Representatives of the State of Montana, That the Representatives of the State of Montana in the Congress of the United States be urged and requested to introduce and the Congress of the United States be urged and requested to enact into law necessary and proper legislation to authorize construction by the Federal Government of the Paradise Dam on the Clark Fork River in the State of Montana and to authorize that sufficient appropriations be provided for the detailed planning and construction of the Paradise Dam; and be it further

"Resolved, That such legislation include a reservation of hydroelectric power to be used within the State of Montana; and be it further

"Resolved, That copies of this resolution be submitted by the secretary of the State of Montana to each of the individuals and to the chairmen of each of the committees named in the title of this resolution and also to the Presiding Officers of both Houses of the Congress of the United States, RICHARD M. NIXON and SAM E. RAYBURN."

A joint resolution of the Legislature of the State of Idaho; ordered to lie on the table:

"SENATE JOINT MEMORIAL 12

"Joint memorial to His Excellency, the Governor of the newly created State of Alaska, to the Legislature of the State of Alaska, and to the citizens thereof

"We, your memorialists, the Senate of the State of Idaho, as assembled in its 35th session, the House of Representatives concurring therein, respectfully represent that:

"Whereas Alakh-Skhak, the great country of the Aleutians, which we now call Alaska, adopted a flag bearing the eight stars of the Big Dipper and Polaris, the steadfast North Star; and

"Whereas even in its inception Alaska was discovered under an edict of Peter, the Great; and

"Whereas after its discovery, Catherine, the Great, through a ukase furthered the development of Alaska with a great dream of empire; and

"Whereas it would appear that the Big Dipper and the North Star had smiled benignly and spilled the gifts of Almighty God with unending munificence upon her; and

"Whereas Alaska, the great country of the Aleutians is larger by far in area than any of the other States of the Union, and is one-fifth the area of the entire United States; and

"Whereas Alaska is great and almost boundless in her natural resources, clothed as she is with the vast mantle of her magnificent forests which are nourished by the richness of her virgin soil and watered by her singing streams in which abound fish of many varieties in vast numbers, and girdled by the diadem of her shining, snowcapped and mighty mountains, the coffers of her untold mineral wealth; and

"Whereas under the beauty and wonder of her skies her wildlife is varied and perpetuating and her seas and shores teem with the creatures of the deep, and offer peace, contentment, and abundance to her people; and

"Whereas in all ways, the people of this great country match her in greatness in their integrity, their courage, their indomitable will and their passionate desire for freedom of the individual, for freedom from the bonds of territorialism and for self-government; and

"Whereas the people of this great country have proven their steadfastness as symbolized by their emblem of Polaris, their tenacity, their capacity to endure privation and the singular frustrations of a territorial government, and their capacity to develop, to create, and to govern; and

"Whereas Alakh-Skhak—or Alaska—the great country was admitted as the 49th State in the Union of these United States of America on January 3, 1959: Now, therefore, be it

"Resolved by the Senate of the 35th session of the Legislature of the State of Idaho (the House of Representatives concurring therein), That our great new State of Alaska be, and she is hereby memorialized and welcomed with warmth, interest, and sincere cooperation as a sister State of Idaho and as the 49th State of these United States of America, with all the glory, honor, and acclaim which she so rightly and richly deserves as a great State; and be it further

"Resolved, That the secretary of state of the State of Idaho be, and he is hereby directed to mail certified copies of this senate joint memorial to the Governor of the State of Alaska, the President of the Senate and the Speaker of the House of Representatives of the State of Alaska, and to the Honorable President and Vice President, and to each Governor of these united 49 States of the United States of America."

A resolution adopted by the City Council of the City of Portsmouth, N.H., relating to wage scales at the Portsmouth Naval Shipyard; to the Committee on Armed Services.

The petition of Ralph E. Turton, of Georgetown, Ky., relating to old-age pensions at age 64; to the Committee on Finance.

Resolutions adopted by the House of Delegates of the American Bar Association, Chicago, Ill.; to the Committee on the Judiciary.

A resolution adopted by the Board of Supervisors of the County of Maui, Hawaii, expressing appreciation to the Congress for the passage of legislation providing for the admission of Hawaii into the Union; ordered to lie on the table.

A letter in the nature of a petition from the eighth-grade class of Anahola School,

Anahola, Kauai, Hawaii, signed by Dick Yoshii, class president, relating to the granting of statehood to Hawaii; ordered to lie on the table.

JOINT RESOLUTION OF COLORADO LEGISLATURE

Mr. CARROLL. Mr. President, House Joint Resolution 5 has been given unanimous approval by the Colorado Legislature. It deals with State parks and lauds the bill introduced by our distinguished colleague, FRANK E. MOSS, of Utah. I ask unanimous consent the joint resolution be printed in the RECORD, and appropriately referred.

There being no objection, the joint resolution was referred to the Committee on Interior and Insular Affairs, and, under the rule, ordered to be printed in the RECORD, as follows:

HOUSE JOINT MEMORIAL 5

Memorial memorializing the Congress of the United States to enact S. 1032, introduced in the Congress of the United States by Senator FRANK E. MOSS from Utah, and relating to the development of a State park system in public land States

Whereas there is now pending in the Congress of the United States, S. 1032, introduced by Senator FRANK E. MOSS from Utah, which bill has for its primary purpose the further development of a State park system in the public lands States; and

Whereas S. 1032 more specifically provides:

First, it would remove the 640-acre limitation on the transfer of Federal lands to the States when the lands are to be used for State park purposes; and

Second, it would provide that such conveyances for park purposes would be without monetary consideration; and

Whereas the Federal Bureau of Land Management has no program to preserve historical sites, scenic areas, or unique features on the lands which it is administering, and as a result many of our great recreational historic and scenic landmarks are being neglected, and even damaged or destroyed; and

Whereas the State of Colorado is attempting to build up a State park system and it would be advantageous to the State to assume the management and development of some of these areas on federally owned lands: Now, therefore, be it

Resolved by the House of Representatives of the 42d General Assembly of the State of Colorado, the Senate concurring herein, That this assembly hereby respectfully memorializes the 86th Congress of the United States to enact S. 1032 now pending in the Congress, which bill is sponsored by Senator FRANK E. MOSS from Utah, and provides for the development of a State park system in public lands States; and be it further

Resolved, That copies of this memorial be duly transmitted to Senator FRANK E. MOSS from the State of Utah, and to each Member of Congress from the State of Colorado.

CHARLES R. CONKLIN,
Speaker of the House of Representatives.
ROBERT S. EBERHARDT,
Chief Clerk of the House of Representatives.
ROBERT I. KNOUSE,
President of the Senate.
LUCILE L. SHUSTER,
Secretary of the Senate.

EXTENSION OF UNEMPLOYMENT COMPENSATION—RESOLUTION OF CITY COUNCIL OF WORCESTER, MASS.

Mr. KENNEDY. Mr. President, the City Council of the city of Worcester, Mass., has forwarded to me a copy of a resolution adopted by that body calling for the extension of legislation for unemployment compensation payments. I ask unanimous consent that this resolution be printed in the RECORD, and appropriately referred.

The city of Worcester has had a substantial labor surplus for over 18 months. Currently, 1 out of every 12 members of the labor force in Worcester is unemployed. Indeed, every major labor market area in Massachusetts, except Boston, suffers from substantial labor surpluses. Brockton, Fall River, Lawrence, Lowell, New Bedford, Springfield-Holyoke, and Worcester areas all have an unemployment rate in excess of 8 percent. In addition, Fitchburg, Greenfield, Haverhill, Marlboro, Milford, Newburyport, North Adams, Pittsfield, Southbridge, Webster, Taunton, and Ware also bear the brunt of large scale unemployment.

I have heard various optimistic forecasts about the extent to which we have recovered from the recession. I believe it would be difficult to explain this economic theory to the 900,000 workers who have exhausted the unemployment insurance available to them, even after the extension voted last year. There is no official estimate of how many of these workers are still jobless.

There being no objection, the resolution was referred to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

Whereas the Federal temporary unemployment compensation program expires the week ending April 4, 1959; and

Whereas this area is considered a distress area with approximately 10 percent unemployment: Now, therefore, be it

Resolved, That our Massachusetts Senators and Congressmen be and are hereby urged to extend legislation for unemployment compensation payments for such further period as they deem necessary.

RESOLUTION OF CITY COUNCIL OF PORTSMOUTH, N.H.

Mr. COTTON. Mr. President, on behalf of my colleague, the senior Senator from New Hampshire [Mr. BRIDGES] and myself, I present a resolution adopted by the City Council of the city of Portsmouth, N.H., relating to equalization of salaries of employees at the Portsmouth Naval Shipyard. The senior Senator from Maine [Mrs. SMITH] has introduced S. 19 to accomplish this objective and I hope the bill will have early consideration by the Senate Armed Services Committee.

I ask unanimous consent that the resolution be printed in the RECORD, and appropriately referred.

There being no objection, the resolution was referred to the Committee on Armed Services, and ordered to be printed in the RECORD, as follows:

Be it resolved by the City Council of the City of Portsmouth, N.H., assembled, as follows:

Whereas the construction of submarines and other vessels for the U.S. Fleet is the same at the Portsmouth Naval Shipyard as at the Boston Shipyard; and

Whereas at the present time there is a difference in salary paid to the employees at the two shipyards: Now, therefore, be it

Resolved, That the City Council of the City of Portsmouth memorialize the Congress of the United States to give consideration to an equalization of salaries of employees at the Portsmouth Naval Shipyard to that paid employees at the Boston Shipyard; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, the Secretary of the Navy, the President of the U.S. Senate, the Speaker of the House of Representatives of the United States, and to each member of the New Hampshire delegation in Congress.

ANDREW JARVIS,
Mayor.

Adopted March 2, 1959.

T. J. MCDONOUGH,
City Clerk.

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations, with amendments:

S.J. Res. 73. Joint resolution extending an invitation to the International Olympic Committee to hold the 1964 Olympic games at Detroit, Mich. (Rept. No. 119).

FIRST INTERIM REPORT ON THE STUDY OF U.S. FOREIGN POLICY (S. REPT. NO. 118)

Mr. FULBRIGHT. Mr. President, as you know, the Senate on July 31, 1958, adopted Senate Resolution 336, authorizing the Committee on Foreign Relations to make a full and complete study of U.S. foreign policy. Senate Resolution 31, adopted by the Senate on February 2, 1959, authorizes the committee to continue this study. The committee is directed to complete its study by June 1960, and is authorized to enter into contracts for this purpose with such individuals, groups, and institutions as it may deem appropriate.

The Committee on Foreign Relations has completed arrangements with all research organizations and institutions which are to undertake studies for the committee in connection with its study of U.S. foreign policy.

In my capacity as chairman of the Committee on Foreign Relations, I am submitting herewith the first interim report of the committee. This interim report describes the work of the committee to this point. It lists the 15 studies now under way, names the contractor for each study, and outlines the area to be covered under each contract.

No substantive conclusion of the committee appears in this interim report.

The purpose in issuing a report at this time is simply to make available to the Senate and the public the general outlines of the areas to be covered by the committee in the contractual studies which are now under way.

The PRESIDENT pro tempore. The report will be received and printed.

REPORT ON USE OF FOREIGN CURRENCIES BY COMMITTEES AND JOINT COMMITTEES OF THE SENATE

Mr. HAYDEN. Mr. President, the Mutual Security Act of 1958, chapter

IV, section 502(b) requires the Committee on Appropriations to publish in the CONGRESSIONAL RECORD, within 10 legislative days after receipt, the consolidated report of each committee of the Senate, and each joint committee whose funds are disbursed by the Secretary of the Senate, using foreign currencies during the preceding year. This provision was signed into law on June 30, 1958. I submit for the RECORD a summary table showing the total amounts of foreign currencies used by all committees as well as the individual reports from the committees.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

Report on foreign currencies and U.S. dollar equivalents, utilized by committees of U.S. Senate for period July 1 to Dec. 31, 1958, as provided by sec. 502(b) of the Mutual Security Act of 1954, as amended

U.S. SENATE,
COMMITTEE ON RULES AND ADMINISTRATION,
March 6, 1959.

Report of the Committee on Rules and Administration to the Committee on Appropriations of the Senate concerning the use of foreign currencies, pursuant to section 502 of the Mutual Security Act of 1954, as amended by the Mutual Security Act of 1958, Public Law 85-477, approved on June 30, 1958.

The Committee ond Rules and Administration, pursuant to the statutory reference above cited, presents herewith a report showing the total itemized expenditures of foreign currencies made by the committee during the calendar year 1958:

Country	Amount	Dollar equivalent
	British pounds	
England, total	189/3/12	528.06
Lodging	67/14/4	189.60
Meals	18/9/8	51.74
Transportation	96/5/5	269.55
Other expenses	6/2/9	17.17
	Belgian francs	
Belgium, total	1,030	20.60
Lodging	1,030	20.60

Country	Amount	Dollar equivalent
	French francs	
France, Total	63,100	151.49
Lodging	25,020	60.00
Meals	13,344	32.00
Transportation	20,255	48.70
Other expenses	4,481	10.79
	Spanish pesetas	
Spain, Total	5,969	142.14
Lodging	2,940	70.00
Meals	1,680	40.00
Transportation	630	15.00
Other expenses	719	17.14

THOMAS C. HENNINGS, Jr.,
Chairman.

Joint Committee on Atomic Energy—Report on foreign currency and U.S. dollar equivalents expended between Aug. 22 and Nov. 30, 1958

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. WILEY:

S. 1459. A bill to provide for the establishment of a Dairy Research Laboratory; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. WILEY when he introduced the above bill, which appear under a separate heading.)

By Mr. SALTONSTALL (for himself and Mr. KENNEDY):

S. 1460. A bill to provide for the establishment of Minuteman National Historical Park in Massachusetts, and for other purposes; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. SALTONSTALL when he introduced the above bill, which appear under a separate heading.)

By Mr. KEATING:

S. 1461. A bill to amend section 9(h) of the Civil Service Retirement Act to eliminate the requirement of good health with respect to unmarried employees or Members electing to provide survivor annuities to certain persons; to the Committee on Post Office and Civil Service.

S. 1462. A bill to amend the Internal Revenue Code to provide for certain disabled war veterans a deduction for income-tax purposes of necessary expenses for transportation to and from work; to the Committee on Finance.

S. 1463. A bill to authorize the furnishing of Gold Star lapel buttons to widows, parents, and next of kin of persons who lost or lose their lives as the result of injury or disease incurred or aggravated in the armed services of the United States in time of war; to the Committee on Armed Services.

S. 1464. A bill to indemnify drivers of motor vehicles of the postal service against liability for damages arising out of the operation of such vehicles in the performance of official duties; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the above bills, which appear under separate headings.)

By Mr. MUNDT:

S. 1465. A bill to direct the Secretary of the Interior to make a preliminary investigation of lands in the United States situated within the exterior boundaries of Indian reservations to determine whether mineral resources exist on such lands in amounts sufficient to justify commercial development; to the Committee on Interior and Insular Affairs.

(See the remarks of Mr. MUNDT when he introduced the above bill, which appear under a separate heading.)

By Mr. SPARKMAN:

S. 1466. A bill for the relief of Sofia N. Sarris; to the Committee on the Judiciary.

By Mr. SPARKMAN (for himself and Mr. HILL):

S. 1467. A bill to extend the provision of the Agricultural Adjustment Act of 1938, providing for the preservation of unused acreage allotments; to the Committee on Agriculture and Forestry.

By Mr. KENNEDY (for himself, Mr. NEUBERGER and Mr. MORSE):

S. 1468. A bill providing for the issuance of special nonquota immigrant visas to certain alien orphans adopted by citizens of the United States; to the Committee on the Judiciary.

(See the remarks of Mr. KENNEDY when he introduced the above bill, which appear under a separate heading.)

By Mr. CARLSON:

S. 1469. A bill for the relief of Dr. Liang-Tseng Fan, and his wife, Eva Shuka-Sam Cheung Fan; to the Committee on the Judiciary.

By Mr. HILL (for himself and Mr. SPARKMAN):

S. 1470. A bill to amend the Fair Labor Standards Act of 1938, as amended, to insure to farmers engaged in raising livestock an exemption for the employment in agriculture of certain of their employees engaged in other duties related to livestock auction operations; to the Committee on Labor and Public Welfare.

By Mr. O'MAHONEY:

S. 1471. A bill for the relief of Jesse R. Chamberlin and Esther Chamberlin; to the Committee on the Judiciary.

By Mr. O'MAHONEY (for himself and Mr. MCGEE):

S. 1472. A bill to eliminate the fractionated heirship problem on the Wind River Indian Reservation in Wyoming, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. McCLELLAN (by request):

S. 1473. A bill to repeal the act of May 27, 1912, which authorized and directed the Secretary of the Treasury to sell certain land to the First Baptist Church of Plymouth, Mass.; and

S. 1474. A bill to make permanent the provisions of the Reorganization Act of

1949; to the Committee on Government Operations.

(See the remarks of Mr. McCLELLAN when he introduced the above bills, which appear under separate headings.)

By Mr. WILLIAMS of New Jersey (for himself and Mr. JAVITS):

S. 1475. A bill to amend the Internal Revenue Code of 1954 to reduce the admissions tax where a substantial part of the program consists of live musical or dramatic performances in order to provide greatly increased employment, accompanied by larger tax revenues which will offset any losses to the Federal Government, in the entertainment and related industries; to aid the motion-picture industry which has suffered a decline; to foster the growth and development of the fine arts in the United States without resort to the subsidies common in other countries, and for other purposes; to the Committee on Finance.

(See the remarks of Mr. WILLIAMS of New Jersey when he introduced the above bill, which appear under a separate heading.)

By Mr. CLARK:

S. 1476. A bill for the relief of Calliope Papaioannou; to the Committee on the Judiciary.

CONCURRENT RESOLUTION

Mr. HUMPHREY (for himself, Mr. CASE of New Jersey, Mr. COOPER, and Mr. KEFAUVER) submitted a concurrent resolution (S. Con. Res. 17) favoring a convention of delegates from Atlantic democracies looking to greater cooperation and unity of purpose, which was referred to the Committee on Foreign Relations.

(See the above concurrent resolution printed in full when submitted by Mr. HUMPHREY, which appears under a separate heading.)

ESTABLISHMENT OF DAIRY RESEARCH CENTER AT MADISON, WIS.

Mr. WILEY. Mr. President, I introduce, for appropriate reference, a bill to establish a dairy research center at Madison, Wis.

In this technological age the dairy industry will depend more and more upon a broad foundation of research to meet the challenges facing the dairy industry and to fulfill the need of the consuming public.

Among the objectives of the research center would be included efforts to, first, improve packaging, refrigeration, powdering, and condensing merchandising of dairy products, to better serve and meet the modern needs of the consuming public; second, combat livestock diseases; third, increase productivity and reduce costs of dairy farm operations; fourth, develop new industrial uses for the constituent parts of milk; fifth, adapt more dairy products to better meet human nutritional needs; sixth, improve marketing at home and abroad; seventh, expand research relating to the effect of radiation and antibiotics upon dairy products and byproducts; eighth, develop new and better ways of processing milk for home consumption and for shipping products over long distances to expand the market area for dairy products; and, ninth, through research, develop new ways and means of treatment and disposal methods for dairy plant wastes; and for other purposes.

We recognize, of course, that currently splendid programs of research are being carried on by the Federal and State Departments of Agriculture, by universities and colleges, and by the dairy industry itself.

The establishment of the laboratory in Wisconsin, the heart of America's dairyland, would be aimed at supplementing and better correlating and coordinating—not supplanting—their research programs.

The establishment of the research center, I believe, also would help to achieve four overall objectives necessary to improve the dairy outlook. These include: Improved production methods, greater consumption, better distribution, and increased utilization of dairy products.

To achieve these goals as early as possible, I respectfully urge early hearings by the Agriculture Committee on this much needed research center.

I request unanimous consent to have the bill printed at this point in the RECORD.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1459) to provide for the establishment of a dairy research laboratory, introduced by Mr. WILEY, was received, read twice by its title, referred to the Committee on Agriculture and Forestry, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of Agriculture (hereinafter referred to as the "Secretary") is hereby authorized and directed to establish a dairy research laboratory to be known and designated as the Dairy Research Laboratory of the Department of Agriculture. The Secretary shall establish such laboratory at Madison, Wisconsin.

SEC. 2. The objectives of the laboratory to be established under this Act shall be to conduct and stimulate continuous research into the basic problems of dairying, including but not limited to research relating to the improvement of the quality of, and the development of new and improved methods of packaging, processing, refrigeration, powdering, condensing, transportation, storing, marketing, distribution, and merchandising of dairy commodities; research relating to the combating of livestock disease, the increasing of dairy productivity, the lowering of dairy costs; research relating to the problems of human nutrition and the nutritive value of dairy products, including gains and losses in nutritive value that may take place at any stage in their production, distribution, processing and preparation for use by the consumer; research relating to the effects of radiation and antibiotics upon dairy products and byproducts; research relating to the development of present, new and extended food and nonfood uses and markets for dairy products and byproducts; research relating to the development of treatment and disposal methods for dairy plant wastes; research relating to the design, development, improvement, and the more efficient use of dairy machines and equipment; and research relating to any other matters that may contribute to the establishment and maintenance of a more effective dairy industry.

SEC. 3. The Secretary is hereby authorized (a) to provide, by construction or otherwise, the necessary facilities for the housing of the Dairy Research Laboratory established under this Act, including any equipment necessary to the operation of such laboratory; (b) to maintain, repair, and alter such facilities; (c) to acquire buildings, property, and rights and interests therein by purchase, lease, gift, transfer, condemnation, or otherwise, necessary to the operation of such laboratory; (d) to incur necessary administrative expenses in the establishment and operation of such laboratory, including personal services; (e) to accept in the name of the United States donations of any buildings, property, real or personal, to such laboratory; and (f) to utilize voluntary or uncompensated services at such laboratory.

SEC. 4. In order to facilitate administration and to increase the effectiveness of all dairy research facilities of the Department of Agriculture, the Secretary is authorized and directed, notwithstanding any other provision of law, to transfer the functions, powers, and duties of any other agency, division, bureau, service, section, or other administrative unit in the Department of Agriculture, which is primarily concerned with research in connection with dairy products, to the Dairy Research Laboratory established under this Act.

SEC. 5. In carrying out the provisions of this Act the Secretary may cooperate with other agencies of the Government, State agencies, State colleges and universities, private research organizations, purchasing and consuming organizations, chambers of commerce, transportation and storage agencies and organizations, and other persons or corporations engaged in the production, packaging, processing, refrigeration, powdering, condensing, transportation, storing, marketing, distribution, and merchandising of dairy products or byproducts.

SEC. 6. The Secretary shall promulgate such orders, rules, and regulations as he deems necessary to carry out the provisions of this Act.

SEC. 7. There is hereby authorized to be appropriated such funds as are necessary to carry out the provisions of this Act.

MINUTEMAN NATIONAL HISTORICAL PARK, MASS.

Mr. SALTONSTALL. Mr. President, on behalf of my colleague, the junior Senator from Massachusetts [Mr. KENNEDY], and myself, I introduce, for appropriate reference, a bill to provide for the establishment of Minuteman National Historical Park in Massachusetts, and for other purposes.

In 1955 the Congress created the Boston National Historic Sites Commission and authorized this Commission to undertake a study of historic objects, sites, and buildings in Boston and the surrounding area to determine the advisability of establishing a coordinated program by Federal, State, and local governments and private historical societies for the preservation of the important colonial and revolutionary properties in that area which form a part of America's historical heritage.

In its report to the Congress, the Commission has recommended the establishment of a national historical park to preserve the last relatively unspoiled section, about 4 miles, of the historic Lexington-Concord Battle Road, which was the scene of the opening events of the American Revolution on April 19, 1775.

Mr. President, I believe that the establishment of this park would indeed be a fitting way of memorializing and preserving for future generations the site at which the war for American independence was born. The proposed park to be established under the terms of this bill would consist of two tracts of land in Lexington, Lincoln, and Concord along the route traversed by the British on their march from Boston on the morning of April 19, 1775, and used by the minutemen and Provincial Militia to route the British into a fighting retreat. The larger part of the proposed park would form a stretch of about 4 miles of the historic battle road from Lexington to Meriam's Corner in Concord. Part of this route was covered by Paul Revere in his famous ride to alert the countryside and includes the site of his capture by the British. The smaller part would consist of properties adjacent to the battleground at the North Bridge in Concord, scene of the first attack on the British by the minutemen and Provincial Militia and location of the famed Minuteman Statue. Authority is urgently needed for immediate acquisition of the vacant parcels of land in both parts, as well as for the establishment of a long-range program for acquisition and preservation of other sites in the proposed park area. This area has been undergoing rapid development and is threatened with more. As recently as 1957 the Air Force proposed to use for a military housing project a relatively unspoiled roadside parcel of 8 acres through which the Battle Road passes in Lincoln.

The march of the British from Boston to Concord covered a distance of more than 20 miles. Many of the sites and structures relating to the incidents that occurred on the eve and the day of the opening of the Revolution are still identifiable. However, more than three-quarters of this historic route and its adjacent roadside area have succumbed to the growth and expansion of the city of Boston and its suburbs. Since it would not be possible to retrieve all the land along the battle road for inclusion in a national park, this bill would authorize the Secretary of the Interior to erect a uniform system of historical markers along the entire length of the battle road from Boston to Concord. For the many sites east of the proposed park area, such a system of markers would provide the only practicable identification of the sites for the inspiration and education of people who are interested in this historic area.

Much fine work has been done by the State and local governments and by private historical organizations in the renovation and preservation of individual historic sites and properties in the area. To assure protection and national recognition of these important sites and structures, this bill would authorize the Secretary of the Interior, under authority granted him by the Historic Sites Act of 1935, to negotiate cooperative agreements with the Commonwealth of Massachusetts and its political subdivisions, and private societies and individuals to facilitate the aims of a coordinated program for the entire historic area.

The bill also authorizes the Secretary to appoint an advisory commission of five members to assist him in the development of the proposed historical park.

Mr. President, the events and incidents which took place on this historic ground in April of 1775 have been memorialized by some of America's finest poets and writers. They inspired Longfellow to write his familiar verses in "Tales of a Wayside Inn," and Emerson to commemorate "the embattled farmers" in his "Concord Hymn." The turning point of the American Revolution has been recognized and commemorated by the establishment of the Saratoga National Historical Park, and the conclusion of warfare on land in the Colonial National Historical Park at Yorktown. The establishment of a Minuteman National Historical Park in Lexington, Lincoln, and Concord would give commensurate recognition to the beginning of the fight that joined the Thirteen Colonies in their struggle for national freedom. I believe that such a park would not only emphasize the importance of the events which occurred within its borders, but would also serve as a center of information and orientation for the entire battle route. At the present time no public agency or private organization is active or strong enough to handle a program necessary for the preservation of this historic area.

On April 19, 1975, less than two decades away, the Nation will celebrate the 200th anniversary of the start of the American Revolutionary War. The most fitting way in which to commemorate the occasion will be by means of suitable exercises and activities in the proposed Minuteman National Historical Park, comprising much of the area where our fight for freedom began. By passing the bill which I am offering today with my distinguished colleague, the junior Senator from Massachusetts [Mr. KENNEDY], Congress will assure that the sites and structures associated with the start of the Revolution will be preserved or commemorated as permanent symbols of the important historic events which occurred on April 19, 1775. Unless this bill is passed all the remaining historic indicia in the birthplace of the Revolution will be faced with obliteration by the spread of urbanization.

I hope Congress will act promptly to establish Minuteman National Historical Park.

Mr. President, I ask unanimous consent to have printed in the RECORD at the end of my remarks two newspaper articles about the proposed Minuteman National Historical Park; one from the New York Times of February 1, 1959, and one from the Boston American of January 22, 1959.

The PRESIDENT pro tempore. The bill will be received and appropriately referred; and, without objection, the articles will be printed in the RECORD.

The bill (S. 1460) to provide for the establishment of Minuteman National Historical Park in Massachusetts, and for other purposes, introduced by Mr. SALTONSTALL (for himself and Mr. KENNEDY), was received, read twice by its title, and referred to the Committee on Interior and Insular Affairs.

The articles presented by Mr. SALTONSTALL are as follows:

[From the New York Times, Feb. 1, 1959]

PATRIOTS' HIGHWAY—NATIONAL PARK PROPOSED TO PRESERVE ROAD WHERE MINUTEMEN FOUGHT

(By John Fenton)

BOSTON.—The battle road along which the minutemen sniped at British Redcoats at the opening of the Revolutionary War in 1775 is being considered for a national historical park.

Of particular interest is a stretch of 4 miles of rather sparsely settled road in the suburban towns of Lexington, Concord, and Lincoln. Although it is made up largely of privately owned parcels of land, the Boston National Historic Sites Commission is looking toward April 19, 1975, the 200th anniversary.

With the present rate of growth of the Boston suburbs, the land might well be gobbled up for housing development in the next 16 years. Hence, the Commission has filed an interim report recommending the creation of such a park by Congress.

Representative THOMAS P. O'NEILL JR., Democrat, of Massachusetts, has filed a bill calling for the creation of Minuteman National Historical Park. He and Senator LEVERETT SALTONSTALL, Republican of Massachusetts, are the congressional Members of the Commission.

GROUP'S OBJECTIVE

The Boston Commission was created under the Historic Sites Act of 1935. Its function is to investigate the problems of preserving the most important sites and structures of the Colonial and Revolutionary periods of American history in this area.

Mark Bortmann, who is Chairman of the Commission, said that such a park would be a logical development. He noted that sites of other important battles of the Revolution, at Saratoga, N.Y., and Yorktown, Va., had been memorialized as historical parks. Hence, he said, the spot where the struggle for American independence began also merited recognition.

Historic districts established by State law already safeguarded such areas as the Battle Green, Buckman Tavern, the Hancock-Clarke House, and the Munroe Tavern in Lexington. In Concord, the Antiquarian Society has been the repository of significant objects associated with the Revolution.

But the Commission felt that the problem of protecting larger areas properly lay within the scope of Federal agencies. The park would be under the Department of the Interior and administered by the National Park Service.

TWO SECTIONS

The proposed park would be made up of two principal units. The larger, of 557 acres, would include land on both sides of the 4-mile stretch of road from Fiske Hill, Lexington, through Lincoln, to Meriam's Corner, Concord. It is bordered by woods and fields for the most part.

The smaller unit, of 155 acres, would embrace the area around the North Bridge, in Concord, where the embattled farmers stood and "fired the shot heard round the world," according to Ralph Waldo Emerson's poem.

Fiske Hill abuts on State Route 128, a circumferential highway around Boston, and is about 18 miles from the Old North Church in Boston, where the warning lanterns were hung as a signal to Paul Revere.

Whatever the disputes over the routes taken by Revere and his fellow patriot, William Dawes, on their famous rides of April 18, 1775, Edwin M. Small, who serves as his-

torian to the Commission, says there is no doubt about the location of the battle road. The British marched along it intending to destroy Colonial powder and arms in Concord.

The present-day road forms part of Route 2A and may be traveled by tourists from Cambridge, or by turning off Route 128 at an interchange at Fiske Hill. A modern motel is situated at the interchange.

A relatively undisturbed parcel of 8 acres in Lincoln already has been turned over to the Interior Department by the Air Force as a nucleus for the park. In 1775 the property in this section was made up of pastures and the Josiah Nelson homestead. Although much of it is now overgrown with brush, the stone walls and boulders behind which the minutemen took cover to snipe at the Redcoats are still there. The parcel was part of the site of a military housing project for nearby Hanscom Air Force Base.

Private property owners have been assured at a public hearing of the protection of their rights. No displacement of homes will be involved.

If the land could have been acquired in 1925, when such a historical park was first considered, it might have been had for around $100,000. The present market value of the 666 acres in both units has been estimated by the Commission at $4,838,100.

Should the park be authorized by Congress, the Commission suggests the urgency of initiating promptly a program to acquire 310 acres made up of vacant parcels in both units. These have an estimated market value of $503,400.

SYSTEM OF MARKERS

The Commission's report also calls for the erection of a uniform system of historical markers to identify the sites of events on the night of April 18, 1775, and the following morning. These markers would be distributed over a distance of about 20 miles between Hanover Street, in Boston's north end, to the Barrett farm on the banks of the Assabet River in Concord. Intermediate communities along the routes taken by Revere, Dawes and the British force include Arlington, Brookline, Cambridge, Medford and Somerville.

Historic areas outside the boundaries of the proposed park would be protected by cooperative agreements between property owners and the individual communities.

[From the Boston American, Jan. 22, 1959]

CONCORD, LEXINGTON BATTLE ROAD TO BE MARKED

A 20-year plan to perpetuate all phases of the Battle of Concord and Lexington in a national park with markers, was announced today by the Boston National Historic Sites Commission.

Mark Bortman, Commission Chairman, said that Congress had been asked to set aside two principal units along the battle road of the Revolution in the two historic towns, to be under jurisdiction of the Secretary of the Interior, and to have markers placed elsewhere.

The markers would outline the route of the famed rides of Paul Revere and William Dawes from Boston to Middlesex County on the eve of the battle of April 19, 1775. Other markers would show the course taken by the British Redcoats. The markers would be set up in Arlington, Brookline, Cambridge, Medford, Somerville and in the many spots in Boston where the ill-trained patriots prepared to take on the supposedly redoubtable English Regulars.

A week ago it was announced in Washington that Congressman THOMAS P. O'NEILL, Jr., had introduced a bill to authorize establishment of the Minuteman National Historical Park. Details were not available.

Principal units needed, the report said, would be a 557-acre area from Fiske Hill, on Route 128 in Lexington to Meriam's Corner in Concord, a continuous stretch of 4 miles, and a 155-acre plot at the North Bridge in Concord, along both sides of Concord River from Monument Street to Liberty Street and Lowell Road.

The current market value of the combined private properties, the report went on, is $4,838,100. Should Congress approve the plan, immediate steps must be taken to obtain 310 acres of vacant land in both units, now valued at $503,400.

Actually, a start already has been made toward the park. The Air Force turned over to the Secretary of the Interior a parcel of 8 acres originally intended to be combined into Hanscom Field as a housing project. It was saved from that fate by the Commission.

And, the report declared, on those 8 acres there still remain some of the stonewalls from behind which the minutemen introduced a new concept of warfare, the skirmish and hit-run tactics utterly foreign to the British square system of old.

The Commission set April 19, 1975, as the target date for completing the present phase of the project. Even then, the report conceded, the task would not be finished.

The plan was conceived after long conferences with local historical groups and study of State laws which now protect many of the areas involved in the battle.

The executive secretary of the Commission, named by the President, is Dr. John P. Sullivan, a professor at Stonehill College, North Easton. Other members are Senator Saltonstall, Congressman O'Neill, Conrad L. Wirth of Washington, D.C., Walter M. Whitehill, and Mrs. Elizabeth West Pigeon, both of Boston.

DISCRIMINATION AGAINST SPINSTER AND BACHELOR CIVIL SERVANTS AND MEMBERS OF CONGRESS

Mr. KEATING. Mr. President, I introduce, for appropriate reference, a bill to eliminate from the Civil Service Retirement Act the requirement that an unmarried employee or Member of Congress must be in good health in order to elect to provide a survivor annuity to persons with an insurable interest.

Under the present law, a married person is not required to pass a medical examination in order to name a survivor as the beneficiary of his civil service annuity. But an unmarried person must be "found by the Commission to be in good health" in order to exercise that privilege. My proposal would eliminate the requirement of good health for unmarried civil servants, thus bringing it in line with the standards for married civil service workers.

The inequity in the law was brought to my attention by a post office clerk with 44 years Government service. He complained to me that because of a heart attack and his unmarried status, he would be prevented from naming his sister as his annuitant. He asked me to correct what he termed the "great injustice" of the present law.

Mr. President, the present statute, requiring good health for unmarried civil servants and Members of Congress, but not for those married, in naming annuitants, is grossly unfair and discriminatory. There is no logical reason for withholding this privilege from anyone simply because, through the whims of fate, he happens not to have been married.

In a Nation founded on the principle of universal equality, we cannot allow one standard for married persons and another for unmarried persons. It is high time we put an end to this discrimination against the honorable states of spinsterhood and bachelorhood. We can do that, simply and swiftly in this case, by eliminating the requirement of good health for unmarried civil service workers and Members of Congress who wish to name an annuitant.

I am sure this measure will have the support of all fairminded people, and most particularly and directly, those bachelors now serving in Congress.

I ask unanimous consent to have the bill printed in the RECORD.

The PRESIDING OFFICER (Mr. NEUBERGER in the chair). The bill will be received and appropriately referred, and, without objection, the bill will be printed in the RECORD.

The bill (S. 1461) to amend section 9 (h) of the Civil Service Retirement Act to eliminate the requirement of good health with respect to unmarried employees or Members electing to provide survivor annuities to certain persons, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on Post Office and Civil Service, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 9(h) of the Civil Service Retirement Act (5 U.S.C. 2259(h)) is amended by striking out ", and found by the Commission to be in good health".

TRANSPORTATION TAX REDUCTIONS FOR DISABLED VETERANS

Mr. KEATING. Mr. President, I introduce for appropriate reference a bill to provide for certain disabled war veterans a deduction for income-tax purposes of necessary expenses for transportation to and from work.

This bill would benefit a most deserving group of person, our 100-percent disabled war veterans. It would permit these people, who have given their country so much, to deduct from their income tax transportation costs to and from work.

Fortunately, a small group is concerned, and the loss of revenue to the country which is deeply in their debt would be small. We can never adequately repay these heroic men, and this is just one more small demonstration of our gratitude for the sacrifice they have made.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at this point.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1462) to amend the Internal Revenue Code to provide for certain disabled war veterans a deduction for income-tax purposes of necessary expenses for transportation to and from work, introduced by Mr. KEATING, was received, read twice by its title, referred

to the Committee on Finance, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 23 of the Internal Revenue Code (relating to deductions from gross income) is hereby amended by adding at the end thereof the following new subsection:

"(gg) Transportation of disabled war veterans to and from work: In the case of an individual entitled to compensation under part I of Veterans Regulation Numbered 1(a) for disability rated 100 per centum, all the necessary expenses paid or incurred during the taxable year for transportation to and from work."

GOLD STAR LAPEL BUTTONS

Mr. KEATING. Mr. President, I introduce, for appropriate reference, a bill to authorize the furnishing of gold star lapel buttons to widows, parents, and next of kin of persons who lost or lose their lives as the result of injuries or disease incurred or aggravated in our Armed Forces in time of war.

This measure would amend the present law which provides for gold star lapel buttons to be awarded certain survivors of veterans who lose their lives during a war. However, no provision is made in the existing statute for survivors of those who die as a result of war-incurred injuries or disease. My bill is designed to fill that void. I see no reason for drawing a distinction between awarding these buttons to those whose loved ones actually died in wartime, and those whose loved ones died as a result of injuries received in time of war.

I had the high honor to be the author of the original gold star lapel bill, which is now the law of the land. I believe very strongly we should take this additional step.

Enactment of this measure would honor in a small but significant manner the widows, parents, and relatives who have suffered an irreparable loss in the defense of the United States.

Mr. President, the cost of this bill would be small. The meaning of the button, rather than its price, is the important consideration. I am delighted to report that this measure has the support of that fine organization, the Gold Star Mothers. I hope it will gain speedy enactment.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at this point.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1463) to authorize the furnishing of gold star lapel buttons to widows, parents, and next of kin of persons who lost or lose their lives as the result of injury or disease incurred or aggravated in the armed services of the United States in time of war, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on Armed Services, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first sentence of section 1 of the Act of August 1, 1947, chapter 426 (36 U.S.C. 182a), is amended to read as follows: "The Secretary of Defense shall formulate and fix the size, design, and composition of a lapel button (to be known as the 'gold star lapel button') suitable as a means of identification for widows, parents, and next of kin of persons who lost or lose their lives—

"(1) in the armed services of the United States during World War I, World War II, or any subsequent war or period of armed hostilities in which the United States may be engaged; or

"(2) as the result of injury or disease incurred or aggravated in line of duty in the armed services of the United States during any such war or period of armed hostilities."

SEC. 2. Section 2 (a) of the Act of August 1, 1947, chapter 426 (36 U.S.C. 182b (a)), is amended to read as follows:

"(a) Upon application to the Department of the Army, Department of the Navy, or Department of the Air Force, as the case may be, one such gold star lapel button shall be furnished, without cost, to the widow and to each of the parents of a person who lost or loses his or her life—

"(1) in the armed services of the United States during World War I, World War II, or any subsequent war or period of armed hostilities in which the United States may be engaged; or

"(2) as the result of injury or disease incurred or aggravated in line of duty in the armed services of the United States during any such war or period of armed hostilities."

INDEMNIFICATION OF POST OFFICE EMPLOYEES FOR LIABILITY INCURRED IN PERFORMANCE OF DUTY

Mr. KEATING. Mr. President, I introduce, for appropriate reference, a bill to indemnify drivers of motor vehicles of the Postal Service against liability for damages arising out of the operation of such vehicles in the performance of their official duties. This bill is designed to provide authority to the Postmaster General to reimburse employees who have been subject to suits and consequent money damages because of accidents involving vehicles they operate in the course of their employment.

The present practice is to pass private bills to reimburse such employees for sums they are compelled to pay as a result of legal actions against them. This has resulted in an undue burden on the respective Judiciary Committees which must consider each claim as a separate piece of legislation. It is obviously desirable under the circumstances to enact general legislation dealing with the subject.

It may be desirable to make the bill applicable to all Government employees, and to make an exception for cases involving willful or wanton conduct or gross negligence. But certainly in the ordinary case liability should devolve, as would be the case if a private employer were involved, upon the public employer, the U.S. Government. Such has appeared to be consistently the policy of Congress in the past, expressed, however, in repeated private bills, rather than in general legislation.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD at this point.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1464) to indemnify drivers of motor vehicles of the postal service against liability for damages arising out of the operation of such vehicles in the performance of official duties, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That no officer or employee of the field service of the Post Office Department who operates, in the performance of his official duties, a motortruck, automobile, or other motor vehicle of the postal service shall be held responsible or liable to the United States (1) for any damage to such motor vehicle resulting from the operation of such motor vehicle in the performance of his official duties, or (2) for any damage to property or for any personal injury, including death, to any person resulting from the operation of such motor vehicle in the performance of his official duties.

SEC. 2. The United States shall pay, in the manner provided in section 3 of this Act, for any damage to property and for any personal injury, including death, to any person resulting from the operation of any motortruck, automobile, or other motor vehicle of the postal service by any officer or employee of the field service of the Post Office Department in the performance of his official duties.

SEC. 3. (a) Payments under section 2 of this Act shall be made by the Postmaster General, and shall be made to—

(1) the officer or employee of the field service of the Post Office Department concerned, if the legal liability of such officer or employee has been determined by a court of competent jurisdiction and if the officer or employee has satisfied the judgment of such court; or

(2) the person, or his legal representative, suffering the damage or injury, if such person or legal representative has secured a judgment in a court of competent jurisdiction against the officer or employee concerned and if such judgment is not satisfied.

(b) Payment under subsection (a)(2) shall be made only upon condition that the person who has secured the judgment against the officer or employee concerned executes a full and complete satisfaction of such judgment.

SEC. 4. The Postmaster General may settle and pay any claim, not reduced to judgment, for damage to property or for personal injury, including death, resulting from the operation of a motortruck, automobile, or other motor vehicle of the postal service by an officer or employee of the field service of the Post Office Department in the performance of his official duties. Settlement and payment of any such claim may be made only upon condition that the claimant (1) executes a full and complete release to the United States and to the officer or employee concerned of any further liability arising out of the facts upon which such claim is based, and (2) withdraws any civil action he may have commenced against the officer or employee.

SEC. 5. (a) The Attorney General shall defend any civil action brought in any court against an officer or employee of the field service of the Post Office Department for damage to property or for personal injury, including death, resulting from the operation by such officer or employee of a motortruck, automobile, or other motor vehicle of the postal service in the performance of his official duties. All costs of defending any such civil action shall be borne by the United States. If the Attorney General is unable to defend any such action, the

Postmaster General shall reimburse the officer or employee for legal counsel retained by him to defend such action and for all other costs of defending such action.

(b) The Attorney General shall, at the request of the Postmaster General, assist in the settlement of claims under section 4 of this Act.

SEC. 6. (a) Any officer or employee of the field service of the Post Office Department shall promptly notify the Postmaster General of any claim alleged against him for damage to property or for injury, including death, to any person resulting from the operation of any motortruck, automobile, or other motor vehicle of the postal service in the performance of his official duties. In addition, such officer or employee shall promptly notify the Postmaster General of the commencement of any civil action against him based upon any such claim.

(b) The Postmaster General shall transmit to the Attorney General any notice received by him under subsection (a) of the commencement of a civil action against an officer or employee of the field service.

SEC. 7. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act.

SURVEY OF MINERAL POTENTIAL ON CERTAIN LANDS

Mr. MUNDT. Mr. President, I introduce, for appropriate reference, a bill designed to initiate a survey of the mineral potential on lands situated within the exterior boundaries of Indian reservations.

The bill directs the Secretary of the Interior to make a preliminary investigation of lands situated within the confines of Indian reservations to determine whether mineral resources (including oil and gas) exist on such lands in amounts sufficient to justify commercial development. This legislative proposal further directs the Secretary of the Interior to report the results of his investigation to the Congress on or before June 30, 1960, together with such recommendations as the Secretary may have with respect to additional exploration in specified areas.

Mr. President, the basic purposes of the bill are in line with recommendations which I have received from the Governors' Interstate Indian Council, an interstate council representing all States in which Indian lands are located. The survey proposed is also thoroughly consistent with the Eisenhower administration policies dedicated to encouraging private business groups to establish commercial enterprises within Indian reservations, thus providing much needed employment for our Indian people.

Many bills have been introduced in recent years, which propose to establish industrial plant facilities within the confines of Indian reservations, in order to provide employment for the Indian residents. Laudable as the purposes of these bills may be, there is little reason to believe that American business will be tempted to locate plant facilities in the Indian country unless there are resources in the area which can be developed. The study proposed in my bill will provide a clear showing of the Indian lands which might be worthy of industrial and commercial development.

I am confident that an initial and well-documented showing of mineral, oil, or gas potential will serve as an adequate incentive to encourage many mining and oil companies to conduct additional exploratory surveys throughout various segments of the Indian country.

If the American Indian is to obtain his fair share of the Nation's wealth, and if job opportunities are to be provided for our Indian citizens there must be a great expansion in economic development of the Indian land holdings throughout America. A well-documented survey of commercial mineral potential existing on the Indian reservations would certainly be a giant step forward in a national program to develop maximum economic utilization of these Indian lands.

Mr. President, I ask unanimous consent that the text of the bill, which is not lengthy, and an editorial from the Christian Science Monitor, be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the text of the bill and the editorial will be printed in the RECORD.

The bill (S. 1465) to direct the Secretary of the Interior to make a preliminary investigation of lands in the United States situated within the exterior boundaries of Indian reservations to determine whether mineral resources exist on such lands in amounts sufficient to justify commercial development, introduced by Mr. MUNDT, was received, read twice by its title, referred to the Committee on Interior and Insular Affairs, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is authorized and directed to make a preliminary investigation of lands in the United States situated within the exterior boundaries of Indian reservations with a view to determing whether mineral resources (including oil and gas) exist on such lands in amounts sufficient to justify commercial development. The Secretary of the Interior shall report to the Congress, on or before June 30, 1960, the results of such investigation, together with such recommendations as to the need for further exploration, or otherwise, as he deems appropriate.

The editorial presented by Mr. MUNDT is as follows:

[From the Christian Science Monitor, Mar. 17, 1959]

THE INDIAN PROBLEM: A CHALLENGE—AN INTIMATE MESSAGE FROM THE PACIFIC COAST

(By Kimmis Hendrick)

LOS ANGELES.—Is the United States solving the American Indian problem?

No. But the problem is getting better understood, and progress is being made. This is encouraging. The United States' moral obligation to help descendants of the first Americans enjoy the privileges of modern freedom is a debt long overdue, and watchful people throughout the world want to see how it is being paid.

Simply stated, the problem is one of trusteeship for lands given the Indian tribes in exchange for lands taken by the advancing white man. The Federal Government, through its Indian Bureau, undertakes to protect these lands which belong to Indians—Indians, as persons, are not Government wards. They are voting citizens, free to come and go, to buy and sell—except the tribal lands—just like other Americans.

What gives their lands a critical status is the congressional policy called termination. The Government wants to give their lands back to the Indians. It wants to be free of the trust. Most Indians are not enthusiastic about this policy because it leaves them the job of improving lands which the Government has woefully neglected. In many cases, they are totally unprepared by education, experience, and aptitude to take on the responsibility.

But there is a deeper problem. Of the 450,000 Indians on tribal rolls, about 250,000 have become involved in the mainstream of American life and are solving their problems independently of Government help or neglect. Some of these live in cities; some still live on reservations. Some are preeminently successful in business or otherwise; characteristically all of them are modern Americans. It is the other 200,000 on reservations who challenge us.

They challenge us because their whole approach to life basically is different from that which is typical of modern America. It is philosophically and religiously different. It puts the group before the individual. It includes no concept of accomplishment in time. It does not reckon on meeting economic obligations or on regular work. It falls back on the wonderful but unmodern Indian idea of sharing—that if Tim Whitefeather cannot pay his bills, everybody in the community will help. It is not his obligation really.

This attitude or approach to life has its own peculiar virtues, but they are not mid-century American virtues. The challenge is to find ways to encourage Indians to keep the kernel of these virtues—respect for life's beauty and reverence for its deeper meanings—and at the same time suit this temper to competitive and progressive modern life.

So far, the one major program the Indian Bureau has evolved to meet this challenge is relocation. It offers reservation Indians a chance to settle in cities. The program has heartbreaks and drawbacks, but it is working better all the time. Congress has increased funds enabling the Bureau to be more helpful and more discriminating all the time in carrying out relocation plans.

But relocation isn't in itself an adequate answer. Evidence indicates that a large portion of the 200,000 reservation Indians who live according to the old pattern have neither preparation for relocation nor aptitude for remaining profitably on reservations. They are caught betwixt and between two cultures. What heightens their trouble is the fact that their children are frustrated by their frustration. And there are many children. One Sioux group, for instance, numbering 2,000, is made up half of children under 15. Their older folks have no more than third or fourth grade educations.

It is easy to argue that the United States might have started 50 years ago educating Indians to assume responsibility for their lands. Of course. But 50 years ago there was almost no awareness by white folks or Indians that this was possible. Today it is recognized. The Indian Bureau recognizes it. Indians recognize it. This is the beginning of an answer.

One Bureau official of wide experience, himself an Indian, said the other day that if he could design a program it would be this: Start with the kindergarten. Provide subsistence farms for reservation Indians who won't change their way of life. Expand tremendously the social services work with relocatees. Follow young Indians all the way through school, to help them individually. Intensify development of reservation resources. Above all: Stress social work.

A nonbureau man, critical of Indian Bureau bureaucracy, spoke almost to the same effect. But he said this: "The Bureau should

be an educator. If a tribal committee sees the need for a dam or a domestic water supply, the Bureau should help it tackle the job—not take over. Just this one change in approach would solve the Indian problem in America."

NONQUOTA IMMIGRANT STATUS FOR CERTAIN ORPHANS

Mr. KENNEDY. Mr. President, on behalf of the senior Senator from Oregon [Mr. MORSE], the junior Senator from Oregon [Mr. NEUBERGER], and myself, I introduce, for appropriate reference, a bill to grant nonquota immigrant status to orphans under 14 years of age who have been adopted or who will be adopted upon their admission to the United States.

The present law which permits these children to come into the United States will expire on June 30 of this year. That termination date was established in order that we might have an opportunity to determine how this provision of the law would operate. As the Senate report stated:

> The authority to issue such nonquota immigrant visas expires on June 30, 1959, at which time the Congress may review the operation of the program and a determination may then be made whether the program should be curtailed, modified, or canceled.

I firmly believe that this program has successfully proved itself and should be continued. It would be tragic, indeed, if the law under which American parents can bring into the country children they have adopted or propose to adopt is permitted to expire. During the past 10 years the lives of thousands of parents have been enriched by special immigrant orphan legislation. The adopting parents have had both the opportunity to participate in a great humanitarian program and to experience the satisfaction of raising a child and watching him develop. The children have been afforded the opportunity to experience a natural and healthy childhood in our land and to share in our abundance. This should be continued as a permanent part of our law.

The proposed legislation establishes safeguards against abuses. Both the parents and the children will be checked to determine their fitness for each other prior to the adoption. This is particularly important in order to prevent the unfortunate maladjustments which have arisen in some instances after proxy adoptions.

The present law, which is known as Public Law 316, was the fourth measure adopted since the end of World War II to provide for special admission of orphans as nonquota immigrants. Over 11,000 orphans—and an equal number of families in the United States—have benefited from these 4 laws. The first law dealing with this subject was the Displaced Persons Act of 1948. It authorized the issuance of 5,000 visas to United Nations and Greek orphans and 5,000 to orphans residing in Western Europe. Only 4,065 orphans were admitted under this act, and these came principally from Greece and Germany. The second law was the act of July 29, 1953, which allowed servicemen and civilians living abroad to bring home and adopt children. Five hundred visas were authorized under this act and 466 orphans were admitted. The third law making provisions for orphans was the Refugee Relief Act of 1953. It authorized 4,000 special nonquota immigrant visas to eligible orphans. Approximately 3,800 orphans have entered the United States under this act. Then, 2 years ago, I introduced the bill which became known as Public Law 316. As of December 30, 1958, 2,740 orphans were admitted under it.

Although these laws have illustrated, as perhaps no other legislation can, the inherent generosity and the humanitarian traditions of our country, there have been a number of serious abuses. Some children have been mistreated and some have been unable to adjust to their new environment. Recent investigations conducted by the New York State Joint Legislative Committee on Matrimonial and Family Laws, under the chairmanship of Senator Janet Hill Gordon, have called these cases to the attention of the Nation.

The bill I am introducing profits from the disclosures in that investigation, from studies which have been made by the American Council of Voluntary Agencies for Foreign Service, and from experience gained by the International Social Service. It provides for the participation and advice of the voluntary agencies in connection with any adoption procedures.

I believe this bill deserves the early attention of Congress so that the immigrant orphan program may be allowed to continue uninterrupted after the June 30 deadline.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1468) providing for the issuance of special nonquota immigrant visas to certain alien orphans adopted by citizens of the United States, introduced by Mr. KENNEDY (for himself, Mr. NEUBERGER, and Mr. MORSE), was received, read twice by its title, and referred to the Committee on the Judiciary.

Mr. NEUBERGER. Mr. President, I am indeed pleased to join with my warm friend the distinguished junior Senator from Massachusetts [Mr. KENNEDY] in sponsoring legislation to continue to permit the entry into the United States of orphan children under the age of 14 who have been or will be adopted by American families. My office has actively participated in the drafting of the proposed legislation, and this bill represents many compromises.

I sponsored a similar measure which was enacted into law, Public Law 85–316, which provides for the admission of orphan children adopted abroad or who will be adopted in the United States. This section of the law will expire on June 30, 1959, and if children adopted by American families are to be admitted to the United States on a quota-free basis, prompt action will be necessary. It is my hope that a proposal to allow the admission into the United States of children adopted or to be adopted will be promptly enacted into law so that children will not be kept separated abroad from their adoptive parents.

I am encouraged in this regard with the discussion I had on the Senate floor with the distinguished chairman of the Senate Judiciary Committee [Mr. EASTLAND] in August 1957, when orphan legislation was being considered, which developed that there was no known opposition to extending the provisions of the orphan law when they expire this year.

VISAS ISSUED TO 3,000 CHILDREN

Under the terms of the orphan section of Public Law 85–316, 2,948 visas have been issued to eligible orphans through January 1959. Of this number, 2,369 were issued to children who were legally adopted abroad and 579 to children admitted to the United States to be adopted in our country.

Under the terms of our bill, provision is made for the admission of children lawfully adopted abroad under the laws of a foreign country and children who are to be adopted in the United States under the laws of the State of the adopting parents. It is my opinion that if an effective program for the adoption of foreign children is to be continued provision must be made for the admission of children adopted abroad, as well as children to be adopted in the United States.

PROXY ADOPTIONS

Serious concern has been expressed by social agencies with respect to so-called proxy adoptions. Such adoptions are permitted under the laws of certain foreign countries, whereby a third party, having a power of attorney, can make a legal adoption for a family in the United States. Adequate checks may not be made by the foreign country or the person holding the power of attorney as to the ability of the family in the United States to adequately care for the adopted child. A similar problem could also exist when a member of a family travels abroad for the purpose of adopting a child under the laws of a foreign country.

Some abuses have undoubtedly taken place with respect to proxy adoptions, and corrective action clearly needs to be taken through tightening immigration procedures. Our bill provides that prior to the admission of any child to the United States the adoptive parents shall file assurances with the Attorney General and the assurances shall contain information to assure that the family can properly care for the child. The Attorney General, acting through the U.S. Immigration and Naturalization Service, can make a detailed home check to determine, if necessary, the abiilty of the parents to properly care for the child.

Under the existing law, the Attorney General is required to make a determination as to the ability of an American family to properly care for a foreign child only if the child is to be adopted in the United States. Under our proposal such a determination must be made prior to the issuance of the visa for all children, both those adopted abroad and those to be adopted in our country. The Attorney General has had experience in this field by preparing re-

ports that are submitted to congressional committees in connection with private immigration bills.

HOME CHECKS

The Immigration Service, operating under the Attorney General, maintains district offices in principal cities in the United States and has a field staff available to make the necessary determination of the ability of families to properly care for adopted children. It is my understanding that such a determination can be made within a few months and thus prospective adoptive parents will know promptly whether an immigrant visa can be issued for any child they may plan to adopt abroad or to adopt after the child has entered the United States. A uniform Federal standard should be used in determining the ability of the prospective adoptive parents to adequately care for a child.

Mr. President, I have long believed that the Department of Health, Education, and Welfare, and particularly the Children's Bureau, should play a role in any orphan immigration program. Legislation which I introduced in 1956 to extend the orphan provisions of the now expired Refugee Relief Act, provided that the Children's Bureau should assist in the operation of the law. I am pleased our bill provides that the Attorney General shall consult with the Secretary of Health, Education, and Welfare, in drawing up regulations for the administration of this law.

Our bill also provides for accredited United States social welfare agencies to participate in drawing up the regulations for the operation of the law. These agencies are familiar with the problems involved and should have the opportunity of presenting their views on this subject.

PROMPT ACTION NEEDED

I should like to stress the need for prompt action by the Congress. The orphan section of Public Law 85–316 expires on June 30, 1959, and after that time children adopted abroad or to be adopted in our country will not be able to enter the United States on a quota-free basis. Children may be separated from their adoptive parents. Hardship and suffering will exist.

A similar situation took place in 1957 after the expiration of the Refugee Relief Act in December 1956 and prior to the enactment of Public Law 85–316 in September 1957. Children were separated from their families. Many of these children in foreign lands faced problems of inadequate food and water and lack of proper medical care. Some children already adopted by American families died during the period they were unable to enter the United States. I know that every Member of the Senate wants to avoid a repetition of such a tragedy.

This problem also concerns members and families of our Armed Forces stationed abroad who have adopted foreign children. When the military transfers its personnel back to the United States, any family which consists of children adopted abroad after June 30, 1959, will be unable to enter our country until new legislation is enacted.

During the 1957 session of Congress a tremendous number of private orphan immigration bills were introduced in an attempt to deal individually with a problem that required general legislation. Prompt action by Congress in extending authority for the admission of children adopted abroad or to be adopted in the United States will make the introduction of private legislation in this field unnecessary.

HARRY HOLT FAMILY SERVES HUMANITY

Mr. President, I would like to call attention to the devoted and humanitarian efforts of Mr. and Mrs. Harry Holt, of Creswell, Oreg., and the members of the Holt family, who have assisted in the entry of more than a thousand Korean orphan children, many of whom were fathered by American military personnel. Mr. Holt is presently in Korea assisting in this humanitarian work. He has constructed near Seoul one of the outstanding orphanages in that country. The fine work of the Holts has been widely recognized and last January was the subject of a nationwide television program on the Loretta Young show. I sponsored the original private legislation enacted in 1955 which allowed Mr. and Mrs. Holt to adopt and bring to the United States eight Korean orphan children who are now members of their family. Last year these children obtained full U.S. citizenship. Mrs. Neuberger spoke at the Holt's annual picnic last August to many families from all over our country who have adopted Korean orphan children. The Holts have expended freely of their time, efforts, and good health, and I know of no family which has better symbolized the Biblical good Samaritan.

Sizable numbers of American military personnel are still stationed in Korea, Formosa, Okinawa, Japan, and other Far Eastern areas. The problem of mixed blood orphan children, fathered by American military personnel continues, but on a reduced scale. These children are unwanted in their native lands.

Mr. President, there has been some opposition to the admission of foreign orphan children as well as other immigrants. I can think of no more worthy cause than to assist homeless and helpless children who have been adopted by American families.

IMMIGRATION HAS HELPED TO BUILD AMERICA

It is important to remember that all of us, except full blooded American Indians, are either immigrants or the descendants of immigrants. The United States has a tradition of offering sanctuary to the oppressed. Immigration has helped to build America. Each immigrant is not only a jobholder but he and his family are also consumers who buy goods and services. While our population has grown by 25 million in the last 10 years, only 2,770,000 immigrants have entered our country. Immigration thus plays only a minor role in our continued population increase. Certainly no one can say that the admission of 2,000 children under the age of 14 adopted by American families would infer with our economy or American traditions.

Mr. President, I am reminded of the famed words on the base of the Statue of Liberty by Emma Lazarus which have typified our Nation's traditional feeling toward immigrants:

Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, the tempest-tost to me
I lift my lamp beside the golden door.

Mr. President, I ask unanimous consent that my remarks with respect to the bill may be printed in the RECORD following the remarks to be made later today by the distinguished Senator from Massachusetts [Mr. KENNEDY].

The PRESIDING OFFICER. Is there objection to the request of the Senator from Oregon? The Chair hears none, and it is ordered.

Mr. MORSE subsequently said: Mr. President, I welcome this opportunity to join with the junior Senator from Massachusetts in the introduction of a new and improved bill to grant nonquota immigrant status to orphans under 14 years of age who have been adopted or who will be adopted upon their admission to the United States.

Mr. KENNEDY has ably explained the purpose of this bill. I, too, believe in a program whereby foreign-born orphan children may be permitted to enter this country, to thrive in a wholesome family group they would otherwise never know, and to share in the abundance of this great land. I also believe qualified American citizens should be permitted the rich experience and the rewarding challenge of bringing these children into their homes and rearing them as their own. If properly planned and administered, such a program will not only enrich the lives of the children and adoptive parents. It will—in the long run—prove a solid contribution to the culture and strength of our Nation and to the welfare of mankind as a whole.

As you know, the provisions of Public Law 316 which permit these orphans to enter the United States are about to expire. By no means should the program for which the law provides be abandoned. On the other hand, I think it imperative that safeguards be provided in the new law to curtail abuses and tragedies that have resulted from some proxy adoptions. These safeguards are essential for the protection of both children and adoptive parents. I am aware that, in some instances, unnecessary redtape entangling adoption procedure has been fortunately bypassed under Public Law 316, yet I am also aware of heartbreaking, shocking experiences that have occurred in cases where innocent children have been adopted by proxy by equally innocent American citizens. Sometimes the children are emotionally disturbed because of the horrifying conditions they have survived; some are physically ill; and many are of mixed racial heritage. All of these cases require adoptive families of an exceptional nature. Otherwise it is likely the children will suffer maltreatment and neglect, conditions that have been brought to my attention many times.

I have before me a letter I have received from Miss Jeanne Jewett, administrator of the Oregon State Public Welfare Commission. She writes:

Since the beginning of the Refugee Relief Act in 1953, our agency has been assisting citizens of Oregon in bringing foreign children to this State for adoption. We found participation in this program an interesting experience and believe that we have extended a needed service to the citizens of the State and to children residing abroad who needed adoptive homes. As we have worked on this program, we have become convinced that foreign children need even greater protections in adoption than children placed by the authorized agencies of this State. Before a child is sent to this country for adoption, an investigation of the prospective adoptive parents' home should be required by experienced and qualified staff of an authorized agency in order to assure that the adoptive home will give the child care that will enable him to develop into useful and normal adulthood. Our experience has strengthened our conviction that a child should live in the home of his adoptive parents for a period of time before the adoption is granted in order to assure that the home selected for him will meet his needs. Unless this program is administered by a qualified social agency at both national and local levels, neither the children, the adoptive parents, nor the community, receive adequate protections.

It does seem to me that the proposed legislation establishes these safeguards through assurances provided by the Attorney General in consultation with the Secretary of Health, Education, and Welfare and through the participation and advice of accredited U.S. social welfare agencies.

Because the present law expires on June 30, 1959, I urge the Congress to give early consideration to this bill.

REPEAL OF ACT OF MAY 27, 1912, RELATING TO SALE OF CERTAIN LAND TO FIRST BAPTIST CHURCH OF PLYMOUTH, MASS.

Mr. McCLELLAN. Mr. President, by request I introduce for appropriate reference a bill to repeal the act of May 27, 1912, which authorized and directed the Secretary of the Treasury to sell certain land to the First Baptist Church of Plymouth, Mass., (37 Stat. 117, ch. 134).

This bill was drafted and submitted to Congress by letter dated March 10, 1958, from the Administrator of General Services. The Administrator reported that this bill was required to repeal the act of May 27, 1912, which not only authorized the Secretary of the Treasury to sell the property, but directed him to convey the property to a specific grantee. The property has not been conveyed as authorized by law but in lieu thereof has been used for public purposes pursuant to a revocable license granted to the town of Plymouth on October 19, 1921. It is therefore requested that this proposal be enacted into law in order that the property can be sold as surplus, or conveyed to the city for park and recreational purposes, pursuant to section 13(h) of the Surplus Property Act of 1944, as amended. Additional background and justification explaining the need for this legislation is contained in Mr. Floete's letter dated March 10, 1959.

Mr. President, I ask unanimous consent that the letter addressed to the President of the Senate from the Administrator of General Services, together with the enclosures thereto, be printed in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the letter and enclosures will be printed in the RECORD.

The bill (S. 1473) to repeal the act of May 27, 1912, which authorized and directed the Secretary of the Treasury to sell certain land to the First Baptist Church, Plymouth, Mass., introduced by Mr. McCLELLAN (by request), was received, read twice by its title, and referred to the Committeee on Government Operations.

The letter and enclosures presented by Mr. McCLELLAN are as follows:

GENERAL SERVICES ADMINISTRATION,
Washington, D.C., March 10, 1959.

Hon. RICHARD M. NIXON,
President of the Senate, Washington, D.C.

MY DEAR MR. PRESIDENT: There is transmitted herewith for referral to the appropriate committee a draft bill prepared by this agency, "To repeal the act of May 27, 1912, which authorized and directed the Secretary of the Treasury to sell certain land to the First Baptist Church of Plymouth, Mass."

The proposal is a part of the legislative program of the General Services Administration for 1959.

In 1911, the U.S. Treasury acquired through condemnation proceedings, title to certain land in Plymouth, Mass., at a cost of approximately $29,600, for the construction of a post office building. The act of May 27, 1912 (37 Stat. 117, ch. 134) authorized and directed the Secretary of the Treasury to grant, relinquish, and convey, by quitclaim deed, for and in consideration of $100 cash, to the First Baptist Church of Plymouth, Mass., that portion of the Burns' lot included in the Federal building site in said city, to the south of the continuation of the southerly boundary line of the next adjacent property conveyed to the United States by said First Baptist Church, and to deposit the proceeds of such sale in the Treasury as a miscellaneous receipt.

The portion of the post office site to be conveyed, pursuant to the act of May 27, 1912, is situated in the rear of said site and is a rectangular piece of vacant land measuring 43 feet by 147 feet. A quitclaim deed was executed on June 6, 1912, by the Secretary of the Treasury conveying said land to the First Baptist Church of Plymouth, Mass. According to a memorandum for Assistant Treasury Secretary Allen, dated March 10, 1913, from the Supervising Architect of the Treasury Department, copy enclosed, the deed was forwarded to the postmaster at Plymouth for delivery to the grantee; but when Dr. Burns, the former owner of said land, heard of the proposed transfer, he vigorously objected thereto and threatened to bring suit to recover the property proposed to be deeded to the church, claiming that the Government, having condemned the land for Federal building purposes, could not legally dispose of the same in this manner. Mr. Harry B. Davis, attorney for the First Baptist Church of Plymouth, informed Assistant Treasury Secretary Allen, in a letter dated February 24, 1913, copy enclosed, that because of the threatened suit by Dr. Burns, the First Baptist Church had sold its property adjoining the Federal building site and requested that the Government recall its deed and refund the payment of $100 which had been made by the church. Accordingly, the quitclaim deed was returned to the Treasury Department and the disbursing clerk of that Department returned the check for $100 to the postmaster of Plymouth with instructions that the same be delivered to the proper officials of the church.

Although the post office is constructed on a portion of the Federal building site, no portion of the area referred to in the act of May 27, 1912, has ever been used and is not now being used for post office purposes. On October 19, 1921, a revocable license was given to the town of Plymouth, Mass., to use the land referred to in the act of May 27, 1912, for public park purposes.

The Post Office Department has indicated that the area referred to in the act of May 27, 1912, is not required for expansion of its existing facilities, and that it is, therefore, excess to its needs and will be reported as such to the General Services Administration. Inasmuch as the act of May 27, 1912, not only authorized but also directed the Secretary of the Treasury to convey the property referred to therein to a specific grantee, this Administration can make no other disposition of this property until said act is repealed. If said act is repealed and the Post Office Department reports the property excess to its needs, the property would be screened by this Administration with other Federal agencies as excess property and, if no Federal requirement is found, could then be disposed of as surplus property pursuant to the Federal Property and Administrative Services Act of 1949 (63 Stat. 377), as amended. In the category of surplus property, the city of Plymouth, Mass., would have an opportunity to present its need for this property for public park and recreational purposes, pursuant to section 13(h) of the Surplus Property Act of 1944 (62 Stat. 350), as amended.

For the reasons stated above, prompt and favorable consideration of the enclosed draft bill which repeals the act of May 27, 1912, is recommended.

The Bureau of the Budget has advised that there is no objection to the submission of this proposed legislation to the Congress.

Sincerely yours,

FRANKLIN FLOETE, *Administrator.*

A BILL TO REPEAL THE ACT OF MAY 27, 1912, WHICH AUTHORIZED AND DIRECTED THE SECRETARY OF THE TREASURY TO SELL CERTAIN LAND TO THE FIRST BAPTIST CHURCH OF PLYMOUTH, MASS.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Act of May 27, 1912 (37 Stat. 117, ch. 134), is hereby repealed.

TREASURY DEPARTMENT,
Washington, March 10, 1913.

MEMORANDUM FOR ASSISTANT SECRETARY ALLEN

I attach hereto a letter dated the 24th ultimo from the attorney for the First Baptist Church of Plymouth, Mass., regarding the sale to said church of a portion of the land heretofore acquired as the Federal building site at that place. From the statements contained in said communication, it will be seen that the church does not now desire to purchase the portion of the site in question.

In order to refresh your memory of the facts in connection with this case it may not be out of place to state that a portion of the Plymouth site was acquired by condemnation proceedings, Dr. Burns being the principal defendant. After the title to the property had been vested in the United States, representatives of said Baptist church secured an act of Congress authorizing the Secretary of the Treasury to convey to them, by quitclaim deed, a portion off the rear of said site for $100. The usual quitclaim deed was duly executed and forwarded to the postmaster at Plymouth

for delivery. When Dr. Burns heard of the proposed transfer, he vigorously objected thereto and threatened to bring suit to recover the property proposed to be deeded to the church, claiming that the Government, having condemned the land for Federal building purposes, could not legally dispose of same in this manner. The United States attorney stated that Dr. Burns' contention was well supported in law. The church people were unwilling to purchase the property under these circumstances and it appears from the attached letter that they have sold their property adjoining the Federal building site and purchased land elsewhere for the erection of their church. The Attorney General, however, does not agree with the U.S. attorney as to the legality of Dr. Burns' contention.

The quitclaim deed is now in the hands of the postmaster at Plymouth, and the check for $100 tendered in payment for the property is in the hands of Disbursing Clerk Jacobs. In view of the circumstances it would appear that the proposed sale of the property may as well be abandoned and I therefore attach letters directing the postmaster to return here the quitclaim deed of the property and requesting the disbursing clerk to return to the postmaster the check for $100, now in his possession, with instructions that same be delivered to the proper officials of the church.

If this action meets with your approval, will you kindly so indicate hereon.

———,
Supervising Architect.

Approved:

SHERMAN ALLEN,
Assistant Secretary.

PLYMOUTH, MASS., *February 24, 1913.*

Mr. SHERMAN ALLEN,
Washington, D.C.

MY DEAR SIR: I have for some time been straightening out certain matters in connection with the transfer of a certain piece of land in Plymouth by the U.S. Government to the First Baptist Church of Plymouth. I talked the matter over with Mr. French on several occasions and regret that it has moved along so slowly, not through any fault of Mr. French, but owing to the fact that we had great difficulty in dealing with Dr. Burns. You are probably acquainted through Mr. French with the facts of the case, which are, briefly, these: That when Dr. Burns found that this lot to be transferred to the First Baptist Church he notified them that if they took title he intended to take a writ of entry to recover the property. I went over the case carefully and came to the conclusion that it was a very close case, and that while it might be possible that the First Baptist Church would win in the end there was enough doubt in regard to it to make it unsafe for them to proceed to build their church until the matter was settled. I knew further that Dr. Burns would keep his word in regard to bringing that suit. If proceedings were begun, I knew that it would be some time before they would be settled and this would seriously inconvenience my clients in their building operations.

I, therefore, advised them that in my opinion it would be better to seek another site, and, acting upon this advice, they did so. They have recently acquired a very desirable site.

Almost immediately they received a very good offer for the lot on Main Street, which they accepted, and that property was transfered Monday to Mr. Mansfield S. O'Brien. My clients, therefore, do not now feel that they should accept the deed of the Burns lot which is here at the post office.

I assume that, having abandoned the site for church purposes, the Government would no longer care to transfer it to them. That phase of the case was discussed last week in connection with the selling of the other lot. If it had simply been a question at that time of accepting the title and fighting it out with Mr. Burns, I should have advised them to do it and then sell it, if successful, but I did not believe that the First Baptist Church could do it in good faith.

I think, therefore, that if it is satisfactory to your department the best thing to be done under all the circumstances is for you to recall your deed and refund the payment of $100 which I understand is in your hands at the present time.

I was in Boston last Friday and called Mr. French on the telephone, and he suggested that I take this matter up directly with you.

Very truly yours,

HARRY B. DAVIS.

PERMANENCY OF PROVISIONS OF REORGANIZATION ACT OF 1949

Mr. McCLELLAN. Mr. President, by request I introduce, for appropriate reference, a bill to make permanent the provisions of the Reorganization Act of 1949.

I am introducing this bill, Mr. President, at the request of the Director of the Bureau of the Budget so that the views of appropriate agencies may be attained upon it.

The bill was submitted to the President of the Senate on February 25, 1959, by the Director of the Bureau of the Budget with the accompanying letter which I request unanimous consent be printed in the RECORD, along with a copy of the aforementioned bill.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill and the letter will be printed in the RECORD.

The bill (S. 1474) to make permanent the provisions of the Reorganization Act of 1949, introduced by Mr. McCLELLAN, was received, read twice by its title, referred to the Committee on Government Operations, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (b) of section 5 of the Reorganization Act of 1949 (63 Stat. 205), as last amended by the Act of September 4, 1957 (71 Stat. 611; 5 U.S.C. 133z–3(b)), is hereby repealed. The subsection designation "(a)", appearing in the said section 5, is hereby deleted from that section.

The letter presented by Mr. McCLELLAN is as follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D.C., February 25, 1959.

Hon. RICHARD M. NIXON,
President of the Senate,
Washington, D.C.

MY DEAR MR. PRESIDENT: I have the honor to present for the consideration of the Senate a draft of a bill, "To further amend the Reorganization Act of 1949, as amended, so that such Act will apply to reorganization plans transmitted to the Congress at any time in conformity with the provisions of the Act."

Enactment of the proposed legislation would carry out the recommendation made by the President in his message of January 19, 1959, transmitting the budget for fiscal year 1960, that the Congress extend the Reorganization Act of 1949, as amended. Under present law, no provision contained in a reorganization plan shall take effect unless the plan is transmitted to the Congress before June 1, 1959. The draft bill provides for the repeal of the limitation respecting time of transmittal of reorganization plans to the Congress. Enactment of the bill would permanently authorize the transmittal of reorganization plans under the Act.

Sincerely yours,

MAURICE H. STANS,
Director.

REDUCTION OF FEDERAL ADMISSIONS TAX

Mr. WILLIAMS of New Jersey. Mr. President, on behalf of the distinguished senior Senator from New York [Mr. JAVITS] and myself, I introduce, for appropriate reference, a bill designed to stimulate employment in music and the theater industry by further reducing the Federal admissions tax on the performing arts. Similar legislation has been introduced in the other body by the distinguished Member from the Fourth District of New Jersey, Mr. FRANK THOMPSON. Under our proposal, the tax savings resulting from the proposed bill would be put into a special fund under an arrangement which is not mandatory; and the fund would be administered by representatives of management and labor in the music and theater industry together with representatives of the public for the purpose of assisting the growth and expansion of live music and drama throughout the United States. The President of the United States would appoint the trustees of the new fund which conceivably could have several millions of dollars for its purposes.

At the turn of the century there were more than 5,000 professional theaters in the United States, while today there are less than 100.

This legislation is essential if the performing arts are not to disappear entirely. In developing our bill we were encouraged by the advice given by the father of the American theater, William Dunlap, of Perth Amboy, N.J., in his famed "History of the American Theater," published in 1833. Mr. Dunlap urged Federal assistance to the theater in order to raise the standards of the arts in our country. He said this aid could be paid for by "taxes on taverns and tippling houses."

The proposed bill applies to the legitimate theater, operas, concerts, and motion pictures. It would halve the cabaret tax, the only one of the Federal execise taxes which remains at the wartime level of 20 percent.

Interest in the new bill has been expressed already by wide segments of the music and theater industry, including the Theater Guild-American Theater Society, the congressionally chartered American National Theater and Academy, the Council of the Living Theater, Actors' Equity Association, the American Guild of Musical Artists, the Hollywood AFL Film Council, and the American Federation of Musicians.

Our bill declares that it is the intention of the Congress in providing tax reductions under this act that any savings which are derived therefrom by persons engaged in presenting live musical and dramatic performances shall be

set aside and used to promote the growth and expansion of live music and drama throughout the United States. To this end, the President is requested to take such action as may be necessary to encourage the establishment of a special fund and—through appropriate officers and agencies of the United States—to provide advice and assistance in the administration and operation of such fund, which shall consist of contributions from savings derived under this act and moneys from any other available sources and shall be held, administered, and used by a board made up of representatives of management and labor in the music, theater and entertainment industry, and the general public to be appointed by the President after receiving and considering recommendations from organizations in the fields involved, in promoting the growth and expansion of live music and drama—educational and civic as well as professional—throughout the United States and thereby stimulating wider appreciation of and increased participation and employment in the musical and dramatic arts.

The PRESIDING OFFICER. The bill will be received and appropriately referred.

The bill (S. 1475) to amend the Internal Revenue Code of 1954 to reduce the admissions tax where a substantial part of the program consists of live musical or dramatic performances in order to provide greatly increased employment, accompanied by larger tax revenues which will offset any losses to the Federal Government, in the entertainment and related industries; to aid the motion picture industry which has suffered a decline; to foster the growth and development of the fine arts in the United States without resort to the subsidies common in other countries, and for other purposes, introduced by Mr. WILLIAMS of New Jersey (for himself and Mr. JAVITS), was received, read twice by its title, and referred to the Commitee on Finance.

ADVANCEMENT OF COMMON ECONOMIC AND POLITICAL AFFAIRS OF NORTH ATLANTIC NATIONS

Mr. HUMPHREY. Mr. President, in the many-sided struggle between Communist totalitarianism and democracy it is imperative that the free nations cooperate as closely as possible, each drawing strength and help from the others. Today the United States is cooperating with many free nations in the United Nations and its specialized agencies. We are tied closely to 14 other countries in the NATO Pack signed on April 4, 1949. We are also allied with the 20 Latin American Republics under the Rio Pact of 1947. In other treaties we are associated with several free nations of Asia.

Through these associations with free nations around the world we are augmenting our military, political and economic strength in the face of a powerful and determined foe.

In the belief that we should explore possibilities for drawing even closer together, I am submitting a resolution urging a convention of the 15 NATO members and other democratic nations to examine further ways of "advancing their common economic and political affairs" in the interests of international peace and stability. I believe honest exploration of this kind may lead to new ideas and fresh approaches for the mutual enrichment of all participating countries. When the threat of nuclear war hangs over us, no effort should be spared which stands some chance of increasing understanding and cooperation among those countries committed to the democratic way of organizing society.

On behalf of myself, the Senator from New Jersey [Mr. CASE], the Senator from Kentucky [Mr. COOPER], and the Senator from Tennessee [Mr. KEFAUVER], I submit a concurrent resolution on this subject.

The PRESIDING OFFICER. The concurrent resolution will be received and appropriately referred.

The concurrent resolution (S. Con. Res. 17) submitted by Mr. HUMPHREY, for himself and other Senators, was received and referred to the Committee on Foreign Relations, as follows:

Whereas united action by democracies is essential for preservation of democratic institutions everywhere, without regard for race, religion, or region, and will bring new hope for disarmament and peace; and

Whereas the North Atlantic Treaty has already committed its members to "contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions," and to "encourage economic collaboration between any or all of them"; and

Whereas it is increasingly urgent that the free peoples gain more strength—moral, political, scientific, industrial, and economic—while avoiding present financial dangers; and

Whereas the strength that proverbially lies in unity offers the free peoples vast, untapped resources for solving this dilemma; and

Whereas the Third NATO Parliamentarians Conference unanimously recommended that a conference be officially called "composed of leading representative citizens selected on a nonpartisan basis and directed to convene as often as necessary in order to examine exhaustively and to recommend how greater cooperation and unity of purpose, as envisioned by the North Atlantic Treaty, within the Atlantic community may best be developed"; and

Whereas the Third NATO Parliamentarians Conference also proposed that "the members of the conference should, as far as possible, be officially appointed but should act in accordance with their individual convictions * * *": Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That the legislatures of the other democratic governments of the North Atlantic Treaty Organization shall be invited to name delegates to meet in a convention with delegates from the United States and from such other democracies, wherever situated, as the convention may invite, to explore and to report to what extent their people might, within the framework of the United Nations and in accord with the basic principles of the Constitution of the United States, achieve more effective and democratic unity in advancing their common economic and political affairs, their joint defense and the aims of world peace and individual freedom.

That the convention should be composed of leading representative citizens officially appointed on a nonpartisan basis but free to explore the problem fully as individuals without being officially instructed or able to commit their governments.

ALLEVIATION OF CONDITIONS OF UNEMPLOYMENT AND UNDEREMPLOYMENT IN CERTAIN DEPRESSED AREAS—AMENDMENTS

Mr. BUSH (for himself and Mr. BENNETT) submitted amendments, intended to be proposed by them, jointly, to the bill (S. 722) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas, which were ordered to lie on the table and to be printed.

Mr. DIRKSEN submitted an amendment, in the nature of a substitute, intended to be proposed by him, to Senate bill 722, supra, which was ordered to lie on the table and to be printed.

Mr. JAVITS. Mr. President, I submit amendments, intended to be proposed by me, to Senate bill 722, the so-called depressed areas bill. I ask unanimous consent that the amendments be printed and lie on the table, and be printed in the RECORD.

The PRESIDING OFFICER. The amendments will be received, printed, and lie on the table; and, without objection, the amendments will be printed in the RECORD.

The amendments submitted by Mr. JAVITS are as follows:

On page 9, line 15, after the parenthesis "(" and before the word "including", insert the word "not."

On page 12, line 12, the same amendment.

VOLUNTARY PENSION PLANS BY SELF-EMPLOYED INDIVIDUALS—AMENDMENTS

Mr. LANGER (for himself and Mr. YOUNG of North Dakota) submitted amendments, intended to be proposed by them, jointly, to the bill (H.R. 10) to encourage the establishment of voluntary pension plans by self-employed individuals, which were referred to the Committee on Finance, and ordered to be printed.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. HUMPHREY:

Article entitled "Indian Economic Development and U.S. Aid," written by Senator HUMPHREY and published in a special India supplement of the New York Times dated January 25, 1959.

Article entitled "Unfinished Business Outdoors," written by Senator NEUBERGER, and published in the New Republic of March 9, 1959.

MILWAUKEE FOREMEN'S SAFETY SCHOOL

Mr. WILEY. Mr. President, we recognize that throughout America there

is, annually, a tremendous loss—both in property and, tragically, in deaths—from the occurrence of accidents in homes, on farms, in businesses, on the highways, and elsewhere.

Today, I should like to call attention particularly to a constructive program which is aimed at reducing the total of casualties.

On March 25, the Milwaukee Association of Commerce is scheduled to open its 1959 Milwaukee Foremen's Safety School. The school has, as its noble objective, life conservation.

In announcing the program to members of the association, the following startling factors were pointed out—and I quote from a leaflet distributed to the members:

Did you know—

That every employee lost-time accident in your firm last year cost your company an average of $608 in direct compensation and medical expenses?

That the total of such compensable injuries and deaths—including lost wages, medical and hospital expenses, insurance overhead, and direct-production losses—cost Milwaukee business more than $16 million last year?

That more than twice as many employees were injured and killed off the job in traffic and in their homes—with an additional $15 million sustained by Milwaukee business in lost-time production?

That 85 percent of all of these accidents are due to human error—which can be controlled through education?

That hundreds of member firms of the association have found that employee training in safety is the most effective means of curtailing this economic waste?

Mr. President, those factors are indeed food for thought—not only for individuals, businesses, and industries engaged in commerce, but also for Congress, as well as other segments of the economy, in attempting to cut down the terrible loss each year as a result of accidents. According to estimates, more than 90,000 persons are killed annually in workshops, on streets and highways, and in the homes.

Recognizing that the need for improved safety is a national problem, I request unanimous consent to have excerpts from the constructive program for the 39th annual session of the Milwaukee Foremen's Safety School, 1959, printed in the RECORD, along with a listing of the program advisory committee and the industrial safety division operating committee of the Milwaukee Association of Commerce.

There being no objection, the excerpts and list were ordered to be printed in the RECORD, as follows:

You are welcome. The Milwaukee Association of Commerce is proud to present this school in the interest of the challenging objective of life conservation.

You—as an employee of a member firm of the association—are cordially invited to participate in this training program directed toward the conservation of human life both on and off the job.

This school is open to all interested employees—no registration fee.

THE SAFETY CHALLENGE

The killing of more than 90,000 persons through carelessness each year in the workshops of the Nation, on our streets and highways and in our homes is one of the greatest tragedies in America.

Milwaukee, the birthplace of the national safety movement, has set a shining example of the effectiveness of safety education through the training annually of thousands of employees in the fundamentals of accident prevention.

Occupational injuries and fatalities in metropolitan Milwaukee have been reduced to less than 50 percent of the national level, with a saving last year of 55 lives and 7,000 crippling injuries.

Since twice as many employees are killed and injured away from the job—in traffic and in homes—the same principles of occupational safety must now be applied to the growing off-the-job accident problem.

To this end, the Milwaukee Association of Commerce dedicates its 1959 school.

Educational training of employees is the key to the safety challenge.

Milwaukee Association of Commerce: President, Lester S. Olsen, Olsen Publishing Co.; executive vice president, Ray H. Weisbrod.

Industrial safety division operating committee:

Chairman of division, S. Lloyd Nemeyer, Milwaukee Gas Light Co.

Chairman of school, E. Clark Woodward, A. O. Smith Corp.

Allen W. Bathke, Chain Belt Co.

Charles A. Baumann, the Heil Co.

Philip W. Behling, Pittsburgh Plate Glass Co.

Wilbur J. Berard, Koehring Co.

Michael F. Biancardi, Allis-Chalmers Mfg. Co.

Erwin C. Brenner, Milwaukee Gas Light Co.

Joseph E. Carone, Pressed Steel Tank Co.

Jean G. Dapp, International Harvester Co.

James G. Dickinson, Wisconsin Electric Power Co.

Donald J. Diederich, Wehr Steel Co.

Henry W. Fels, Bucyrus-Erie Co.

Robert E. Gess, Employers Mutuals of Wausau.

Edward G. Goldbeck, Milwaukee Solvay Coke Co.

Edward L. Hanley, Wisconsin Society of Professional Engineers.

Edward Haverberg, American Motors Corp.

Thomas F. Hedglin, General Electric Co., X-ray department.

Karl H. Hinrichs, Harnishfeger Corp.

John R. Joerg, Harley-Davidson Motor Co.

Myron E. Jolidon, Standard Oil Co.

Herbert H. Koepke, Johnson Service Co.

John H. Kopmeier, Wisconsin Ice & Coal Co.

Fred J. Ladwig, the Milwaukee Road.

Richard D. Lutz, the Falk Corp.

Cyril V. McDonald, Froedtert Malt Corp.

Franklin A. McVety, the Borden Co.

Walter E. Meyer, Plankinton Packing Co.

Francis T. Murphy, Ladish Co.

Donald F. Possell, Nordberg Mfg. Co.

Murdoch G. Pryor, Allen-Bradley Co.

James G. Reilly, Cutler-Hammer, Inc.

Arnold W. Rosmann, Norris, FitzGerald & Russell.

Clarence R. Seybold, Smith Engineering Works.

Dorr C. Snoyenbos, AC Spark Plug, General Motors Corp.

Clarence J. Muth, manager, industrial safety division, Milwaukee Association of Commerce, 611 North Broadway, Milwaukee 2.

Program advisory committee:

Past chairmen, industrial safety division: 1954–57, John H. Kopmeier, president, Wisconsin Ice & Coal Co.; 1958, Joseph F. Cairnes, president, Milwaukee Braves.

Past chairmen of school: 1950–52, Myron E. Jolidon, Standard Oil Co.; 1953–54, Erwin C. Brenner, Milwaukee Gas Light Co.; 1955–56, Michael F. Biancardi, Allis-Chalmers Manufacturing Co.; 1957–58, James G. Dickinson, Wisconsin Electric Power Co.

Reception and ushering committee: Chairman, Robert E. Gess, Employers Mutuals of Wausau; Edward L. Hanley, Wisconsin Society of Professional Engineers; Arnold W. Rosmann, Norris, FitzGerald & Russell Co.

SENATOR FULBRIGHT'S SPEECH OF MARCH 16 ON BERLIN, WEST GERMANY, AND RELATIONS WITH THE SOVIET UNION

Mr. MANSFIELD. Mr. President, in the Washington Daily News of March 18 and the Washington Star of the same date there appeared two editorials on the speech delivered on Monday last by the chairman of the Foreign Relations Committee, the Senator from Arkansas [Mr. FULBRIGHT]. His speech was made on the floor of the Senate on the same day the President made his speech to the Nation. Both were very important; both were by responsible leaders. I hope that the speech made by the senior Senator from Arkansas has not been lost sight of, because I believe what he said is of the greatest importance. Furthermore, in view of the fact that he made the speech from his position as Chairman of the Senate Committee on Foreign Relations, what he said should be given every possible consideration.

Mr. President, it is well to point out that on the basis of the speech made by the Senator from Arkansas, the Soviet Union should be aware of three things:

First, the United States will make no separate "deals" with the Soviet Union.

Second, the United States will not be driven or enticed from Berlin or West Germany.

Third, the United States will not accept, even tacitly, any propositions designed to formalize the subjugation of the once-free satellite peoples.

Mr. President, the speech made by the distinguished Senator from Arkansas is a most important one. I hope all Senators will give it their most serious and most earnest consideration.

I ask unanimous consent that the two editorials which refer to the speech of the Senator from Arkansas be printed at this point in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News, Mar. 18, 1959]

FULBRIGHT'S OFFER

President Eisenhower's address eclipsed an equally important—maybe more important—statement on the Berlin crisis by Senator FULBRIGHT, new Democratic chairman of the Senate Foreign Relations Committee.

The Senator offers the President the opportunity of Democratic-Republican cooperation not only in the immediate crisis but the long-range negotiations with the Russians. He endorses Ike's stand firm policy but puts the emphasis on what else is to be done while standing firm. He urges some hard thinking now on the German problem and relations with the Soviet as a whole.

Nikita Khrushchev should know well the three points on which the Senator says there is complete unity in this country:

The United States will make no separate deals with the Soviet Union.

It will not be driven or enticed from Berlin or West Germany.

It will not accept, even tacitly, any propositions designed to formalize the subjugation of the once-free satellite peoples.

If the Russians understand that, and respect it, the Senator said, there are some negotiable points. One of these is the disposition of East-West forces in Germany.

"It seems to me," he said, "that if both were to move back an equal distance—however slight the distance—the possibility of war, especially accidental war, would be reduced."

His condition for such a move is important—"under no circumstances * * * except in return for a bona fide quid pro quo—in short, an agreement that would benefit the Western Allies at least as much as the Soviet Union."

His warning against expecting quick spectacular results is equally important—"it may be a matter of years rather than months before the Russians will extend a quid equal in value to our quo."

The nub of Senator FULBRIGHT'S advice—keep strong, be patient and determined, and "chip away relentlessly at the encrusted Communist mixture of dogma, braggadocio, and fear."

One of the most unfortunate—and dangerous—events on the Washington scene these days is the continuing and running debate between the President and Congress over the adequacy of our military program. Both have constitutional responsibilities in this field—and both should be seeking a compromise for agreement rather than trying to win the argument.

The important thing about Senator FULBRIGHT'S statement is that it offers a chance to prevent development of a similar controversy in the months ahead over our diplomatic policies.

The Fulbright statement alone is a major contribution to formation of a strong American diplomatic posture. It is now up to the President to take advantage of the opportunity offered—to combine the thoughts of the best minds in both parties for the diplomatic confrontations ahead this spring and summer with the Russians.

[From the Washington Evening Star, Mar. 18, 1959]

PRISONERS OF WORDS

Senator FULBRIGHT has addressed himself to a useful and timely point—the danger that our foreign policy may become the captive of words and slogans.

The chairman of the Foreign Relations Committee is not in any sense an appeaser. Nevertheless, he thinks it may be possible to negotiate with the Russians and, as an example, he suggests the desirability of agreement on a mutual withdrawal of forces in central Europe. If this were done it might ease tensions and reduce the danger of an "accidental" war. But those who propose this kind of disengagement often are assailed as "appeasers." That this should be the case is not especially surprising. Given a certain kind of mentality, and a total lack of responsibility, it is easy to resolve such momentous things as the Berlin issue in terms of slurring words and half-baked phrases.

Senator FULBRIGHT'S basic point is that we must not fall into the error of equating negotiations or disengagement with such words as "appeasement" and "retreat." To negotiate a settlement on a given point, assuming an acceptable quid pro quo, is neither an act of appeasement nor of retreat. And we must not permit the specialists in invective to shackle our freedom of action.

For one thing is certain. Our dispute with the Russians over Berlin and Germany is going to be settled by a war, which no sane person wants, or through a process of negotiation which will compose differences without sacrifice of principle. This latter process will be difficult at best. It will become impossible if we let the catchword artists take us into camp.

ATOMIC POWER IN THE 86TH CONGRESS—ADDRESS BY SENATOR ANDERSON

Mr. NEUBERGER. Mr. President, all of us in the Senate admire the brilliant and outstanding leadership of the distinguished junior Senator from New Mexico [Mr. ANDERSON] in the whole general realm of atomic energy. The Senator's knowledge in this field has been of value to our Nation and to the free world.

The Senator from New Mexico last night, March 18, to the National Capital Democratic Club, delivered a characteristically able, informative, and thoughtful address on the whole question of atomic energy in the 86th Congress. I ask unanimous consent that this outstanding address by the distinguished Senator from New Mexico be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ATOMIC POWER IN THE 86TH CONGRESS

(Speech before National Capital Democratic Club by Senator CLINTON P. ANDERSON, chairman, Joint Committee on Atomic Energy, March 18, 1959)

It is a pleasure to be with such a pleasant and sympathetic group this evening. I am sure that you appreciate, however, that I am not talking to you primarily as a partisan Democrat, but rather as the chairman of a joint committee that has in the main operated in a nonpartisan manner. Indeed, I was pleased to hear one of our senior minority members say recently that the joint committee was the least political of any congressional committee on which he had ever served.

I must admit with regret that ever since the AEC and the Budget Bureau injected politics into the atomic energy program via the infamous Dixon-Yates contract, there have been some political overtones on any atomic project involving the production of substantial quantities of electricity. I am glad to say that the Democratic majority of the joint committe, with some help from the minority, has kept the faith and sponsored a vigorous atomic power program.

SEVERAL APPROACHES TO PROBLEMS

There are several approaches I could take in discussing atomic power in the 86th Congress.

First of all, I might trace for you the laborious processes by which an atomic powerplant gets in an authorization bill, has money made available to it if the appropriation bill is passed and signed by the President, and then resumes the hazardous journey across the ice pursued, like Little Eva, by the bloodhounds of the Bureau of the Budget.

Or I could take a historical view and contrast the rosy predictions of what was supposed to happen when we unleashed the forces of private enterprise in 1954, and the current unhappy state of the atomic power industry where things are on dead center.

Another approach would be to trace the long and patient negotiations the Joint Committee and its staff have undertaken with the Atomic Energy Commission looking to an agreed program of accelerated reactor construction—thus far to little avail.

Or I could give you a chronology of the battles we have had with the Commission over the years, with a list of our victories and defeats.

And finally, I could outline for you the program I hope the Joint Committee will consider and report out for fiscal year 1960.

TWO KEY ISSUES

Tonight, however, I would like to analyze two key issues facing us in the 86th Congress which may perhaps give you a flavor of all these approaches. The issues which I will discuss are the plutonium and power issue and the gas-cooled reactor prototype issue, with possibly a few words about leadership and planning for the future.

As some of you may know, atomic reactors produce two principal products from the chain reaction in their uranium fuel. First, is the new element plutonium and second is large quantities of heat. The heat from these reactors can be utilized to make electric power, or it can be wasted by dumping it in the river, as the AEC now does with its single-purpose plutonium reactors at Hanford, Wash.

A whole speech could easily be devoted to the Hanford reactors and the fights they have generated over Government entrance into the power business. Let me devote a few minutes to the subject to show you the battles which have to be fought to advance the nuclear program.

Plutonium is a prime ingredient in atomic and hydrogen weapons, and we hope and believe that someday soon it can also be used as fuel in atomic powerplants.

FIGHT TO INCREASE PLUTONIUM PRODUCTION

The Democratic members of the Joint Committee have fought long and hard to increase plutonium production facilities, so as to be ready for added production which will be necessary when the small atomic weapons are developed. The Joint Committee was supported by the Army, Navy, and Air Force and the Joint Chiefs of Staff, going as far back as 1956 and 1957.

In 1958 Congress was finally able to authorize construction of a plutonium production reactor at the AEC Hanford installation, which included features by which the reactor could be converted to the production of large quantities of electric power—perhaps as much as 900,000 kilowatts.

For a time there were signs that the project would run into trouble—trouble traceable to the fact that the AEC and the administration did not want to see Government generating power.

The Commission, under Chairman McCone, proceeded with the design of the convertible plant. But AEC, on its own initiative, selected the Stone & Webster Co. to make a so-called technical and economical analysis of the convertible reactor. Stone & Webster, along with being good engineers, are noted particularly in the Northwest for their private power bias.

Sure enough, a few weeks ago the AEC sent us the Stone & Webster report and suggested that the Joint Committee on Atomic Energy reexamine the economics of whether AEC should go ahead with the convertible features of the reactor.

CONGRESSIONAL ASSUMPTIONS REVERSED

It has been very difficult to wade through the tangled assumptions and statistics of the Stone & Webster report. Suffice it to say that they have reversed the assumptions used by the Congress in authorizing the plant, and have attempted to determine the economics of the cost of power from the reactor using an assumed cost of plutonium. After setting up this strawman, and rigging the costs with nonexistent interest and insurance charges, Stone & Webster proceeded to compare it with the cost of power

from the most efficient conventional plant which could be built near the load center.

It would not surprise you that Stone & Webster found this hypothetical conventional plant would produce power cheaper than the hypothetical dual-purpose reactor. They apparently never got around to seeing how cheap plutonium could be made from the reactor using the projected established value of power approved by the Federal Power Commission and the Bonneville Power Administration.

Also not taken into account was the fact that private and public utilities in the area recommended going ahead with the construction of the convertible reactor.

We squared away for a fight, but I have talked the problem over with Mr. McCone and I believe he takes a more reasonable attitude than Stone & Webster did. I have faith that the project will go ahead as Congress planned.

BUY-BACK PRICE MORE THAN DOUBLE

It is interesting to note, however, that AEC is moving right along on a proposed agreement with a foreign country for the procurement of plutonium. The Joint Committee has been informed that AEC proposes to pay the so-called weapons buy-back price for this plutonium, which is $30 a gram instead of a price in the neighborhood of $14 a gram which was the basis on which this foreign plutonium production has been financed.

Make no mistake about it. We are not talking about peanuts. We are talking about thousands of kilograms of plutonium, and over $175 million of excess costs.

Last year AEC proposed essentially the same thing as an amendment to section 55 of our law in connection with the amendments on exchange of weapons information with NATO countries. Some of my colleagues and I objected that this was a stratagem to permit the subsidization of our lagging private atomic program. Perhaps a bit of history would be appropriate. In a speech to the Washington Press Club on May 15, 1958, I stated:

"I have tried to be consistent on this score. When a briefing session was held at the White House in December 1957, I did not remain silent as the buy-back was discussed. On the contrary, I said frankly then to the President and to his assembled advisers that this proposal looked to me like an effort to bail out Walker Cisler and his Detroit Edison plant now under construction at Lagoona Beach, Mich. I smelled a mouse, and sure enough when the AEC testimony was given in January, it was made clear that the AEC planned to treat domestic producers of plutonium equally as well as it treated foreign producers. That meant a $30 price to Detroit Edison for a 10-year period. Its project is still in trouble from a safety standpoint, and there are collateral financial questions. It is still locked in litigation. Yet I am convinced that the AEC Chairman, as in the Dixon-Yates controversy, hopes that someday opposition from the Joint Committee will die down and that thereafter the $30 price for plutonium may rescue Detroit Edison stockholders."

As a result of our objections last year, AEC reluctantly dropped the controversial section 55 amendments. Now this year once again AEC is coming up with what is apparently the same proposal, but with no amendments to authorize it. I have recently written a letter, dated March 13, 1959, to the AEC raising these policy and legal objections.

Here again we have the seeds of trouble. At first glance, it might appear that the administration worries about wasteful spending and its effect on a balanced budget while at the same time it subsidizes or bails out domestic and foreign power organizations. We could vigorously oppose such a program. But we also must remember that we do not live alone in the world. Britain has been our oldest and most reliable ally. I hope we may assist her without prejudicing our domestic atomic energy program.

DOMESTIC POWER PROGRAM

So much for plutonium and its relation to power. Let us now turn for a few minutes to the program at home.

You will remember that there have been two basic atomic energy acts. One was the McMahon Act of 1946 taking atomic energy from the military and giving it to a civilian commission. The other was the Cole-Hickenlooper Act of 1954, adopted after long hearings and a tough floor fight, including some 13 days of Senate debate.

During the 1954 hearings the testimony to end the Government monopoly in atomic energy and turn private enterprise loose was both lengthy and eloquent. The vice president of General Electric said: "Congress has a tremendous opportunity to unleash the forces of free enterprise and in that way insure that we lead the world."

Well, we passed the bill, but it was a little like the dramatic plea that the Generalissimo Chiang Kai-shek be unleashed so that he might invade the Chinese mainland. Chiang has been unleashed now for quite some time. But the mainland was never more secure. We unleashed a lot of power companies and if I wanted to be cynical, I might say that we unleashed them to let them make rather substantial financial errors.

GOVERNMENT FOOTS BILL

The forum memo of the Atomic Industrial Forum for March 1959, page 33, lists U.S. reactor costs based on AEC figures submitted to the joint committee. First on its list is Shippingport which is generating 60,000 kilowatts of electric energy but not due to the 1954 act. Shippingport, which is sometimes held up as a great example of private initiative at work, is an inspiring sight, as I can testify, having visited it just 1 week ago today. But Shippingport was started under the 1946 act and is a Government plant in that all but $5 million on the nuclear end comes from the U.S. Treasury and some $20 million for turbo-generation facilities from the Duquesne Power Co. The forum memo lists its 1959 costs at $73,577,000, an increase of 38 percent over the original estimate. So you must remember that of that large sum only $5 million represents the contribution of the private enterprise to the nuclear reactor proper.

I like the Shippingport plant. I like the fact that Admiral Rickover has put into Shippingport a lot of challenging ideas that eventually will bring us closer to competitive atomic power. I like the fact that he plans to step up its production pace to 10,000 kilowatts—maybe to 125,000 kilowatts, and eventually if all goes well to 150,000 kilowatts and even more. But this isn't private enterprise turned loose to run with the ball. This is your money and mine, the funds of the taxpayers of the United States invested in an attempt to see how much could be done under the McMahon Act of 1946 prior to the day that the forces of free enterprise were so dramatically unleashed. Perhaps this is why Shippingport is sometimes the object of a slander campaign designed to indicate that its power is expensive because it was Government-sponsored.

LOSSES SUBSTANTIAL

But let's take a peek at what happens when you unleash private enterprise in this field. Just outside of Chicago, Commonwealth Edison is building the Dresden plant. It is being built as a turnkey job to cost $45 million, of which Commonwealth Edison puts up $30 million and various other companies interest in research will put up $15 million. But rumor has it that there may be some substantial losses on the $45 million figure. In a talk with a manufacturing executive, I estimated the loss at $15 million, and his reply was that I wasn't close to the final figure that General Electric—the builder of the plant for Commonwealth—will have to budget, that the loss will be much larger.

At Indian Point, N.Y., Consolidated Edison of New York is building a plant which will have a capacity of more than 200,000 kilowatts, not all of which will be atomic. The forum memo shows the original estimate as $55 million. By 1958, the estimate reached $90 million. More recent testimony was that the cost has been moved up to $100 million. Only last week I got a private estimate that the cost will go far beyond that because not all the development has yet been done. The introduction of thorium has presented some perplexing problems, and the increase over the original estimate of $55 million may more than double the original figure when all the expenses are totaled.

Many of us on the Joint Committee feared these increases and delays might happen and said: "Let the Government build the first generation plants. Let it test out the concepts and the theories. Let it find out how these devices perform, exactly as it did when, in the military reactors, we built a land-based prototype of the powerplant of the *Nautilus* and tried it out before we developed the plants for the *Nautilus*, the *Skate*, and the *Skipjack*."

GOVERNMENT AID NOT FORECAST

But every time we suggested the route of caution and the procedure of proving out the advance steps by Government construction, we were challenged to let private industry "go it alone."

When the Detroit Edison reactor was being considered, the Joint Committee was told: "We do not expect any financial appropriation to the project." Later on there was a suggestion that the Government finance some work in Government laboratories and thereby make a contribution to the project. But there followed these words: "If the Government is unwilling to make this contribution some of our scientists are willing to go it alone."

Let me use as an example the testimony of Charles B. Oakes, then President of the Pennsylvania Power & Light Co., in the 1956 hearings when the private utilities were doing their best to beat the Gore-Holifield bill.

"Industry" Mr. Oakes assured us, "is moving just as fast as it can * * *. What I am saying here is that the public utility industry is prepared to do this job, and under those circumstances the Government of the United States should not intervene." Intervene? All the Government wanted to do was help—not hinder.

RESEARCH AND DEVELOPMENT FUNDS PROVIDED

Mr. Oakes, of course, was talking about private construction of a homogenous reactor to forestall AEC construction of such a plant. The fact remains that in 1958 Pennsylvania Power & Light was back asking for research and development money. Even though there had been rather adverse testimony a couple of years before, the joint committee reported out legislation authorizing the special research and development money and it was included in proper appropriation bills. After all that and within 4 or 5 months of our hearings, Pennsylvania Power & Light Co. gave up the project on financial and technical grounds. Can you imagine what would have been said about us if we had held back the money? That would, of course, have given aid and comfort to those who would have contended that we were trying to pass bills to put the Government in the business of constructing

these reactors when private industry was ready, willing, and able to do it.

I say that because members of the Joint Committee, particularly on the Democratic side, always have to face the charge that there is something a little socialistic about their zeal to have the Government build these experimental prototype reactors which we know are not commercially attractive or economically feasible. The former Chairman of the Atomic Energy Commission, the current Secretary of Commerce, Lewis Strauss, spoke on September 18, 1957, at the dedication of a research center for the U.S. Rubber Co., of which he was a director for a generation. He stressed the need for "faith in the preservation of our American system of free enterprise. This is the winning of the cold war that has been going on within our own country for years."

UTILITY CUSTOMERS PAY COSTS

"Make no mistake about it," said Admiral Strauss, "this threat is a serious one. There are people who are politically dedicated to the encouragement of socialist projects." I break in there to remind you that there will always be talk of socialism whenever the Government construction of prototype reactors, and even second generation reactors, is under consideration. That is what Admiral Strauss was shooting at, those of us who believe that it is no favor to Consolidated Edison of New York or its customers who in the end pay the costs of the Indian Point Reactor in their rate structures to have the project scheduled to cost $55 million and have it in the end cost $150 million. We don't think it is any favor to General Electric, Bechtel, and the other firms participating in the Commonwealth Edison reactor, to have a turnkey job at $45 million which eventually costs $75 million, and we don't think it is socialistic to say so, Mr. Strauss to the contrary notwithstanding.

I now go back to his statement: "There are people who are politically dedicated to the encouragement of socialist projects," says the admiral, "and their continual election to office evidences that public support exists for such misguided economics. Unless continually fought, the battle against socialism can be lost here within the United States. I do not think we have lost any recent ground to this doctrine." Admiral Strauss could say that in 1957 because we had not then held the election of 1958. But when the smoke had cleared away after the 1958 election, he could see what happened from Ohio to Wyoming, from Connecticut to California, a double amputation in the Republican Senators from West Virginia, all over the map where Republican candidates for Senate and House had to pay for the talk that Strauss and company threw into the 1958 campaign about socialism in atomic energy.

But I must return to Admiral Strauss and his speech: "I do not think we have lost any recent ground to this doctrine, but its proponents are vigorous, intelligent, ruthless, and indefatigable. If we intend to maintain the system that made us prosperous and great, we leave this sector undefended at our peril."

GAS-COOLED REACTOR CONSTRUCTION

What sector was he talking about? Well, I suppose he had in mind the proposal of the Joint Committee on Atomic Energy that, in addition to the plutonium reactor at Hanford required for our national defense, provision be made for the construction of a gas-cooled reactor. This is a long story, but you need to know a little of its history.

The Joint Committee, after considering gas-cooled reactor proposals since 1956, finally got a study project authorized in 1957 over AEC opposition.

The study was contracted to Kaiser-ACF and they prepared a design report. AEC then requested authorization of $51 million of this type reactor for detailed design and construction and it was included in the AEC authorization for fiscal 1959 on which hearings were held early in 1958.

At that time, during May and June 1958, there were rumors that a new combine would come forth and offer to build a high-temperature gas-cooled project to replace the Kaiser-ACF design. Time will not permit me to read page after page from the testimony developed June 4, 1958, but the conclusion of the spokesman of the AEC was that industry would not want to come in under the private demonstration program on a gas-cooled reactor, and a definite commitment for the Government to go ahead in case industry did not come in was then and there made.

DIFFERENT TYPES PROPOSED

On November 21, 1958, the last day under the law, a group of 52 utilities headed by Philadelphia Electric and including representatives of General Dynamics, submitted a proposal for a high-temperature gas-cooled prototype of a different design from the Kaiser-ACF type.

We do not plan a seminar on reactor design tonight, but I must spend a moment on these two ideas.

The British have gas-cooled natural uranium reactors now operating at Calder Hall. They are reasonably successful. Let's call them the first generation of the Calder Hall type.

The British are now building an advanced Calder Hall type, a second generation. It, too, is gas cooled but uses slightly enriched uranium. We see the British selling a nuclear plant to Japan, and we want to see our manufacturers and workmen have a chance for world business. So the Joint Committee made the proposals I have mentioned, and they led to the Kaiser-ACF studies.

But the British have a third Calder Hall type—a third generation. This is purely in the design stage there. It will use enriched uranium and work at higher temperatures, which should increase its efficiency. Many things about it remain to be tested, but it could give power costs nearly competitive in England with coal- and oil-fueled types, maybe actually so. We want to watch that closely, and General Dynamics, Philadelphia Electric, 51 other utilities and the AEC want to build it with the Government putting $14½ million into its research and development and writing off $8½ million more by the tax route, a total of $23 million out of a total cost of just under $40 million.

POWER GENERATION BASES ISSUE

Maybe we ought to build them both—the Kaiser-ACF design and the General Dynamics-Philadelphia Electric project—but it isn't just that simple. The AEC has talked of reducing the $51 million already authorized for the Kaiser-ACF reactor to $30 million, eliminating the prototype aspect by building it in a much more experimental manner, and leaving out all but a nominal amount of electric power. Simultaneously it would take $14.5 million of the $21 million so saved and give it to the General Dynamics-Philadelphia Electric Co. for research on its project which the British feel is a little too risky for them to construct now.

That is all there is to the controversy. Should the Government now go ahead and build the Kaiser-ACF experimental prototype as originally authorized by the Congress even though it has some power connected with it and might scare some private utility, or should it put the Kaiser-ACF study virtually on the shelf by making it far more experimental, and making sure that no power is generated which the Government might have to utilize in one of its installations?

I think the situation is easy to understand. The AEC did not get a proposal by November 21 for the construction of the type of reactor contemplated by the congressional act signed by the President. Never mind whether the General Dynamics-Philadelphia Electric proposal is good or bad. There still remains the obligation under the law to proceed. The General Counsel of the AEC on January 2, 1959 said that the General Dynamics-Philadelphia Electric proposal did not qualify under the criteria set forth in the law. Why did not AEC proceed on the Kaiser-ACF proposal that day, or the next, or the week following? Why are we—2 months later—stalled on dead center with the joint committee being asked to retreat from its former position, which it established only after three or four vigorous floor fights?

I understand that AEC may be undergoing a change of heart on the Kaiser-ACF concept. Apparently they may be willing to go ahead after all with the original project if we are willing to cut down on electric power production somewhat, and not call it a prototype. At this moment, we are not so concerned with semantics as we are with compliance with the law. Again, I have hope.

AEC PROGRAM "TIMID"

From what I have told you thus far, it should be clear that AEC moves slowly with Government construction of prototype atomic power plants. In lieu of such a program the Commission has proposed a continuation of its power reactor demonstration program, with increased financial assistance to private organizations. This type of program has lagged rather badly in the past, and the AEC program for 1960 of financial assistance for two or three small prototypes has been characterized by my colleague ALBERT GORE as being somewhat timid. CHET HOLIFIELD, chairman of our Subcommittee on Legislation, who is now known as the "First Chef" of our legislative kitchen, characterized the AEC program in the same vein.

I would like to emphasize that we aren't making these comments just to be critical. We are in dead earnest that U.S. leadership in atomic technology is in process of being seriously threatened. AEC estimates that by the end of 1963 we will have less than 1 million kilowatts of atomic power plants, whereas England will have three times that much. It appears that the Soviet Union will also have 2 million to 3 million kilowatts by that time with considerable diversity.

Moreover the pattern that is developing in the United Kingdom and the U.S.S.R. is in marked contrast to the program AEC is recommending here. In England in their expanded program, they are constructing large-scale reactors of up to 250,000 kilowatts per reactor and 500,000 kilowatts per station. In Soviet Russia they are also apparently constructing large reactors up to 200,000 kilowatts per reactor and 400,000 kilowatts per station.

What is the American public going to say about this situation if we find ourselves in 1963 a second or third rate competitor in the field of atomic power and technology? Where are the plants coming from after 1963? To exist then, they have to be put on the drawing boards in the next year or so.

THE 1960 PROGRAM

It is for the above reasons, plus the fact that our own energy needs will require atomic power in the 1970's as a supplement to conventional fuels, that some of us in the joint committee have supported an accelerated atomic power program. For fiscal 1960, in addition to the projects proposed by AEC, I believe we should consider the following projects:

1. AEC construction of 1 or 2 experimental power prototypes at AEC sites with the power to be absorbed at the site (these

projects might include a natural uranium-heavy water prototype and an organic prototype);

2. AEC support of 1 or 2 large-scale or intermediate-size second or third generation power plants under the power demonstration program utilizing differential construction grants on a trial basis;

3. Extension of the second round power demonstration program to include one or two small or intermediate-size second or third generation plants. (The plants under two and three might include boiling and pressurized water reactors.)

4. Authorization of several additional design studies of promising reactor types.

In addition to the civilian atomic power program, we shall of course be concerned with civilian ship propulsion reactors, the naval reactor program so ably directed by Vice Admiral Rickover, and the aircraft nuclear propulsion project which Mel Price and the rest of us would like to get off the ground.

LONG-TERM PLANNING

The problems and shortcomings I have discussed so far have been of a short term nature. They cover what is and should be happening in the next year or 2 or the next 5 or 10 years at the most.

But man does not live by bread alone. He has to dream, and indeed he has to plan and forecast ahead if he is to avoid his bread being overly radioactive.

I have felt for some time that the joint committee should sponsor a long range survey of advanced applications of atomic power for the period up to the year 2000. Such a survey would consider such advanced ideas as controlled thermonuclear power, the direct conversion of heat to electricity, atomic power for outer space propulsion, the utilization of solar energy, and the like. I hope to get this survey under way in the 86th Congress, and it may just possibly be the most productive effort we undertake.

NEED FOR LEADERSHIP

All of the problems and issues I have discussed with you revolve in one or another on the matter of leadership. The laissez faire system unleashed by Mr. Strauss in 1954 has not provided the results hoped for, and has been abandoned by the AEC. It remains to be seen whether the AEC-directed small prototype program can be successful. Their policy of inviting proposals in all cases from industry would seem to entail all the hasseling and delays which have plagued the program in the past.

I hope the Commission and its new Chairman will see the light and try to get the program on the track again. We on the Joint Committee are anxious to cooperate in any way possible. But AEC must learn, as we have learned, that cooperation is a two-way street, and that there has to be some give as well as take.

In any event the Joint Committee, through its majority and, I hope, with the support of the minority, is ready in the 86th Congress once again to provide the leadership which is the biggest gap in the atomic power program of the United States.

AN INDEPENDENT SUPREME COURT

Mr. KUCHEL. Mr. President, "We cannot permit the Supreme Court's independence to be undermined by direct or indirect assaults. Nor can we stand by and let the Court suffer for its declaration of some of the finest values in American life; for its recognition that the declared standards must be lived by; for the reaffirmation of the integrity of the individual; and that the State is required to treat its citizens with equality. We should be proud to support and defend each additional step toward the day that man shall be judged in accordance with his intrinsic worth as a member of the family of God."

Mr. President, those sturdy words were used by a distinguished American lawyer, the Solicitor General of the United States, the Honorable J. Lee Rankin, in closing an excellent address on March 13 before the Pittsburgh regional meeting of the American Bar Association. Solicitor General Rankin's address is entitled, "An Independent Supreme Court." It ought to be read by the Members of the Congress; it ought to be read by the lawyers of America; indeed, it ought to be read and studied by all citizens. The excellent and vigorous logic with which the Solicitor General has courageously answered the intemperate abuse by some of the U.S. Supreme Court ought to invigorate and restore the faith in that venerable institution which it merits.

I ask unanimous consent that the text of the address be printed in the body of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN INDEPENDENT SUPREME COURT

(Address by Hon. J. Lee Rankin, Solicitor General of the United States, before the Pittsburgh regional meeting of the American Bar Association, Pittsburgh, Pa., March 13, 1959)

If we did not have a Supreme Court today we would have to create one or our basic freedoms would rapidly disappear. But despite this fact a favorite sport of the day is to attack the Court. It is the target of a rare combination of dissident groups who have found common ground in their displeasure with decisions in their fields of special interest. Segregation is the particular rallying point at the moment but the complaints cover limitations on congressional power in congressional hearings,[1] restrictions on dismissal of Government employees in security programs,[2] prohibition against punishment by States for sedition directed against the United States,[3] denial of power to discharge an employee for claiming privilege against self-incrimination before congressional committees,[4] and determination that a State cannot draw unfavorable inferences from a mistaken but honest refusal to answer relevant questions in a proceeding for admission to the bar.[5]

It is not a new development to find the Court the center of such assaults. Throughout our history it has been near the storm center.[6] The very nature of its work requires it to pass upon questions of great sensitivity to interested groups of citizens. Since passions are easily aroused in such matters, a slight shift in course may move the Court out of the eye of the hurricane and precipitate it into the whirling vortex.

A brief reference to our history reveals periods of disenchantment with the Court by persons from various sections of the country. These complaints date back almost to the founding of the Union. When the Court held, in 1793, that a State could be sued by a citizen of another State,[7] the States were aroused because many of them had outstanding obligations which were delinquent. Georgia's Legislature promptly prohibited collection of the judgment against it and the clamor subsided when the 11th amendment was passed to prevent any further suits against a State in Federal courts by citizens of another State, or a citizen of a foreign state.

In 1798 Virginia and Kentucky were stirred up by the alien and sedition laws, and anticipating that the Court would uphold the acts, Madison, and Jefferson and John Breckenridge, together, anonymously drafted the resolutions against the Court for the respective States.[8] In the Virginia resolution Madison made the first reference to the doctrine of interposition. There he expounded the idea that each party (the State and Federal Governments) had the power to judge for itself as to excesses in governmental action and to determine the measure of redress.

When the Court, in 1816, decided that it had the power to review the action of the supreme court of a State[9] there was little immediate reaction. However, between 1821 and 1862 there were at least 10 bills introduced in Congress to deprive the Court of such jurisdiction in whole or in part.

South Carolina defied the Federal Government and incidentally the Court with its nullification ordinance on November 24, 1832, specifically directed against the Tariff Act of 1828 after the decision in the second Cherokee case. Then it was disappointed when its native son, Andrew Jackson, did not take his part in the dispute. However, soon after that the legislature declared the tariff null and void and forbade Federal agents to collect it, and Jackson met this action by the Force bill of 1833 conferring protective jurisdiction on the Federal district courts and threatened to place warships in the port of Charleston. After a compromise tariff South Carolina withdrew its nullification statute.

It was not merely in the South or Border States that we find this opposition to the Court. In the North, in 1809, the Pennsylvania Legislature defied the Federal Court's ruling as to the ownership of a sloop claimed by the State.[10] The marshal was prevented by State troops from serving the process of the Court and the grand jury indicted the commander of the militia.

Madison's response to the Governor's letter was:

"The Executive of the United States is not only unauthorized to prevent the execution of a decree sanctioned by the Supreme Court of the United States, but is expressly enjoined, by statute, to carry into effect any such decree where opposition may be made to it."[11]

Although State troops were withdrawn, the general was convicted, but his sentence was remitted to 1 month by President Madison.

President Eisenhower expressed his recognition of the responsibility of the Chief Executive in a similar manner with regard to Little Rock.[12]

The War of 1812 with its embargo on shipping produced the same kind of anti-Union sentiments in New England that supported

the South Carolinians in 1832 and in fact the first secessionists were the New Englanders. Conflicts became so bitter at times that Marshall indicated his discouragement in writing to his friend Story in 1832, saying:

"I yield slowly and reluctantly to the conviction that our Constitution cannot last. * * * The Union has been prolonged thus far by miracles. I fear they cannot continue." [13]

Of all resistance movements the most violent reaction in the North was caused by the fugitive slave law and the Court's decisions relative to fugitive slaves.[14] The people were aroused by the convictions of abolitionists in Federal courts but these were nullified by habeas corpus proceedings in State courts. When the Court held the State courts were exceeding their authority,[15] the opinion was vigorously denounced.

At the time of the Dred Scott decision in 1857 [16] the claim was made that the Court's action was one of the principal causes that brought on the Civil War. Many historians believe that that conflict was inevitable in view of the positions of the North and South but there is no question that the decision largely reduced the reputation and standing of the Court for many years. The effect was so substantial that in the period between 1860 and 1870 the independence of the Court was more seriously threatened than at any time since Jefferson. Historians now recognize that this result was in a considerable measure caused by the continuous assault on the Court that was maintained for 9 years before the decision, for the purpose of reducing its influence in the anticipated graver controversy over slavery.

The Civil War brought a brief respite during which the country was engrossed with that conflict. Shortly after the war was over, however, the Court proved to be a cohesive force and a conciliatory means when it held unconstitutional as bills of attainder and ex post facto laws both State and Federal test oaths of past loyalty as conditions to the practice of the professions.[17]

From this time on until recently the nature of the opposition shifted so that it came from groups having a common interest rather than from sections of the country. Organized labor fought against the labor injunction,[18] and during the New Deal in 1937 the Court-packing plan failed of enactment when the trend of Court decisions changed and public opinion did not support the plan.

This is a summary review of some of the storms that have beat about the Court prior to this one. The present high winds of opposition are probably one of the more violent attacks and the gale which started this was the segregation cases.

In considering those actions it is helpful to examine the choices open to the Court. The provision of the Constitution involved was the application of the following portion of the 14th amendment:

"Nor [shall any State] deny to any person within its jurisdiction the equal protection of the laws."

What meaning was to be given this language in the context of these cases? Was it to be what the draftsmen had in mind at the moment of adoption, and if so, who were the draftsmen? Or is the sense to be given it by those who have to make the determination today, under present conditions, but in the light of the broad purpose of the amendment? Was the interpretation one to be made in the light of the classic statement by Chief Justice Marshall: "* * * it is a constitution we are expounding"? [19] And does that include applying it as a charter of government that is expected to last through the ages? If the latter is the correct application the Constitution must have an inherent ability to grow with the law.

Some parts of the Constitution deal with historical terms like "attainder of treason," "corruption of blood," "letters of marque and reprisal," and "infamous" as applied to crimes, and, therefore, we must seek their meaning in history. Others such as "due process of law," "regulate commerce with foreign nations and among the several States," and "the general welfare of the United States," and words like "liberty" and "property" express broad concepts and standards that cannot be so limited or confined but must be recognized as involving growth factors if the Constitution is to serve an evolving and dynamic country. For the Constitution to be a living organism we must assume that the meaning of its provisions shall be gained from "their origin and the line of their growth" as Justice Holmes said.[20] As Judge Hough said about the due-process clause, these expressions are of "convenient vagueness." [21] They require the Court to put meaning into the Constitution and not to take it out.

Obviously, the significance of such an approach to interpretation is vital to our national development. It is a mere formality. Such constructions are quite distinct from mathematical formulas which have their essence in their form.

Turning again to the amendment it is clear that the language—equal protection of the law—was born out of the concern for elimination of racial discriminations.[22] It was developed primarily to meet anticipated State action that was expected to be discriminatory because of race. Any interpretation that was to have validity would have to recognize this basic consideration. In addition, the amendment as it applied to racial discriminations had had a significant line of growth when the segregation cases reached the Court.

It had already been recognized that although service on a jury was a duty rather than a privilege, it was within the clause.[23] Municipal zoning laws on a racial basis, while providing equally for exclusion of whites from Negro sections of a community and colored from white areas had been forbidden.[24] The Court had held that under the 15th amendment in primary elections there must be a nondiscriminatory suffrage despite the claim that primaries were private affairs and not State activity.[25] And when education was examined in a group of cases where colored persons sought entry into State-supported universities, it was determined that they were entitled to admission and the petitioners were within the equal protection guarantee.[26] In each of the latter cases it was accepted by the Court and the parties, including the State concerned, that the educational provisions made by the State had to meet the requirements of due process of law and equal protection of the laws declared by the 14th amendment. It was not seriously thought or believed that because education is primarily a State responsibility, it could be carried on in a manner contrary to the 14th amendment. For otherwise even the so-called separate but equal doctrine would have been an infringement on State rights.

Each of these cases was earnestly and strenuously contested and although the result may now seem to have been clearly indicated, the outcome at the time was not obvious. However, the development of the equal protection doctrine was manifest to the careful observer.

When the segregation cases reached the Court, three lines of decision were open to it. One was to apply the old separate but equal doctrine and declare in 1954 that segregation by law was consistent with the national understanding of legal equality. But in any event such an application of the rule would require that it first be reexamined under the theory that interpretations of the Constitution are not automatically foreclosed by stare decisis. This principle is based on the assumption that such holdings cannot be readily corrected by the legislature and should be reexamined from time to time in the light of later experience, greater wisdom, and understanding.

It can hardly be assumed that such a construction would have been accepted by the Nation even if some way could have been found to reconcile it with the decisions referred to. The conscience of a great people could not be denied so easily. It is also difficult to imagine how we could have justified such a judgment to the peoples of the world after repeated claims that under our law citizens have equal rights and that we have no second-class citizenry.

A second approach would have been to say that the cases involved a political question to be determined by the Congress under its power to legislate as provided in the amendment. This course would not only be evasive but also would have been a sharp departure from the practice of the Court in 14th amendment cases. It would, in addition, have been contrary to the established law, since for 75 years Congress had left it to the Court and the Court had undertaken to develop the content of the equal protection clause.[27]

The third solution is the one the Court followed.[28] It is assumed the responsibility, applied the experience it had and the developed law and concluded that since "education is perhaps the most important function of State and local governments" and the "very foundation of good citizenship" where the State undertakes to provide it, the "right * * * must be made available to all on equal terms." It proceeded to declare that separation of children in the educational process from others of their own age and qualifications "because of their race generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone." The Court concluded by saying that "Separate educational facilities are inherently unequal," and are in viola-

tion of the equal protection of the laws guaranteed by the 14th amendment.

The Court was unhurried in arriving at its decision and the disposition of the cases. It requested two arguments and extensive briefs before it arrived at the unanimous determination that separate public schools because of race was a violation of the equal protection clause. Additional argument was had before the Court proceeded to the decree stage.[29] In the relief ordered it carefully provided for the local Federal courts to pass upon proposed plans for desegregation according to equitable principles. It directed the lower courts to require a prompt and reasonable start and after that provided that they might find some delay necessary when it was affirmatively shown to be required in good faith compliance. The lower courts were instructed that with regard to allowing additional time they might consider problems relating to the physical condition of the school plant, the school transportation system, personnel, revision of school districts, and attendance areas into compact units to achieve a system of determining admission to the public schools on a nonracial basis and revision of local laws and regulations which may be necessary in solving those problems.

The courts were also directed to enter such orders and decrees as were necessary and proper to admit to public schools on a racially nondiscriminatory basis the children involved in the cases with all deliberate speed. They were enjoined not to allow the "vitality of these constitutional principles * * * to yield simply because of disagreement with them."

Much speculation has resulted as to what the Court intended by the expression "with all deliberate speed." It was not the first time that that phrase had been used by the Court, since it had been relied upon in other cases. The phrase "with all deliberate speed" did not originate, of course, in the opinion of May 31, 1955. This classic phrase, derived from the English courts of chancery, is traditionally used by courts of equity in fashioning decrees to meet the needs of justice in cases before them where flexibility and adaptability to varying circumstances are required.[30]

Thus the Court demonstrated thorough study and reflection, a keen appreciation of the sensitivity of the issues, and a thoughtful selection of a plan for their solution. There was nothing precipitate about its action although there could also be no uncertainty about its conclusions or the relief that was accorded under the Constitution.

Let us turn now to the problems of implementation. Actions in Little Rock, *Aaron* v. *Cooper*,[31] proceedings and developments in Virginia,[32] are common knowledge which we all obtained from the daily press. Recent count discloses that out of some 2,800 school districts which were segregated prior to the *Brown* decision about 800 are either partially or entirely desegregated. There still remains many areas where nothing has been done.

I would not suggest that desegregation will be accomplished by positive law alone. But there are other powerful forces at work. Religious groups have generally taken positions actively supporting desegregation on moral grounds. Business and other economic interests are showing alarm at the adverse effects experienced and anticipated as to industrial and economic growth and development in areas of resistance. Citizens generally have become fearful of the possibility of attempts to destroy public education as a countermeasure and all that that prospect means to a community. Youth is demonstrably ready to adjust quickly to the necessary changes in most cases.

All of these groups acting with good will are at work outside the area of mere law to try to achieve as easy a transition as possible. There is confirmation in experience that compliance does produce a successful changeover and may, in improving the Negroes' status and self-respect, eliminate other problems.

However, the people with the greatest interest in and influence upon, and to be sure the largest stake in the successful resolution of this issue according to law, are southerners. They cannot afford to abandon the phenomenal progress the South has made in recent years—a modern industrialization that is only partially achieved. In the competition between various sections of the country for people, investments and business growth the South cannot be content to abandon the program that it has undertaken along with the rest of the Nation to train its people for their greatest capabilities as well as the responsibilities of citizenship, in a system of public schools.

The leaders of the South who have vision and wisdom will keenly appreciate that regardless of its wealth in natural resources, incomparably the greatest assets of the area are the children, both white and black, who with or without the educational experience which is their due will be the citizens of tomorrow. It is difficult even to imagine at this late date in the 20th century the abyss into which a community could sink if it failed to provide public education within its means, to develop its citizens to their full capacities.

The whole problem also cries out for assistance from those not directly involved. The men and women courageously engrossed in the effort to implement these decisions need moral support and leadership. And in this vital task the bar can play an important part. Others must have an awareness of the grave difficulties involved in such a fundamental break from past practices and that it requires an active encouragement of all genuine and peaceful action for its achievement. Success will demand a realization of how necessary the change is to the preservation and progress of the South, and in addition, and, in at least like degree, a warmhearted sympathy for the suffering necessarily involved in the tearing out and replacement of such a deep-rooted custom.

However, returning to the Court, we must be vigilant that we guard against the indirect effects upon its independence by the current onslaught. Independence is primary in the administration of justice and we can never be too watchful in protecting it. We would be shocked to learn that the Court had been reached by bribes or other approaches by interested parties either within or outside the Government, but long continued, public attacks may cause an even more serious damage to the Court although it be an insidious and indirect effort to affect its judgment.

Justice gains her sustenance from a serene confidence that truth revealed will ultimately prevail. In examining the Court's work we lawyers readily forget that the public tends to equate law with morality. But any careful study reveals that censure is often directed at the Court for its sensitivity to the protection of the rights of the individual and its recognition in effect that moral principles are involved. But, may I suggest that that is one of its principal and indispensable functions. Our Constitution was conceived as an instrument to not only establish a government but to put into writing certain guaranteed rights of the people. Many of the amendments were adopted so as to further reinforce and make explicit that purpose. Obviously the Court would do us a great disservice if it tended to interpret those rights away.

These are heroic times and man is engaged in a period of not only historic thoughts, but orbital enterprises. From medieval times when he dreamed of the lunar system he has progressed to where he now plans to make a trip to the moon. His opportunities and prospects in almost all fields of endeavor are on a comparable scale. His knowledge of fissionable materials vastly increases his power to do good or evil. With such rapid developments involving great aggregations of capital, associations of labor and huge government, the individual never needed more the protection of his freedom by an independent Court.

Our profession has special knowledge and should have singular understanding of the very difficult questions the Court is called upon to decide, almost continuously. I urge you when you consider and then comment upon the Court's decisions that you keep before your mind's eye the protection that there is for individual rights in our opportunity to appear before the bar of the Supreme Court of the United States in their defense. As Justice Brandeis said: "What we must do in America, is not to attack our judges but to educate them." That principle especially applies to all those who purport to be learned in the law.

The layman cannot fully realize how much the Court means to the preservation of his freedoms and his fundamental rights. But we who labor in the law know that our responsibility for the defense of the Court is therefore incomparably greater. We cannot permit the Supreme Court's independence to be undermined by direct or indirect assaults. Nor can we stand by and let the Court suffer for its declaration of some of the finest values in American life; for its recognition that the declared standards must be lived by; for the reaffirmation of the integrity of the individual; and that the State is required to treat its citizens with equality. We should be proud to support and defend each additional step toward the day that man shall be judged in accordance with his intrinsic worth as a member of the family of God.

THE PRESIDENT'S DECISION TO IMPOSE OIL IMPORT QUOTAS CAN IMPERIL RELATIONSHIPS WITH CANADA

Mr. NEUBERGER. Mr. President, I wish to add my voice to the protests being made against President Eisenhower's decision to impose oil import quotas. I also desire to emphasize an additional reason why the decision of the President is highly unwise.

This decision complicates our already delicate relations with our closest ally, Canada. We of the Pacific Northwest are extremely conscious of these relationships. We share with Canada the continent's major source of hydroelectricity, the Columbia River. We are dependent on friendship with Canada to use that mighty river in the economic interest of both nations. Canada could divert the Columbia, which would be disaster to us.

Yet, the administration has disturbed and offended Canada by imposition of oil import embargoes. Already the Canadian Government has expressed grave concern over the action of our Government. Do we not jeopardize mutual use with Canada of the great Columbia, Yukon, and St. John Rivers when our Government takes action which cripples Canada's oil industry?

I ask unanimous consent to have printed with my brief remarks a thoughtful and vigorous editorial from an independent Republican newspaper, the Oregonian of Portland, for March 12, 1959, which, likewise, protests against the President's imposition of quotas and bans on oil imports. The title of the editorial is "Ike Takes Sides On Oil."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IKE TAKES SIDES ON OIL

With his new order controlling oil imports to this country, President Eisenhower has taken sides on a most controversial question involving the proper use of America's petroleum resources. He has allied himself with those who would accelerate the development of our own domestic oil reserves, as opposed to those who would let much of America's oil lie underground while taking advantage of the opportunity—which may not always be with us—to bring in oil from the Middle East, South America and Canada.

There are good arguments on both sides of this debate. The President evidently was most impressed by those who told him unlimited imports of cheap foreign oil were hurting the independent oil producers in Texas, Oklahoma and California. If there is no incentive to search for new oil fields in this country, he was told, the Nation might be in a dangerous situation if war suddenly should shut off oil imports. Also, the U.S. coal industry has been hit hard by competition from foreign oil for industrial furnaces.

On the other hand, resource conservationists believe it makes sense to save America's oil for a rainy day. They are joined in this by large, international oil companies which have heavy investments in foreign oil fields and tanker fleets. There is the delicate matter, too, of diplomatic relations with the oil-producing countries. Cutting down their income from oil sales to us won't help our popularity in Canada and Venzuela.

While the President's order cuts crude imports about 25 percent, it slashes the import of gasoline and other refined products more sharply. This may have a considerable effect on gasoline prices, which already are showing an upward trend despite heavy stocks of gasoline now in storage. Producers say recent wage increases for refinery employees, plus the extra cost of turning out the higher octane fuels needed for modern auto engines, mean an inevitable rise of a half cent to a cent-and-a-half a gallon at the service station pump this spring. If refiners must use higher-priced domestic oil, this will add another inflationary factor. Yet motorists already are unhappy about the existing gasoline price level.

President Eisenhower's proclamation says he has directed the Office of Civil and Defense Mobilization to keep an eye out for price increases, and inform the President "whether such increases are necessary to accomplish the national security objectives of the proclamation."

The response to the President's decision has been just as one would expect. Congressmen from States with oil and coal fields have hailed it. Spokesmen for oil companies with heavy import programs have been critical of it. If the cost of running the family car and heating the family house goes up because of the President's order, he may hear an expression of opinion from the public that he has picked the wrong side of the argument.

AMBASSADORIAL APPOINTMENTS

Mr. DIRKSEN. Mr. President, like Will Rogers, all I know is what I read in the newspapers. I read a little squib in a local paper which reports on a meeting in Washington of the Workshop for Religious Liberals. I cannot mention the gentleman's name who made the speech quoted, because he is a member of another very distinguished deliberative body, but I notice in discussing politics as usual, he is quoted as saying:

Under "politics as usual," (he) accused the administration of selling ambassadorships for campaign contributions filling the State Department with "incompetent schedule C political appointees"—

And so forth. I shall ask to have the clipping printed in the RECORD, Mr. President, but I thought I ought to make a comment or two regarding it.

Mr. President, ever so often when a noncareer ambassador is appointed and generously publicized, it has become a favorite indoor sport to place the emphasis on the appointee's wealth, if he is wealthy, and make it appear that this standing by itself is a disqualification for foreign service.

If that were true, one would be compelled to conclude with respect to those appointed under prior administrations that they also were disqualified and were mere political appointees who were favored because of contributions to the party.

I believe the record will show that in 1936 diplomatic appointees contributed $170,575 to the Democrat Party coffers and contributed $74,337 to the committee in 1944.

I allude to the matter because the distinguished chairman of the Senate Foreign Relations Committee [Mr. FULBRIGHT] did say that—

Some (of) our ambassadorial appointments have not been up to the standard that should be maintained if our interests abroad are to be fully promoted.

It is, therefore, well to look at the record; and I believe it is quite outstanding under this administration.

There are a greater number of career diplomats serving in key positions today than ever before, and that is not only true of our missions abroad, but in the State Department as well. Of the 18 statutory State Department positions requiring Senate confirmation, 10 are filled by career persons and 8 by noncareer appointees.

An examination of the noncareer diplomatic appointments indicates that in this group also persons of high caliber and competence have been selected.

Four have served in Congress. They are Richard Wigglesworth, of Massachusetts, with whom I served on the House Committee on Appropriations, who is now our Ambassador to Canada; Walter C. Ploeser, of Missouri, with whom I served in the House, who is now our Ambassador to Paraguay; John D. Lodge, with whom I served in the House, now our Ambassador to Spain; and Clare Boothe Luce, with whom I also served in the House, who has served with distinction in Italy and is the President's appointee as our Ambassador to Brazil.

Let us consider other noncareer appointees also, and take note of the number who have had previous diplomatic or other experience to qualify them for the service which they now render.

The list includes David Bruce, Ambassador to Germany, who served in that capacity as our representative in Paris; Joseph S. Farland, our Ambassador to the Dominican Republic, who was a former Military Governor in Korea; Walter Howe, our Chilean Ambassador, who was director of our Economic Mission there before appointment as Ambassador; Amory Houghton, now serving in Paris, who was Deputy Chief of Mission for Economic Affairs during World War II.

Ambassador James M. Langley in Pakistan was chairman of our trade negotiations with the Philippines in 1954.

John Hay Whitney, Ambassador to Great Britain, was special adviser on public affairs to the Secretary of State before he became Ambassador.

Philip Young, representing us in the Netherlands, discharged high responsibilities in the Office of Lend Lease of the Foreign Economic Administration.

James D. Zellerbach, our Ambassador to Rome, had a splendid record as chief of our economic mission in Italy.

Robert Hill was our Ambassador to Costa Rica and El Salvador before he was sent to represent the United States in Mexico City. I think nearly every Member of the Senate knows of the real diplomatic attainments of Bob Hill.

Francis White, our Ambassador to Sweden, was for many years a career Foreign Service officer, and was once Ambassador to Mexico. Ambassador Philip Crowe, appointed to represent us in the Union of South Africa was former Ambassador to Ceylon and also served in China.

Ellsworth Bunker, our Ambassador to India, served in the Argentine and also in Italy.

Thomas E. Whelan has been Ambassador to Nicaragua since 1951.

Then there is a person we affectionately know as "Whitey" Willauer. His given name is Whiting Willauer. He was with the Foreign Economic Administration before appointment as Ambassador to Honduras.

Richard L. Jones was formerly director of the FOA Mission in Liberia before becoming Ambassador.

Val Peterson served as Governor of Nebraska and Administrator of Federal Civil Defense before appointment as Ambassador to Denmark.

Henry J. Taylor had a distinguished record as a foreign correspondent, I think for the Scripps-Howard newspapers, and then as a businessman, before assignment to Switzerland.

Scott McLeod, who is presently in America, since we have been honored by a visit of the President of Ireland, had broad experience as an assistant to the Senator from New Hampshire [Mr. BRIDGES] and in the FBI, and also in the

State Department, before appointment as Ambassador to Ireland.

I believe an examination of the background of these appointees indicates that they have the experience, the competence, and the broad qualifications which meet the high standards set by this administration for service abroad.

That many of them are Republicans certainly does not argue that they are not dedicated to the country and its best interests.

So, Mr. President, I simply say that if anyone wants to look at the record, I am only too glad to cite the record and compare it with the record of appointees in prior administrations. I believe it can be said that the Eisenhower administration has performed notable service to the country by securing the best available talent for service abroad in the interest of people and good will.

Mr. President, I ask unanimous consent to have printed in the RECORD the clipping to which I referred, as well as an article written by Peter Edson, published in the February 13, 1959, issue of the Washington Daily News, under the rather intriguing caption, "GOP Control Slim on State Appointees."

The PRESIDING OFFICER. Is there objection to the request of the Senator from Illinois?

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

REPRESENTATIVE REUSS HITS POLITICAL PRACTICES

A Democratic Congressman from Wisconsin, HENRY S. REUSS, told a religious meeting yesterday that the United States should give up two luxuries: Economics as usual and politics as usual.

REUSS spoke at the final session of a 3-day National Workshop for Religious Liberals, at All Souls' Church (Unitarian), 16th and Harvard Streets NW.

By economics as usual, he said he meant "5 million unemployed, one-fourth of our productive capacity at a standstill, and an annual growth rate in our economy of only 2 percent, compared to 8–10 percent in the Soviet Union."

Under politics as usual, REUSS accused the administration of selling ambassadorships for campaign contributions filling the State Department with incompetent schedule C political appointees, and insincerity in carrying out the reciprocal trade program.

"We kick low foreign bidders in the face," he said, "when a Republican senatorial candidate says his election depends on giving the contract to an American high bidder."

[From the Washington Daily News, Feb. 13, 1959]

GOP CONTROL SLIM ON STATE APPOINTEES

(By Peter Edson)

Much malarkey is being spread around on the question of State Department political appointees.

The underlying fact of the situation is that the Republicans still have only a slim control over the State Department, though they have been in office 6 years.

ONLY A FEW

Of the 18 top policymaking jobs in the Department organization chart, the Republicans can claim only enough to count on one hand of a normal five-fingered child:

Secretary Dulles, Acting Secretary Christian A. Herter, Under Secretary C. Douglas Dillon, Assistant Secretary for Congressional Relations William B. Macomber and Legal Adviser Wallace Becker.

Below this top rank you have to get down to the fourth level of hierarchy before you find other Republicans. Then only two are easily identifiable. They are:

Administrator of Security and Consular Affairs John W. Hanes and Deputy Assistant for International Organization Horace E. Henderson.

The other 12 out of 18 top officials in State are career diplomats like Under Secretaries Robert Murphy and Loy W. Henderson. All of them will give you an argument that they are nonpartisan, professional foreign service officers interested only in their country's welfare.

TWO HUNDRED AND EIGHTEEN KEY POSTS

In the entire State Department organization of nearly 35,000 employees, there are 218 key policy making jobs. Foreign Service officers now hold 173 of them.

The other 45 "C" classification confidential jobholders are hard to identify politically. But GOP headquarters says they are by no means all Republicans.

Ambassadorships divide about the same way. There are now 77 ambassadorial and three ministerial posts with two vacancies. The 78 filled positions divide 56 Foreign Service officers and 22 non-career political appointees. Nineteen of the latter identifiable as Republicans.

Every ambassadorial and every other presidential appointee is cleared at Republican National Committee headquarters on a pink sheet. It gives his political endorsement before the appointment goes through. This constitutes a veto power in fact, if not in name.

CHARLES M. RUSSELL, MONTANA'S CONTRIBUTION TO STATUARY HALL

Mr. MANSFIELD. Mr. President, March 17th was a great day for the Irish, but today is a great day for all Montanans and the Treasure State.

Mr. President, this afternoon we are unveiling our first contribution to Statuary Hall here in the U.S. Capitol. As many Senators know, the man being honored is Montana's cowboy artist, Charles M. Russell.

I am delighted to see the distinguished Senator from Missouri [Mr. SYMINGTON] in the Chamber. Charles M. Russell came up the Missouri River by flatboat from his native State of Missouri.

Recently I received a copy of a poem, entitled "Lasting Footprints," by Charles A. Shrewsbury, of Buffalo, Mont. This poem was brought to my attention by Mr. Mont Davey, a former Montanan, who now lives in the State of Illinois.

In honor of this occasion, I ask unanimous consent to have this poem printed in the CONGRESSIONAL RECORD as a part of my remarks.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

LASTING FOOTPRINTS

(By Charles A. Shrewsbury, Cowboy Poet, Buffalo, Mont.)

From the rugged Rocky Mountains
To the Bear Paws standing by
To the Little Big Horn River
Where with Custer brave men lie

Where the Crow fought with the Piegan
And the warring Blackfeet dwell
Lies the range that Russell rode
And Brother Van served well

Dauntless men of kindred spirit
As through life's full course they ran
Purses lean but ever open
For each loved his fellow man

Russell seeking high adventure
Made of life a gay romance
Quite content to leave the future
To the laws of fate or chance

Brother Van sought not a fortune
Nor cared he for great acclaim
He was here to spread the Gospel
In his Holy Maker's name

Often they would meet in passing
In those days of pioneers
Made a friendship that well fostered
Grew and flourished through the years

Welcomed by the half wild redman
To their hunt and to their play
Russell put them in his paintings
Brother Van taught them to pray

While the cowboy rode the ranges
With the punchers of the land
Idly painted for their pleasure
Anything that came to hand

Vividly he told the story
While they laughed around the fire
Of the bronc that came to breakfast
And aroused the camp cook's ire

Waiting for the first Chinook
Starting night guard in the rain
Cowboys shooting up the town
Wagon trains upon the plain

Men still boast, that rode with Russell
Bent with age and beard grown gray
How they watched him make these paintings
Of that lonely frontier day

Sparing not, the gay young puncher
Of the skill that he possessed
To perpetuate forever
The drama of the West

His pictures hang in hallowed halls
His name we eulogize
He has left a cherished treasure
For posterity to prize

We owe a debt we can't repay
To kindly Brother Van
For the years he freely gave
To help his fellow man

When lonely men dropped in to hear
His friendly spoken word
To aid a fellow man in need
Would be his great reward

The people all loved Brother Van
And soon a way was found
To build a church of logs or sod
To spread the word around

Outlaws, thieves and gamblers
Were often gathered there
Though some wore notches on their guns
All joined him in prayer

The many schools and churches
That the brother helped to build
We cherish in his memory
He has seen his dream fulfilled

Two great men with different visions
Each has given of his best
Left his footprints in his passing
Deeply graven in the West.

Mr. MANSFIELD. I extend a personal and warm invitation to every Member of the Senate to be in the rotunda of the Capitol at 3:45 o'clock this afternoon, at which time we shall honor the greatest of all Montanans, and, in many respects, one of the great Americans of all time.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. SYMINGTON. I wish to associate myself with the remarks of the distinguished Senator from Montana. We in Missouri are just as proud of Charles M. Russell as are the people of Montana; and I look forward to the ceremony.

Mr. MANSFIELD. I thank the Senator.

STRANGULATION OF THE SCHOOL LUNCH PROGRAM

Mr. SYMINGTON. Mr. President, the benefits of the national school lunch program to the school children of our Nation are very well known.

Since its inception, the school lunch program has received bipartisan recognition and support.

But we now find that this program faces fiscal strangulation, unless the Congress takes positive action.

The President's 1960 budget recommendation calls for a cut of nearly one-third—$45 million—in the funds available for the school lunch program during the 1959 and 1960 school year.

Obviously this recommendation completely disregards the needs of this important program.

The House Appropriations Committee is scheduled to begin hearings next week on the 1960 appropriations for the school lunch program.

The Senate Appropriations Committee will begin consideration of this matter early next month.

The plight of the school lunch program is very ably presented in a letter from Mr. Earl M. Langkop, director of the Missouri school lunch program, and this year's chairman of the legislative committee of the American School Food Service Association.

In order that all Members of Congress have an opportunity to read Mr. Langkop's clear and conclusive statement, I ask unanimous consent that his letter of March 5 be printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE DEPARTMENT OF EDUCATION,
DIVISION OF PUBLIC SCHOOLS,
Jefferson City, Mo., March 5, 1959.

Hon. STUART SYMINGTON,
Senate Office Building,
Washington, D.C.

DEAR SENATOR SYMINGTON: As State director of the school lunch program, I feel that it is my duty and responsibility to the school children in Missouri to keep our national Representatives informed on matters dealing with Federal legislation, particularly with reference to the national school lunch program.

During each of the past several years it has been my unpleasant task to report to school administrators about this time of the year that Federal funds appropriated for the school lunch program are again inadequate to provide continuing reimbursement throughout the school year, even though our reimbursement rate has been reduced to 4 cents. At the time the National School Lunch Act was passed, sufficient funds were appropriated at the national level to permit reimbursement at the rate of 9 cents for all type A lunches served in Missouri. Program expansion, over the years, on a nationwide basis has increased by 225.7 percent. During this same period, however, Federal appropriations have increased by only 23.5 percent. This accounts for the main reason we have had to reduce our reimbursement down to 4 cents for type A lunches and discontinue completely reimbursement for type B and type C lunches. Even with our reimbursement decreased to 4 cents during this school year, we now find ourselves in a position where our available funds for type A lunches to be served this year will be less than 4 cents.

We are deeply grateful for your personal action in connection with the appropriation last year and for the action taken by our national Representatives nationwide in authorizing an appropriation in excess of the amount recommended by the U.S. Deparment of Agriculture. We were also very much encouraged by the congressional transfer of section 32 funds, which we felt would assist in narrowing the gap between increasing enrollments and participation and Federal appropriations for the national school lunch program. We were of the opinion at that time that this additional help would permit us to at least continue our limited reimbursement throughout the 1958–59 school year.

We now find that a further increase in participation has completely absorbed the additional funds appropriated, and we are in the same financial position as we were a year ago. Our schools in Missouri have been notified that, due to increased enrollments and a further participation gain, our allocation of Federal funds will become exhausted with the payment of April claims.

It is difficult for us to believe that the Congress, in passing the National School Lunch Act, intended that such a situation should develop. Section 2 of the act sets forth the very laudable purposes for which Federal aid was to be provided, and the wording in this section certainly implies that expansion of the program was desired. Section 3 of the act authorizes the Congress to appropriate such sums as may be necessary to carry out the provisions of the act. Section 7 establishes the basis upon which the States and local districts were to match the Federal funds as the program expanded. We feel that this section very definitely carries the implication that it was the intent of Congress that the necessary Federal funds would be provided as the program expanded, so long as the State and local communities carried their full share in matching the Federal contribution. There can be no question that the States have met this responsibility. In fact, in our own State last year these contributions reached the point of matching the Federal dollar on the basis of 7 to 1, even though the National School Lunch Act required matching of only 3 to 1.

The U.S. Department of Agriculture has access to participation figures on a monthly basis from all States and is well acquainted with the tremendous expansion of this program. In view of this situation, it is very difficult for us to understand why this agency has on two occasions seen fit to recommend a reduction in the national school lunch appropriation. We have the third such example of Federal apathy this year. In each instance, in the past, departmental officials in appearing before the Appropriations Committees, have maintained that the reduction in funds would be offset through increased allocations of surplus commodities. We have always maintained, and I believe the records will bear us out, that surplus commodities and such promises represent a most undependable source of aid for the schools in planning their budgets. The commodity program, over the years, has been one of "feast or famine." Those who maintain that surplus foods have offset the reduced cash assistance are either woefully misinformed as to the workings of the price support program, or they are deliberately trying to mislead the public and Congress with respect to school lunch assistance.

You will recall the drastic reduction in surplus commodities last year which created a tremendous additional financial burden for the schools. This reduction in surplus foods came at a time when unemployment rolls were at a peak and the demand for free lunches was heavy. Our schools have not recovered from the financial losses sustained last year, and unemployment in many sections of our State is still a problem, along with the accompanying increased requests for free lunches. Our welfare department now has a heavier caseload of unemployed persons receiving commodities than a year ago.

The Congress acted last year to assist program sponsors by transferring $35 million from section 32 funds to be used by the Secretary of Agriculture to purchase additional foods needed to replace the losses resulting from lack of action by the Federal Agency on price support operations during the 1957–58 school year. During hearings on the appropriation the committees were very critical of the USDA because of this lack of action for aiding both agriculture and the school lunch program.

We have had some help from this transfer of section 32 funds during the present school year, and certainly, without this transfer, we would have been in serious financial trouble. Outside of the mandatory support items of dairy products and cereals, the only surplus foods offered by the Department during this school year have been a very meager offering of fresh cabbage and peanut butter. Neither of these items were offered in sufficient quantity to permit statewide distribution to our schools. This leads us to believe that the Department has, through discretionary authority, successfully circumvented the intent of Congress on the transfer of section 32 funds by merely using them to carry out normal section 32 operations. We say this because each of the items purchased with the transferred funds this year have, in the past, been offered under the regular section 32 program. We now have a further indication of such action through the current purchases of large quantities of dried eggs during the heavy production period and the fact that offerings of this product, coming so late in the school year, cannot possibly benefit the schools in this year's program.

As of March 1, approximately $6 million of the $35 million transferred remains unused. This situation exists at a time when school lunch programs nationwide are experiencing extreme financial difficulty. In Missouri, 60 percent of our programs are operating at a deficit. The deficits are even greater in some of our other States. For example: 95 percent of the programs in Montana are presently operating at a deficit. Other States are in a similar position: California, 85 percent; Washington, 75 percent; Oklahoma and Wisconsin, 70 percent; New Mexico, 50 percent, Wyoming, 48 percent; Michigan, 40 percent; and so forth. Requests for free lunches for needy children are increasing. In fact, Michigan reports that in the city of Detroit two lunch programs had to be closed due to financial difficulties when free lunch servings totaled 80 percent. Many of the States have reported that because of increased participation this year, Federal funds available for reimbursement to the schools will amount to less than 4 cents.

It is rather difficult for us to explain to local school administrators why our reimbursement rate under the National School Lunch Program for the serving of complete type A lunches, which must include a half-pint serving of milk, has reached a point where it is less than the reimbursement available under another Federal program administered by the USDA for the serving of a half-pint of milk only.

All of our major agricultural groups in Missouri, the Missouri Farm Bureau Federation, Missouri Farmers Association, and the American Dairy Association, are fully acquainted with the contribution this program is making to our agricultural economy and are on record as favoring an expanded school lunch program, which at the present time represents a $25 million industry in our State. We think this is evidence that the agricultural aspects of the program are being carried out in Missouri.

In order to restore the level of cash assistance alone that was available when the national act was passed would require a current appropriation of $171 million. This does not even take into consideration the greatly decreased purchasing power of the 1959 dollar.

Unless more interest is demonstrated by the USDA in budget recommendations for the national school lunch program, it is obvious to many of us that this program will begin to disintegrate, and many schools will revert back to the candy and coke lunches which we have tried diligently during the past 11 years to replace with nutritiously adequate lunches for all children. This situation is beginning to develop, and we are hopeful that you will lend your help in assisting us to head off this situation before it gets out of hand.

In behalf of the schoolchildren in Missouri and nationwide, we sincerely urge your support of an appropriation of $130 million for the national school lunch program for fiscal year 1960 and the transfer of $45 million of dormant section 32 funds to the national school lunch program. We are firmly convinced that this is the minimum amount that will be needed next year if the national school lunch program is to avoid disaster. In the transfer of the section 32 funds, we urge that legislation be developed to effect a cash transfer of $45 million from section 32 under the same plan that was used in the complete financing of the school lunch program during the 2 or 3 years immediately preceding passage of the National School Lunch Act. In this way the funds could be distributed to the States along with the national school lunch appropriation. We are convinced that the schools of this Nation can and will do a better job in accomplishing the intent of section 32 than has been demonstrated by the Federal agency in the use of the $35 million transferred to the program during this school year.

In conclusion, let us say that the States and local communities are more than doubling the matching requirements set forth in section 7 of the National School Lunch Act. We are sincerely hopeful that our Federal Government will see fit to assume its fair share of the responsibility for financing this program as it continues to expand and in line with the very clear intention implied in the wording of the National School Lunch Act.

Your continued interest and cooperation in the sound financing in this program is deeply appreciated by all of us who are so closely associated with the administration and operation of the school lunch program in the States.

Yours sincerely,

EARL M. LANGKOP,
Director, School Lunch Section.

THE IMPORTANCE OF FULL EMPLOYMENT

Mr. SYMINGTON. Mr. President, last week the Labor and Commerce Departments reported that unemployment rose again in the month of February, a month in which it usually declines.

It was also reported that seasonally adjusted unemployment was again over 6 percent of the work force.

This high rate of unemployment results in impairment not only of our standard of living, but also of the safety and welfare of the United States.

Aside from the personal tragedy this unemployment brings to millions of workers and their families, it is also very, very wasteful. These workers are unable to contribute to our national strength at a time when their contribution is urgently needed.

Because of unemployment of men and machines, our economy is standing still, while that of other nations is rising.

The Committee on the Economic Report, under the able leadership of the distinguished Senator from Illinois, has prepared a study which shows that between 1953 and 1958, our gross national product per capita actually declined.

In 1953, the average production per person was $2,576. In 1958, it was $2,508.

This decline compares with an increase over the same period of 8.5 percent in West Germany, 7.5 percent in France, 4 percent in Italy, and 2.5 percent in the United Kingdom.

Our recent stagnation also compares most unfavorably with the increasing strides in production being made by our possible adversaries of the Sino-Soviet empire.

Some sectors of our economy have recovered from last year's recession. The high unemployment, however, persists. I have seen reports in the press that some economic leaders have concluded, from this experience, that an unemployment rate of 5 percent or more must be expected for the foreseeable future.

Mr. President, I can think of no more dangerous and defeatist attitude than that one.

This is the richest country in the world. If we cannot provide employment opportunities for all who are able to work, then something must be very wrong, indeed. I fear that the defeatist attitude is just another example of the inferiority complex which seems to affect some of our national leaders.

These say we cannot afford an adequate defense. They say we cannot afford the necessary education for our children. They say we cannot afford a decent standard of health for all. Now they say we cannot afford full production and employment.

Mr. President, we must begin to plan now to operate our economy on a full production basis. Capital should be available at low enough interest rates so that businesses can borrow to expand, and homeowners can borrow to build.

The spendable income of the 7½ million people who still earn under $2,000 should be increased.

We should extend unemployment insurance, along the lines of the bill sponsored by the distinguished junior Senator from Massachusetts.

We should do something about the practice of administered prices, which cuts production and prolongs high prices even in the absence of demand.

We must clear away the barriers to the full operation of our private enterprise system.

If positive action is taken in this session, Mr. President, next year will bring us reports of real progress, rather than such sad reports as we have just received of increases in midwinter unemployment.

ECONOMY IN GOVERNMENT

Mr. CLARK. Mr. President, in the issue of Time magazine dated March 16, 1959, the following comment appears:

Pennsylvania liberal Democrat JOE CLARK took the Senate floor to recommend a balanced budget—liberal Democrat style. He proposed to raise both taxes and spending by $4 billion, strike the balance at $81 billion. Demanding higher outlays for defense, education, urban redevelopment, housing, airports, water resources, public health, welfare, and foreign aid, CLARK argued that the new money could be raised by tougher enforcement of income-tax laws, stiffer rules against business expense deductions, higher taxes on capital gains and dividends, lowered depletion allowances (from 27½ to 15 percent) on oil and gas wells. Nowhere did Clark suggest where costs could be cut.

Mr. President, the last statement is false. I ask unanimous consent that there may appear in the RECORD at this point as a part of my remarks the portion of my speech to which Time magazine had reference, and which deals with where costs could be cut.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

ECONOMIES

I have no doubt that the Congress will be able to find some economies in the budget. Again, I do not want to prejudge where savings might be found, because the members of the Appropriations Committee are far more experienced and skilled than I in ferreting out waste in the budget. I am inclined to believe, however, that some of the bills proposed for agriculture by Democratic Senators from farm States, whose devotion to the welfare of the family farmer is thoroughly tested and proven, would result in considerable economies below the more than $3 billion in this year's price support operations. I am also sure that through further unification of the armed services, better management of procurement and other means, the Defense Department could save considerable sums.

However, I want to be conservative in this presentation and I therefore will not attempt to place any dollar figure on these economies to offset them against the additional expenditures I have outlined above. As they develop during the session, we can take account of them, but there are undoubtedly further expenditure needs also, beyond those I have mentioned earlier. So let us regard these potential economies instead as providing us with a reserve for contingencies over and beyond the $100 million set out as a reserve in the President's budget.

Mr. CLARK. Of course, this is not the first nor the last time that Time magazine has or will distort the facts. I should point out, in lighter vein, that one of the best methods of distortion is to print unflattering photographs of Members of this body and others in public life whom Time magazine does not favor. Such a picture of me, with

my mouth open, appears opposite the comment in Time magazine which I have just read.

If Time magazine were selling applesauce instead of a weekly publication, it would not be able to call itself, as it does, "the weekly news magazine," because the Federal Food, Drug, and Cosmetic Act of 1938 would prohibit it. That act requires the truthful labeling of goods for sale.

The Federal Food, Drug, and Cosmetic Act of June 25, 1938, prohibits "the introduction into interstate commerce of any food, drug, device, or cosmetic that is adulterated or misbranded."

It also provides that—

In determining whether the labeling (of such a product) is misleading there shall be taken into account (among other things) not only representations made or suggested by statement, word, design, device, or any combination thereof, but also the extent to which the labeling fails to reveal facts material to consequences which may result from the use of the article to which the labeling relates under the conditions of use prescribed in the labeling thereof or under such conditions of use as are customary or usual.

It has always been my view that it would be far more candid of Time magazine to call itself a journal of plutocratic opinion rather than a weekly news magazine. Such a description would be in accordance with the principle of truth in advertising. The other day I had occasion to look up an article in the Encyclopedia Britannica on Pluto. The article states, in part:

A euphemistic name for the Greek god of the lower world. * * * He is stern and pitiless, deaf to prayer or flattery, and sacrifice to him is of no avail. * * * Being feared he is usually referred to by euphemistic epithets such as "illustrious" or "the giver of good counsel" * * * but perhaps by contamination with a god of the fertility of the earth, he is also the giver of wealth * * * and at most of the centers of his cult he was so worshipped.

"Euphemism" is defined in Webster's Dictionary as "a way of describing an offensive thing by an inoffensive expression."

"Plutocrat" is defined in Webster's Dictionary as "one who has power or influence due to his wealth."

A little while ago a reporter on the Providence Journal-Bulletin had occasion to analyze Time magazine in an article which was subsequently printed in the New Republic. I ask unanimous consent that an excerpt from that article be printed in the RECORD at this point as a part of my remarks.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The elusiveness of truth must have worried the editors of Time occasionally. But if so, they have spared the reader this human doubt. Each week the world is created absolute and dogmatic, the good guys on one side, the bad guys on the other, with Time holding the only scorecard. Only when the reader checks back does he discover that the good guy of October may be the bad guy of January, that truth and Time change.

For example, was it the truth, when Time reported Dwight Eisenhower's appearance at the start of his 1952 campaign in Abilene in the June 16, 1952, issue:

"They saw Ike, and they liked what they saw.

"They liked him because he turned out to be an amazingly good campaigner. * * * They liked him for his strong, vigorous manner of speech, for his quiet control. * * * It was a crashing conquest."

Or was it the truth when, after the campaign was over, Time in its issue of November 3, 1952, described that same week in Abilene:

"At first the echoes were not strong. Ike * * * as a political candidate * * * did not quite 'come across' * * * his voice was flat; he looked like an old man on TV."

Time, during the 1952 campaign: "Stevenson tore into this straw man * * * the Democratic candidate made a careful pitch * * * In the same speech, Stevenson got in a reference to aid to India, which is getting to be the stock Democratic way of changing the subject on China."

Time, 4 years later: "Stevenson of 1952, a man meticulously concerned with the facts."

Time, before Adlai Stevenson became a presidential candidate:

"Illinois has a good Governor now: Adlai Ewing Stevenson. * * * In his 3 years * * * Stevenson has * * * sent State police out to stop commercial gambling downstate * * * lopped 1,300 political hangers-on off the State payroll * * * he didn't think State's Attorney John Boyle of Chicago was a good candidate. Stevenson has largely kept hands off law enforcement in Cook County, on the theory that local authorities are better staffed to handle it. But he didn't like the way Boyle had done the job * * * promptly dumped Boyle. * * * If Lincoln Steffens was right, corruption is the norm of U.S. political life. * * * But men like Adlai Stevenson have dedicated themselves to a more hopeful and dynamic proposition: that the United States is not a static pattern but an experiment, among other things—in good government."

Time, after Stevenson became a presidential candidate, 8 days before election:

"Stevenson * * * has himself cited his record as Governor to support his argument that he can deal with corruption; he tells his audience that he knows about corruption because he followed '8 years of Republican rascality.' He never so much as slapped the wrist of the Cook County Democratic organization, the most corrupt and powerful of existing big-city machines."

Time, August 1, 1955, on President Eisenhower's accomplishment at Geneva:

"If Geneva was to be measured by the spirit, as all the participants insisted it should be, then quite a bit was achieved * * * the chances of war started by the Russians is continuing to diminish. This was the reading of Geneva."

Time, May 19, 1958, quoting Dean Acheson approvingly to support Time's thesis that a summit conference should not be held:

"From former (1949–53) U.S. Secretary of State Dean Acheson came two forceful, well-argued statements on U.S. foreign policy. * * * The 1955 Geneva Conference, said Dean Acheson, 'was not merely a failure; it was a fraud and positive harm'."

The changeability of truth in the pages of Time was noted in 1955 by a Harvard student, Milton S. Gwirtzman, who listed in the Harvard Crimson some Time truths which seemed to change with administrations.

Time, March 10, 1952, on the income tax under a Democratic administration:

"This week, once again, the American taxpayer * * * was working over his income tax return. He did not do the job happily. * * * The blow, in full and crushing measure, now lands each March 15 on the chin of a fellow named John Q."

Time, April 18, 1955, on the income tax during a Republican administration: "60 million Americans have by this week signed their 1954 income tax forms. * * * They did this, wonderful to tell, without riots or protest. * * * It has become more and more unfashionable to criticize the income tax level."

Time, August 12, 1946, on the character of George E. Allen under a Democratic administration:

"Last week * * * the President [Truman] eased his croniest crony, George E. Allen, into the Board of Directors of the Reconstruction Finance Corporation."

And on January 28, 1946: "George is all the more remarkable because to the naked eye, he is a clown."

Time, December 14, 1954, on the character of George E. Allen under a Republican administration: "Last week * * * the President [Eisenhower] chatted quietly with * * * golfing companion George E. Allen, Washington lawyer and friend of Presidents."

Time throughout the 1956 campaign ridiculed public questions about the risk of having a sick President in office; or as it said in the July 22, 1956, issue on the President's decision to run again: "* * * Settled the issue with the simplicity and finality of a 1-foot putt." And 16 months after the campaign, Time raised the question, in its March 3, 1958, issue:

"President Eisenhower is 67; the cumulative effect of his three major illnesses has sapped his second-term strengths.* * * Most of the work curtailment has come in the field of domestic affairs * * * if allowed to slide, small problems can snowball into major cases, for example, the present economic recession, and it is in this area that the President's inability to ride constant herd is most often felt."

The late William Allen White once wrote:

"I think on the whole, sooner or later, the American people do get the truth. But they often get it when it is cold potatoes and does them no good."

THE DEADLY PARALLEL

Mr. EASTLAND. Mr. President, yesterday the President of the Irish Republic, Hon. Sean T. O'Kelly, addressed a joint meeting of the two Houses of Congress, and referred to the fact that in 1880 another distinguished Irishman, Charles Parnell, had addressed a like session.

Mr. President, this reference is tremendously interesting in contemporary American history. It is an interesting vignette that sheds light on problems with which the U.S. Senate has been concerned and will be concerned. Only yesterday, in the Judiciary Subcommittee on Constitutional Rights, the distinguished senior Senator from North Carolina [Mr. ERVIN] said:

I belong to a minority. If there is any minority in this country today, it is white southerners. I belong to a minority.

Charles Parnell was a member of the British House of Commons, representing an Irish minority. His steadfast purpose was to remove from the people of Ireland the yoke and oppression of British overlordship and tyranny. After returning from the United States he was incarcerated for his alleged sedition. But, thank God, he still had the right to a trial by jury and no jury of Irishmen would convict him. From jail he returned to the British Parliament. The pending business was a bill to solve the Irish question. Two of its worse features provided that arrests could be made on

mere suspicion and the suspect incarcerated in jail without trial for a long period of time, and, secondly, it denied to such person the right of habeas corpus. To this coercion bill, Parnell offered the following amendment:

That peace and tranquillity cannot be promoted in Ireland by suspending any of the constitutional rights of the Irish people.

In the words of Justin McCarthy, then an Irish member of the Parliament, this is what transpired:

We were then about 20 strong, all told; and the House of Commons contains some 650 members. With the exception of some half a dozen stout English Radicals who were always on our side, the whole house was against us. Every man's hand was against us, but I am bound to admit that our hand was against every man. We made a great many speeches in those days. The House of Commons did not always listen to us, but we made our speeches all the same. We kept the house sitting through long and weary nights; we kept the house sitting once from 4 o'clock on Monday afternoon until 6 o'clock on the following Wednesday evening—no intermission of debate all that time. We went in for open and avowed obstruction; we declared that, so long as we could, we would resist the coercion bill. Then they tried to amend their procedure, and made all sorts of new rules to introduce a closure, meant, of course, only for the Irish members—I mean those who called themselves emphatically the Irish members. Once or twice the Speaker accomplished a very coup d'etat, and brought a long debate to a sudden close. We were each of us suspended from the service of the house. We were all of us expelled from the the house in a body on one memorable evening; each of us refusing to leave the house until the sergeant at arms had gone through the formula of using force to carry out the mandate of the majority. Of course we came back again the next day, or on whatever day the sentence of suspension expired; and we went on with our work of obstruction as if nothing had happened. We were doing just what we wanted to do; we were arousing the attention of England and Scotland and the civilized world. Our cause was gaining every day in Ireland, and among the Irish in America and Australia.

History repeats itself. Reflect on the Irish Coercion Act of 1881, the Civil Rights Acts of 1957, and those proposed today directed against the constitutional rights, liberties, and privileges of the southern white minority. Mr. President, what a deadly parallel.

CRITICAL AND STRATEGICAL MATERIALS OF THE EASTERN HEMISPHERE

Mr. GOLDWATER. Mr. President, the Senate Committee on Interior and Insular Affairs published, in December 1958, as a committee print, the authorized Senate report on the 73 nations and entities of the Eastern Hemisphere.

Mr. President, the report was authorized by Senate Resolution 78, as amended by Senate Resolution 225, 85th Congress, providing for a report on the availability of the critical mineral resources of the Eastern Hemisphere.

This report was compiled and edited under the direction of former U.S. Senator George W. Malone, of Nevada, then ranking minority member of the Committee on Interior and Insular Affairs, and a member of the Subcommittee on Minerals, Materials and Fuels.

In appendix II will be found: 20th century trade wars, page 522; atomic weights, page 605; our military position, page 610; and war treaties, page 613.

Mr. President, I ask unanimous consent to have printed in the RECORD, as a part of my remarks the introduction, findings, recommendations, and other pertinent material, as they appeared in the page proofs of the report.

There being no objection, the materials were ordered to be printed in the RECORD, as follows:

ACCESSIBILITY OF CRITICAL AND STRATEGIC MATERIALS OF THE EASTERN HEMISPHERE, INCLUDING THE SOVIET UNION AND SATELLITE COUNTRIES—73 NATIONS AND ENTITIES—SENATE RESOLUTION 78 AMENDED BY SENATE RESOLUTION 225, 85TH CONGRESS

(By George W. Malone)

INTRODUCTION

Both the Western and Eastern Hemispheres can be self-sufficient in the production of the so-called critical minerals and materials for war or peace.

Neither hemisphere can cripple the other through withholding supplies of any kind or nature—including the complete list of 77 fuels and minerals.

Any treaties between the nations of the respective hemispheres, or trade among the respective nationals of these nations can and must be on a mutually attractive and profitable basis, without endangering the security of this Nation.

In the event of war, or the threat of war it would be impossible for either hemisphere to defend lines of transportation and communication across major oceans for materials of any kind.

The first prerequisite to a foreign investment is a sound investment climate, which can only be established by the individual nations—the answer cannot be found through grants-in-aid or guarantee of stability by a second nation, even the United States.

The threat of confiscation of property and the manipulation of the value of their currency in terms of the dollar for trade advantage discourages private investors.

The answer is found in a free currency exchange, free from manipulation by a nation of the value of its money in terms of another nation's money for trade or other advantage and an established record of integrity toward private investments. Also, the former stabilizer gold has been discarded as a common denominator of world currencies.

With the exception of the United States nearly every nation in the world today can and does exercise executive control over foreign exchange, manipulating its currency at will for trade advantage without approval of its legislative body.

Since World War II through 1958 the taxpayers of the United States have shipped more than $70 billion abroad in gifts and soft loans—the lion's share to the Eastern Hemisphere.

These funds have been utilized to build production and mining enterprises abroad, to use the cheaper foreign labor, importing the goods into the United States to compete with the American investor and workingman.

The United States is the only Nation in the world today that does not protect its investors and workingmen once the investment is made, through the use of tariffs, import permits, exchange permits and the manipulation of the value of its currency in terms of its competitor's money for trade advantage.

It is believed that these data and the information in this report, not hitherto available as a reference work, will afford a useful background picture of the Eastern Hemisphere countries. The committee report, 85th Congress, 2d session, on the political, economic and social status of the nations of the Eastern Hemisphere is a final supplement to two previous reports, Senate Report 1627, 83d Congress, and Senate Document No. 83 of the 84th Congress on the Western Hemisphere.

The committee report describes the political, economic and social structures of the following 73 nations and entities of the Eastern Hemisphere:

Afghanistan, Albania, Andorra, Austria, Belgium.

British Commonwealth: Australia, Ceylon, Ghana, India, Malaya, New Zealand, Pakistan, Union of South Africa, United Kingdom.

Bulgaria, Burma, Cambodia, China (Communist), China (Nationalist), Czechoslovakia, Denmark, Estonia, Ethiopia, Finland, France, Germany (East), Germany (West), Greece, Hungary, Iceland, Indonesia, Iran, Iraq, Ireland, Israel, Italy, Japan, Jordan, Korea (North), Korea (South), Laos, Latvia, Lebanon, Liberia, Liechtenstein, Lithuania, Libya, Luxembourg, Monaco, Mongolia (Outer), Morocco, Nepal, Netherlands, Norway, Philippines, Poland, Portugal, Rumania, San Marino, Saudi Arabia, Spain, Sudan, Sweden, Switzerland, Thailand, Tunisia, Turkey, United Arab Republic, U.S.S.R., Vatican City, Vietnam (North), Vietnam (South), Yugoslavia.

FORMAL RECOGNITION OF COMMUNIST CHINA

Twenty-one free-world countries and ten Communist countries have formally recognized the Government of Communist China, as follows:

Free world countries: Afghanistan, Burma, Cambodia, Ceylon, Denmark, Finland, India, Indonesia, Iraq, Israel, Morocco, Nepal, Netherlands, Norway, Pakistan, Sweden, Switzerland, United Arab Republic, United Kingdom,[1] Yemen, Yugoslavia.

Communist countries: Albania, Bulgaria, Czechoslovakia, East Germany, North Korea, North Vietnam, Outer Mongolia, Poland, Rumania, U.S.S.R.

All trade agreements are capitulations, in which a government agrees to surrender some part of its economy or sovereignty to another government and the world knew and recognized it as such until a more pleasing phrase could be invented: "reciprocal trade."

The 1934 Trade Agreements Act (so-called reciprocal trade) was a voluntary "capitulation" by this Nation through an act of Congress, under the guise of reciprocal trade.

The GATT (General Agreement on Tariffs and Trade) charter under which 36 foreign competitive nations continue to divide our markets among themselves through multilateral trade agreements specifically exempts such nations from keeping their part of any such agreement as long as they can show they are short of dollar balance payments to the United States—and they can show such shortage of dollar balance payments until our wealth is equally divided between them.

A disillusioned President Woodrow Wilson said on September 5, 1919—10 months following the Armistice of World War I—and after he had sat in on the Paris peace settlement negotiations:

"The real reason that the war we have just finished took place was that Germany was afraid her commercial rivals were going to get the better of her, and the reason some nations went into war against Germany

[1] The United Kingdom includes the following: England, Scotland, Wales, and North Ireland.

was that they thought Germany would get the commercial advantage of them.

"The seed of jealousy, the seed of deep-seated hatred, was hot, successful commercial and industrial rivalry. This war in its inception was a commercial and industrial war. It was not a political war."

Wilson neglected to delineate that of the Allies, England and France had been commercial giants dominating the trade of extended colonial areas for 300 years, more often at each other's throats than at that of a common competitor, that it was Germany which was achieving industrial and commercial success, and that seed of jealousy, and deep-seated hatred sprouted from the older trading nations.

President Franklin Roosevelt learned his lesson at Yalta and Teheran—and President Harry S. Truman learned his at Potsdam.

None of these eminent heads of our Government, however, have bothered to explain to the American people that these wars have been trade wars since hundreds of years B.C., and that these agreements and trade treaties simply mean a further capitulation and a surrender of more of the sovereignty of the United States of America.

We have made hundreds of agreements and treaties with the nations in Europe and Asia since World War II. Prior to World War II we recognized Communist Russia without any safeguards whatever; all under the guise of improving our world trade position.

We have established military bases in many of these countries on the premise that they would follow us in any international conflict.

We have continued the division of our wealth—our taxpayers' money and markets—through successive Marshall plans and the so-called Reciprocal Trade Act extensions.

Apparently we must relearn the lesson the hard way that was first learned by the writers of our Constitution that no sovereign nation ever keeps an agreement or treaty when it becomes obnoxious to it.

FINDINGS

Between 1947 and 1955 inclusive, I have systematically inspected every important nation in the world, not only for the purpose of determining their living standards, their production, including the accessibility of the critical minerals and materials to such nations for war or peace, but the treatment accorded their investors and workingmen under their national and international policies.

The findings are arrived at as a result of such personal investigations of the 73 nations and entities of the Eastern Hemisphere. The findings are the result of a digest of the research material and include—

1. That most of the nations of Europe and Asia have controlled area beyond their borders under colonial systems beginning hundreds of years B.C., and that many of such nations have overrun each other over that period, as the fortunes of war have changed.

2. That the United States is the only country in the world that does not systematically protect its own investors and workingmen, through the judicious use of tariffs, exchange permits, quotas, or other effective device. Such protection is operated to direct the flow of industrial capital investments to the protected area.

3. That practically all wars between nations for 2,000 years have been trade wars. That such wars have developed the so-called colonial nations—meaning control of a weaker nation's markets by a stronger and distant power.

4. That history shows that international trade rivalry breeds such trade wars between nations, and that the greatest international trade war in history is now brewing.

5. That the Eastern Hemisphere can be made self-sufficient in the production of the critical minerals and materials necessary for war or peace. That the Western Hemisphere can likewise be made self-sufficient and can be successfully defended from North America is shown in Senate Report 1627, 83d Congress, and Senate Document 83, 84th Congress. A going concern industry is the best stockpile.

6. That the power in the Eastern Hemisphere has shifted to Russia and that Russia can make the area under its control self-sufficient in the production of the critical minerals and materials for war or peace. Power in the Western Hemisphere is in the United States, as shown by Senate Report 1627, 83d Congress.

7. That under the 1934 Trade Agreements Act (so-called Reciprocal Trade Act) through the State Department and Geneva, we have opened our own domestic markets to the trading nations of the world—and during the same period have priced ourselves out of the foreign markets through inflation, which can only result in an ultimate lowering of the American living standard. There is no difference in the final objective of importing the goods produced by low wage living standard labor and importing the cheap labor. No one can consistently support free imports from lower wage living standard countries and oppose free immigration.

8. That we are living on a war economy, since we have consistently adopted national and international policies creating an unfavorable investment climate here and favoring foreign investments.

9. That our adherence to an unconditional most favored nation clause has accelerated the division of our markets among the nations of the world. An unconditional "most favored nation" clause means that when a concession is granted any nation under any one of the multitude of bilaterial or multilateral trade agreements made by the State Department or in Geneva under GATT, then all nations are automatically entitled to the same concession, whether or not any compensatory concession is granted by that nation.

10. That under the General Agreement on Tariffs and Trade (GATT) and the foreign trade policies operating under the 1934 Trade Agreements Act we have returned to the interminable trade wars of old Europe and Asia and are becoming a greater economic colonial of those areas today than we were before the Declaration of Independence in 1776.

RECOMMENDATIONS

1. That a sound investment climate, which would include a return to the Constitution, article 1, section 8, in the regulation of foreign trade, and adequate depletion allowances in the field of fuels and minerals, thus creating a favorable domestic investment climate is necessary. A going concern producing industry is the best stockpile.

2. A recognition of the fact that the Western and Eastern Hemispheres can each be made self-sufficient in the production of the 77 critical minerals and materials, or adequate substitutes, for war or peace.

3. A further recognition, in the accessibility of critical minerals and materials, that there are just two major powers, one in each hemisphere; the United States and Russia.

4. Elimination of our Nation's present dependency upon remote and possibly unfriendly or neutral areas of the world for the critical materials, without which we cannot live in peace or conduct a war.

5. A recognition of the fact that the Western Hemisphere can and must be defended from North America, since there is an expanding movement throughout the Eastern Hemisphere to deny this Nation military bases on the grounds of endangering their own security.

6. A further recognition of the fact that our future markets and security lies within the Western Hemisphere containing one third of the land area of the world and more than 350 million people and that any encroachment of that area by any nation with a view of establishing control politically, economically or militarily will be dangerous to our security and economic well-being. To do this a revival of the 135-year-old Monroe Doctrine principle is in order.

7. That the unconditional "most favored nation" clause be eliminated—and a return to the Constitution in the regulation of foreign trade—and that all future trade agreements be regarded as treaties, which must be approved by a two-thirds vote of the U.S. Senate.

8. That this Nation give every consideration to maintaining self-sufficiency of the production of the critical minerals and materials in the Western Hemisphere and the defense of this area from North America, since the transportation of these materials across major oceans would be impossible in wartime.

9. That foreign trade be based upon fair and reasonable competition—that the flexible duty or tariff be continually adjusted on the "equalization of costs of production" principle—always equaling the difference in costs of production here and in the principal competing country on each product, and that a free market exchange value of all nations' currencies be maintained in the interest of favorable "investment climate." Gold should be reestablished as a common denominator of world currencies.

10. Rejection of international controls of production, prices, and supplies of critical and strategic materials unless by legislative action by the Congress of the United States. By such rejection, and recognition of the self-sufficiency and the great trade potential of the Western Hemisphere, the greatest trade war in history now building up can be averted.

NATIONAL STOCKPILE

As of June 30, 1958, there were 76 metals, minerals, and nonmetals and minerals in the national stockpile either in inventory or on order. The major part of requirements has been fufilled. The materials authorized for open market purchase are amosite asbestos, small diamond dies and muscovite block and film mica.

Materials acquired in barter for agricultural products are held in a supplementary stockpile and will only be taken over by the national stockpile as need arises.

Critical and strategic minerals

A material may be critical due to its scarcity or unusual chemical and physical properties either in peace or war. A material may be strategic due to its difficulty of procurement for any reason in time of war. This could apply to either domestic or foreign production.

The current definition in the Government is that only those materials that are still needed for the stockpile are critical and strategic.

FOREIGN TRADE

Gifts and subsidies deducted

The volume of the so-called foreign trade and the volume of foreign trade on a mutually profitable and agreeable basis are entirely two different figures.

The first includes all gifts, so-called loans and subsidies to the foreign nations with which to purchase American goods, and the second is shown in the right-hand percentage column with such gifts and subsidies deducted.

It will be noted that the percentage of exports of American exportable or movable goods on a mutually profitable or agreeable basis has ranged from a low 5.5 percent in 1953 to high of 13.2 percent in 1921 with the general average lower since the 1934 Trade Agreements Act (so-called Reciprocal Trade Act) was first passed.

It will be noted that the general average of the profitable exports of American exportable goods from 1909 to and including 1953, which included three wars was from 5.5 to 7.5 percent. The average is 8.1 percent excluding war years.

[Millions of dollars unless otherwise indicated]

Calendar year	Estimated U.S. production of movable goods	Total exports of U.S. merchandise	Ratio of exports to movable-goods production	Military-aid exports from United States	Net U.S. Government grants other than military-aid shipments	Net U.S. Government loans [1]	Sum of cols. 4, 5, and 6	Col. 2 minus col. 7	Ratio of col. 8 to col. 1

DEPLETION

Allowance for a wasting asset

As a result of legislation which I introduced in 1954 to raise the depletion allowance on the 49 principal minerals to 27½ percent, such depletion allowance was raised by the Senate Finance Committee and approved by the Congress on 35 metals, minerals, and materials.

The 27½-percent depletion was retained on oil and gas wells and raised from 15 to 23 percent on 35 minerals.

Depletion is the percent of net profit from the net income tax because af a wasting asset.

Excerpts of Senator Malone's testimony before the Ways and Means Committee of the House in 1951:

Two principles encourage investments

"The two important principles encouraging venture capital to engage in the hazardous business of drilling oil wells in untried areas, and sinking shafts and driving tunnels where no commercial mineral has ever been known to exist, are the depletion allowance and the tariff or import-fee structures.

"The percentage-depletion allowance provides a reasonable method for the return of the capital investment, provided oil or mineral is discovered—if none is discovered the capital is lost—that is the gamble miners and oil drillers take.

"The tariff or import fee, providing a principle for fair and reasonable competition in the importation of products from the sweatshop countries of Europe and Asia, assures investors that their capital will not be destroyed as soon as the emergency is ended.

Emergency saves oil and mineral industries

"While the administration is fostering the imports of petroleum and minerals from foreign, generally strategically indefensible sources, the domestic industry has only been saved from a severe depression by the rapidly increasing domestic demand through the present emergency.

"Another factor which has kept the domestic oil and mineral industries searching for new sources of supply was the existence of the percentage depletion allowance.

Threat of removal disastrous

"Mr. Chairman, the continual threat of the removal or manipulation of either one of these factors—that is to say, the depletion allowance, which makes possible the return of capital investment, or the tariff or import fee structure, which provides for fair and reasonable competition between imported and domestically produced goods—the very threat of the removal keeps venture capital out of the business since there can be no confidence in a congressional principle which is continually under fire."

INTERNAL REVENUE CODE OF 1954

Sec. 613. Percentage Depletion:

(a) General rule: In the case of the mines, wells, and other natural deposits listed in subsection (b), the allowance for depletion under section 611 shall be the percentage, specified in subsection (b), of the gross income from the property excluding from such gross income an amount equal to any rents or royalties paid or incurred by the taxpayer in respect of the property. Such allowance shall not exceed 50 percent of the taxpayer's taxable income from the property (computed without allowance for depletion). In no case shall the allowance for depletion under section 611 be less than it would be if computed without reference to this section.

(b) Percentage depletion rates: The mines, wells, and other natural deposits, and the percentages, referred to in subsection (a) are as follows:

(1) Twenty-seven and one-half percent—oil and gas wells;

(2) Twenty-three percent: (a) sulfur and uranium; and (b) if from deposits in the United States—anorthosite (to the extent that alumina and aluminum compounds are extracted therefrom), asbestos, bauxite, beryl, celestite, chromite, corundum, fluorspar, graphite, ilmenite, kyanite, mica, olivine, quartz crystals (radio grade), rutile, block steatite talc, and zircom, and ores of the following metals: antimony, bismuth, cadmium, cobalt, columbium, lead, lithium, manganese, mercury, nickel, platinum and platinum group metals, tantalum, thorium, tin, titanium, tungsten, vanadium, and zinc.

(3) Fifteen percent: Ball clay, bentonite, china clay, sagger clay, metal mines (if paragraph (2)(b) does not apply), rock asphalt, and vermiculite.

(4) Ten percent: Asbestos (if paragraph (2)(b) does not apply), brucite, coal, lignite, perlite, sodium chloride, and wollastonite.

(5) Five percent: (a) Brick and tile clay, gravel, mollusk shells (including clam shells and oyster shells), peat, pumice, sand, scoria, shale, and stone, except stone described in paragraph (6); and (b) if from brine wells—bromine, calcium chloride, and magnesium chloride.

(6) Fifteen percent: All other minerals (including but not limited to, aplite, barite, borax, calcium carbonates, refractory and fire clay, diatomaceous earth, dolomite, feldspar, fuller's earth, garnet, gilsonite, granite, limestone, magnesite, magnesium carbonates, marble, phosphate rock, potash, quartzite, slate, soapstone, stone (used or sold for use by the mine owner or operator as dimension stone or ornamental stone), thenardite, tripoli, trona, and (if paragraph (2)(b) does not apply) bauxite, beryl, flake graphite, fluorspar, leipolite, mica, spodumene, and talc, including pyrophyllite), except that unless sold on bid in direct competition with a bona fide bid to sell a mineral listed in paragraph (3), the percentage shall be 5 percent for any such other mineral when used, or sold for use, by the mine owner or operator as riprap, ballast, road material, rubble, concrete aggregates, or for similar purposes. For purposes of this paragraph, the term "all other minerals" does not include (a) soil, sod, dirt, turf, water, or mosses; or (b) minerals from sea water, the air, or similar inexhaustible sources.

CRITICAL MINERALS

The 1953 Malone-Aspinall Mineral Purchase Act, Public Law 206, 83d Congress, 1st session, "To encourage the discovery, development, and production of tungsten, manganese, chromite, mica, asbestos, beryl, and columbium-tantalum-bearing ores and concentrates in the United States, its Territories, and possessions, and for other purposes"

Declaration of policy

SEC. 2. It is hereby recognized that the continued dependence on overseas sources of supply for strategic or critical minerals and metals during periods of threatening world conflict or of political instability within those nations controlling the sources of supply of such materials gravely endangers the present and future economy and security of the

United States. It is therefore declared to be the policy of the Congress that each department and agency of the Federal Government charged with responsibilities concerning the discovery, development, production, and acquisition of strategic or critical minerals and metals shall undertake to decrease further and to eliminate where possible the dependency of the United States on overseas sources of supply of each such material.

SEC. 3. In accordance with the declaration of policy set forth in section 2 of this Act, the termination dates of all purchase programs designed to stimulate the domestic production of tungsten, manganese, chromite, mica, asbestos, beryl, and columbium-tantalum-bearing ores and concentrates and established by regulations issued pursuant to the Defense Production Act of 1950, as amended, shall be extended an additional two years: *Provided*, That this section is not intended and shall not be construed to limit or restrict the regulatory agencies from extending the termination dates of these programs beyond the two-year extension periods provided by this section or from increasing the quantity of materials that may be delivered and accepted under these programs as permitted by existing statutory authority: *Provided further*, That the extended termination date provided by this section for the columbium-tantalum purchase program shall not apply to the purchase of columbium-tantalum-bearing ores and concentrates of foreign origin.

SEC. 4. In order that those persons who produce or who plan to produce under purchase programs established pursuant to Public Law 774 (Eighty-first Congress) and Public Law 96 (Eighty-second Congress) may be in position to plan their investment and production with due regard to requirements, the responsible agencies controlling such purchase programs are directed to publish at the end of each calendar quarter the amounts of each of the ores and concentrates referred to in section 3 purchased in that quarter and the total amounts of each which have been purchased under the program.

Approved August 7, 1953.

The Malone-Aspinall Act of 1953 and its extension in 1956 simply fixed a Government purchase price at a figure in each case that the Interior and Insular Committee felt was enough above the world price to make the difference in the wages, taxes and the general cost of doing business here and in the chief competing nation on each product.

Extension of the Malone-Aspinall 1953 Mineral Purchase Act, Public Law 733, 84th Congress, "To provide for the maintenance of production of tungsten, asbestos, fluorspar, and columbium-tantalum in the United States, its Territories, and possessions, and for other purpose"

That this Act may be cited as the "Domestic Tungsten, Asbestos, Fluorspar, and Columbium-Tantalum Production and Purchase Act of 1956."

Approved July 19, 1956. Expires December 31, 1958.

The House nullified this legislation in 1957 through failing to appropriate the necessary funds to carry out the purpose of the Malone-Aspinall Mineral Purchase Act.

New mineral purchase legislation, S. 4036, passed by the Senate July 11, 1958, failed in the House August 21, 1958

While the Malone-Aspinall 1953 Mineral Purchase Act, as extended in 1956 to December 31, 1958, it was rendered inactive in 1957 and 1958 when the House refused on three separate occasions to go along with the Senate in appropriating the necessary funds.

The Senate recognizing that the the House had effectively stopped the purchase of these minerals and that such action would result in closing the mines, many of which would be very expensive to reopen, introduced new legislation with the objective of keeping the mines operating pending a sound national policy under which production might continue.

[S. 4036, 85th Cong., 2d sess.][2]

IN THE SENATE OF THE UNITED STATES

June 30, 1958

Mr. Murray (for himself, Mr. Malone, Mr. Church, Mr. Watkins, Mr. Mansfield, Mr. Allott, Mr. Bible, Mr. Barrett, Mr. Goldwater, and Mr. Chavez) introduced the following bill, which was read twice and referred to the Committee on Interior and Insular Affairs:

A bill to stabilize production of copper, lead, zinc, acid-grade fluorspar, and tungsten from domestic mines

THE 1934 TRADE AGREEMENTS ACT VERSUS THE 1930 TARIFF ACT

Since the 1934 Trade Agreements Act (so-called Reciprocal Trade Act) was extended and all special legislation providing for the production of such minerals either failed to pass the House or was rendered inactive by it through failure to pass the necessary appropriation—most of the mines have, in fact, closed and this Nation is dependent upon foreign sources for many of the critical minerals without which it cannot fight a war or live in peace.

The 1934 Trade Agreements Act transferred the constitutional responsibility of the Congress, article I, section 3, to regulate foreign trade to the President, the executive branch, with the power to extend that authority to Geneva where it now resides with 36 foreign competitive nations continuing the job of dividing the American markets among themselves through the complicated multilateral trade agreements.

The Constitution, article I, section 8, says that "The Congress shall have the power to lay and collect taxes, duties, imposts and excises. * * * To regulate commerce with foreign nations."

Two forces are at work dividing American markets with foreign nations. The State Department, representing the executive, through bilateral trade agreements; and Geneva through the GATT (General Agreement on Tariffs and Trade) regulations.

The GATT regulations provide that such foreign nations do not need to keep their part of the agreements as long as they are short of "dollar balance" payments—and they can show that they are short of such payments until the American wealth and markets are equally divided among them.

If the 1934 Trade Agreements Act were to be repealed or not renewed the constitutional responsibility would revert to Congress and the Tariff Commission, an agent of Congress, would adjust the flexible tariff under section 336 of the 1930 Tariff Act, entitled:

SEC. 336. Equalization of costs of production:

(a) Change of classification or duties: In order to put into force and effect the policy of Congress by this Act intended, the Commission (1) upon request of the President, or (2) upon resolution of either or both Houses of Congress, or (3) upon its own motion, or (4) when in the judgment of the Commission there is good and sufficient reason therefor, upon application of any interested party, shall investigate the differences in the costs of production of any domestic article and of any like or similar foreign article. In the course of the investigation the Commission shall hold hearings and give reasonable public notice thereof, and shall afford reasonable opportunity for parties interested to be present, to produce evidence, and to be heard at such hearings. The Commission is authorized to adopt such reasonable procedure and rules and regulations as it deems necessary to execute its functions under this section * * *. If the Commission finds it shown by the investigation that the duties expressly fixed by statute do not equalize the differences in the costs of production of the domestic article and the like or similar foreign article when produced in the principal competing country, the Commission shall specify in its report such increases or decreases in rates of duty expressly fixed by statute (including any necessary change in classification) as it finds shown by the investigation to be necessary to equalize such differences. In no case shall the total increase or decrease of such rates of duty exceed 50 percent of the rates expressly fixed by statute.

(b) Change to American selling price: If the Commission finds upon any such investigation that such differences cannot be equalized by proceeding as hereinbefore provided, it shall so state in its report to the President and shall specify therein such ad valorem rates of duty based upon the "American selling price" (as defined in section 402(g)) of the domestic article, as it finds shown by the investigation to be necessary to equalize such difference.

NO SPECIAL LEGISLATION NECESSARY

With the tariff adjusted upon the "equalization of costs of production" provision of section 336 of the 1930 Tariff Act the American investors and workingmen would be back in business; and no special legislation would be necessary.

Under the 1930 Tariff Act the Tariff Commission, an agent of Congress holds the necessary hearings and adjusts the flexible tariff to equalize the costs of production. The Congress takes no action, unless it should not agree with the findings of the Commission.

Under the 1934 Trade Agreements Act as amended the State Department acting for the Executive can trade all or any part of an industry to a foreign nation or nations to further a foreign policy.

THE EASTERN HEMISPHERE

Political, economic, and raw materials—73 nations

In 1955, I went behind the so-called Iron Curtain and stayed 2½ months.

I not only inspected all of the Balkan countries, Austria, Bulgaria, Czechoslovakia, Finland, Hungary, Lithuania, Poland, Rumania, and Yugoslavia, but inspected manufacturing plants and mines in each of the Russian 16 Soviet Socialist Republics from Leningrad in the north to Tiflis in the south, and from the Ukraine in the west to beyond Novosibirsk, east in Siberia.

As a result of such inspections I have no hesitancy in saying that not only can the Eastern Hemisphere be made self-sufficient in the production of the 77 critical materials for war or peace but Russia itself can do likewise within the area under her control.

Further, as I announced on my return from Russia in 1955, there will be no successful revolt, and that all of the power in the Eastern Hemisphere has moved to Russia.

There are two hemispheres, Western and Eastern, and two world powers, the United States and Russia. There are 42 nations and entities in the Western Hemisphere and 73 in the Eastern Hemisphere.

The work here describing the 73 nations of the Eastern Hemisphere, including mineral and general raw material resources, and the political and economic structure of each is the most recent data and information available. It is not as complete as the comparable reports on the Western Hemisphere but includes the best available data and information.

The accessibility of the necessary mineral and general raw material resources is often the measure of the political and military power of a country in world affairs.

On that basis alone the United States and Russia have the greatest future potential.

[2] S. 4036, 85th Cong., 2d sess., passed by the Senate but failed in the House.

Availability of such materials marked the rise and fall of the colonial empires of history. Colonialism indicates the control by a stronger nation of a weaker nation's markets.

The control and loss of the markets of the countries of South America and a substantial part of what is now the United States marked the rise and fall of the Spanish colonial empire.

Britain's Navy held the British, French, Belgian, and the Netherlands colonial empires together for several hundred years. Colonialism ended with the domination of the British fleet by airpower at the end of World War II; they have been riding on momentum and the support of this Nation since that time.

CITATION BEING AWARDED TO ROBERT VANCE

Mr. DODD. Mr. President, this afternoon, Robert C. Vance, editor and publisher of the New Britain, Conn., Herald, is being honored in his home town by the Department of the Army in appreciation of his patriotic civilian service.

Mr. Vance is deservedly receiving a citation for the important role that he and his newspaper played in promoting and encouraging a mutual understanding between the residents of the New Britain area and the personnel of the Nike command post there.

Mr. Vance's effort on behalf of the Army is no surprise to those who know him. He and the New Britain Herald have teamed up to bring a long list of outstanding accomplishments to their community.

Mr. Vance has never considered it a duty to perform public service to his readers. Instead he has always felt that it was a privilege, and has acted accordingly.

I personally am proud of the fact that I have been a close friend of Bob Vance for many years. I am pleased that the Department of the Army has seen fit to honor him publicly for his outstanding work.

The PRESIDING OFFICER (Mr. RANDOLPH in the chair). Is there further morning business? If not, morning business is closed.

Mr. JOHNSON of Texas. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

Aiken	Eastland	Lausche
Anderson	Ellender	McClellan
Bartlett	Engle	McGee
Beall	Ervin	McNamara
Bennett	Frear	Mansfield
Bible	Fulbright	Martin
Bridges	Goldwater	Monroney
Bush	Green	Morse
Butler	Gruening	Morton
Byrd, Va.	Hart	Moss
Byrd, W. Va.	Hayden	Mundt
Cannon	Hill	Murray
Capehart	Holland	Muskie
Carlson	Hruska	Neuberger
Carroll	Humphrey	O'Mahoney
Case, S. Dak.	Jackson	Prouty
Church	Javits	Proxmire
Clark	Johnson, Tex.	Randolph
Cooper	Johnston, S.C.	Robertson
Cotton	Keating	Russell
Curtis	Kefauver	Saltonstall
Dirksen	Kennedy	Schoeppel
Dodd	Kerr	Scott
Douglas	Kuchel	Smith
Dworshak	Langer	Sparkman
Stennis	Thurmond	Williams, Del.
Symington	Wiley	Young, N. Dak.
Talmadge	Williams, N.J.	Young, Ohio

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Tennessee [Mr. GORE], the Senator from Indiana [Mr. HARTKE], the Senator from Missouri [Mr. HENNINGS], the Senator from North Carolina [Mr. JORDAN], the Senator from Louisiana [Mr. LONG], the Senator from Minnesota [Mr. MCCARTHY], the Senator from Rhode Island [Mr. PASTORE], the Senator from Florida [Mr. SMATHERS], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

The Senator from Washington [Mr. MAGNUSON] is absent because of illness.

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. ALLOTT], the Senator from New Jersey [Mr. CASE], and the Senator from Iowa [Mr. HICKENLOOPER] are necessarily absent.

The PRESIDING OFFICER. A quorum is present.

The Chair lays before the Senate the unfinished business.

AMENDMENT OF BRETTON WOODS AGREEMENTS ACT

The Senate resumed the consideration of the bill (S. 1094) to amend the Bretton Woods Agreements Act, which had been reported from the Committee on Foreign Relations, with amendments, on page 2, line 13, after the word "thereof", to strike out "such amounts as may be necessary" and insert "$8,675,000,000"; and, after line 14, to insert a new section, as follows:

SEC. 3. The amendments made by this Act shall become effective on July 1, 1959.

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Bretton Woods Agreements Act is amended by adding at the end thereof the following new section:

"SEC. 16. (a) The United States Governor of the Fund is authorized to request and consent to an increase of $1,375,000,000 in the quota of the United States under article III, section 2, of the articles of agreement of the Fund, as proposed in the resolution of the Board of Governors of the Fund dated February 2, 1959.

"(b) The United States Governor of the Bank is authorized (1) to vote for increases in the capital stock of the Bank under article II, section 2, of the articles of agreement of the Bank, as recommended in the resolution of the Board of Governors of the Bank dated February 2, 1959, and (2) if such increases become effective, to subscribe on behalf of the United States to thirty-one thousand seven hundred and fifty additional shares of stock under article II, section 3, of the articles of agreement of the Bank."

SEC. 2. Section 7(b) of the Bretton Woods Agreements Act is amended by striking out "of $950,000,000", and by striking out "not to exceed $4,125,000,000" and inserting in lieu thereof "$8,675,000,000".

SEC. 3. The amendments made by this Act shall become effective on July 1, 1959.

Mr. FULBRIGHT. Mr. President, I rise to explain and justify the increases in the financial resources of the International Bank for Reconstruction and Development and the International Monetary Fund which are contained in Senate bill 1094, which would amend for that purpose the basic Bretton Woods Agreements Act.

In these days of trial and trouble, when we are continually called upon to meet international crises and domestic problems, and when we are conscious of past shortcomings and future dangers, it is, indeed, a pleasure now and then—and this is one of those occasions—to tell a story of success. This bill relates to two highly successful international financial institutions—the International Bank for Reconstruction and Development and the International Monetary Fund.

The International Monetary Fund has had a steady record of success in promoting international monetary cooperation and wiser foreign-exchange practices. It has solved several major financial crises abroad by providing short-term financial assistance to countries which are members of the Fund. In 12 years of operations, the Fund has made temporarily available to 36 different countries about $4.1 billion.

Mr. President, I think the educational value of the International Monetary Fund is one of its most important virtues, although it is an intangible and does not show up on any balance sheet of any kind. The advice which the Fund gives to the countries which borrow from it, and answers to requests for information made by the countries as to internal practices, constitute one of the most valuable aspects of the entire operation. If the free world is ever to come to an intelligent and efficient use of the capitalistic system the Fund will be one of the principal reasons therefor.

The International Bank for Reconstruction and Development is likewise a success. The Bank is now in its 12th year of operation. It has made loans of more than $4 billion in 49 different countries and territories. Its operations helped in the reconstruction work after World War II, and the Bank has now become one of the important means of financing the free world's economic development. Loans by the Bank are currently running at the rate of about $700–$800 million a year. The Bank's reputation is of the highest quality. It has been able to borrow large sums of money from private enterprise, and it has never had a default on any of its loans.

Mr. President, I hesitate to go into the somewhat intricate details of the organization and operation of these two financial institutions. Members of the Senate have before them a print which contains the message from the President of the United States urging these increases in the resources of the Fund and the Bank, together with a special report of the National Advisory Council of our Government, which contains a wealth of detailed information and statistical data explaining the operations of the Fund and the Bank and justifying the increases in their resources. In addition, members have available the report of the Committee on Foreign Relations on the bill. In addition to these materials, the

staff of the committee has available in the Chamber voluminous documentation on the activities of the Fund and the Bank, and copies of the annual reports which have been rendered by the President to the Congress on their operations.

In addition to the written materials which I have cited as informative about S. 1094, the activities of the International Bank for Reconstruction and Development and the International Monetary Fund are well known to Members of this body, some of whom participated in the formulation of the articles of agreement governing the two institutions, and some of whom have attended, as members of the United States delegation, every annual meeting of the Boards of Governors of the Bank and the Fund. Thus, we have more than a casual acquaintance with this subject.

I believe this bill is warmly supported on both sides of the aisle. With the exception of one minor matter to which I shall refer in a moment, I believe there is no controversy about the bill. No one appeared before the committee in opposition to the bill, and the committee heard well-informed and persuasive witnesses in support of the bill, representing farm, labor, and business groups in the United States.

Mr. CAPEHART. Mr. President, will the Senator yield for a short colloquy?

Mr. FULBRIGHT. I yield.

Mr. CAPEHART. Mr. President, the able Senator from Arkansas and I have been members of both the Committee on Banking and Currency and the Committee on Foreign Relations, which handle these matters and have handled them for many years. In fact, we were both members of the Committee on Banking and Currency when the International Bank for Reconstruction and Development and the International Monetary Fund were established.

Is it not a fact that these institutions have done an outstanding job, and that we have not heard any complaints with respect to their operations?

Mr. FULBRIGHT. The Senator from Indiana is entirely correct. I have never heard a really serious complaint about their operations. These organizations have been blessed with extraordinarily able management, in my opinion. They started out with the correct policies. There have been no defaults. The International Bank for Reconstruction and Development has had no defaults. Though there have been a few cases of minor failures to abide by the conditions prescribed by the International Monetary Fund, I think there has been nothing of a serious nature. The program has been a very great success.

Mr. CAPEHART. Is it not also a fact that when moneys have been loaned either by the International Bank for Reconstruction and Development or by the Export-Import Bank private investments have increased very materially? In fact, I think the figures show that private investment in the countries concerned has increased about three times over comparable previous years.

Mr. FULBRIGHT. I do not have the exact figures in mind, but the activities of the Bank have had a very beneficial effect upon private industry. Not only has assurance been given to private industry, but by means of education of the financial managers of the various countries with whom business has been done there has been created a much better climate for private industry.

Mr. CAPEHART. And this process has encouraged and helped private industry both in the United States and in the other countries, rather than hurt it.

Mr. FULBRIGHT. The Senator is absolutely correct.

Mr. CAPEHART. I thank the Senator.

Mr. FULBRIGHT. Senators will recall that the International Bank for Reconstruction and Development and the International Monetary Fund were established on the initiative of the United States. Our participation was authorized by the Congress in 1945 through the adoption of the Bretton Woods Agreements Act. Although back in 1945 we knew that the first task of the two institutions would be to assist in the recovery from the havoc wrought by World War II, it was clearly seen then that the Fund and the Bank would become financial institutions of major importance to the ever more interdependent economies of nations in the free world. The United States took the lead in establishing the Fund and the Bank and by our participation during the 12 years since we have retained that leadership. As is well known, the national quotas agreed upon for the Fund and the subscriptions to the stock of the Bank were fixed by considering the size of the international trade, the national income, and the monetary reserves of the members. Contributions to the organizations are thus determined on a kind of approximation of ability to pay. Policies of the Bank and the Fund are determined by a system of weighted voting which closely reflect the financial stake of each country in the institutions.

The functions of the International Monetary Fund have remained constant but its business has varied greatly over the years. In the period immediately after World War II, drawings against the Fund to meet balance-of-payments deficits were large. A few years later, however, such drawings fell to a low level. It was not until the Suez crisis of 1956 and 1957, with its profound dislocations in trade, that the true worth of the International Monetary Fund was again appreciated. In 1956 drawings against the Fund amounted to $693 million and in 1957, $977 million. The largest beneficiaries of the Fund's resource at this time were Great Britain, France, India, and Japan.

The operations of the Bank have shifted from concentration on post-war reconstruction loans to Europe to the making of loans to less developed areas of the world. The Bank has made 60 percent of its loan commitments for two major purposes: the construction of electric power installations and the development of transportation facilities, such as harbors, railroads and highways. The Bank's loans are of the very hard variety and they complement the efforts being made through the Mutual Security Program to assist other countries in economic development.

Mr. President, I shall take a moment to describe how the Bank and the Fund work. First, I would call attention to the fact that they are both free world institutions. With the exception of Yugoslavia, which seems to have a foot in both worlds, all 68 members of both institutions are outside of the Communist group of countries. With respect to both the Bank and the Fund, it has not been necessary for the United States to appropriate funds toward the operating expenses of the organizations. Both the Bank and the Fund have paid for their administration and personnel out of the fees which they have charged for their services. As I mentioned earlier, those countries which have contributed the most financially, to the Bank and the Fund have the most to say in the determination of their policies. The United States, being the largest contributor, has more to say than anybody else. Thus, there can be no question in these two institutions about other countries having undue power in disposing of assets contributed by the United States.

The International Monetary Fund operates as a kind of pool of currencies. When a member country suffers a crop failure or some other economic emergency, it may buy from the Fund the hard currency it needs, for a short period of time, usually between 3 and 5 years, by selling its own currency to the Fund in exchange. Later, when the crisis has passed, the country which has drawn on the Fund must replace its own currency sold to the Fund and must do so with gold or a convertible currency, such as dollars. In this way the Fund's resources are made whole.

The Fund's resources are protected against inflation through the method of fixing a par value for the currency of each country which has been paid into the Fund, and countries are obligated to keep their currency in the Fund within 1 percent of its par value. If the currency of a country depreciates, the Fund calls in more currency from that country. This same system applies to the currency resources of the International Bank for Reconstruction and Development. The International Monetary Fund has a little over 400 employees, slightly under half of whom are Americans.

The International Bank for Reconstruction and Development is in the business of lending capital for development purposes in member countries. It makes these loans to governments and to private enterprise. If it makes a loan to private organizations in a certain country, that country must guarantee repayment. The Bank gets its money, which it lends, partly from capital subscribed and paid in by the members and partly from the private money markets through the sale of the bonds of the Bank to private investors. In recent years the Bank has obtained most of its resources by the sale of its securities, 60 percent of which have been sold in the United States. The Bank now has about 580 employees, 45 percent of whom are American citizens.

Mr. President, the proposal before the Senate in S. 1094 amounts to this in

simplified terms: It is proposed to increase the resources of the International Monetary Fund by 50 percent and to increase the capital of the International Bank for Reconstruction and Development by 110 percent. The Fund, after these increases, will have resources of about $5 billion, of which gold and dollars will amount to about $2.3 billion. Under the articles of the agreement of the Fund, a member must pay 25 percent of its increased contribution in gold and the balance in its currency. This means for the United States a payment of $344 million in gold and $1,031 million in dollars. The dollar payment of the United States will be in the form of non-interest-bearing notes, to be drawn upon by the Fund if necessary, but meanwhile no cash will be paid by the United States. All of the other countries which are members of the Fund will increase their quotas by at least 50 percent. Some of the smaller quota countries will have a higher percentage of increases and Canada, Germany, and Japan, because of their relative prosperity and increased importance in international trade, will have increases of larger than 50 percent.

It is proposed that the U.S. subscription to the International Bank for Reconstruction and Development be increased by 100 percent, from $3,175 million to $6,350 million. No part of the increase in the U.S. subscription will be paid except to meet some future default of the Bank's obligations. No such default has ever occurred in the past. Thus, the increased liability of the United States will be a contingent liability and a fairly remote contingency at that. The quotas of other members of the Bank will also go up correspondingly, so that the authorized capital of the Bank will increase from $10 billion to $24 billion. Larger than 100 percent increases in the Bank's subscriptions for Canada, Germany, and Japan have been agreed upon for the same reasons which I just mentioned in the case of the increased quotas of these countries in the Fund. The subscription of Canada to the Bank will be increased from $325 million to $750 million, of Germany from $330 million to $1,050 million, and of Japan from $250 million to $666 million.

I wish to emphasize that these increases in the resources of the two financial institutions are the only changes which are contemplated by this legislation. There will be no change in the method of operations of the Bank and the Fund, no change in membership, and no change in the policies of the organizations.

The primary reason for the increasing of the resources of the Bank and the Fund is that the world has greatly changed in the 12 years since they were established. Twelve years ago the Bank and the Fund were untried institutions looked upon with some skepticism and even hostility. We did not know how they were going to work out. Now we have a record of solid achievement on which to plan for the future.

Economic conditions in the world and the resources of the member countries have greatly changed since the original quotas for the Fund and the shares in the Bank were fixed. For example, the total of free world imports has increased from $27 billion in 1937 to about $100 billion in 1958. Trade in the free world, which is roughly four times what it was when the Fund was established, surely needs a larger stabilization mechanism. The national income and monetary reserves of the member countries since the inception of the Fund fortunately make possible such an increase. The salutary trend toward greater convertibility of the free world's currencies also puts us on notice that there may be increased demands on the International Monetary Fund, because now that exchange restrictions are diminishing, the variations in balances of payments are likely to be greater.

At the end of 1958 the Monetary Fund had gold resources equal to $1,532 million and $792 million in U.S. dollars. Against these assets there were commitments to sell $911 million worth of currency; that is, possible demands on the fund. This total of resources is clearly inadequate to contain the exchange aberrations which could occur over a period of international crisis. The Suez crisis alone in 1956 and 1957 gave rise to drawings on the Fund in the neighborhood of $1.6 billion.

It would be hard to argue that the 50-percent increase in the resources of the Fund is precisely right. Considering the size of the national incomes of the members and the magnitude of current world trade, the increase ought to be larger. On the other hand, the members desire to continue the principle that each of them will increase its quota by the same percentage. If the percentage becomes too large, some of the same countries will be unable to carry the burden. Thus a compromise has been arrived at between the foreseeable needs of the Fund and the ability of members to contribute additional resources.

The increase in the capital of the Bank is brought about because without it the Bank will soon run into difficulty selling its bonds in the private money market. This can be seen by examining the attitude of the U.S. private investors on this point. U.S. investors care more about the backing of the U.S. Government of the Bank's bonds than they do about any other backing. The portion of the U.S. subscription to the Bank, which is pertinent here, to meet obligations of the Bank now amounts to $2,540 million while the Bank now has $1.8 billion of its bonds outstanding. The Bank has been issuing bonds at the rate of $497 million in 1957 and $663 million in 1958. At this rate, the funded debt of the Bank will exceed the amount of the U.S. backing sometime in the next 2 years, depending on the volume of loans made by the Bank. American investors are therefore beginning to ask about an increase in the size of U.S. Government guarantee.

The need for an increase in the capital of the Bank can also be seen if one looks at the needs of the world for development capital. These needs, in the underdeveloped areas of the world alone, are greater than any resources which are in sight. India alone can probably use outside capital to the extent of between $500 million and $1 billion annually for the next few years. Estimates of total outside capital needed in underdeveloped countries annually range from $2.5 billion to $10 billion. Now the Bank cannot begin to meet this need by itself. Private investment and bilateral lending by the industrialized countries, including the United States, will be necessary to make up the difference. The Bank's important contribution through its prime, gilt-edged loans in the fields of electric power, transportation, industry, agriculture and forestry, general development, and communications is badly needed.

Mr. President, I turn now to the part of the bill which has given rise to a difference of opinion. The question is whether the impact of the bill on the U.S. Government expenditure budget shall be placed on the fiscal year 1959 budget or the fiscal year 1960 budget.

The President said in his budget message of January 19, 1959, with respect to the International Monetary Fund:

> For the additional U.S. quota in the International Monetary Fund, this budget includes $1,375 million as supplemental new obligational authority and as estimated expenditures in 1959. Of this amount, $344 million is to be paid in gold, and the balance of $1,031 million is to be paid in the form of noninterest-bearing Treasury notes.

The President, in his budget message of January 19, 1959, said with respect to the increased subscription to the International Bank:

> The anticipated subscription to the International Bank of $3,175 million in the fiscal year 1959 is included in the budget as new obligational authority but not as an expenditure, because it will be in the nature of a guarantee fund. On the strength of guarantees from all its members, the Bank is able to sell its bonds to private investors.

In other words, the increase in the U.S. subscription to the International Bank almost certainly would have no effect on the expenditure budget of the United States in fiscal year 1959 or fiscal year 1960.

The Committee on Foreign Relations has decided that the bill should be amended by providing that the increases in the U.S. contribution to the Fund and Bank should become effective on July 1, 1959; in other words, to affect the fiscal 1960 Government budget.

Administration witnesses put great stress in their presentations on the need for the United States to continue its leadership in the activities of the Fund and the Bank. If the United States decides to increase its quota in the Monetary Fund this will encourage other countries to follow suit. The Committee on Foreign Relations agrees. The committee took notice, however, of the fact that the increased U.S. quota in the Fund shall not, under the agreement with the other members, become effective unless the Fund determines that members having no less than 75 percent of the total of quotas have consented to increases in their quotas. Although the United Kingdom has begun to move toward increasing its quota, and although two Latin American countries have approved the increase, there was little evidence presented to the committee that

the rest of the 75 percent of the total of quotas will be fulfilled prior to the fall of 1959.

There would appear to be nothing in the offing to cause extraordinary demand on the resources of the Monetary Fund over the next few months. Administration witnesses made some vague references to the Berlin situation as possibly causing economic difficulties in the future, similar to the Suez crisis. It is hard to see how the effects of Berlin could be like those of Suez, but even assuming that such an effect were identical, the prospects now are that negotiations with the Russians over Berlin will be just getting started by the end of fiscal year 1959. Hence, dangerously heavy drawings on the Fund before July 1, 1959, would seem to be most unlikely.

In view of these facts about the foreseeable operations of the Fund and the long time which will be required for the other countries to make sufficient contributions to the Fund to cause an expenditure of the proposed increase in U.S. quotas in the Fund, the Committee on Foreign Relations thought it unreasonable to add these sums to the fiscal year 1959 budget, which is already at least $12 billion in deficit.

Thus the committee proposes to continue the U.S. leadership in the Bank and the Fund by deciding now to increase our contributions, but the committee proposes to postpone any harmful effect on the U.S. budget until the fiscal year 1960, because the increased U.S. contributions will not be accompanied by a budget expenditure prior to fiscal year 1960 anyway. I asked Mr. John J. McCloy, representing the American Bankers Association, and a former President of the International Bank, about this course of action when he testified. He said that he saw no real objection to this move.

Mr. President, in conclusion I should like to express the sincere hope that the Senate will approve these increases in the financial resources of the International Monetary Fund and the International Bank for Reconstruction and Development. These institutions have proved their worth. They will be able to do what we want them to do in the future only if they can receive this increased backing from the Government of the United States.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to consider executive business.

EXECUTIVE MESSAGES REFERRED

The PRESIDING OFFICER (Mr. DODD in the chair) laid before the Senate messages from the President of the United States submitting sundry nominations, which were referred to the Committee on Armed Services.

(For nominations this day received, see the end of Senate proceedings.)

PROTOCOL OF AMENDMENT TO CONVENTION ON INTER-AMERICAN INSTITUTE OF AGRICULTURAL SCIENCES—REMOVAL OF INJUNCTION OF SECRECY

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the injunction of secrecy be removed from executive C, 86th Congress, 1st session, a certified copy of a protocol of amendment to the convention on the Inter-American Institute of Agricultural Sciences, which protocol was opened for signature at the Pan-American Union in Washington, on December 1, 1958, and that the protocol, together with the President's message, be referred to the Committee on Foreign Relations, and that the President's message be printed in the RECORD.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

The message from the President is as follows:

To the Senate of the United States:

With a view to receiving the advice and consent of the Senate to ratification, I transmit herewith a certified copy of a protocol of amendment to the convention on the Inter-American Institute of Agricultural Sciences, which protocol was opened for signature in the Spanish, English, Portuguese, and French languages at the Pan American Union in Washington on December 1, 1958. The protocol was signed in behalf of the United States of America on January 7, 1959.

I transmit also the report of the Acting Secretary of State regarding the protocol for the information of the Senate.

DWIGHT D. EISENHOWER.

THE WHITE HOUSE, *March 19, 1959.*

(Enclosures: (1) Report of the Acting Secretary of State; (2) protocol of amendments to the convention on the Inter-American Institute of Agricultural Sciences.)

The PRESIDING OFFICER. If there be no reports of committees, the nominations on the Executive Calendar will be stated.

DISTRICT OF COLUMBIA REDEVELOPMENT LAND AGENCY

The legislative clerk read the nomination of Francis F. Healy, to be a member.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

UNITED NATIONS

The legislative clerk read the nomination of Thomas C. Mann to be the representative of the United States of America on the Commission on International Commodity Trade of the Economic and Social Council of the United Nations.

Mr. JOHNSON of Texas. Mr. President, I am pleased that this nomination has been reported. Mr. Mann is a very able, conscientious, honorable and dedicated public servant, who lives in my State. I am very pleased to attest to his fidelity to any service he may be called upon to render.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the President be notified of the nominations confirmed today.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE SESSION

Mr. JOHNSON of Texas. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

AMENDMENTS TO THE BRETTON WOODS AGREEMENTS ACT OF 1945, AS AMENDED

The Senate resumed the consideration of the bill (S. 1094) to amend the Bretton Woods Agreements Act.

Mr. DIRKSEN. Mr. President, I yield 5 minutes to the Senator from New York.

Mr. JAVITS. Mr. President, I favor the increases in the funds which are sought. I should like to point out one additional reason why the increases are vitally important, not alone to the safety of the United States as it engages in international lending activities, but very importantly to the taxpayers of the United States in terms of the foreign aid program of the United States. By these lending operations a very important, productive investment can be made by the people of the United States toward relieving themselves of as much of the responsibility for foreign aid as possible.

Secondly, and very importantly, this effort to increase especially the funds available to the International Monetary Fund has a very important and real bearing on such disturbances as are now apparent in Bolivia, and, therefore, can contribute very directly to the peace of the world. I say that for this reason: It is widely believed—and I think with great reason—that the disturbance in Bolivia was principally caused by the break in the market in tin, which is Bolovia's primary export. The break was caused by the raid on the tin market by the Soviet Union. The economy of the free world is susceptible to this kind of influence. The Soviet Union is aware of that fact. In short, by failing to break the price level of inter-

national commodities at a particularly sensitive time and at a particularly sensitive point it is possible. The Soviet Union knows it can affect the economies of countries, particularly underdeveloped countries, very adversely.

It has been truly said that in one afternoon of a commodity price break enough value can be wiped out to soak up all the aid we have given to a particular country for 10 years.

In the case of tin, the Russians hit the market and thereby there was created a very serious economic dislocation in Bolivia. That, I believe, was responsible principally for the tension which resulted in Bolivia, and which flared up as a reaction to an article in Time magazine, although its real basis lay in economic causes.

The Russians are aware of this fact, of course. We were attacked by them in this instance. I say attacked, Mr. President, as we were also attacked in the case of residual fuel oil. We were attacked by Soviet Russia's spot sale in an effort to break markets in the Scandinavian countries. These efforts on the part of the Soviet Union have had very serious effects. That is the way the Soviet Union has been operating in connection with these commodities, and other commodities also.

What can the International Monetary Fund do about it? In the first place, it can lend money to a particular country to enable that country to carry itself through such an economically depressed period and through the price situation created by the Soviet Union in its price-breaking operations. A country such as Bolivia or Chile, or any other country so affected, can carry itself through until the law of supply and demand again reasserts itself. When that time comes and the Soviet Union is, of course, unable to supply the needs of the world, the users of the particular product again return to the main source of supply, if meanwhile the country in question can carry through.

In that way the Fund can make a very real contribution toward the peace of the world and help avoid the kind of dislocation and tension and upset which we saw happen in Bolivia. Therefore this is a very important aspect of the International Fund, because the Fund is ideally suited for carrying through that kind of operation. It cannot do it unless we increase its resources. Therefore it is extremely important in terms of the whole cold war that the increase be provided.

In this connection let me say that I speak from my own experience. I have the honor, under authority of the NATO Parliamentarian Conference, to be Chairman of its Economic Committee.

The PRESIDING OFFICER. The time of the Senator from New York has expired.

Mr. DIRKSEN. I yield 5 additional minutes to the Senator from New York.

Mr. JAVITS. I have the honor to be Chairman of the Economic Committee of the NATO Parliamentarian Conference, which is composed of representatives of the 16 members of NATO.

In the committee we have dealt with this problem. We have had made a study of the question of international commodity prices, and how the U.S.S.R.'s efforts in this field can literally destroy underdeveloped countries. We have come to the conclusion—although the conclusion has not yet been actually incorporated into a resolution—that the soundest procedure is to enable the country itself to carry through the swing when a damaging price situation affects it, for if it can carry through the low point, it will again be able to come out on top. This turns out to be one of the most priceless services which the Fund renders. So much for the Fund. I think it is extremely important for the American taxpayer to realize how vital in the cold war it is. For the reasons I have just given this increase in the resources of the Fund, which is a most valuable asset to the economy of the whole free world and its stability, should be authorized.

Now about the International Bank for Reconstruction and Development. There is no question that there exists a tremendous deficiency in international capital—both public and private—to do the job of assisting underdeveloped areas.

If we continue to invest privately and publicly by way of the foreign aid programs for underdeveloped areas, year after year, and go on developing them year after year, as is now being done, we will end up in about two decades from now with ourselves having improved our standard of living by 50 percent, but the underdeveloped areas will be able to improve theirs by only 30 percent. That is completely unacceptable to them. We have the words of their spokesmen in the United Nations and elsewhere to that effect. Yet, unacceptable in this case as it may be, they may not of necessity turn to our system; they may turn to the Communist system. Let us not forget that 2 out of 3 people in free Asia live in India. They face the competition of Communist China on their doorstep. The whole effort of the free world to win the support of its underdeveloped areas could go down the drain unless we determine to do now what needs to be done; and what is needed is greater investment, public and private.

Why do we need the Bank? Why cannot private investment take care of everything?

I think it is true that private investment has been successful, and efforts to promote it have had no more ardent friend in Congress, both in the Senate and in the other body, than myself. I joined with Representative Vorys in developing the private investment guarantee program. I have sponsored an amendment, under which a comprehensive study of private investment is being made by Undersecretary of State Douglas Dillon. But private investment cannot do all the work because it cannot supply what is called the infrastructure—the roads, ports, sanitation and other fundamental public works. So the International Bank for Reconstruction and Development is essential to supply the infrastructure. Its loans are more acceptable in the neutralist nations than in others.

Now we come to the big question: Do people like or dislike the United States? Are they grateful for the money which we give them under our foreign aid programs?

Mr. President, it is time we grew up. We naturally like it but it makes no vital difference whether the people are grateful or not. It even makes no vital difference whether they like us or not—although certainly we want to be liked. I think educational, cultural and sports exchanges, tourism, and similar efforts will help us materially in that regard, as will better information programs. But that is not the fundamental point. The fundamental point is that the other nations should take the free world's way of attaining economic development and national life. If they will do that, we will have won what it is essential to win in the free world.

The work done by the International Bank for Reconstruction and Development is our work. It is helping by taking some of the load of making the effort to win the cold war a success off the American taxpayers in a most effective way. I can think of no single thing which will do the American taxpayers more good in terms of economizing in the cost of Government and in terms of winning the peace, than our passing this bill.

I shall not go into the question of the fiscal year to which the funds should be charged, or anything like that. That is strictly a political issue. It makes no substantive difference which way it is settled, although I shall suport the Republican position on that question. The vital matter is that we shall do it and that we shall know why we are doing it and that the American taxpayer shall realize it.

I do not think there is anything he as an individual could do more effectively than to support what we are doing, both in terms of the struggle for peace and the effort to effect, as much as we can, economy in government in our foreign aid programs.

Mr. DIRKSEN. Mr. President, I yield 5 minutes to the distinguished Senator from Connecticut.

Mr. BUSH. Mr. President, I oppose the committee amendment, known as section 3 of the bill. The purpose of the amendment is to throw into the 1960 budget the cost of the bill; whereas the administration had recommended that it be taken care of in this fiscal year. I regret to say that this has been recognized or labeled by many authorities as a political decision, and that partisan political influences have brought about the decision of the Committee on Foreign Relations, which I think is hardly in keeping with the high traditions of that committee. Therefore I object.

The matter is discussed in the New York Times this morning by Arthur Krock, known to many as the dean of political writers in this community, and certainly one of the shrewdest, sharpest observers on the Washington scene for

a great many years. In discussing the matter, he wrote in part as follows:

The Democrats understand it perfectly, and this explains to a great degree why they are voting into the budget for fiscal 1960 certain items the President wants charged to fiscal 1959 and which could just as well be charged to either. They have attacked his on-paper balance for the next fiscal year as phony bookkeeping to begin with; dependent on revenues he knows will not be collected and economies he knows will not be made; and inadequate for essential foreign and domestic security, anyhow.

THE DEMOCRATIC STRATEGY

But, fearing that nevertheless the President may be able to persuade the electorate that he proposed an attainably balanced budget for the fiscal year of 1960 that was adequate for all basic needs they are doing what they can to demonstrate the contrary. One effective way is to charge items to the 1960 budget that the President wants charged to the current one, but at the same time to show that the sums they granted were the sums he himself requested. This was the method employed yesterday when the Foreign Relations Committee approved the transfer from the Treasury to the International Monetary Fund of $1,375 million, the amount named by the President. And adding this to the budget for the next fiscal year terminated its already hairline balance—phony or otherwise. This strategy the Democrats will repeat as often as possible.

THE ADMINISTRATION'S VIEW

The estimate of the deficit in the budget for fiscal 1959 is already $11,500 million without the Monetary Fund item; it can be larger and probably will be. The administration's economic theory is that, this deficit being already so large, no harm will be done if it is larger—

I shall speak of that in a moment, because I agree with that statement—

and, since the domestic economy and the stability of the dollar at home and abroad will be vastly strengthened by the triumph of the balance principle in the budget for fiscal 1960, whatever can be charged currently should be. The Democrats attack this course as fancy bookkeeping for which 1960 politics is the real animation, and they are proceeding accordingly.

Mr President, that is a rather strong indictment. There is great merit in the administration's request that this item be included in the budget for 1959, when it is already well known that we will have a very large deficit, one which will probably be upward of $12 billion. I believe it can be said this deficit is already largely financed by the Federal Government and largely without recourse to the banking system. That is due to a series of reasons which I shall not now outline.

The PRESIDING OFFICER. The time of the Senator from Connecticut has expired.

Mr. DIRKSEN. I yield 5 more minutes to the Senator from Connecticut.

Mr. BUSH. It is a fact that because we started the fiscal year with a very large cash balance, and for other reasons, the deficit this year will not have been financed through the banking system to any appreciable extent. Thus the monetary and inflationary aspects of it are not so serious this year and have been discounted. Moreover the psychological effect of the deficit for the present fiscal year has been discounted to a large extent. Everyone has known for a long time that there will be a deficit on the order of $12 billion; so the psychological effects have been discounted.

It is also true that we have been talking about the desirability of a balanced budget for the fiscal year 1960. The President has submitted such a budget. I think that the reception of this budget by the public at large, judging by what reliable indexes indicate, has been very favorable and has tended to restore confidence in the Government, in the fiscal system, and in the American dollar. Therefore, why should any steps be taken at the present time which would dislodge the confidence which has been placed—replaced, we might say—in the dollar, because of the fact that we have discounted the 1959 effects of the deficit and have rallied confidence on the basis that a balanced budget will occur in 1960?

This is a matter of concern to both parties. Both of them should claim credit for a balanced budget. The Congress, which is heavily controlled by the Democratic Party, certainly must take the responsibility for unbalancing the 1960 budget, if it is unbalanced.

Therefore, I do not see why they are so anxious to unbalance it, as evidenced by the current situation regarding the second committee amendment, namely, section 3 of the bill.

So I beg the Democratic Members of the Senate to think of their responsibility in this matter, and to consider the fact that if the 1960 budget is unbalanced by deliberate action, such as by means of this committee amendment, which would be done purely and simply, as Arthur Krock has pointed out, for the purpose of unbalancing the 1960 budget—the responsibility for that will rest directly upon their heads. I beg them to reconsider the matter, and either to withdraw the amendment or vote it down, so that the amounts carried in the bill will go into the 1959 budget.

Mr. AIKEN. Mr. President, will the Senator from Connecticut consider placing the entire Krock article in the RECORD? I notice that the article contains a number of references to me and I believe it would be rather flattering to have the entire article placed in the RECORD. Of course, I notice that Mr. Krock has made a great deal of a statement I made—namely, that I "did not understand." I used the words "I do not understand." As a matter of fact, I understand; but he does not understand. When a Yankee says, "I do not understand," he is simply trying to be charitable. Or sometimes he means "I do not agree."

Mr. BUSH. Mr. President, out of deference to my friend, the Senator from Vermont, I did not request that the entire article be printed in the RECORD. But if it is his wish to have it printed in the RECORD, I now ask unanimous consent to have the entire article printed in the RECORD at the conclusion of my remarks.

Mr. AIKEN. Mr. President, I concur in the request.

The PRESIDING OFFICER (Mr. DODD in the chair). Is there objection?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WARRING FACTORS IN THE BUDGET FIGHT

(By Arthur Krock)

WASHINGTON, March 18.—The President might have lifted one eyebrow, and Republican National Chairman Alcorn both, on reading a statement made to the press yesterday by Senator AIKEN, Republican of Vermont. After the Committee on Foreign Relations, of which AIKEN is a member, in approving the President's request for an increased subscription to the International Monetary Fund, charged the sum to the Federal budget for 1960 instead of to the current fiscal year's (as the President also had requested), the Vermont Senator said:

"I can't understand why 1960 should be sacred * * * that we have to balance the budget that year if we can't ever balance it again."

The President has explained over and over that he is fighting for a balanced 1960 budget to dispel growing doubts at home and abroad of the stability of the dollar, and to discourage in good years the easy resort to deficit financing that is acceptable in bad. And, since also he has not accepted the proposition that the budget could never again be balanced, it is curious that AIKEN still fails to understand the President's explanation. If the Senator had said he wasn't impressed with it, that would be comprehensible.

ALCORN'S SPECIAL INTEREST

Chairman Alcorn has a special interest in another aspect of the fiscal 1960 budget-balancing effort by the administration. It is apparent that the Republicans believe their next national ticket will be importantly aided by the concurrent showing of a balanced budget, or of a determined effort to attain one that failed only because of Democratic resistance. AIKEN may reject this consideration on the ground, surprising in the case of a professional politician, that it is partisan and political. But again it is curious he does not understand it.

The Democrats understand it perfectly, and this explains to a great degree why they are voting into the budget for fiscal 1960 certain items the President wants charged to fiscal 1959 and which could just as well be charged to either. They have attacked his on-paper balance for the next fiscal year as phony bookkeeping to begin with; dependent on revenues he knows will not be collected and economies he knows will not be made; and inadequate for essential foreign and domestic security, anyhow.

THE DEMOCRATIC STRATEGY

But, fearing that nevertheless the President may be able to persuade the electorate that he proposed an attainably balanced budget for the fiscal year of 1960 that was adequate for all basic needs, they are doing what they can to demonstrate the contrary. One effective way is to charge items to the 1960 budget that the President wants charged to the current one, but at the same time to show that the sums they granted were the sums he himself requested. This was the method employed yesterday when the Foreign Relations Committee approved the transfer from the Treasury to the International Monetary Fund of $1,375 million, the amount named by the President. And adding this to the budget for the next fiscal year terminated its already hairline balance—phony or otherwise. This strategy the Democrats will repeat as often as possible.

THE ADMINISTRATION'S VIEW

The estimate of the deficit in the budget for fiscal 1959 is already $11,500 million without the Monetary Fund item; it can be larger

and probably will be. The administration's economic theory is that, this deficit being already so large, no harm will be done if it is larger; and since the domestic economy and the stability of the dollar at home and abroad will be vastly strengthened by the triumph of the balance principle in the budget for fiscal 1960, whatever can be charged currently should be. The Democrats attack this course as fancy bookkeeping for which 1960 politics is the real animation, and they are proceeding accordingly.

Nor did the President get any help yesterday from the Republicans on the Foreign Relations Committee. Senator LANGER was registered in the negative, but he was merely following his line of opposing all foreign economic aid. There was no objection of record, however, from Republican Senators WILEY, of Wisconsin; CAPEHART, of Indiana; or CARLSON, of Kansas. And AIKEN voted with the Democratic majority because, as he said, he couldn't understand the reasons for not doing so.

Mr. JOHNSON of Texas. Mr. President——

Mr. BUSH. Mr. President, does the Senator from Texas wish me to yield to him?

Mr. JOHNSON of Texas. No; I simply wish to determine whether it will be possible to have the yeas and nays ordered on the question of agreeing to the second committee amendment.

Mr. BUSH. Mr. President, I yield back the remainder of my time.

Mr. JOHNSON of Texas. Mr. President, I understand that the Senator from Illinois desires to have the yeas and nays ordered on the question of agreeing to section 3, the second amendment. I wonder whether it will be possible to have the yeas and nays ordered on that amendment at this time.

The PRESIDING OFFICER. The yeas and nays have been demanded on the question of agreeing to section 3, the second committee amendment. Is there a sufficient second?

The yeas and nays were not ordered.

Mr. JOHNSON of Texas. Mr. President, I renew my request for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were ordered.

Mr. JOHNSON of Texas. Mr. President, I understand there is no controversy regarding the committee amendment in section 2. Has that part of the amendment been agreed to?

The PRESIDING OFFICER. The first committee amendment will be stated.

The first amendment of the Committee on Foreign Relations was, on page 2, in line 13, after the word "thereof," to strike out "such amounts as may be necessary," and insert "$8,675,000,000."

The amendment was agreed to.

The next committee amendment was, on page 2, after line 14, to insert a new section, as follows:

SEC. 3. The amendments made by this Act shall become effective on July 1, 1959.

Mr. WILLIAMS of Delaware. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Delaware will state it.

Mr. WILLIAMS of Delaware. Upon what question were the yeas and nays ordered?

The PRESIDING OFFICER. The yeas and nays were ordered on the question of agreeing to the second committee amendment.

Mr. BUSH. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Connecticut will state it.

Mr. BUSH. Is the Presiding Officer referring to section 3 of the bill, on page 2? Is that the second committee amendment?

The PRESIDING OFFICER. Yes, in section 3.

Mr. BUSH. It does not include the amendment in section 2, does it?

The PRESIDING OFFICER. No, it does not.

Mr. BUSH. I thank the Chair.

The PRESIDING OFFICER. What is the will of the Senate?

Mr. WILLIAMS of Delaware. Mr. President——

Mr. DIRKSEN. Mr. President, I yield 5 minutes to the senior Senator from Delaware [Mr. WILLIAMS].

The PRESIDING OFFICER. The Senator from Delaware is recognized for 5 minutes.

Mr. WILLIAMS of Delaware. Mr. President, for the moment, I shall not discuss either the merits or the demerits of the bill.

At this time I wish to call attention to what I consider to be the irregular manner in which the bill has been brought before the Senate. I refer to the CONGRESSIONAL RECORD for yesterday, on page 4484, from which I read the following:

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 98, Senate bill 1094. I announce that there will be no debate on the bill this evening.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 1094) to amend the Bretton Woods Agreements Act.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Foreign Relations, with amendments.

Farther down in the same column on the page we find that the Senator from Texas made an additional unanimous-consent request, as follows:

Mr. JOHNSON of Texas. Mr. President, the bill has been reported almost unanimously from the committee, with perhaps one vote against it.

I have discussed the bill with the minority leader, who desires to make a statement on it tomorrow, and with the chairman of the Committee on Foreign Relations.

I ask unanimous consent that the time be divided between the distinguished chairman of the Committee on Foreign Relations and the minority leader, and that the vote be taken not later than 3 o'clock p.m.

The PRESIDING OFFICER. Without objection, it is so ordered.

In agreeing to this I asked whether the bill and its report was available. I was assured that it was available. I quote further from the CONGRESSIONAL RECORD for yesterday.

If they are—

Meaning the bill and the report—

available tonight, I have no objection.

Mr. President, I call attention to the fact that the bill in regard to which this unanimous consent was given did not then exist; there was not then such a bill; there was not then such a calendar number. On yesterday's calendar, the last number is 97. This bill was not on that calendar. There was no such calendar number as 98; and at the time the consent was given there was no bill and no report available for the Senate.

Mr. President, I make the further point that the bill in question was not even in the Senate at the time when it was supposedly read by the clerk. If any bill of this number was read, it was only a dummy bill, not the bill as reported by the committee.

Therefore, I make the point of order that the unanimous-consent request, as agreed to, was not in order.

The PRESIDING OFFICER. The bill is now before the Senate. The point of order should have been raised yesterday, at the time when the bill was brought up.

Mr. WILLIAMS of Delaware. The point was made yesterday; and on yesterday I was assured that the bill was available. I accepted that assurance in good faith.

Furthermore, Mr. President, when the Members of the Senate hear the clerk supposedly read a bill, they have every right to believe that the bill is actually before the clerk. But I make the point of order that the bill was not actually read.

The PRESIDING OFFICER. The bill was not actually read; but the RECORD shows that the bill is now before the Senate and that the Senate is operating under a unanimous-consent agreement.

Mr. WILLIAMS of Delaware. The RECORD shows that the bill was read only by title; but I say that the bill itself was not only not read to the Senate, it was not even in the Senate. Anyone is at liberty to take exception to that statement if you wish. It cannot be denied.

I make the point that the bill was not actually read, that the assurances given were not correct, and that the bill is not now in order.

Mr. FULBRIGHT. I turned in the bill on yesterday. I do not know what the Senator from Delaware has in mind.

Mr. WILLIAMS of Delaware. I think all of us will agree that the bill itself was not in the Senate last night when it was made the order of business.

Mr. JOHNSON of Texas. Mr. President, to what page of the RECORD does the Senator from Delaware refer?

Mr. WILLIAMS of Delaware. I refer to page 4484 of the CONGRESSIONAL RECORD for yesterday. The request made by the Senator from Texas was for consideration of the bill; and then the clerk supposedly read the bill. I make the point that this bill was not then in the Senate Chamber and, therefore, could not have been read then.

In making this point, I say to the majority leader, I realize that a motion to have the Senate consider the bill could now be made. But I think this is

an irresponsible manner in which to bring up a bill which involves more than $1 billion. This bill deserves more consideration.

The bill was originally introduced in the Senate on February 17. The bill was considered by the Foreign Relations Committee to be of sufficient importance to warrant the holding of 3 days of hearings. Yet, before the bill and its report was printed and was available, the majority leader obtained unanimous consent to have the Senate consider the bill—which, as I have said, involves more than $1 billion; and he reached out into thin air and picked out some projected calendar number and some imaginary bill. I think the bill involved is highly important. Regardless of whether the point of order is sustained or is not sustained, I am calling attention to the irresponsible manner in which a bill of this importance was handled.

Mr. FULBRIGHT. Mr. President, the bill has been printed; and I think the statements made by the Senator from Delaware about irresponsibility are entirely uncalled for. The Senator from Delaware does not know what he is talking about. He should restrain his language.

There is no secret about the bill. It has been in the committee for a long time. The basic legislation has been on the statute books for 12 years.

So, Mr. President, to pretend that the bringing up of proposed legislation of this sort involves irresponsible action, when we have had complete hearings, and when the bill is an administration bill, I believe is entirely uncalled for.

Mr. EASTLAND. Mr. President, will the Senator from Arkansas yield for a question?

Mr. FULBRIGHT. I yield 2 minutes to the Senator from Mississippi.

The PRESIDING OFFICER. The Senator from Delaware has the floor.

Mr. WILLIAMS of Delaware. Mr. President——

Mr. EASTLAND. If such a point of order or such an objection is valid, should not it have been made yesterday?

Mr. FULBRIGHT. If the Senator from Delaware had paid attention to his duties on the floor, he would have been here and would have objected yesterday. Why does he raise such a point today?

Mr. WILLIAMS of Delaware. Mr. President, I have the floor; and the time used by the two Senators should not be taken out of the time available to me.

The PRESIDING OFFICER. The time yielded to the Senator from Delaware has expired.

Mr. DIRKSEN. Mr. President, I yield to the Senator from Delaware an additional 5 minutes.

The PRESIDING OFFICER. The Senator from Delaware is recognized for an additional 5 minutes.

Mr. WILLIAMS of Delaware. Mr. President, I was here yesterday, the reason why I make the point of order today is that on yesterday I was given assurance that the bill and the report was available. Otherwise, I would have objected.

I know the bill has now been reported; but the bill was not ready last night; it was on the way to the printer. However, in answer to my question last night, I was given to understand otherwise.

Mr. FULBRIGHT. All that the Senator from Delaware had to do was go to the desk and read the bill.

Mr. WILLIAMS of Delaware. The bill was not at the desk. I repeat that we then had every reason to expect that the bill was in the Senate, when the calendar number of the bill was read and when the bill was reported by title.

Mr. FULBRIGHT. It was here. The bill was handed in at the desk by me either during or shortly after the morning hour yesterday.

Mr. WILLIAMS of Delaware. But there was then no such number as Calendar No. 98. And the bill and report were not available to us as Members of the Senate. It was not here until this morning.

Mr. JOHNSON of Texas. Mr. President, will the Senator from Delaware yield?

Mr. WILLIAMS of Delaware. I shall yield in a moment.

Mr. President, at that time there was no such number as Calendar No. 98, and at that time no bill of that calendar number was available in the Senate. I was given assurance otherwise. I said:

If they are available tonight, I have no objection.

But after the Senate adjourned a few minutes later I found they were not available.

The Senate may consider the bill at this time, if it wishes to do so; but again I say this is an irresponsible manner in which to consider a bill which involves more than $1 billion.

I also point out that the bill, as reported by the Senator from Arkansas from the committee, has an effective date of July 1, 1959. So there will be nearly 4 months before the bill will be effective, after it is passed. Why this urgent rush. Why are we suddenly confronted with a request for unanimous consent to have the Senate take up a bill—which involves, as I have stated, more than $1 billion—before the bill and report was even printed.

You may be familiar with the bill, but I have not seen it until just a few minutes ago.

Mr. JOHNSON of Texas. Mr. President, will the Senator yield 2 minutes to me?

Mr. FULBRIGHT. I yield the Senator from Texas whatever time he may need.

Mr. JOHNSON of Texas. Mr. President, the most regrettable thing I have seen happen in the Senate in a long time is the statement by the Senator from Delaware. No one has given the Senator any assurance that has not been kept.

The Senator was present when the unanimous-consent request was made. It was made with the approval of the Senate's minority leader, who has been silent, but I ask him to testify it was agreeable. The bill is designed to implement an administration proposal, and the administration wanted to have it taken up. I made the statement that the bill would not be debated until the report and the record of hearings were on the desk of each Member. I asked for the calendar number from the clerk and the number was given to me. I motioned the bill up by calendar number and I asked unanimous consent at that time that the Senate proceed to its consideration. I did not state that I had a report I could hand to the Senator, although if the Senator had wanted one he could have gotten it, because it was available.

Mr. WILLIAMS of Delaware. I beg the Senator's pardon. It was not available until this morning.

Mr. JOHNSON of Texas. I understood the Senator from Arkansas to say he submitted the report shortly before.

Mr. FULBRIGHT. The bill was at the desk from the morning hour yesterday and the report was in preparation.

Mr. WILLIAMS of Delaware. I was advised after the Senate adjourned that both had gone to the printer and it would be necessary to go to the printer to get them. They definitely were not available as I had understood they would be.

Mr. JOHNSON of Texas. The statement I made was that the Senator was standing on the floor, and I asked unanimous consent and the Senator did not object. The Senator from Illinois [Mr. DIRKSEN] asked the Senator if he desired to object, and he said:

No. I was merely trying to find out what the agreement was.

The Senator from Illinois then said:

The agreement was that a vote be had not later than 3 p.m. tomorrow.

The Senator from Delaware then asked:

What is the calendar number?

The Senator from Illinois then said:

It will be Calendar No. 98. The reports will be available in the morning.

Mr. WILLIAMS of Delaware. I ask the Senator to continue reading.

Mr. JOHNSON of Texas. The Senator from Delaware then asked:

The bill has not even been reported?

The Senator from Illinois then said:

It has been reported, but it is not on today's calendar.

The Senator from Delaware then asked:

Is it printed?

And the Senator from Illinois said:

It is printed.

The Senator from Delaware then asked:

Will the bill and the report be available?

The Senator from Illinois said:

I think they are available now.

Then the Senator from Texas said:

Nothing will be taken up until the bill and the report are available.

That is true. Nothing was taken up.

Mr. WILLIAMS of Delaware. Will the Senator continue reading?

Mr. JOHNSON of Texas. When the bill came to the floor this morning, I asked the proper officers of the Senate at 10:30, "Do you have on the desk

of every Member the report and the bill?"

That answer was in the affirmative.

Mr. WILLIAMS of Delaware. Will the Senator yield for a moment?

Mr. JOHNSON of Texas. No, I am not going to yield until I finish the statement.

The Senator was in the Chamber and heard all of that presentation. Now the Senator undertakes to criticize his own leader and to criticize the chairman of the committee for bringing up a bill which has been brought up in the regular order. The report is here for the Senator. The Senator can read it, can smell it, can touch it, or do anything he wants with it. I say nothing has happened which was not in accordance with correct procedure.

Mr. WILLIAMS of Deleware. Mr. President, will the Senator yield 1 minute to me?

Mr. JOHNSON of Texas. I yield.

Mr. DIRKSEN. Mr. President, I yield 1 minute to the distinguished Senator from Delaware.

Mr. WILLIAMS of Delaware. I desire to read the rest of the colloquy, which the majority leader did not read, and which follows immediately thereafter.

Mr. WILLIAMS of Delaware. If they are available tonight, I have no objection.

Mr. DIRKSEN. If they are available, there is no objection.

That was the basis of my agreement and I say again, they were not available last night, and that statement cannot be challenged. The bill had been ordered reported; that is true. The report was filed; that is true. But the bill and the report were filed with the clerk late last night, and were on their way to the printer. They were not available to us as Members of the Senate until sometime this morning.

I say again that the unanimous-consent agreement was given on the assurance that they were available, but they were not available at that time.

Perhaps I was too gullible in accepting the assurances so readily last night, but I will be protected properly the next time when unanimous consent is asked.

Mr. DIRKSEN. Mr. President, I ask unanimous consent to proceed for 2 minutes without having the time charged as a speech on the pending bill.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Illinois? The Chair hears none, and the Senator may proceed.

Mr. DIRKSEN. Mr. President, the only parliamentary problem which occurred to me last night was that the printed calendar did not contain the number 98 which was assigned to the pending bill. I am advised, however—and I made a point of going to see the Parliamentarian about it early this morning—that the procedure followed is proper. I wanted to ascertain whether under those circumstances a bill might be subject to a point of order. I understand it is the practice and within the rule that when a bill has been reported it is assigned a calendar number. Notwithstanding the fact that the bill did not appear on the printed calendar—which obviously was printed the night before—the bill still bears the number assigned to it, and therefore is quite in order.

I had some doubts about that, but I satisfied myself on that point with the Parliamentarian himself.

The rest of the colloquy, of course, must speak for itself.

I wish to make only one further comment, Mr. President, which is that I am of the belief there is urgency about this bill. The remarks I am going to make on the bill will be predicated in large measure upon urgency, and that is one reason why I shall resist section 3 of the bill. I do so after a long session with the Secretary of the Treasury and others who feel very deeply about the bill.

In all other respects the record is quite clear.

I must say, in behalf of the majority leader, that when we discussed the matter the day before, he did say the bill would not come up until the bill and the report and the hearings were available. I think he gave the Senate that assurance.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield for a moment?

Mr. DIRKSEN. I yield.

Mr. WILLIAMS of Delaware. In that colloquy, the Senator is aware of the fact that I said—and I quote my exact words—

If they are available tonight, I have no objection.

The Senator from Illinois then said—and I quote his exact words—

If they are available, there is no objection.

I think the Senator will agree that no objection was made, with the clear understanding that the bill and the report would be available last night. I think the Senator from Illinois will concur in what I have said, that they were not available for the Members of the Senate last night, and we could not get them unless we went to the Printing Office for them.

Mr. DIRKSEN. I can concur, with the observation that I had so much material on the subject which kept me so busily engaged I was not concerned about the bill or the report or the record of the hearings.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. WILLIAMS. I can understand the Senator's attitude from his position. I am speaking from my position. I asked if the report and hearings would be available to me and the other Senators last night. We had a right to think they would be available. I think the Senator will agree that even though it may be within the rules to reach out into the future and pick a number for tomorrow, it is not usually done.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DIRKSEN. Mr. President, I yield myself 1 minute, under the same conditions.

It is interesting to note that not a day goes by when some fine parliamentary point does not present itself. Frankly, I never encountered this problem before. There was no number 98 on the calendar. I understand, however, it is clearly within the rule to assign a number when the bill is reported, and it does not have to be a number printed on the calendar the day before in order to qualify the bill to take that number.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield for a moment?

Mr. DIRKSEN. I yield.

Mr. WILLIAMS of Delaware. I will not delay the discussion. The Senator is correct. The numbers are assigned. That is perfectly proper. However, the Senator has confirmed what I previously said. This question has not arisen before, because this is the first time since I have been in the Senate that I have had the experience of a majority leader on either side trying to reach out into the future and obtain unanimous consent to consider a bill involving any amount of money on the following day, under limited debate, especially a bill involving $1¼ billion, when such bill is not printed and does not have a calendar number. This is the first time, to my knowledge, that has been done. I repeat what I said earlier: It is an irresponsible manner in which to conduct the affairs of the Senate and a reckless way to spend a billion dollars of the taxpayers' money.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

Mr. EASTLAND. Mr. President, will the Senator withhold his request for a moment?

The PRESIDING OFFICER. The bill, S. 1094, Calendar No. 98, was reported yesterday. By unanimous consent the bill was taken up. Under the rule, upon objection, a bill must lie over 1 day. The bill having been taken up yesterday by unanimous consent, which in effect operates to waive the rule, it is properly before the Senate.

Mr. JOHNSON of Texas. Mr. President, will the Senator from Arkansas yield 1 minute to me?

Mr. FULBRIGHT. I yield the Senator from Texas whatever time he may require.

Mr. JOHNSON of Texas. I think this is a typical attempt to try to confuse the issue.

In the first place, I am informed that the bill was filed at the clerk's desk during the morning hour yesterday.

In the second place, I am informed that the complete report was given to the printing clerk about 7:30 o'clock last evening, and was available for anyone who wanted to see it, if anyone wanted to see it.

I did not state it was available. I said we would not debate the bill last evening. I stated that before we debated it we would see that the bill and the report were available for each Senator. But I asked the minority leader, since this was a very important administration measure, when he wanted it taken up and how long he thought it would take to discuss it. The minority leader told me he did not think the total discussion would require more than 2 hours. I asked him to explore that

matter with Senators on his side of the aisle, and he did so. When he came back he told me 2 hours was enough. I called the chairman of the Committee on Foreign Relations and asked him how much time he would like.

During all that time I was engaged in debate on the floor. An aid came to me and said that the chairman of the Committee on Foreign Relations was in agreement with the suggestion made to me by the minority leader, that 2 hours was ample time.

I suggested that the Senate meet at 11 o'clock today, and that there be 3 hours of discussion. I did not know whether the report was available. No Senator asked me or the chairman of the Foreign Relations Committee to see the bill or the report. Evidently Senators did not have enough interest last night to read it. The bill and the report were available this morning. Senators have had ample opportunity to read them since the Senate met at 11 o'clock. They will have ample opportunity to read them between now and the time the vote is taken.

If anyone has broken faith, I do not know who it is. I told the Senator I would not bring this bill up for debate until the report was available. I did not know whether it was available or not. I did not say it was available.

Mr. WILLIAMS of Delaware. Mr. President, if the Senator from Texas will yield, he said he would not bring the bill up until the report was available. That is true. He also said there would not be any debate last night, which indicates he was aware of the fact the report was not available.

Mr. JOHNSON of Texas. I was not aware of the fact the report was not available. I knew we would not debate the bill last night. I told all Senators they could leave, that they did not need to stay. We did not plan to discuss the bill. We merely wanted some bill made the unfinished business.

If the Senator says this is the first time a measure has been brought up before a report has been made available, or the first time a bill has been brought up before the calendar was printed, the Senator has been around the Senate for a long time without knowing what has happened, because that frequently happens. Except with respect to appropriation bills, many times the leadership can make an agreement on bills. We did agree in this case, and the agreement was carried out pursuant to what the minority leader recommended.

If the minority leader did not talk with the Senator, I did not know it. I thought he did, because I saw the two Senators talking with each other. I thought the Senator approved of what was happening.

Mr. WILLIAMS of Delaware. I did approve of what was happening, subject to the assurances which I accepted as being reliable.

Mr. JOHNSON of Texas. Did the Senator ask to see the report last evening?

Mr. WILLIAMS of Delaware. I did, immediately after the Senate adjourned, but when I found the bill and report were not here it was too late to raise the point at that time. However, I definitely did try to find a copy of the report last night, and it was not available.

Mr. JOHNSON of Texas. I am informed that it was given to the printing clerk about 7:30 p.m.

Mr. WILLIAMS of Delaware. If it had been filed, it had gone to the Printing Office. I say that it was not available to me, and that I tried to get it.

Mr. DIRKSEN. Mr. President, I withdraw the suggestion of the absence of a quorum, and yield 10 minutes to the distinguished Senator from Wisconsin [Mr. WILEY].

Mr. WILEY. Mr. President, I rise to support the increased U.S. contributions to the International Monetary Fund and to the International Bank.

These are the offspring, Senators will recall, of the conference at Bretton Woods, N.H., in 1944. They are now among the oldest and most reliable of the free world's institutions.

For 12 years, each has discharged its functions with a high order of effectiveness and with surpassing responsibility. Now, for the first time since the adoption of the Bretton Woods agreements, the 68 member nations have agreed—agreed unanimously, I might add—that the present subscription levels are no longer adequate if the economic ills and crises of the future are to be faced realistically.

It was proposed that contributions of most members to the Fund be increased by half. For the United States, this means an increase of $1.375 billion—from $2.75 billion to $4.125 billion. As for the Bank, subscriptions in most cases are to be increased 100 percent. This means an additional liability to the United States of $3.175 billion. However—and I hope my colleagues will note this point—only the first figure, the increase of $1.375 billions to the Fund—will have any budgetary effect. Our additional obligation to the Bank will simply be a standby guarantee against future contingencies. Not one cent of this new money is intended to be called up for use in the Bank's operations. But it will serve to reassure the investors who buy the Bank's bonds and, in effect, to double their protection.

I scarcely need point out that this legislation was intended to be genuinely bipartisan in character. This is substantially still the case, although only this week an amendment which I regard as highly political has been attached to the bill. But I would rather not at this time divert the attention of my colleagues from the urgency of the measure by dwelling on that matter.

It is my feeling that the International Monetary Fund and the World Bank perform a service that is seldom seen in its true perspective. Just as the United Nations labors to ease political strife and to settle political squabbles, so do these two agencies strive to mitigate the economic stresses and strains of 68 nations. These are ambitious objectives. However, as I have already said, the achievement marks of both the Fund and the Bank are high, indeed.

In considering this measure, we should remember that most of the work done by the Fund and the Bank is in behalf of the so-called underdeveloped countries. In fact, the Bank has confined its operations to Asia, Africa and Latin America. In the context of the great Soviet challenge, this is an important point to remember.

In November of 1957, Mr. Khrushchev threw down the glove to a group of American visitors. "We declare war on you," he said, "in the peaceful field of trade."

One year later, the Soviet premier's delegate said this to the Asian-African People's Solidarity Conference at Cairo:

> We do not need profits, privileges, controlling interest, concession of raw material sources. We do not ask you to participate in any blocs, reshuffle your governments, or change your domestic or foreign policy. We are ready to help you as brother helps brother, without any interest whatever, for we know from our own experience how difficult it is to get rid of need. Tell us what you need and we will help you and send, according to our economic capabilities, money needed in the form of loans or aid * * * to build for you institutions, for industry, education and hospitals * * * our only condition is that there will be no strings attached.

Mr. President, I submit that this spurious Soviet declaration could, in substance, be set forth in good faith by the International Bank and the Monetary Fund together. The functions of these sibling organizations differ, but they work to the same end—to strengthen the economies of the non-Communist countries of the world. We must see to it that these functions are never curtailed by the lack of operating funds.

It might be useful to examine these functions. The World Bank was initially a lending agency at the service of countries whose first need was to rebuild facilities that had been destroyed by the war. Since then, the reconstruction phase of its career having ended, the Bank has become a major source of development capital for the economically less developed countries of the world. In the past 10 years, its lending rate has just about tripled.

The construction of electric power facilities has been perhaps the Bank's single greatest preoccupation. Indeed, such projects have accounted for about one-third of its loans. This high priority on power is understandable when you consider that in all of Africa, for example, there are barely 6 million kilowatts of electric power. Another third of the operating funds have been devoted to the improvement of ports, harbors, railways and highways. Most of the remainder has been spent on agriculture, especially reclamation; and industry, with special stress on steel production. In 12 scant years, the World Bank has granted more than 200 loans totaling more than $4 billion. This money has been spent on more than 600 projects by 49 countries.

I doubt that any Member of the Senate would dispute the fiscal and procedural policies of the World Bank. They are eminently sound. Loans are extended only to member countries, or in some cases to a government whose application

is guaranteed by a member country. Each transaction with a private business must be guaranteed by the government of the country in which the money is to be spent. As the distinguished Secretary of the Treasury reminded us last week, a period of intense study, survey and negotiation must precede every such loan.

Most of the Bank's funds derive from the subscriptions of its members and from the sale of its own bonds to investors. The greatest part of the funds used to finance its projects come from the bond sales. In fact, only 20 percent of the Bank's total capitalization is even available for operations. The balance is held in a fund that guarantees the bonds.

According to the Secretary of the Treasury, bond issues in the amount of $1.8 billion are currently outstanding. They are issues in dollars, sterling, Swiss francs, German marks, Canadian dollars, and Dutch guilders. They are bought in substantial quantities for investment purposes by numerous private interests, both here and abroad. Some issues have been bought outright by foreign countries, who view the bonds as a good investment of their monetary reserves.

The appeal of the World Bank's bonds to investors is easily explained, I think. First of all, the impeccably high standards of the Bank's operations have given the stamp of merit and reliability to all of its transactions. Furthermore, investors know that behind the bonds stands a guarantee in the form of subscriptions of the member countries. This guarantee is represented by the uncalled 60 percent of the Bank's capital. Never in the Bank's history has it been necessary to call up any of it. And we must all hope that it never will be necessary.

Although the Bank is lending somewhere between $700 million and $800 million annually, last year it borrowed only $660 milion. Now it seems certain that the lending rate will quicken before it slows down. Indeed, we hope this will be the case. Yet unless even more investors are persuaded to buy the Bank's bond issues, the current rate will not be maintained. Thus, the bonds must continue to be held in the highest regard by investors.

This, I am confident, will always be the case, so long as the margin of the guarantee fund is such as to inspire confidence.

The bill before the Congress seeks to allow the United States, in concert with the other free world countries, to increase its contribution to this contingency fund, as well as endorsing the proposal to increase the Bank's capitalization to $21 billion. As already noted, the bill would double the U.S. commitment. This is precisely the increase expected of all other members, except for Germany, Japan, and Canada, whose capital subscriptions are being raised to more realistic levels.

Mr. President, I hope that the Senate will pass this measure with a resounding majority. What the World Bank has contributed—what it will contribute to the future—is a unique service that could not be duplicated elsewhere. Private corporations have neither the will nor the means to undertake the kinds of projects that the Bank encourages. Moreover, the epithet of colonialism could not in any logic be applied to so selfless and international an institution as the World Bank. What we stand to gain from its achievements, besides the knowledge that we have helped others, is an effective, pretested rebuttal to such phony Soviet claims as the one I have just quoted. And as for ourselves, I think we might be approaching a time in which our own prosperity may increase only as fast as we and other strong nations can enrich the economies of those who are less fortunate.

I turn for a moment to the International Monetary Fund. The central purpose of this organization is to extend short-term loans of convertible currencies to member nations whose foreign exchange has dwindled. The Fund is definitely not in the business of bankrolling poorer countries over a long period of time. However, it can help a member over a rough spot, such as a seasonal dip in the economy. This allows the member state to avoid extreme measures such as imposing import quotas, for example. As a result, the cause of international trade is served.

The 68 member states have unanimously proposed an increase in the Fund's working capital. The present quotas are judged no longer realistic. First of all, they are based on data for the period preceding the Bretton Woods Conference. Among the determinants were prewar foreign trade, national incomes, and monetary reserves. Aside from this, the U.S. quota was set at $2.75 billion.

Since the time of the Bretton Woods Conference, we have experienced a period of extraordinary growth in many parts of the world. Figures arrived at then have been revised far upwards. The traffic in the trade routes is heavier, the amount of currency in circulation vastly greater. Yet great expansion can also produce great fluctuation—in foreign exchange earnings—and reserves, for example. It also produces a corresponding need for ready capital.

Mr. President, I regard the proposal to increase the Fund's quotas to realistic levels as absolutely essential. The needs of today cannot be measured by yesterday's standards.

The International Monetary Fund is more than just a short-term credit institution. For many nations it is a vital crutch in their recurring times of need. For others—those with a tradition of wealth and durability—the Fund is a unique and equally vital insurance against future dips and turns. For all, it provides a line of credit that permits the matching up of exports with imports.

It should perhaps be made clear that the Fund's assets never really change. Whenever a member borrows a sum of hard currency, he deposits with the Fund an equal sum of his own soft currency. So the transaction is actually a sale of one kind of currency for another convertible type. When the term of the loan has expired, the member simply repurchases his own currency with gold or convertible funds.

Mr. President, we have all seen what the Marshall plan contributed to reinvigorating the currencies of Western European countries. Some of them, Belgium and Holland for example, having once drawn upon the Fund themselves, now see their own francs and guilders being borrowed by other countries in need of foreign exchange. I think both we and they can take considerable satisfaction in this development. I submit that it makes even clearer our duty to bring the reserves of the International Monetary Fund into line with the needs of all its members.

I conclude by saying that this is not a giveaway. This is a business transaction between nations, for their own preservation. Today the President is conferring with the representative of Great Britain. In this critical hour, when the free nations are facing the challenge of Khrushchev, it is well for us to strengthen our very vitals in this way.

Mr. DIRKSEN. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the time consumed in the quorum call be charged equally to both sides.

Mr. HOLLAND. I have no objection.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HOLLAND. Mr. President, I yield 10 minutes to the Senator from Vermont.

Mr. AIKEN. Mr. President, I rise in support of the pending bill which proposes to increase the U.S. contribution to the International Monetary Fund and to the World Bank. I believe that this organization has proved its worth during the 12 years it has been in existence. It has contributed immensely to the great increase in world commerce and to the business which has been done among nations. It has also contributed greatly to the U.S. economic system. It has been of great help in developing the so-called undeveloped nations of the world. In fact, about one-third of all the loans made by the World Bank have gone for the construction of public utilities in such countries, which have borrowed money, without which they could not have made further progress.

Although the amount involved seems very large, to the limit of $8,675 million, which is imposed upon it by the bill, we must understand that this is not all expense; it does not represent money actually paid in by the United States, because to a great extent the bill merely provides for a guarantee of the loans, just as we guarantee loans for certain programs in the United States.

The point at issue with reference to the increased contribution on the part

of the United States to the fund and to the bank is when it shall be made available. Three principal witnesses appeared before the Committee on Foreign Relations. They were Secretary Anderson, of the Treasury; Assistant Secretary Dillon, of the State Department; and Mr. McCloy, representing the American Bankers Association and also the Chase Manhattan Bank. None of these witnesses made a very convincing argument for making the additional contribution available immediately. Therefore, the committee amended the bill so that it will be available at the beginning of the next fiscal year, July 1. Had the administration given any convincing evidence that these funds would be needed during the next 3 months, I, for one, would have been glad to make the contribution available immediately.

So much has been said on this point that I should like to read into the RECORD excerpts from the testimony of the witnesses who came before the committee. The first is an excerpt from the testimony of the Secretary of Treasury, Mr. Anderson. The excerpt I shall read appears at page 21 of the printed hearings:

The CHAIRMAN. What has been the trend in the last 6 months of the drawings on the Fund? Have they been going up or going down during the past 6 months?

Secretary ANDERSON. Mr. Chairman, I don't have it on a 6-month basis. My judgment is that they have gone off slightly below the past 2 years; they have not been as severe.

The CHAIRMAN. They have decreased since the time of the Suez crisis?

Secretary ANDERSON. Yes, that is correct, sir.

The CHAIRMAN. Suez produced almost a panic, did it not? The requirements for foreign exchange were very extraordinary, were they not?

Secretary ANDERSON. Well, you really had two things happen. You had the Suez situation, and you had the exchange crisis which developed in 1957.

The CHAIRMAN. Was that not largely brought on by Suez?

Secretary ANDERSON. It was certainly influenced by Suez.

The CHAIRMAN. Your chart No. 1 indicates there has been a very substantial drop in the requirements on the Fund since 1957.

Secretary ANDERSON. That is correct.

The CHAIRMAN. I wonder if you have more current information than that chart shows.

Secretary ANDERSON. We do have it. It is still turning down.

As of the end of 1958, $1,400,000 was left in the International Monetary Fund for use in the current year. I understand that at present more than $1 billion is available, and there seem to be no indications of emergencies occurring in the near future which would require larger amounts.

I for one would not want to have the United States make contributions to any of these funds if it were necessary to borrow in order to do so. I would not want to put the $400 million in gold into the fund prematurely; in fact, I would want to wait until the very last minute when that could be done, and when it was shown conclusively that it was needed. I believe we should give the authority to do so at as early a date as it seems likely that the funds will be needed.

Under Secretary of State Dillon, so far as I know, did not comment on the pending question as to when the fund should be made available. He favored the bill, as did the other witnesses.

Mr. McCloy, representing the American Bankers Association, as well as the Chase Manhattan Bank, had this to say, on page 103 of the hearings, in response to a question by the chairman, the Senator from Arkansas [Mr. FULBRIGHT]:

The CHAIRMAN. So it is extremely important in that.

One other aspect of that is this: Do you see any compelling necessity that this increase in the funds—the International Monetary Fund is part of this; you have already commented, I believe, on the Bank—but for the Fund itself, is there any compelling necessity that this increase be made available within the next 3 months? Is there that kind of urgency?

Mr. McCLOY. I don't anticipate any emergency within the next 3 months that I can say makes it impelling that you do it.

Then there was further colloquy between the chairman and Mr. McCloy. Mr. McCloy ended his statement on this matter at the middle of page 104, again saying that he did not see any need for the contribution to be made at this time.

The House bill as it has been reported to the House makes the funds available immediately. The bill as reported to the Senate by the Committee on Foreign Relations makes the contributions available on July 1.

It is obvious that if the Senate bill were passed as is, and the House retained the present language of the House bill, the matter would go to conference. I have advised top administration officials that if they can produce a more convincing argument or reason for making the contributions immediately available than the reasons their witnesses gave before our committee, I will be receptive to whatever evidence they might adduce. It was my advice, for what it was worth, that they should not seek to have a fight made on the Senate floor, where they were almost certain to be defeated, and as a result, the Senate would almost be bound to maintain an adamant position when the bill goes to conference. I think it is all right to speak against the bill and say why the proposal of the Treasury, the White House, or any other agency of the Government should not be adopted. But I am sorry we shall have a yea and nay vote on the amendment, because I have no doubt what the outcome will be. My vote will have to be based on the evidence presented so far. It may be that in due time the administration will be able to produce evidence which will convince the committee of conference that the money ought to be made available immediately, or at least before July 1.

Mr. DIRKSEN. Mr. President, may I inquire how much time remains to each side?

The PRESIDING OFFICER. The Senator from Arkansas [Mr. FULBRIGHT] has 37 minutes remaining; the Senator from Illinois has 32 minutes remaining.

Mr. DIRKSEN. Mr. President, I appreciate that I probably am the only remaining speaker on the bill on this side of the aisle. We have been trying to take care of the requests of a number of Senators who are officially away from the Chamber for a short time at the Pentagon. I had indicated that the Senate might vote as early as 2:30, although the time limit as set by the unanimous-consent agreement is 3 o'clock.

I have had informal discussions with various Senators with respect to pressing the case against section 3 of the bill, which places the burden in the fiscal year 1960 instead of the fiscal year 1959. It might be gathered from that statement that the primary consideration here is a budget consideration. Yet with me that is not so at all. The primary consideration, in my judgment, is to do those things which are reasonable, as requested by the Secretary of the Treasury, who is the governor and our representative in this matter, because I believe his evaluation of the situation in the world and of the responsibility of this bank and this fund must transcend my own judgment, unless I can refute the contentions which he makes.

On occasion it has been said—and we make the necessary political discounts—that there has been a lack of leadership in this administration. Mr. President, if anything demonstrates leadership, I believe it is the very measure with respect to the International Bank and the International Fund, which came to use from the President. I believe the record shows that as early as August 18 of last year the President sent a 3-page letter to the Secretary of the Treasury. First, the Secretary inquired of the President. Then the President sent him that long letter, indicating how anxious he was to get something done in this field, so as to increase the necessary capital and authority, so that the Bank would be assured of the means and resources by which to carry on its good work.

Incidentally, I wish to say to the distinguished chairman of the Foreign Relations Committee [Mr. FULBRIGHT] that the report which accompanies the bill is an excellent one. It is at once readable, and I think it is quite fair. Normally I am in favor of the bill. But I do take exception to section 3, the amendment written into the bill by the committee, which does not appear in the House version of the bill.

But the chronology is fairly well established, namely, that this effort began in August of last year; then, on the 28th of the same month, the President wrote to the Secretary, and said he should go to the international conference in New Delhi, India, and that there he should propose these increases; and in the letter the President said that the Secretary should ask for "prompt consideration."

The President did not say that the Secretary should wait until the end of the fiscal year. Instead, the President asked the Secretary to request prompt action from the representatives of the 68 countries, or from all the representatives in attendance at that conference in India. I think that demonstrates the leadership of the President and the Secretary of the Treasury in this field.

The months of August, September, and October were then given over to the vari-

ous consultations; and in October the Secretary went to New Delhi, India. In the speech he made there, he said—and in my judgment this statement by him constitutes the key to the matter:

> The importance of this matter will be so evident as to create a sense of urgency.

Mr. President, the one who has to administer this program, the one who has the fiscal burden of our country on his shoulders, who is a dedicated spirit, in my book, was so anxious, that the delegates and all others present got a sense of urgency.

Obviously, there does not have to be urgency if the committee says, "Wait until the beginning of the fiscal year and waste 12 or 14 weeks."

My friend, the Senator from Vermont, says no need was demonstrated. No need was demonstrated in October 1929, when the house of cards fell in and the Nation was overnight engulfed in a depression, notwithstanding the fact that the New York bankers had been here, testifying that there was no danger and no foreseeable difficulty. The developments at Suez could not be foreseen, although they resulted in a drain of nearly $1 billion on this organization in connection with the exchange crisis of 1956 and 1957.

Crises do not come on the installment plan. Suddenly they arrive in all their naked fury; and if one does not have the resources required in order to deal with them, one is in trouble.

That is the point the Secretary of Treasury made at the New Delhi Conference. Furthermore, he made it to me, in my office. He has made this point because he is concerned about this matter.

The cold print of recorded testimony taken before a committee does not always reveal such concern. But the Secretary is deeply concerned; and he came to us, to lay this matter before us; and I became concerned, because I thought there was a contagious quality about his concern.

So unanimous action was taken at the conference in India; and on December 21, it was followed by the executive report of the Governors, and the resolutions came in; and on December 22 the Governors approved.

This is the resolution which was adopted by the Governors who administer this matter for 68 countries:

> Since it is in the interest of the Fund and its members that the contemplated increases be expedited, the members are invited to comply as soon as possible with the procedures for notice and payments.

This matter does not apply to us alone. There is a 75-percent participation provision. In a few moments I shall discuss it.

But there was the statement of the Governors, those who must administer this program, which the committee report says this has been well handled, and that the operation is efficient and is substantial—and it is.

So the Governors said:

> To comply as soon as possible with the procedures for notice and payments to the Fund—

Under the resolution.

Then came February 12, when the President delivered his message; and on February 17, the bill was introduced. On March 9, the hearings were held.

So there is the story, beginning in the middle of August, when the President and the Secretary of Treasury requested prompt consideration; and thereafter the convention or the conference in New Delhi, India requested prompt consideration; and the Governors in their resolution asked that this matter be given attention "as soon as possible" and asked the members to comply.

So this is not a budget consideration or question. Instead, this is a matter of a world operation and a question of whether it has the necessary resources.

The second committee amendment—and it is one thing I am interested in—would put this authorization into the fiscal year 1960. It is now March 1959. Following this month will come April, May, and June—3 months. In 3 months the world could go to the devil in a handbasket; it has done so before.

I do not want to see our country abandon and forfeit its leadership under a dedicated President and a dedicated Secretary of the Treasury, who have come with anxious hearts to say to us, "Give us this in 1959, and do not make us wait for 14 weeks, because we cannot look over the bill and see what might happen."

The world is full of fever, and events move with great acceleration. We cannot take any chances in that connection.

The committee recommends, by means of its second amendment, that the authorization be put into the fiscal year 1960. The committee's argument is that the bill itself manifests a continuing interest on the part of the country and our abiding interest in the operations of the Bank and the Fund. The committee included in the hearings a table. I do not have the slightest doubt that the table is accurate and authentic, so far as it goes. The purpose of including the table was to show that the demands have been receding somewhat, and that if we measure this matter on the basis of so many million dollars a week or so many million dollars a month, predicated on the past, perhaps we could make out satisfactorily.

But, Mr. President, that is not the story. In this world, events are not particularly predicated upon how quiet this fiscal demand has been in the last 12 months. When the demand begins, it develops and increases very rapidly. And when we do not have the resources, we cannot move in with expeditious action.

What is the problem with respect to the Fund? The Secretary told the committee that on the 1st of January of this year it had a $2.3 billion balance in golden dollars. That is exclusive of Canadian dollars, German marks, British sterling, and that kind of fund. Look at the arithmetic involved: $2.3 billion; and standby commitments were $900 million. So the amount is reduced to $1.4 billion. The golden dollar need has been expressed by the committee, and particularly on page 3 of its report.

Now every country that is a member of the Fund has drawing rights. Those drawing rights cannot be denied to them. Those drawing rights add up to about $1 billion. So when we get through, we have available for all other demands, not $1 billion, or $1 billion plus. We could have available, for another emergency situation, $400 million.

That is less than half the amount committed in the Suez and the exchange crises—$400 million.

Those are the figures the Secretary gave to me. They become pretty impressive when we consider the rights of countries to draw on the fund, and the standby commitments, and the standard that it requires golden dollars to do the job, because they are what are in demand.

The actual cash demands in the years 1956 and 1957, according to the statement I received from the Secretary, had been $1.4 billion. I do not know that the statement conforms to everything that was said to the committee, but I got the information yesterday afternoon, because I wanted to be sure the information was current.

I asked all manner of questions, in the hope I would get the whole story. I certainly would not be making a fight against a committee amendment if only a budget consideration were involved. I would make a fight, but I would not carry it to the very end. But this is a different situation, because the leadership of the United States of America is here involved. I do not want it to be felt that we had done our duty when we passed a bill and then said to the 68 countries, "Throw your marbles into the pot. We are going to wait 14 weeks before we do it." We are not going to fill the need on that kind of doctrine.

That leads me to the question of participation, on which I shall have something to say. There is a provision in the Bretton Woods Agreement that there is to be 75 percent participation before the fund can use the increased money. It was said there could not be a 75 percent participation except some time late in the year. There will never be such a participation if the world's leading Nation says, "Gather around, all you Governors. Throw your marbles in the pot right away, so we get 75 percent participation, but while you are doing that, we are going to wait until the end of the present fiscal year, and we are going to wait 12 or 14 weeks in which to do it."

Is that great leadership? I have heard some speeches made around here about the need for dynamic leadership; the need for bold, fresh action. Bold action. This is no bold action, in my book, if we are going to let the world sit at the well and say, "We do not think you need that money. We do not think there is going to be a crisis. Jack McCloy cannot see anything ahead. Therefore, based on such testimony, we are not going to make the money available."

Not by my vote will that position be assumed. An isolationist tag was put on me for a long time. My distinguished colleague knows about it happening in the days we served in the House together. I have learned a few things, I hope. But I want to be sure that my country, by

action of the Congress, is not going to lose its leadership, by waiting until the beginning of the new fiscal year. Why not give the money? It may a cost a little in interest—$342 million. A little interest will have to be paid on it. But I would rather have the assurance that this $1,350 million, out of which $450 million is in gold, will be there if Secretary Anderson needs it. We hear speeches made on the floor of the Senate about waste and extravagance in foreign aid. We had to reconstruct the whole financial structure of Turkey at one time, when inflation was rampant. Through the instrumentality here in question we were able to move into Turkey, and we got a pretty fair job done, according to Secretary Anderson. That is a job for this instrumentality and what is made available through it.

Mr. President, there are many possibilities. I do not like to talk about them. I never like to speculate too much about what is over the hill. Many speeches concerning Berlin have been made on the floor of the Senate. There have been many indications as to what the administration ought to do. Well, the President spoke up. I thought he made a masterful address to the country. It brought a degree of hope and comfort and assurance to the people.

Let us talk not only about Berlin, but about the efficacy of our defense posture and where our responsibility lies in the foreign aid field.

There does not have to be a shooting war in order for tensions to develop that shake every chancellory in the world and every exchange. What is involved, in the Bank, is economic development; and, in the Fund, a goal of stabilizing and protecting the currencies of countries and keeping them on a sound basis. An excellent result has been accomplished. That is the delicate thing. That is the thing that can be sunk overnight, when someone rocks the boat. It happened in 1929. It was the president of the National City Bank who proclaimed to the world that everything was ducky, and overnight we went into the cellar.

Mr. President, I do not want to be in the position of having to apologize. I am not going to reproach my conscience by saying, "Well, you had an opportunity to give Secretary Anderson what he asked for with an anxious heart, and you did not do it. You said, in effect, 'All you 68 members throw your marbles into the pot. We will wait until the end of the fiscal year.' "

That is not leadership, in my book. That is why the amendment takes on considerable importance. I do not want Ecuador and Guatemala to say, "We led the way for the great country to the north, because we had already consented." I am not going to forfeit our leadership. We have struggled too long for it. If it is to be my vote alone that will be a vote for eliminating the committee amendment when it is offered, it will be at least that much.

So here is an accent on emergency by the President of the United States. Here is an accent on urgency by a very distingushed Secretary of the Treasury, who comes to Congress from a busy office and talks with Members and says, "I need this." I feel it was done under deep obligation, especially after I talked to many representatives in India last fall.

Can we be accused of boldness? Maybe it is a bold delay, but I do not want to be charged with it. If ever there was a time when we could demonstrate some dynamic quality, I think this is the time for the Congress to do it, for an institution and fund which, by the admission of everybody familiar with it, have done an efficient job and a forthright job. That is what the committee said.

Mr. CASE of South Dakota. Mr. President, will the Senator yield?

Mr. DIRKSEN. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 10 minutes remaining.

Mr. DIRKSEN. I yield to the Senator from South Dakota.

Mr. CASE of South Dakota. In the first place, can the Senator advise me where the requirement rests that one-fourth of the payment be in gold? Is that in the original Bretton Woods agreement?

Mr. DIRKSEN. I think it is in the original Bretton Woods agreement.

Mr. FULBRIGHT. It is in the original Bretton Woods agreement.

Mr. DIRKSEN. That is correct.

Mr. CASE of South Dakota. Is there a determination that the gold shall be at the present value of $35 an ounce?

Mr. DIRKSEN. I do not know about that.

Mr. FULBRIGHT. I think so. The gold was evaluated at that rate, and must be maintained at that rate insofar as the Fund is concerned.

Mr. DIRKSEN. The distinguished chairman of the committee has served in the House, and was serving about the time the gold was so evaluated, as was also the distinguished Senator from South Dakota. I always think of the rather ironic way in which history rises up. This is sort of a lineal descendant of the old stabilization fund, when we raised the price of gold by taking a few grains out of the gold dollar, and we discovered the $1.8 billion of the increment so gained was not necessary, for the stabilization fund then in being and so it was used for the creation of the International Fund which we have today.

Mr. FULBRIGHT. That was a part of the original funds.

Mr. DIRKSEN. So history repeats itself, while we are in Congress in another body.

Mr. CASE of South Dakota. Let us assume that during the life of the agreement the price of gold should change again.

Mr. DIRKSEN. I must confess I have not carefully examined the language in the agreement to the point of understanding that there is any provision for a modification of the gold price.

Mr. FULBRIGHT. If I may, I should like to invite the Senator's attention to page 23 of the hearings, where this matter was discussed by the Secretary of the Treasury. Would the Senator like to have me read that?

Mr. DIRKSEN. Yes.

Mr. FULBRIGHT. The Secretary said:

> Yes, there is a fixed basis in that all of the countries are required to declare a par value at some time, and this par value is related to either gold or dollars.
>
> Now thereafter it undertakes an obligation to maintain that its currency will not fluctuate from that par by more than 1 percent. If it does fluctuate, the country has to put in new currency if it goes down, or the country takes back currency, if the value of the currency goes up.

In other words, it is related directly to the par value of all currencies and related to the gold at the rate established, $35 an ounce.

Mr. CASE of South Dakota. It would appear that if the value of the currency were to go down the country would have to reimburse the Fund.

Mr. FULBRIGHT. The country would have to put in more currency.

Mr. CASE of South Dakota. It does not appear clear as to what would happen if the price of gold should appreciate and there should be an increment, to which the Senator from Illinois alluded. If there should be such an increment after the gold was in the Fund, presumably the Fund would get the benefit from it.

Mr. DIRKSEN. I am not sure. I rather think that benefit would redound to the country, because the Fund is expressed in terms of dollars.

Mr. CASE of South Dakota. I have a further question with regard to a different aspect of the matter.

I notice in the statement submitted by the American Farm Bureau Federation, on page 116 of the record of the hearings, it is stated:

> The United States would have to make a gold payment in the amount of approximately $344 million. The remainder of slightly over $1 billion would not actually be expended from the U.S. Treasury until needed by the International Monetary Fund to meet a situation where a great demand would be made for loans by member countries.

Mr. DIRKSEN. It is a callable fund.

Mr. CASE of South Dakota. Is that a correct statement?

Mr. DIRKSEN. It is a callable fund.

Mr. FULBRIGHT. The countries put demand notes into the Fund. Whenever the Fund has need for the money, it can call upon the Treasury to deliver the dollars.

Mr. CASE of South Dakota. The reason for inviting attention to that matter is that if the statement in the American Farm Bureau Federation presentation is correct, it becomes relatively less material as to what is the effective date, whether it be now or July 1. If the Treasury cannot be required to put up the money until the Fund needs it, then the date is less important.

Mr. FULBRIGHT. The Senator is quite correct. Is the question addressed to me?

Mr. CASE of South Dakota. It is addressed to either Senator. I am happy

to have the comment of the distinguished chairman of the Committee on Foreign Relations.

Mr. DIRKSEN. There is a question, when does the need arise?

Mr. FULBRIGHT. That is correct. I certainly do not believe there is any reasonable chance that any of this money would be needed before July 1.

With respect to that part which is in gold, there is little prospect it will be needed until a real crisis develops, at least of the nature of the Suez crisis. Even with regard to the Suez crisis, which took place in the biggest year we have ever had, for the entire 12 months only $977 million was used. All we are talking about is a delay of 3 months.

As the Senator from Illinois pointed out, there is in the Fund roughly a billion dollars now free and uncommitted, not subject to standby or any other commitment.

Mr. CASE of South Dakota. Then it seems to me the major point to be considered is whether there is some value, for moral or diplomatic reasons or for reasons of negotiation, in having the act become immediately effective.

Mr. FULBRIGHT. The passage of the bill would certainly be sufficient action to convince any reasonable person that so far as we are concerned this has been agreed to and the money will be available on July 1. I think that is the only leadership needed.

I do not believe that the further act of making available money, which could not be used until 75 percent of all the contributors also subscribed would in itself be of great value. That procedure will take some time. Only two countries have completed such action, and they are relatively small countries in Latin America. No major country has completed action.

The result would be that if we turned over the gold to the Fund, the Fund would hold the gold in its possession until 75 percent of the rest of the subscribers had also made available their gold and agreed to put up their total subscriptions.

Mr. CASE of South Dakota. Mr. President, in conclusion, I should like to comment that it seems to me the date is relatively less important, so far as the Treasury is concerned, if the Treasury is not going to have a demand until the money is actually needed, since there will be no impact on the Treasury. I think there is some value in having the legislation become effective as soon as possible, for the moral force, if we are going to support the program at all.

Mr. DIRKSEN. Mr. President, there is an answer to the problem. I recall a session I had with a chief of state in Asia. When we had discussed matters rather thoroughly, we got around to the question of aid, and he asked, "Has the money been appropriated? Is the money on the shelf?"

These countries know a good deal about our budget procedures. We are dealing with 68 countries and a 75 percent provision, so we have to have that much participation before the increased fund will come into use. It will be said, "Well, we passed a bill." The question then will be, "Where is the money?" Other countries will say, "Well the United States is in no hurry about putting up the money. Why should we be in a hurry?"

That pushes the program on and on and on. Perhaps instead of its being accomplished next fall, it will be the following year before these resources will become available. That in itself is an argument to sustain my judgment that the amendment should be taken out of the bill.

I allude again to the committee report. It is said that what the Bank does is an efficient operation. It is said that it is successful. It is said that they have built up strong reserves. It is said, "Gold and dollars are the important elements." It is said, "Gold and dollar composition might be at low levels at any particular time." And the committee report says, "The Fund could not now meet a demand of comparable scale to 1957 in the event of a similar future crisis."

I do not wish to have our country put in that hole, Mr. President, because the demands might be greater than ever before.

This is not a budget problem. This is not a political problem. This is not a case of trying to move the money from one year to another to make one budget or another look better. No, there is a far more compelling reason behind the procedure, and it is the urgency which has been expressed for 6½ months, from August of last year until now, by the President, by the Secretary of the Treasury, and by the governors from these various countries who administer the Bank and the Fund operation. All of these gentlemen are in agreement and are asking for expeditious action, yet it is proposed that the Senate shall say to them, "Wait awhile."

Under those circumstances I do not want to wait. That is why I am against the committee amendment.

Mr. CASE of South Dakota. Mr. President, will the Senator yield me 1 minute?

Mr. DIRKSEN. I yield.

Mr. CASE of South Dakota. Mr. President, the clerk of the committee has handed me a copy of the articles of agreement of the International Monetary Fund. Article IV is headed "Par Values of Currencies," and reads as follows:

SECTION 1. Expression of par values: (a) The par value of the currency of each member shall be expressed in terms of gold as a common denominator or in terms of the U.S. dollar of the weight and fineness in effect on July 1, 1944.

That, of course, would be $35 an ounce.

Mr. FULBRIGHT. That is correct.

Mr. CASE of South Dakota. Paragraph (b) reads as follows:

All computations relating to currencies of members for the purpose of applying the provisions of this agreement shall be on the basis of their par values.

Section 2 reads as follows:

Gold purchases based on par values: The Fund shall prescribe a margin above and below par value for transactions in gold by members, and no member shall buy gold at a price above par value plus the prescribed margin, or sell gold at a price below par value minus the prescribed margin.

That probably provides the answer.

Mr. DIRKSEN. But the problem which arises is that a number of countries never did succeed in establishing the par value of their money.

Mr. President, I yield the floor, and suggest the absence of a quorum.

Mr. FULBRIGHT. Mr. President, will the Senator withhold the suggestion of the absence of a quorum?

Mr. DIRKSEN. Certainly.

Mr. FULBRIGHT. Mr. President, I yield myself such time as I may need.

I ask unanimous consent to have printed in the RECORD at this point as a part of my remarks the provisions of the resolution adopted by the Board of Governors of the International Fund relating to the 75 percent requirement.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

2. None of the increases in quotas proposed in paragraph 1 of this resolution shall become effective unless:

(i) The member concerned has notified the Fund in writing that it consents to the increase in its quota; and

(ii) The Fund determines that members having not less than 75 percent of the total of quotas on January 31, 1959, have consented to increases in their quotas; and

(iii) The requirement is satisfied of a minimum aggregate increase in subscriptions, contained in the resolution of the Board of Governors of the International Bank for Reconstruction and Development entitled "Increase of $10 billion in Authorized Capital Stock and Subscriptions Thereto," recommended by the executive directors of the International Bank for Reconstruction and Development.

Mr. FULBRIGHT. Mr. President, I shall not detain the Senate long.

I think it is quite evident from the discussion which has already taken place that there is no real purpose to be served by making the actual dollars or gold available to the Fund at this time. The action of the Congress in passing the legislation assuring that the money will be made available on July 1 is sufficient, I believe. That will be in ample time. In fact I think the need might well not arise until much later than that. However, I do not wish to make the effective date any later, because of a situation which might arise.

There is one source of confusion which I should like to clarify, if possible. It relates to the figures which the Senator from Illinois used with regard to the need for money in 1957 and 1956. Those figures related to a full year. I invite the attention of Senators to page 7 of the committee report, which I think makes quite clear the fantastic improbability of any need for our contribution arising before July 1.

It will be noted that the figure for the full year 1957 was $977 million. Today there is on hand, free of any commitments, $1 billion. So for the next 3 months there will be available $1 billion in gold or dollars. That represents three or four times the rate at which the

money was used during the period referred to, even during the Suez crisis. So I think it is quite unrealistic to make a case based upon the argument that the money is needed by the Fund.

The only real argument which the Senator from Illinois suggested—although he thought it was so weak that he did not choose to rest his case upon it—is based upon the effect of a balanced or unbalanced budget in 1960. The argument on the part of the administration is that it wishes to create confidence in the dollar by having a balanced budget. Therefore it places everything possible in this year's budget, on the theory that confidence in the dollar will not be affected if this year's deficit is $12 billion, $15 billion, or even perhaps $20 billion.

It seems to me that that reasoning is entirely without merit. I believe the U.S. Government to be a continuing body, just as I believe the Senate is. Whether $12 billion or $15 billion is in this year's budget, and 2 or 3 billion in next year's is not a matter which will affect seriously or substantially, or at all, the confidence of ourselves or our friends abroad in the stability of the dollar. I cannot see that it makes the slightest difference whether the budget deficit is much larger this year and much less the next year. If the total is the same, it makes no difference whether all or a part of it is shifted from one year to the other.

That is the substance of the argument. I do not believe that any serious minded person is convinced that there will be any use for the $344 million in the fund before the 1st of July. If there is any case to be made, it is on the basis of the question of confidence in the dollar. I am unimpressed by any such argument. I am quite willing to leave the question to the Senate.

Mr. HOLLAND. Mr. President, I yield 2 minutes to the distinguished minority leader.

Mr. DIRKSEN. Mr. President, I undertook today, in discussing this matter, to implement the need and to put it on that basis, and also to indicate the deep concern of the Secretary of the Treasury, who is the fiscal administrator and the Governor of the Fund and the Bank, so far as U.S. representation is concerned. That weighs very heavily with me.

I hope I do not trespass on the rules of the Senate when I allude to a statement which appeared on the news ticker, but I think it is so pertinent that I ask the indulgence and forebearance of the Senate if I do trespass. It reads:

> In the House, meanwhile, a Democratic leader sharply criticized the proposal to delay until July 1 the contribution to the Monetary Fund.
>
> Chairman BRENT SPENCE, of the House Banking Committee, warned that "it would not be a good thing" to delay the contribution in view of the present world crisis.

That is the very issue before the Senate. The parliamentary situation is that this matter will be offered as a committee amendment, since it appears in the bill. I have indicated my opposition to the amendment, and I hope the argument commends itself to all Senators.

Mr. AIKEN. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. AIKEN. I should like to repeat that the evidence presented before the Committee on Foreign Relations was not convincing or conclusive. If the House passes the bill in the form reported by the committee, the subject will then be in conference, and the evidence which may be forthcoming in the meantime can be presented to the conference of both Houses. If the evidence is conclusive, I for one will be glad to have the date set forward. But until such evidence is presented, I feel I should stand by the committee's recommendation, because there were no votes against the committee bill as reported.

Mr. HOLLAND. I support the position taken by the distinguished Senator from Vermont, and will vote to uphold the committee report, with the definite understanding that in conference, if the officials who handle this complicated matter are able to make a case and a showing of urgency about the matter, the situation can be ironed out in accordance with that showing.

Mr. President, I am prepared to yield back the rest of the time on behalf of the proponents of the bill, and to ask for a quorum call preceding the vote.

The PRESIDING OFFICER. All time has been yielded back. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. YOUNG of Ohio in the chair). Without objection, it is so ordered.

The question is on agreeing to the second committee amendment, which inserts, on page 2 of the bill, a new section, section 3. On this question the yeas and nays have been ordered; and the clerk will call the roll.

Mr. AIKEN. Mr. President, I ask that the question be restated.

The PRESIDING OFFICER (Mr. BARTLETT in the chair). The question is on agreeing to the second committee amendment, which inserts, on page 2 of the bill, a new section, section 3.

On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Tennessee [Mr. GORE], the Senator from Indiana [Mr. HARTKE], the Senator from Missouri [Mr. HENNINGS], the Senator from North Carolina [Mr. JORDAN], the Senator from Louisiana [Mr. LONG], the Senator from Minnesota [Mr. MCCARTHY], the Senator from Rhode Island [Mr. PASTORE], the Senator from Florida [Mr. SMATHERS], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

The Senator from Washington [Mr. MAGNUSON] is absent because of illness.

On this vote, the Senator from Minnesota [Mr. MCCARTHY] is paired with the Senator from Colorado [Mr. ALLOTT]. If present and voting, the Senator from Minnesota would vote "yea," and the Senator from Colorado would vote "nay."

The Senator from Rhode Island [Mr. PASTORE] is paired with the Senator from New Jersey [Mr. CASE]. If present and voting, the Senator from Rhode Island would vote "yea," and the Senator from New Jersey would vote "nay."

I further announce that if present and voting, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Tennessee [Mr. GORE], the Senator from Indiana [Mr. HARTKE], the Senator from Missouri [Mr. HENNINGS], the Senator from North Carolina [Mr. JORDAN], the Senator from Louisiana [Mr. LONG], the Senator from Washington [Mr. MAGNUSON], the Senator from Florida [Mr. SMATHERS], and the Senator from Texas [Mr. YARBOROUGH] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. ALLOTT], the Senator from New Jersey [Mr. CASE], and the Senator from Iowa [Mr. HICKENLOOPER] are necessarily absent.

The Senator from New Hampshire [Mr. BRIDGES] is detained on official business.

On this vote, the Senator from Colorado [Mr. ALLOTT] is paired with the Senator from Minnesota [Mr. MCCARTHY].

If present and voting, the Senator from Colorado would vote "nay," and the Senator from Minnesota would vote "yea."

On this vote, the Senator from New Jersey [Mr. CASE] is paired with the Senator from Rhode Island [Mr. PASTORE].

If present and voting, the Senator from New Jersey would vote "nay," and the Senator from Rhode Island would vote "yea."

The result was announced—yeas 58, nays 25, as follows:

YEAS—58

Aiken	Hart	Murray
Anderson	Hayden	Muskie
Bartlett	Hill	Neuberger
Bible	Holland	O'Mahoney
Byrd, Va.	Humphrey	Prouty
Byrd, W. Va.	Jackson	Proxmire
Cannon	Johnson, Tex.	Randolph
Carroll	Johnston, S.C.	Robertson
Church	Kefauver	Russell
Clark	Kennedy	Smith
Dodd	Kerr	Sparkman
Douglas	Langer	Stennis
Eastland	Lausche	Symington
Ellender	Mansfield	Talmadge

NOT VOTING—15

Allott	Hartke	Magnuson
Bridges	Hennings	McCarthy
Case, N.J.	Hickenlooper	Pastore
Chavez	Jordan	Smathers
Gore	Long	Yarborough

So the amendment was agreed to.

The PRESIDING OFFICER. The bill is open to further amendment. If there be no amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was read the third time.

The PRESIDING OFFICER. The bill having been read the third time, the question is, Shall it pass?

Mr. LANGER. Mr. President, on this question I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

The yeas and nays were ordered, and the legislative clerk called the roll.

Mr. MANSFIELD. I announce that the Senator from New Mexico [Mr. CHAVEZ], the Senator from Tennessee [Mr. GORE], the Senator from Indiana [Mr. HARTKE], the Senator from Missouri [Mr. HENNINGS], the Senator from North Carolina [Mr. JORDAN], the Senator from Louisiana [Mr. LONG], the Senator from Minnesota [Mr. MCCARTHY], the Senator from Rhode Island [Mr. PASTORE], the Senator from Florida [Mr. SMATHERS], and the Senator from Texas [Mr. YARBOROUGH] are absent on official business.

The Senator from Washington [Mr. MAGNUSON] is absent because of illness.

I further announce that, if present and voting, the Senator from New Mexico [Mr. CHAVEZ], the Senator from Tennessee [Mr. GORE], the Senator from Indiana [Mr. HARTKE], the Senator from Missouri [Mr. HENNINGS], the Senator from North Carolina [Mr. JORDAN], the Senator from Louisiana [Mr. LONG], the Senator from Washington [Mr. MAGNUSON], the Senator from Minnesota [Mr. MCCARTHY], the Senator from Rhode Island [Mr. PASTORE], the Senator from Florida [Mr. SMATHERS], and the Senator from Texas [Mr. YARBOROUGH] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Colorado [Mr. ALLOTT], the Senator from New Jersey [Mr. CASE], and the Senator from Iowa [Mr. HICKENLOOPER] are necessarily absent.

The Senator from New Hampshire [Mr. BRIDGES] is detained on official business.

If present and voting the Senator from Colorado [Mr. ALLOTT] and the Senator from New Jersey [Mr. CASE] would vote "yea."

The result was announced—yeas 73, nays 10, as follows:

YEAS—73

Aiken	Engle	Monroney

Case, N.J.	Hickenlooper	Pastore
Chavez	Jordan	Smathers
Gore	Long	Yarborough

So the bill (S. 1094) was passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Bretton Woods Agreements Act is amended by adding at the end thereof the following new section:

"SEC. 16. (a) The United States Governor of the Fund is authorized to request and consent to an increase of $1,375,000,000 in the quota of the United States under article III, section 2, of the articles of agreement of the Fund, as proposed in the resolution of the Board of Governors of the Fund dated February 2, 1959.

"(b) The United States Governor of the Bank is authorized (1) to vote for increases in the capital stock of the Bank under article II, section 2, of the articles of agreement of the Bank, as recommended in the resolution of the Board of Governors of the Bank dated February 2, 1959, and (2) if such increases become effective, to subscribe on behalf of the United States to thirty-one thousand seven hundred and fifty additional shares of stock under article II, section 3, of the articles of agreement of the Bank."

SEC. 2. Section 7(b) of the Bretton Woods Agreements Act is amended by striking out "of $950,000,000", and by striking out "not to exceed $4,125,000,000" and inserting in lieu thereof "$8,675,000,000".

SEC. 3. The amendments made by this Act shall become effective on July 1, 1959.

Mr. SPARKMAN. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. JOHNSON of Texas. Mr. President, I move to lay that motion on the table.

The motion to reconsider was laid on the table.

Mr. DIRKSEN. Mr. President, earlier in the day a colloquy occurred with respect to the availability of the bill, the report, and the printed hearings. I think it was the result of a misunderstanding more than anything else.

The Senator from Delaware [Mr. WILLIAMS] was correct, in that the full text of the report certainly was not available yesterday. It did become available later, and the report was in full form, I believe, about 7 or 8 o'clock that night, while the Senate was still in session. I think it should be said in behalf of the Senator from Delaware that, with respect to what was filed at 12:30 that day, he is correct.

Mr. WILLIAMS of Delaware. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. WILLIAMS of Delaware. The fact of the matter is—and I checked this with the bill clerk—that a dummy bill was filed with the bill clerk early yesterday with the statement that the real bill had been reported and the bill clerk was requested to hold the dummy bill until the real bill was received from the committee.

About 7:30 o'clock last night the real bill was obtained from the committee, together with two pages of the proposed report, again with the request that they be held, and the promise was made that as soon as possible the full report would be forwarded. That was 7:30 last night.

The Senate recessed at 7:38 o'clock last night. At 8 o'clock the bill clerk was still waiting for the report. It had not come, and he went home. I understand the Committee on Foreign Relations, after writing the report, some time around 8 o'clock, sent it to the Government Printing Office. Therefore it was not available, even from the bill clerk.

The point I make is that the bill was not available to me, as a Member of the Senate. I think the majority leader should recognize that point and admit that he was in error.

I emphasize that at the time the unanimous consent was obtained to consider the bill and limit debate, the bill and the report were not available as we were led to believe. It was not on the calendar, even though it had been assigned a number. The bill clerk did not even have a copy of the bill or the report. If I am in error, I ask any member of the Committee on Foreign Relations to contradict me. You all know that I am right.

I think the RECORD should show that the bill and report were not available at the time the unanimous consent was given. Yet the consent was obtained only on the statement that they were available. They were not available in time for any Member of the Senate to obtain copies last night.

I do not question the fact that the majority leader may have thought he was correct. I am making no accusation. I think this is a misunderstanding on his part. I do know I was unable to obtain a copy of the bill and report when the Senate adjourned last night. I checked again an hour ago, and I was told that the bill clerk himself did not receive the report before he went home which was around 8 p.m. last night.

This bill calls for expenditures of over $1 billion yet it is being steamrollered through the Senate without the Members having had an opportunity to even read it.

Mr. JOHNSON of Texas. Mr. President, I did not say that the report was available last evening. I stated that I would not bring the bill up for debate last evening, or until a copy of the report was on each Member's desk.

Mr. WILLIAMS of Delaware. That is correct but I gave consent only based on that understanding.

Mr. JOHNSON of Texas. The report and printed hearings were available before the bill was brought up for debate.

All I can testify in connection with the time when the report was filed is that the clerk and the chairman of the committee told me that the bill itself—not a dummy bill—was turned in at the desk during the morning hour yesterday. The first few pages of the report were also turned in at the desk at the same time. The final, complete report was given to the Senate printing clerk between 7 and 8 o'clock last evening.

I am informed that if I or any other Senator had asked for a copy of the bill after the morning hour yesterday or a copy of the full report between 7 and 8 o'clock last evening a copy would have been furnished. No Senator asked me for copies of either, and, so far I was aware, no Senator had requested such copies from anyone. If anyone had told me that he wanted a copy of the report, I would have personally delivered it to him last evening. When I made my request for the consideration of the bill today, I asked the minority leader to write his own ticket. I asked him to confer with the Members on his side of the aisle and to tell me how much time he wanted, and when he wanted it brought up, because it is an administration-sponsored bill. He told me what he wanted. I complied with his request. When I made my request I said there would be no action taken on the bill last night.

I am well aware of what the Senator has said about wanting the report to be available. I was informed by the clerk of the Committee on Foreign Relations that he personally gave the full report to the printing clerk about 7:30 o'clock, and that carbon copies of the report were available at the committee from that time on.

The only statement of the majority leader was that he would not ask the Senate to take any action on the bill in the way of debating it last night, and that when he did ask it he would see to it that the report and the hearings were available to every Senator.

Mr. WILLIAMS of Delaware. When consent was given last night I said, with reference to the bill and the report: "If they are available tonight, I have no objection." That is my exact statement last evening. It was only with the clear understanding that they would be available, that I agreed. Then I went to the appropriate place to get the report, and it was not available. I have great respect for the majority leader, but I am sure no one will maintain that we are supposed to get copies of reports from him. It would be ridiculous to say that he carries all these reports with him. We have regular paid bill clerks for this work.

Mr. JOHNSON of Texas. The chairman of the committee had the report. It had been given to the printing clerk, and copies were available at the committee office. The Senator from Delaware is beclouding the issue. I never had the report. I did not give it to anyone. I did not give the Senator the assurance that I had the report last night, and the Senator from Delaware knows it. I feel the Senator has gotten all the headlines he can get out of the matter.

Mr. WILLIAMS of Delaware. I am not interested in headlines. This is very irregular procedure to proceed to take up a bill which has not been printed. At the time the motion was made to take up this bill last night neither the bill nor the report were here.

Mr. JOHNSON of Texas. I heard the Senator from Illinois [Mr. DIRKSEN] ask the Senator from Delaware if he had any objection. I believe the RECORD shows that he was asked if he had any objection and that the Senator said he would have no objection if the report was available.

Mr. WILLIAMS of Delaware. That is correct. If the report was available—but it was not available as I was led to believe.

Mr. JOHNSON of Texas. The report was available last night. The chairman of the committee filed it last night. It is true that the report was not printed and put on each Senator's desk. However, no one assured the Senator from Delaware that it would be.

Mr. WILLIAMS of Delaware. It may be a misunderstanding, but I can assure you it will not happen again. When the next unanimous-consent agreement is asked for, I will clearly understand what is happening.

Mr. DIRKSEN. I merely wish to add that Dr. Marcy concurs in what the majority leader has said, and I believe that is in agreement with what the Senator from Delaware has said. The full report of the committee was not filed at noon, but a carbon copy of the full report was available, according to Dr. Marcy, the clerk of the committee.

Mr. JOHNSON of Texas. At about 7:30 o'clock last night.

Mr. DIRKSEN. It was available sometime around 7:30 o'clock. There is apparently some misunderstanding, which is unfortunate. However, I trust that it will leave no scars and that the balm of Gilead will prevail, so that when the next request is made, our distinguished friend will treat it generously in the interest of the convenience of all Members.

Mr. WILLIAMS of Delaware. I assure the Senator that I will consider the next request on its merits and I also assure him I will know what we are doing. This will not happen again.

Mr. JOHNSON of Texas subsequently said: The Senator from Delaware and I have just conferred with the clerk of the Committee on Foreign Relations. We have concluded, as a result of this conference, that early last evening, around 7:30, a typed copy of the report was given by the clerk of the committee to the printing clerk. The Senator from Delaware told me that he had asked the bill clerk if he had received a copy of it. He had not. In effect, the clerk of the committee took a copy of the report to the printing clerk, and it was not made available to the bill clerk. In effect, the Senator from Delaware was talking about one man regarding the report, and the clerk of the Foreign Relations Committee was talking about another. One was the bill clerk and the other was the printing clerk.

I do not care to reflect on the Senator from Delaware or on any employee of the Senate. The fact is that the report was made available to the printing clerk at approximately 7:30, and that is about the time, I may inform the Senator from Delaware, the Senate adjourned. I wanted to make this statement for the RECORD.

I yield now to the Senator from Delaware.

Mr. WILLIAMS of Delaware. Mr. President, I appreciate what the Senator from Texas has said.

Mr. JOHNSON of Texas. I deeply regret there has been any misunderstanding.

Mr. WILLIAMS of Delaware. The Senate adjourned about 7:38. The colloquy took place around 7:20 to 7:30. The Senator from Texas said the report was available, had I talked to the clerk of the committee. I did go to the appropriate place in the Senate. It was not available where it was supposed to be. The printed reports and bill were not available here in the Senate until this morning. I wanted them last night. The committee clerk had sent the report to the Printing Office and it did not get back until this morning. I was correct when I said the report was not available to me, or to any other Senator who wanted it, last night. Presumably we could have gone to the Government Printing Office, and gotten it, but if we had, there would have been no reports available today for anybody. I am sure that this was a misunderstanding. But I am sure also that the Senator from Texas will agree that a bill and report in the hands of the printers is not considered as available for Senators to take home and study.

As I said earlier this morning, when I gave my consent last night it was with the clear understanding that a copy of the report and the bill would be available to me for study overnight.

Mr. JOHNSON of Texas. I regret very much that was not the case. Had I known the Senator did not have the report available, or that he desired it, I would have made it available, because I am told there was an extra typed copy. I did not know the Senator made that request.

Mr. WILLIAMS of Delaware. Whether there was an extra typed copy I do not know, but I do know that at the desk, where we normally get bills and reports, the report was not available at the time we adjourned. In fact, the bill and the report were not available until this morning, because the report was sent to the Printing Office last night.

I recognize that there is a basis here for this misunderstanding to have developed, and we can both be more careful the next time.

Mr. WILEY. Mr. President, as a member of the Committee on Foreign Relations, having been present when the committee considered the amendment suggested by the chairman, and having heard the short explanation of it, I would say it was not satisfactory, even though I made no objection to the reporting of the amendment. I will say further that after hearing what the gentleman in the House had to say, and also having been in communication with the Department, I felt it was my duty to vote with the minority leader in relation to his suggestion.

I give this explanation, because ordinarily I vote for the committee report. I wish to say, in explanation, that the amendment came up within the last few minutes. It was not even before us or discussed except, as I have said, in

the last few minutes. After hearing the argument of the distinguished Senator from Illinois, and the explanation given in the other House, and also having the statement made to me that was made by the people downtown, I voted as I did. When I asked the question on the telephone, "Is it important that this amendment be defeated?" I was given the answer, "Yes; because of the world situation today we do not know when it will be necessary to have the funds necessary."

WEST URGED TO TAKE FRESH INITIATIVE IN BERLIN CRISIS

Mr. HUMPHREY. Mr. President, there is no topic which is of more vital concern at this hour than the matter of American foreign policy and the national security measures which we have taken or have not taken or should take. This of course refers directly to the Berlin crisis. The visit of Prime Minister Macmillan in Washington, just after his talks with Chancellor Adenauer, President Charles De Gaulle, and Prime Minister Diefenbaker, is another significant step in strengthening the world alliance in the face of the grave Communist challenge in Berlin.

Mr. Macmillan, who is scheduled to arrive at noon today, deserves a warm welcome. He should be applauded for his recent trip to Moscow, where he presented with candor, courage, and, I daresay, imagination, the position of the West. His example of courage and forthrightness is worthy of emulation. I believe the talks this coming weekend between President Eisenhower and the British Prime Minister will go a long way toward solidifying our position in Berlin.

Some time ago, in addressing a meeting in Washington, I had this to say about Mr. Macmillan:

> The entire world is indebted to the Prime Minister of Great Britain, Mr. Macmillan, for his visit to the U.S.S.R. and his talks with the Soviet leaders. Prime Minister Macmillan has again demonstrated those great qualities of character which have marked the British people through their great history. With characteristic British good manners, he has consulted with Soviet officials in a spirit of understanding and patience which reveals great courage and statesmanship. He has exemplified friendliness to the Russian people, courtesy and proper diplomatic conduct to the Soviet officials. He has patiently explored areas of possible agreement between the Soviet and the Western nations. He has been conciliatory without appeasement. He has been firm and resolute without being stubbornly obstinate.
>
> The British through their Prime Minister have demonstrated what we mean when we say firmness and negotiation are not in any way contradictory.
>
> At the very time that our own leadership seems to be faltering and the Secretary of State was stricken down with serious illness, thereby limiting the role of American leadership, we see again the advantage which comes from being associated with our NATO partners.

Mr. President, that statement, made some 3 weeks ago, is still very true. We are indeed indebted for the leadership which has been exemplified by the Prime Minister of Great Britain. I for one, as a Member of the Senate, salute and thank him and commend him.

In his address to the American people last Monday, the President rightly insisted on both firmness and our willingness to negotiate. I am gratified that he is now willing to go to the summit, if this seems justified by the foreign ministers' conference. The gravity of the Berlin crisis necessitates that we enter into face-to-face talks with Russian leaders, but to do so only after the most careful preparation.

The willingness to negotiate is only the beginning, not the end, of a responsible policy toward the German situation. Our major problem now is to develop a viable negotiating posture in concert with Britain, France, and West Germany. To enter into talks with the Russians, either at the foreign ministers' level or heads of state level, ill-prepared or disunited, is to invite humiliation and even disaster.

I am therefore gratified at the reported progress of the four-nation working group in Paris on drafting Western negotiating positions for the forthcoming talks with the Soviet Union.

Of course I am disturbed that the administration has been so tardy in grappling with the substance of the negotiation. This is indeed no new position for me, because over the past 3 or 4 years I have stated again and again what I thought was the importance of our preparing alternative proposals with which we could confront the Soviet Union on questions relating to central Europe, Berlin, and Germany.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. HOLLAND. How much additional time does the Senator from Minnesota desire?

Mr. HUMPHREY. I should like to have 10 additional minutes.

Mr. HOLLAND. How much time remains on our side?

The PRESIDING OFFICER. Fifteen minutes remain.

Mr. HOLLAND. I yield 10 addtional minutes to the Senator from Minnesota. I give notice that I have already agreed to yield 2 minutes to the minority leader.

Mr. HUMPHREY. I thank the Senator.

Our tardiness seems to reflect both a dangerous lack of imagination and an unbecoming timidity for the acknowledged leader of the free world. But that is as of yesterday. Today I say that I am pleased that our Government is taking anew the leadership in preparing for these important conferences.

In our policy toward German reunification, for example, the administration adhered doggedly to rigid positions which have helped produce the present stalemate. We all believe, of course, that genuinely free elections are the best means of creating a united and democratic Germany. I say it must be firm American policy that we not abandon this objective—I repeat—not abandon this objective. We should concentrate our present efforts on those measures which will produce a climate in which free elections will eventually be possible.

The East Germans, faithfully following instructions from their masters in the Kremlin, have been advancing ideas for the reunification of Germany on their own terms. Specifically, they have put forth a series of demands to be met by West Germany as the price for confederation. The East Germans have proposed the end of military conscription in the Federal Republic, the renunciation of nuclear weapons, and an end to Bonn's outlawry of the Communist Party. These lopsided demands are patently fraudulent. They are about as honest as the Bavarian sausage that was advertised to be half rabbit and half horse—one rabbit to one horse.

However, instead of simply assuming a posture of righteous indignation when such one-sided demands are made, would it not be better for us to encourage the West Germans to make some hard but reasonable counterdemands as the price for reunification? It is right and proper for the Bonn government to take the initiative in such matters. The Soviets have encouraged the Federal Republic to make counterproposals. I gather they have done so because they feel that we might restrain the Federal Republic, or attempt to restrain the Federal Republic, from entering into that kind of negotiation. However, we have nothing to lose, and perhaps much to gain, by imaginative Western overtures. Perhaps the West Germans could seize the initiative by making counterproposals, such as the following, as the price for confederation, and thereby prepare the way for true unification by free elections.

For example, why not a proposal requiring guarantees for a free press, freedom of movement, and freedom of religion in East Germany, as is now the case in West Germany? This would mean the free circulation of Western books, periodicals, and newspapers, as well as free cultural exchange between East Germany and the West.

I recognize that it does not include what are called free elections, but it is preparing the way in the appropriate steps for the kind of freedom which makes possible free political choice and, ultimately, free elections.

Second, why would it not be proper for, let us say, the West German Republic to require, as one of its requests and demands, that all political parties compete openly for the support of the electorate in both of the German areas, West Germany and East Germany?

Third—and I believe this is a very important point—it should be required that the People's Police be stripped of their inordinate political and military powers.

If East Germany expressed even a willingness to move in either of these directions, a new basis for the possible settlement of the German problems and the larger issues of European security might well be laid.

I fully recognize that there will be those who will say that these conditions will under no circumstances be met by East Germany. My answer is that we will never know until we at least lay them on the table and offer them as constructive, thoughtful proposals.

In a crisis as serious as the one we now face, there is no substitute for

imagination and new ideas. Indeed, many Senators have suggested the consideration of such proposals as the theory of disengagement which was advanced by Mr. Kennan, and the withdrawal or withdrawing of the troops of both the East and the West. Also, proposals have been made for the consideration of some aspects of the Rapacki plan, as advanced by the Polish Foreign Minister. All of these proposals might well be studied and considered.

I only offer the admonition that whatever is considered should be done with meticulous care. It must constantly be kept in mind that there are no short-time, short-run, immediate answers to these grave, perplexing, long-range problems. Negotiations will require persistent patience. They will require a willingness to endure almost unbelievable, tedious discussions of long duration.

I, therefore, hope and pray that no attempts will be made to find quick solutions which will ultimately or later be regretted because of ill-considered action or ill-advised consideration.

I would be less than honest if I did not say that I remain somewhat unconvinced by the President's calmly reassuring words that our defense position is thoroughly adequate to any possible requirements in the Berlin situation. We know that our national security is not and should not be a partisan matter. But genuine bipartisanship in foreign policy does not mean that the loyal opposition silently acquiesces in all policies advanced by the administration.

It is true that many Democratic Senators have questioned the adequacy of our military shield for the present crisis. It is also true that a substantial number of defense experts in our universities and other research centers have challenged the administration's claims of military adequacy.

Furthermore, the distinguished senior Senator from New York [Mr. JAVITS], who refers to himself as an Eisenhower Republican, only last Sunday is reported to have charged the administration with giving a higher priority to a balanced budget than to adequate defense.

Only yesterday, Wednesday, March 18, a distinguished Washington columnist, Marquis Childs, reported that Gen. Maxwell Taylor, Army Chief of Staff, believes that the defense budget should be increased by $5 billion a year to meet minimum security requirements.

Mr. President, if it were only the generals and admirals who were asking for more money for their respective services, one might be inclined to regard their appeals less seriously. But the fact is that several independent commissions, such as the Gaither Commission and the Rockefeller Panel, as well as many civilian defense experts in the universities and other research centers, are saying the same thing.

The fact that a disturbing number of competent American military observers believe that the administration's emphasis on a balanced budget has seriously jeopardized the Nation's defense capacity cannot be dismissed lightly. Our conventional military strength, they maintain, is at such a dangerously low level that we are virtually forced to rely on nuclear retaliation.

The administration, in its attempt to "get a bigger bang for a buck," has maneuvered itself into a perilous position where our only choice may be between surrender and suicide. The President's remark, hopefully an unstudied remark, at his last press conference about the inability of the United States to fight a ground war in Germany seems to be a backhanded confirmation of what many military analysts have been saying for several years. In any event, his words were hardly reassuring to our NATO allies or, for that matter, to the American people.

Mr. President, I should like to commend to the Senate for serious study the preliminary report of the Draper Committee, which was published yesterday. Among other things, this distinguished panel recommended a long-range program of about $2.4 billion a year for military aid abroad. It recommended an immediate increase of $400 million in President Eisenhower's military aid request of $1.6 billion for fiscal 1960, this increase to be primarily for the NATO area. This is a most significant recommendation and must be carefully reviewed in light of the current crisis.

We can negotiate effectively only from a position of strength. This is a singularly unpropitious time to reduce the level of our Armed Forces. This is the time for firmness on basic principles and flexibility in tactics. I hope that the Macmillan mission will help to weld the united strength we need to grapple effectively with the crisis in Berlin.

Mr. President, I ask unanimous consent that the statement to which I referred, about the crisis in Berlin, and about what is meant by negotiations and standing firm, which was delivered in Washington, D.C., some 2½ weeks ago, be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON BERLIN BY SENATOR HUBERT H. HUMPHREY BEFORE THE NATIONAL COUNCIL OF JEWISH WOMEN, WASHINGTON, D.C.

We live in a time of continous crisis. We have been numbed by screaming headlines about Suez, Quemoy, Baghdad, and Budapest. Now we are in the middle of the Berlin crisis. This is not just another international crisis. It is probably the most serious and fateful problem faced by the United States and the free world since the end of World War II.

We all know what is at stake in Berlin—the two things we value most—peace and freedom. A false move or a serious miscalculation could be the spark that would ignite a nuclear holocaust. If free West Berlin falls, it is not inconceivable that West Germany would eventually follow, and if West Germany falls, the nightmare of a new tyranny would sweep over all of Europe.

Berlin is the focal point in the mighty struggle between Communist tyranny and the free world. The situation is fraught with danger. But I believe that firmness, wisdom, and solidarity with our closest allies will give us the strength we need to meet the challenge posed by Mr. Khrushchev's thinly disguised ultimatum which falls due on May 27.

In my remarks about the seriousness of the Berlin crisis, I would like to make a few general observations in the interests of understanding. I do not want to say or do anything that will make the job of the executive branch any more difficult than it now is. In fact, I seriously considered whether I should say anything at all in public on so delicate an issue. I hope my comments will help to clarify the situation in its deepest and broadest aspects.

A sound policy toward the Berlin crisis will require all the patience, understanding, and courage we can muster. I urge our President to tell the American people what we are up against.

If the American people understand the depth of the crisis, I believe they will be willing to pay the price to save West Berlin. We know that peace and freedom are indivisible and that both are at stake in Berlin. And if freedom is snuffed out in Berlin, the cause of freedom and justice throughout the world will suffer.

WHAT THE COMMUNISTS WANT

It seems to me that the Soviet Union wants three things in Europe and has created the Berlin crisis as a lever to gain them:

1. The Soviet Union wants the three Western Powers to get out of West Berlin. It ultimately wants the entire city to be under complete Communist control.

2. She wants to use the Berlin crisis to force the Western Powers to negotiate an all-German settlement favorable to the Soviet Union. She prefers a united Germany tied closely to the Communist bloc. She will settle immediately for two Germanys. In other words, the status quo with East Germany the Communist state under firm Soviet control and influence. The least acceptable alternative that the Soviet appears willing to consider is a neutralized and denuclearized Germany which she hopes eventually to swallow up, by one means or another.

3. The Soviet Union sees in the Berlin crisis an opportunity to split the Western alliance. We must never forget that the primary objective of Soviet policy in Europe is to weaken NATO and to divide the United States from her allies. We cannot permit any of these Soviet objectives to be fulfilled. It is inconceivable that we would retreat from West Berlin. To do so would be to forfeit world leadership and in fact to become a second-rate power. I am convinced that the Soviet Union prefers to gain its political objective in Europe without nuclear war, and I know that the United States and our allies want to avoid a nuclear Armageddon.

We should make every effort to avoid getting into a position where we would be required to use force first. I am sure our Government will do everything possible to avoid a provocative or hostile act. We should, however, make it crystal clear that we will not be forced out of Berlin, nor be denied access to or in any way accede to any effort to starve into submission the West Berlin population. It must be clearly understood by Moscow and East Germany that we are prepared to take any action necessary in support of these policies and commitments.

U.S. POLICY OF RESOLUTE FIRMNESS

Last November I stood in West Berlin with its able and courageous mayor, Willy Brandt. I vowed then, and I vow today, to support a policy of firmness, to uphold the right of France, Britain, and the United States to maintain garrisons in West Berlin until a legitimate peace treaty is signed.

This is the position and policy of our Govment. We can all be grateful that we do not stand alone. Britain, France, and the 12 other members of the NATO alliance stand with us. We will not surrender. We will not be pushed out.

What does standing firm mean? It does not mean holding fast inflexibly to old positions which have helped to produce the present unhappy stalemate. The real issue, said Walter Lippmann recently, is "whether to stand pat on positions that have become untenable or to move to new positions from which the Western allies can recover the political initiative." Standing firm means that we must match our firmness with imagination, courage, and a willingness to negotiate with the Soviet Union. It means firmness in our fundamental position and flexibility in our strategy and tactics. Standing firm and willingness to negotiate are not, as some people suggest, contradictory policies. They are two elements in any viable policy in the Berlin crisis. We must stand firm in order to negotiate effectively. And we must have solid bases for negotiation if we want to stand firm.

It is imperative that the best minds of our country—those persons qualified as experts on the problems of central Europe and Germany as well as Soviet policies and tactics—be called upon at once for intensive consultation directed toward policy formulation.

In the weeks between now and May 27, we, in concert with our allies, must explore every possible honorable means of negotiation that can ease this crisis and point in the direction of a just and equitable settlement.

It is not enough just to negotiate and talk. We must have clearly in mind the objectives we seek, and the means and ways of achieving those objectives without bargaining away the rights of others, or in any way weakening our own security.

The Berlin crisis is both a danger and an opportunity. It is a danger to world peace if we display signs of weakness, indecision, or appeasement. It is an opportunity if we recognize the sharpness of the crisis and proceed to explore every means of peaceful settlement, not only of the Berlin and German situation, but indeed the relationships between the United States, its allies, and the Soviet Union in all of central Europe. Wise, prudent, and courageous statesmanship is needed now as never before. We must be prepared to follow the course that may be tedious, frustrating, and characterized by insults, threats, and abuses for months to come. The war of nerves has been intensified.

In this struggle, the victory will come to those who clearly understand the relationship between power and principle, maneuver and objective. We cannot afford to be found wanting in any of these.

Make no mistake about it, a policy of firmness with negotiation, is the only policy that will avoid surrender on the one side, and minimize the risks of war on the other.

COOPERATION WITH ALLIES AND RESTRAINT URGED

We must act in harmony with our allies, Britain, France, and West Germany. This means more than coordinating our pronouncements about standing firm. It means hammering out a unified policy and strategy to give us strength for bargaining, and to undergird our determination if negotiation should break down.

If we had worked a bit closer with our allies and had strengthened the consultative process within NATO during the past 5 years, perhaps we would be in a better position than we are today. But let bygones be bygones. If we ever needed the wisdom, strength, and counsel of trusted allies we need them now.

THE MACMILLAN VISIT TO THE U.S.S.R.

The entire world is indebted to the Prime Minister of Great Britain, Mr. Macmillan, for his visit to the U.S.S.R. and his talks with the Soviet leaders. Prime Minister Macmillan has again demonstrated those great qualities of character which have marked the British people through their great history. With characteristic British good manners, he has consulted with Soviet officials in a spirit of understanding and patience which reveals great courage and statesmanship. He has exemplified friendliness to the Russian people, courtesy and proper diplomatic conduct to Soviet officials. He has patiently explored areas of possible agreement between the Soviet and the Western nations. He has been conciliatory without appeasement. He has been firm and resolute without being stubbornly obstinate.

The British through their Prime Minister have demonstrated what we mean when we say firmness and negotiation are not in anyway contradictory.

At the very time that our own leadership seems to be faltering and the Secretary of State was stricken down with serious illness, thereby limiting the role of American leadership, we see again the advantage which comes from being associated with our NATO partners.

France under the leadership of DeGaulle displays new strength and firmness. Chancellor Adenauer rightly insists that Germany be a part of the European community and not separated from the stream of democratic and free institutions.

British statesmen explore every area of negotiations, and the President of the United States, speaking for the American people, reminds friend and foe that we will not retreat, appease, or fail to fulfill our commitments.

Yes, these are dangerous days and the situation is explosive. But these are also great and challenging days where spiritual and brainpower may save us from the dangerous alternative of the use of firepower.

The alternative to war is peace and it is in the pursuit of peace that we will find our greatness and fulfill our destiny.

MARCH 2, 1959.

OIL IMPORTS

Mr. JAVITS. Mr. President, it is most unfortunate that while we deal with the vitally important increases in the U.S. contribution to the International Monetary Fund and the World Bank we face the problems of an Executive order establishing mandatory restrictions on oil imports. For this order is an unfortunate development in our international trade and is hurting our relations with friends abroad, including Canada and Bolivia. Indeed, it may tend to weaken the economies of some of the very countries which the proposed increase in the International Monetary Fund is meant to promote and strengthen.

Yesterday Senator AIKEN led a chorus of objections to this recent order establishing mandatory import quotas on petroleum and petroleum products. I wish to join him in expressing my concern about this order after I and a number of other Senators had called attention to the serious domestic problem that would be created for home owners and apartment dwellers who we said may well have to pay higher fuel bills, unless the sellers exercise self-discipline. I had hoped at least that the imports of residual fuel oil would have been exempted from the order, since over one-third of the homes and apartments in the Northeastern States are heated by oil and heating costs represent up to 4 percent of the cost of living.

At a time when we are doing our utmost to keep prices down in every area, it seems particularly unfortunate to get into a course of action which gives the chance of increased living costs for so many families. Indirectly, fuel oil price increases would affect every one of us for part of the price of each product we buy reflects the cost of fuel used to heat the factories, generate the electricity and run the machines used in manufacturing.

The justification given for this order and for its provision in the Reciprocal Trade Agreements Extension Act is national security. The domestic oil industry has put out statistics to point up how the discovery of new reserves has lagged behind U.S. oil production, and that therefore it is necessary to encourage exploration in the industry domestically. Is it not paradoxical that we should use up our own oil reserves at an increased rate supposedly in the interests of national security instead of conserving our reserves and using foreign oil while it is readily available? The contradiction becomes even more marked when the exclusion also applies to Canadian oil to which none of the national security arguments about vulnerability of sealanes can apply.

To a large extent, the reasons given to justify this order are similar to those given to support the 27½-percent oil depletion allowance. This provision also was supposed to foster oil exploration and the growth of reserves for national security reasons. However, the result of this allowance has been to give important tax concessions to a limited sector of the economy and has led to a growing sentiment in Congress to reduce this special benefit.

A restrictive move of this type, which appears strongly protectionist to the rest of the world, is particularly regrettable right now when we are spending billions of dollars abroad to develop economies, particularly in the underdeveloped areas of Africa, the Middle East and South America, many of which are oil producers.

In light of the protests already received from a number of nations in opposition to the mandatory restrictions, I sincerely hope that the President will reconsider the terms of this order or at the very least, its amendment in order to exempt from its provisions residual fuel oil. Also, I hope every seller of oil contemplating price increases will think about it many times before imposing such increases on the people and the national economy.

MESSAGE FROM THE HOUSE—ENROLLED BILL AND JOINT RESOLUTION SIGNED

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the Speaker had affixed his signature to the following enrolled bill and joint resolution, and they were signed by the Vice President:

H.R. 2294. An act for the relief of the Ellis Timber Co.; and

H.J. Res. 198. Joint resolution to provide for the reappointment of Robert V. Fleming as citizen regent of the Board of Regents of the Smithsonian Institution.

UNEMPLOYMENT IN DEPRESSED AREAS

Mr. JOHNSON of Texas. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 99, S. 722.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 722) to establish an effective program to alleviate conditions of substantial and persistent unemployment, and underemployment in certain economically depressed areas.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Texas.

The motion was agreed to; and the Senate proceeded to consider the bill, which had been reported from the Committee on Banking and Currency with amendments.

Mr. JOHNSON of Texas. Mr. President, I am prepared to ask the Senate to remain in session as late today as Senators may wish to stay in order to discuss the bill, and to have the Senate meet tomorrow to discuss it further. I have talked with the minority leader about the matter. I am not aware of how much discussion is desired. If need be, we shall be glad to have a Saturday session to accommodate Senators who wish to make speeches on the bill.

I hope we may have an understanding that there will be no votes on the bill for the remainder of this week, and that we will try to reach a vote on the bill sometime late on Monday.

There is also a resolution providing funds for the Joint Economic Committee, as to which I have given notice that it is planned to call it up on motion as soon as action has been concluded on the bill now before the Senate.

If there are no Senators who desire to discuss the bill, there will be no need for a Saturday session, or, for that matter, a Friday session. If the minority leader will canvass Senators on his side of the aisle, I will speak with the Senator having the bill in charge, the Senator from Illinois [Mr. DOUGLAS], and will try to estimate how much discussion is desired, and will be guided accordingly.

I have had several inquiries as to when a vote on the bill may be expected. If it is possible to do so, I should like to enter into an agreement that there will be no votes this week, and try to arrange to vote on the bill on Monday next.

Mr. DIRKSEN. Mr. President, I had expressed to the majority leader the hope that after this evening the Senate could go over until Monday, and that we could come in early on Monday and agree upon a certain amount of time for debate on each amendment, and then on the bill, and to finish action on the bill on Monday. That would give Senators a chance to catch up with the work in their offices. I am frank to say that these days get pretty long when committees are in session and Senators try to be on the floor and also in committees. I think Senators are entitled, in the interest of better and more efficient work, to have their weekends free to get the decks cleared.

I hope the majority leader will press for agreement to his unanimous-consent request. I told him it was entirely agreeable to me. I utter the hope that there will be no objection to it. The bill has been available to Senators for some time. The report and the hearings also are available. A similar bill has been before the Senate previously. I think it would be an ideal situation if an arrangement could be made so that the weekend could be free for the benefit of all Senators.

Mr. JOHNSON of Texas. Would it be agreeable to the minority leader if the Senate met tomorrow, so as to give Senators an opportunity to speak if they desired to do so; and if Senators desired to speak longer, a session could be held on Saturday, with the understanding that there will be no votes during the remainder of the week, and that an attempt will be made to reach an agreement for a limitation of time on amendments and on the bill, to be effective following the morning hour on Monday?

Mr. DIRKSEN. I am agreeable to that; or the unanimous-consent request could be proposed now.

Mr. JOHNSON of Texas. Mr. President, on behalf of the minority leader and myself, and with the approval of the Senator in charge of the bill, the Senator from Illinois [Mr. DOUGLAS], I submit a proposed unanimous-consent agreement and ask that it be read.

The PRESIDING OFFICER. The proposed agreement will be read for the information of the Senate.

The legislative clerk read as follows:

Ordered, That, effective on Monday, March 23, 1959, at the conclusion of routine morning business, the Senate shall proceed to the consideration of the bill, S. 722, the area redevelopment bill, and debate on any amendment, motion, or appeal, except a motion to lay on the table, shall be limited to 1 hour, to be equally divided and controlled by the mover of any such amendment or motion and the majority leader: *Provided*, That in the event the majority leader is in favor of any such amendment or motion, the time in opposition thereto shall be controlled by the minority leader or some Senator designated by him: *Provided further*, That no amendment that is not germane to the provisions of the said bill shall be received.

Ordered further, That on the question of the final passage of the said bill debate shall be limited to 2 hours, to be equally divided and controlled, respectively, by the majority and minority leaders: *Provided*, That the said leaders, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, motion, or appeal.

Mr. DOUGLAS. Mr. President——

Mr. JOHNSON of Texas. Mr. President, I may say to the distinguished senior Senator from Illinois that what has been proposed is that the Senate have tomorrow in which to discuss the bill. If any Senators so desire, the Senate will be asked to meet on Saturday so that they may discuss the bill. We should like to have an understanding that there will be no votes either on Friday or Saturday, so far as the leadership can control the voting.

It is proposed, further, that at the conclusion of the morning hour on Monday, the Senate proceed to the consideration of the bill with a limitation of 1 hour of debate on each amendment, and that at the conclusion of the disposition of all amendments there be a limitation of debate of 2 hours on the bill.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. DOUGLAS. This arrangement is completely satisfactory to me. I think it provides ample opportunity for discussion and debate. May I inquire of the majority leader whether it is his intention to have the formal discussion of the bill begin this afternoon?

Mr. JOHNSON of Texas. At any time that is agreeable to the Senator from Illinois. Senators may speak as long as they desire today, tomorrow, and Saturday. On Monday, the limitation of debate would be in effect.

Mr. CAPEHART. Mr. President, will the Senator yield?

Mr. JOHNSON of Texas. I yield.

Mr. CAPEHART. In the best interests of all Senators, I feel that a Saturday session should be eliminated. I do not think it is necessary to have one. As the ranking minority member of the Committee on Banking and Currency, having an understanding of the bill, and knowing the Senators who are opposed to it and the Senators who favor it, I think it would be most unfortunate to have a Saturday session in order to consider the bill, particularly when there will be the rest of today and all day tomorrow to discuss it; and then to debate it under a unanimous-consent agreement on Monday. If the agreement shall be entered into, there will be 1 hour for debate on each amendment. That means, of course, that any Senator can offer all the amendments he wishes and take 1 hour on each amendment. But I think it would be unfortunate to have the Senate meet on Saturday.

Mr. JOHNSON of Texas. I have no desire for a Saturday session unless some Senator desires it.

Mr. CAPEHART. I ask that the unanimous-consent agreement be changed.

Mr. JOHNSON of Texas. It does not provide for a Saturday session. I simply made the statement that the Senate would meet if any Senator desired to make a speech on the bill on Saturday.

Mr. WILLIAMS of Delaware. Mr. President, I object.

Mr. DOUGLAS. Mr. President, so far as the proponents of the measure are concerned, I feel certain that we will not take a disproportionate share of the time to conclude our argument. I should like the majority leader to know that I did give every opportunity to the minority to offer amendments. I am reassured by the statement of the Senator from Indiana [Mr. CAPEHART] that he probably will not prolong the discussion to great length. But if he has a large number of amendments which he intends to offer, I shall be very glad to come in on Saturday and listen to him with great interest and attention.

ORDER FOR ADJOURNMENT UNTIL 12 O'CLOCK NOON TOMORROW

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when the Senate concludes its business today, it stand in adjournment until noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE SENATE AND THE CAUCUS—DEMOCRACY OR TYRANNY IN THE SENATE

Mr. NEUBERGER. Mr. President, in recent weeks the distinguished junior Senator from Wisconsin [Mr. PROXMIRE] has discussed in this Chamber, on two separate occasions, the function of leadership within the Democratic Party in the United States Senate. He has presented a number of suggestions which he contends would improve the machinery through which this leadership is exercised, and has declared that implementation of these ideas would result in increased party responsibility and accountability of individual Members.

Mr. PROXMIRE. Mr. President, will the Senator yield at the outset of his speech?

Mr. NEUBERGER. I yield.

Mr. PROXMIRE. I merely desire to say to the Senator that I have read his speech. At the very outset, I wish to say that it is an extremely constructive speech. I shall listen to it carefully. But I wanted to make one minor—perhaps the Senator would consider it a major—suggestion at this point, where I think it would be more constructive.

Mr. NEUBERGER. The Senator from Wisconsin did not permit me to begin my speech before he rose and asked me to yield. What does he want me to do?

Mr. PROXMIRE. I simply asked if the Senator from Oregon would yield at this point.

Mr. NEUBERGER. I am happy to yield, but I must say that it is very early in my address to yield.

Mr. PROXMIRE. I recognize that it is early. I think the Senator will make a fine, constructive speech. I am delighted that he is doing so. The reason I asked him to yield is that at the outset of his speech the Senator from Oregon said that I had "declared that the implementation of these ideas would result in increased party responsibility and accountability of individual Members."

At this point I wish to make clear that the principal purpose of the argument I made for a caucus and for my other suggestions was to try to secure more democracy in the Senate in our party—in other words, for an opportunity for all Senators to have something to say, in some way, about our policy and our program.

Incidentally, I think that in having such greater democracy, we would also secure a greater degree of party responsibility and accountability.

Mr. NEUBERGER. Mr. President, before the Senator from Wisconsin makes his third speech on this subject, I should like to make mine, if I may.

Mr. PROXMIRE. Certainly.

Mr. NEUBERGER. I wish to be permitted to deliver some portion of my speech before the Senator from Wisconsin comments for a third time on the question.

I intend to point out that, good though the intentions of the Senator from Wisconsin may be regarding democracy in the Senate, I fear that the proposals he has made in his two previous speeches would point back toward tyranny in the Senate, toward what the late, great Senator Bob La Follette, Sr., of Wisconsin, has described as "King Caucus." To that point I shall address my remarks today.

Mr. President, one of the suggestions of the Senator from Wisconsin deals with the caucus. Today, I wish to consider briefly that particular proposal and all its implications.

The Senator from Wisconsin has asserted—and has done so very ably—that we should have more Democratic Party caucuses, and that such caucuses should be used to formulate party policy. He has stated that he does not desire a binding caucus, and would not himself be bound by the decisions of a caucus. He has indicated, however, that he believes that the majority leader's actions should be ruled by expression of the will of the majority, as evidenced by vote or discussion; and he suggested that if the majority leader disagrees with the position of the majority, he should step aside.

Mr. President, so that the RECORD be clear on these points made by the Senator from Wisconsin, I ask unanimous consent that there be printed at this point in the RECORD, as a part of my remarks, the text of the exchange of views between the Senator from Wisconsin [Mr. PROXMIRE] and me, as reported in the CONGRESSIONAL RECORD of March 9, 1959, on pages 3565 and 3566.

The PRESIDING OFFICER (Mr. MCGEE in the chair). Is there objection?

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Mr. NEUBERGER. Mr. President, will the Senator yield?

Mr. PROXMIRE. I yield to the Senator from Oregon.

Mr. NEUBERGER. I should like to obtain some information from the Senator from Wisconsin.

I gather that the Senator from Wisconsin is seeking more democracy in the Senate. I, too, should like to see more democracy in the Senate. When the Senator says that "the formulation of such an overall budget and fiscal policy to support the passage of a particular bill is an appropriate, in fact an indispensable, function of a party caucus," what does he mean? Does he mean that the party caucus should take a vote?

Mr. PROXMIRE. I think it would be desirable if the party caucus could take a vote, although that would not be essential.

Mr. NEUBERGER. How would a policy be formulated unless the caucus took a vote? Suppose the party met in caucus for 3 hours. Unless the caucus took a vote, how would a policy be formulated?

Mr. PROXMIRE. I am sure the junior Senator from Oregon has been present at meetings at which policies have been formulated without a vote. I do not pretend that in connection with something as important and controversial as the policy we are discussing, agreement can inevitably be reached without a vote. However, it is possible to obtain an expression from most of the members present, which shows what the general sentiment is. I agree that if a precise expression of sentiment is desired, there must be a vote; but not always.

The point is that a caucus is a desirable way to find out what the Democratic Party in the Senate thinks—whether or not it favors a balanced budget, for example. Suppose there were a vote on that question. It seems to me that would be a precise, logical, understandable subject on which there could be a vote.

Mr. NEUBERGER. Let us find out what the Senator is really talking about. I have read very carefully his speech of several weeks ago. I have been quite unable to determine just what policy the Senator wishes. First, I should like to ask this question: Does the Senator honestly believe, and will he state for the CONGRESSIONAL RECORD, that 64 men can meet and formulate a policy without voting upon it? The Senator used the word "formulate."

Mr. PROXMIRE. Under most circumstances, I think that is probably correct. Under most circumstances, it would be necessary to have a vote. However, as I previously stated—and I think it is perfectly sensible and consistent—there are certain subjects with respect to which a vote would not be necessary. If we had a caucus on some question like the Berlin crisis, I think it is perfectly understandable that it would be possible to obtain some kind of consensus that would be unanimous, without a vote. It may be that such circumstances are rare.

The distinguished Governor of a great State—not the State of Wisconsin—told me that whenever his administration had a bill or proposal which was considered to be essential, a caucus of the party in the State legislature was always called. He told me that never once did the party lose a vote on the floor. He said that it was not a matter of voting or binding the members of the caucus, but rather a matter of explanation, a question of all members of the party understanding what the position of the leadership was, and being informed as to the situation.

I agree that under many circumstances it would be desirable to have a vote.

Mr. NEUBERGER. I should like to pursue the inquiry a little further. The Senator is shifting the scenery on us. I am not talking about the Governor of a State, or a State legislature. I am talking about the language in the Senator's own speech. What I wish to know is how a Democratic Party caucus would formulate a policy on the budget, for example, or on other fiscal questions, without voting on such a policy. I wish the Senator would explain that to me.

Mr. PROXMIRE. I will tell the junior Senator from Oregon that we probably would have a vote upon it.

Mr. NEUBERGER. That is fine. There would be a vote. After the vote is taken, what is the situation? Let us assume that the vote might be to hold the line at $77 billion, or that $3 billion or $4 billion should be added to the budget. That is a purely hypothetical situation. After the vote is taken, is the majority leader bound to carry out the policy which has been formulated?

Mr. PROXMIRE. I should say that the majority leader can and should call a caucus whenever he thinks the situation is such that the party should reconsider or modify its position. I believe that the majority leader should not exercise his powers as the head of the party in the Senate unless he is reflecting the majority opinion of the Democratic Senators in caucus.

Mr. NEUBERGER. So the majority leader should carry out the policy which has been

formulated, to use the Senator's own words. Is that correct?

Mr. PROXMIRE. That is correct.

Mr. NEUBERGER. What about individual Democratic Senators? What about the other 64 Senators, including the Senator from Illinois [Mr. DOUGLAS], the Senator from Wisconsin [Mr. PROXMIRE], the junior Senator from Oregon——

Mr. PROXMIRE. Let me say, in that connection, that I think the majority leader has every right—and this has been the practice in many State legislatures—to disagree with the position taken by the majority of members of his party. However, what he does under such circumstances is to step aside. He no longer acts as majority leader. The assistant majority leader takes over. He directs and leads the majority position on the floor. The majority leader votes in any way he desires. His conscience is not imposed upon. He votes according to his conscience. He is free to do so, as are all other Senators.

Mr. NEUBERGER. Does the Senator believe that when a caucus takes a vote in formulating a policy, that vote should be binding on members of the caucus?

Mr. PROXMIRE. I do not.

Mr. NEUBERGER. On February 23 the Senator cited to us with great approval the policies followed by the Democratic Party under Majority Leader John Kern, when Woodrow Wilson was President.

Mr. PROXMIRE. At the time I did so. I believe I said that it would be unwise for us to follow the practice of binding members in caucuses.

Mr. NEUBERGER. Let me read what the Senator said:

"I think Senators can hardly do better than go back to the period from 1913 to 1916 and consider how the Democratic majority operated; and it was a thin majority at that time. It was a majority which did not have the vast superiority we now have, a superiority, virtually, of two to one. The majority at that time was very close. It was also a majority having dissident groups, just as ours has, perhaps more so.

"The majority of that time was a majority confronted with a tremendously difficult situation, including a change in the Presidency. But it was a majority which fulfilled its responsibility by passing some of the most significant legislation this Nation has ever seen. The entire New Freedom program of President Wilson was passed in the period from 1913 to 1916. There were not occasional caucuses; there were frequent caucuses. The Democratic Senators operated as a unit. The Democratic leader, John Kern, who was a splendid majority leader, took his direction from the unified decision of all Democratic Senators."

The Senator goes on to cite with glowing approval that every Democratic Senator in that period, unless I am mistaken, was bound by the decision of the caucus.

Mr. PROXMIRE. I have said that. I have also said that I did not believe that under the present circumstances it would be practical, possible, wise, or necessary for the Democratic caucus to so bind Senators.

Mr. NEUBERGER. Why, then, did the Senator say we should take a lesson from that period?

Mr. PROXMIRE. Because they used the caucus. While I do not approve of everything they did in caucus, I approve of the general fact that all Senators should have an opportunity to express their position on the question of the leadership position, because the leadership position expresses the opinion of Democrats as a whole. I took exception to the technique that was used to bind all Members.

Mr. NEUBERGER. Is it not possible that the technique was at the root of the success that was achieved?

Mr. PROXMIRE. That is possible. However, there have been caucuses which have been effective without binding the Members. We had caucuses in the legislature in Wisconsin. We held them at weekly intervals. Toward the end of the session we held them daily. As a result, every Democratic pledge in the platform was introduced as a bill and was voted on by the legislature, and every one of them was supported by a majority of the Democrats. However, they were not bound under those circumstances.

Mr. NEUBERGER. I have read the Senator's earlier speech with interest, and I have read his present speech with interest.

Mr. PROXMIRE. I thank the Senator for reading my speeches. That is a real compliment.

Mr. NEUBERGER. It is commendable that this issue should be discussed by the Senator. However, I believe—and I hope my mind will be changed—that although the Senator hopes to have more democracy in the Senate, I feel that a return to a caucus system which would bind all Members would result in infinitely less democracy in the Senate. I believe it to be a system which the great liberals like the elder La Follette, from the Senator's State, and George Norris, who was the greatest modern Senator, and perhaps the greatest Senator of all time, have denounced as "King Caucus." I am saying this from memory, but George Norris, I believe, many times was critical, in speeches on the floor of the Senate and before civic bodies, of what he described as "King Caucus." I hope the Senator from Wisconsin is not proposing to take us back to what the illustrious liberals of the past fought so strenuously against.

Mr. NEUBERGER. Mr. President, I have no quarrel with the right—and even the responsibility—of the Senator from Wisconsin to express his opinions regarding the nature and operation of the internal organization of the Democratic Party in the Senate, nor do I dispute his contention that it might be desirable to have more frequent caucuses or conferences by our party. I have previously expressed the latter position on the floor of the Senate.

However, I think that the attitude which the Senator from Wisconsin has adopted with respect to the caucus, places him in the position of urging adoption of a system designed to better secure party responsibility, but rejecting, as repugnant to individual conscience, the very factor—namely, a binding commitment—which makes this system effective. In essence, the Senator from Wisconsin suggests adoption of the type of party organization and operation which is in effect in a number of Western countries operating under the parliamentary form of government—for example, Great Britain; but he would provide for elimination of the discipline which makes the method workable. I, myself, do not propose such discipline; but I emphasize that without it, the recommendations of the Senator from Wisconsin become both unfair and unworkable.

Furthermore, I believe that the procedure outlined by the Senator from Wisconsin would place a heavy restriction on the majority leader, without imposing a similar responsibility upon the members of our party in the Senate.

Mr. President, what does the proposal of the Senator from Wisconsin with regard to caucuses actually mean?

NONBINDING CAUCUS IS INEFFECTIVE

The efficacy of the caucus as a method of formulating party policy has historically rested with its ability to bind its members. Weakening of this power tends to erode the cohesive effect of these meetings. While the nonbinding caucus may perform a valuable function, by providing an opportunity for discussion and receipt of information, the nonbinding caucus can achieve only infrequent success in uniting behind a particular bill the party's widely diversified membership. The tendency to submit to the group more vague proposals, in order to arrive at language which would be acceptable to a majority of the members, would result in broad, but meaningless, policy statements.

This quality of the caucus is apparent in the experience of parliamentary countries. For instance, between 1946 and 1952, the British Labor Party suspended party discipline of this nature, with the idea of improving morale and teamwork. A number of serious violations of this discipline occurred; members were expelled; and the binding rules were restored.

I share the conviction of the Senator from Wisconsin that each Senator's fundamental duty is to his conscience. But I suggest that when the Senator from Wisconsin urges that all Democratic Senators play a part in the formulation of policy, through participation in the caucus, he ignores the responsibility which such participation would entail if his plan were to be effective.

The nature of the Senator's oversight is indicated in a statement made by Senator Fessenden in 1867:

> You may not go into a consultation—call it a caucus or what you will—where the implied obligation is that the question under consideration is to be settled by a majority, and not only debate but vote, and then, finding yourself in a minority, say "I am not bound."

POLITICAL SCIENTISTS FAVOR BINDING CAUCUS

If we accept the view that a Senator's conscience is his final guide in matters of legislation, thus eliminating the possibility of a binding caucus, the caucus becomes merely a discussion group, and cannot be the effective instrument for the formulation of policy which the Senator from Wisconsin claims it to be.

It is true, as the Senator from Wisconsin has stated previously, that a number of students of government have in recent times urged increased use of the caucus as a means of formulating policy in a manner which will insure a greater degree of party responsibility. But they invariably point out that, to be effective, such meetings must be binding.

For example, the distinguished political scientist, Dr. George B. Galloway, of the Library of Congress, in his study "Congress and Parliament", dealing with the American and British systems of government, reported that:

> Party organization in Parliament is evidently much more tightly knit and strictly disciplined than in Congress. The Parliamentary Labour Party's rigid code of discipline may sometimes stifle the public expression of honest differences of individual opinion, but these find an outlet in the private meetings of the PLP. If revived in Congress with power to bind its Members,

the party caucus could go far toward clarifying party policy.

Dr. Galloway, in summarizing his comparison of the Congress of the United States and the British Parliament, suggested that one of the lessons which Congress might learn from Britain was the value of a binding caucus. Dr. Galloway stated:

More responsible and effective party organization in Congress could be developed by tightening up the internal organization of the congressional parties in both Houses, through the merger of their various leadership groups, the holding of frequent meetings of the entire membership of each party in each House, the adoption of party standing orders, including provision for binding caucus decisions, and the assumption of majority party responsibility for planning and guiding the legislative agenda, making committee assignments, and selecting committee chairmen. Party discipline could be strengthened by reviving the party caucus with binding decisions, the skillful use of patronage and promotions for the faithful and committee demotions for the disloyal, and the expulsion of serious offenders from the congressional parties.

A close student of British political parties, R. T. McKenzie, has noted that the British system since 1867 has resulted in increased rigidity in party relationships and decreased individual freedom.

The Senator from Wisconsin has previously declared that in considering the function of leadership in the Democratic Party in the Senate, we could "hardly do better than go back to the period from 1913 to 1916 and consider how the Democratic majority operated." The Senator from Wisconsin declared that:

The majority of that time was a majority confronted with a tremendously difficult situation, including a change in the Presidency. But it was a majority which fulfilled its responsibility by passing some of the most significant legislation this Nation has ever seen. The entire new-freedom program of President Wilson was passed in the period from 1913 to 1916. There were not occasional caucuses; there were frequent caucuses. The Democratic Senators operated as a unit. The Democratic leader, John Kern, who was a splendid majority leader, took his direction from the unified decision of all Democratic Senators.

Mr. HAYDEN. Mr. President, will the Senator from Oregon yield?

Mr. NEUBERGER. Yes, Mr. President; I am happy to yield to the Senator from Arizona.

Mr. HAYDEN. I happened to be in the Congress during the years 1913 to 1917, as a Member of the House of Representatives.

The first important measure taken up was the Underwood tariff bill, which was based upon recommendations made by President Wilson. We asked the Republicans to go away, and to take their time about coming back, until the Democrats could agree upon the terms of that bill.

That was a very remarkable measure because Republican protective tariff laws had been in effect practically since the Civil War. It was the first time a Democratic Congress and a Democratic President could make a change in tariff policy.

We met for days in a Democratic caucus—under what conditions? Under the conditions that we would be bound by what a majority of the caucus agreed upon. A Member could be excused from that obligation only if he had previously made to his constituents, pledges concerning some particular item in the bill.

That is why the Louisiana Democrats, who were opposed to reducing the tariff on sugar, were able to vote against that part of the bill and still remain good Democrats, because they had previously pledged themselves to their people that they would carry on. With that exception, everyone was bound. The result was, when we finally brought the bill to the floor, that numerous amendments were offered on the Republican side. They were all defeated, and the bill was passed just as it had been approved by the Democratic caucus.

In the Senate, in 1917, rule XXII was adopted as the result of a binding caucus on the Democratic side and a binding caucus on the Republican side. In that caucus it was agreed that the Senate would adopt a limitation on debate. If the Senator will read the proceedings, he will see that a Senator, who was absent when the caucus was held, sought to amend the proposed rule. He withdrew his amendment when told that a rule, providing that two-thirds of those present could bring debates to an end, had been agreed to in both caucuses.

Mr. NEUBERGER. I thank the able Senator from Arizona, who, of course, is in a better position to make an observation, based on his own knowledge and wisdom, on this particular period in our history than is any other Member of Congress, because, if I am not mistaken, he has served in both Houses longer than has anybody else in the entire chronicles of the Congress.

As I recall, the late Senator Norris told me he protested against this particular method of binding members of a caucus on a tariff bill. In the various biographies of the late Senator Norris, one of which I was privileged to coauthor, these objections of Senator Norris are mentioned.

I thank the Senator from Arizona for bringing out what happened in that particular period of American history.

Mr. President, I believe that it is very important to note that during the period which the Senator from Wisconsin recommends as a model for the Democratic Party in the Senate to follow today, the legislative caucus was revived, and decisions made with respect to legislative action were binding upon the entire membership of the party and controlled their votes. However, the Senator from Wisconsin has asserted that he does not wish a binding caucus of this nature.

Mr. President, of course, the binding quality of the caucus I have cited has been confirmed by the Senator from Arizona, who has just discussed this question on the Senate floor out of his own experience and service at that time.

Mr. President, in connection with this discussion of caucuses and the necessity of insuring that they be binding if they are to be employed effectively in the formulation of policy, I think it is of interest to note the remarks of the Senator from Wisconsin on February 23 when he called to the attention of the Senate the report "Toward a More Responsible Two-Party System," prepared by the committee on political parties of the American Political Science Association. At that time he said:

"What is perhaps the most authoritative statement by outstanding professional experts on this subject was made by the committee on political parties of the American Political Science Association in a report in 1950 entitled "Toward a More Responsible Two-Party System."

The Senator from Wisconsin then read to the Senate the following recommendation from the report:

Whether they be called caucuses or conferences, more frequent meetings of the party membership in each House should be held. Otherwise there can be no real discussion of party positions and no real participation in or check upon the decisions of the party leadership. Without such discussion and participation, efforts to make party operations more responsible will be futile.

The Senator from Wisconsin then declared:

Mr. President, let me repeat that quotation because I believe it is extremely important that the Democratic Members of the Senate recognize that the words I have quoted are the considered judgment of the top political scientists.

And then the Senator from Wisconsin read in the Senate that particular quotation again, for emphasis.

In his remarks following this reference to the APSA report, he urged more regular caucuses as a method of aiding policy formation by the leadership but indicated that he would not be bound by any vote taken at such meetings.

Mr. President, I recall this language today so that I may inform the Senate of that portion of the committee's recommendation with regard to the caucus which the Senator from Wisconsin curiously neglected to quote.

I should like to read to the Senate the entire text of the APSA recommendation dealing with caucuses or conferences. This recommendation appears on pages 60–61 of the report, as published as a supplement to the September 1950 issue of the American Political Science Review, in the chapter entitled "Party Organization in Congress." The report states:

Whether they be called caucuses or conferences, more frequent meetings of the party membership in each house should be held. Otherwise there can be no real discussion of party positions and no real participation in or check upon the decisions of the party leadership. Without such discussion and participation, efforts to make party operations more responsible will be futile.

That is the part the Senator from Wisconsin quoted. Now I proceed, and I am quoting again:

There is no formula to tell how often a caucus or conference should be convened merely to discuss matters and how often it should be held for the purpose of voting upon a position binding on the members. Nor is it possible to prescribe in other than general terms either the conditions under which a party membership may be released from

abiding by a caucus decision or the consequences to be invoked upon those who disregard the decision without release. Three points, however, are rather clear.

The first is that a binding caucus decision on legislative policy should be used primarily to carry out the party's principles and program. Such a decision should not be used merely to support the views of the President or of congressional party leaders when their views do not rest on stated party policy, except in exigencies affecting the public record of the party.

The second is that members who generally stand behind the party program should have reason to know that their service is appreciated by the party leadership. Rewarding party loyalty is a proper way of fostering party unity. On the other hand, when Members of Congress disregard a caucus decision taken in furtherance of national party policy, they should expect disapproval. They should not expect to receive the same consideration in the assignment of committee posts or in the apportionment of patronage as those who have been loyal to party principles. Their conduct should be brought before the eyes of the public. Their voters are entitled to know about it.

The third is that the party leadership committees should be responsible for calling more frequent caucuses or conferences and developing the agenda of points for discussion.

Mr. President, the report to which the Senator from Wisconsin has referred in a previous speech does, indeed, recommend more frequent caucuses. But it also states that the caucus should be binding on individual Senators with respect to decisions on legislative policy to carry out the party's principles and program.

Mr. President, I do not favor a binding caucus. I am pleased that the Senator from Wisconsin also holds this view, although I wish he had not quoted so selectively from ASPA documents. But what would be the effect of a nonbinding caucus with regard to the formulation of policy in the manner suggested by the Senator from Wisconsin?

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. NEUBERGER. I shall be happy to yield to the Senator when I reach the next page of my prepared text. I should like to finish through one paragraph on page 6 before I yield.

RESTRICTS LEADER, BUT NOT MEMBERS

In his discussion on the Senate floor March 9, the Senator from Wisconsin indicated that he thought the Democratic Party caucus should be binding upon the majority leader but nobody else. This was the purport of his statement that the majority leader should step aside as majority leader when the caucus formulates a policy with which he is in disagreement. No other Senator should be bound to this extent, according to the Senator from Wisconsin.

Consider, for a moment, the implications of such a proposal. Let us suppose that the Democratic Party caucus formulates a policy against high Federal price supports on corn and cotton. If the majority leader is in disagreement with this policy, he must step aside. What if all 10 Democrats on the Agriculture and Forestry Committee likewise disagree with the policy of the caucus? Must they step aside, too? The Senator from Wisconsin evidently thinks not, for he has said repeatedly that no Senators should be bound by the caucus, save and alone the majority leader.

Yet, who has greater control over farm price support legislation, the majority leader or the chairman and all the Democratic members of the Senate Agriculture and Forestry Committee? In other words, the majority leader could not defy the policy adopted by the caucus on farm policies, but all the Democratic members of the Agriculture and Forestry Committee could do so.

Apply this same reasoning to proposed civil rights legislation. If the Democratic caucus formulates a policy favoring strong civil rights bills, the majority leader must step aside if he is in disagreement, according to the program outlined by the Senator from Wisconsin. But what about the Democrats on the Judiciary Committee, where the fate of civil rights bills is decided? Are they free to defy the policies "formulated" by the caucus, to use the word of the Senator from Wisconsin? What, then, has he accomplished, if he binds LYNDON B. JOHNSON and lets 63 other Democrats, no matter how powerful or strategic they are on various committees, repudiate the policies of the Democratic caucus virtually at will?

I am now happy to yield to the able Senator from Wisconsin.

Mr. PROXMIRE. Mr. President, I should like to repeat what I said before, when the Senator from Oregon started his speech. I think it is a constructive speech. I think the tone is excellent. I very much appreciate that, because this whole type of discussion and controversy could easily become a discussion of personalities, which would be most unfortunate.

I should like to say that of course it appears to be a contradiction to be arguing for a caucus on the one hand and arguing against a binding caucus on the other. It is true, as the Senator from Oregon very well stated, that outstanding political scientists who have favored more caucuses have also, by and large, favored binding caucuses. It is true that throughout most of the 19th century and the 20th century in the Senate there were generally binding caucuses.

I do not think, however, the fact that one rejects binding caucuses necessarily means one cannot have any kind of a caucus for effective and democratic organization, to give some sort of direction and influence to the leadership.

I should like to point out that in the report of the Committee on Reorganization of the Congress, the La Follette-Monroney committee report, there was a great deal of consideration of this matter. In the first place, they recommended that some instrumentality be established to enable the platforms of the two parties to be put into effect. They recommended party caucuses emphatically and distinctly and said that these would be useful. They also recommended policy committees. However, they had to cope with the difficult problem of how one can have an effective influence on a policy committee or on a caucus and still not have it binding upon the membership. This is the recommendation they came up with:

> On issues where party policy is involved the decisions of these policy committees would be formally announced in proceedings of Congress, and formal records would be kept of such decisions. No member of either party would be required to follow such announced party policy except as he chose to do so. Each member would be free to vote as he saw fit, but the record of his action would be available to the public as a means of holding both the party and the individual accountable.

I recognize, of course, that this particular recommendation is directed toward policy committees. It seems to me it would be constructive, helpful, and perfectly possible to have that kind of recommendation carry over for the caucus itself.

I should like to point out to my good friend from Oregon that this is a practice which is followed in many State legislatures. In my own State legislature in Wisconsin we had frequent party caucuses, weekly or even daily, toward the end of the session. These caucuses were not binding, but they did instruct the leadership. They were very effective. We had a very large number of platform promises, all of which were approved by the caucus, introduced and supported by a majority of Democrats.

I realize this is a long interruption, but there were some very interesting and challenging statements made by the Senator from Oregon, and I should like to comment on some of them at this time.

Mr. NEUBERGER. I am happy to yield further to the Senator at this time.

Mr. PROXMIRE. The Senator asked, "Who has greater control over farm price support legislation—the majority leader or the chairman and all the Democratic members of the Senate Agriculture and Forestry Committee?"

I think, so far as the overall policy is concerned, speaking in terms of whether we have a farm bill, for instance, it can be said that the leadership does—that the majority leader would have a greater influence. I think it is possible that if all of the Democrats on the Agriculture and Forestry Committee would get together—which I think is most unlikely—they could prevail. The fact is, however, that the leadership of our committee generally tends to come to the majority leadership to learn whether a farm bill in the session is a practical possibility. That decision is generally a leadership decision. Of course, the outstanding Democrats on the committee are consulted.

I think that policy decision as to whether we should have a farm bill now is the kind of decision which might be made by a caucus.

There is one further point I wish to make. The Senator from Oregon says:

> What, then, has he accomplished, if he binds LYNDON B. JOHNSON and lets 63 other Democrats, no matter how powerful or strategic they are on various committees, repudiate the policies of the Democratic caucus virtually at will?

I am sure the Senator from Oregon indicated, as he said in a previous part of his speech, that I do not intend to

bind LYNDON B. JOHNSON. It is very important to note that I do not intend to bind any individual as an individual. I intend only to bind the majority leader, as such. If he disagrees with the policy which has been formulated, he has the same right as any other Senator to speak out and vote against the position of the majority. But I suggest, under those circumstances, that the majority leader step aside and that the assistant majority leader act in his stead.

Mr. NEUBERGER. What if the assistant majority leader does not agree with the policy "formulated" by the caucus proposed by the Senator from Wisconsin?

Mr. PROXMIRE. That is an easy decision. This is not something impracticable or starry eyed. It is a problem which we have in the Wisconsin Legislature, and a problem which is encountered in other legislatures. The chairman of the committee or some other leading Democrat could step into the position of leader for the time being.

Mr. NEUBERGER. Suppose the chairman of the committee disagrees? The question I am asking the Senator goes to the root of the proposals which he has brought before the Senate. It is the Senator from Wisconsin who has raised the entire question. The Senator from Wisconsin, in previous speeches and discussions on the floor with other Senators, has proposed a caucus in which Democratic Party policy will be "formulated." He has admitted that this policy would have to be determined by a vote.

Mr. PROXMIRE. It would have to be determined in some cases by a vote of the Democrats in the caucus.

Mr. NEUBERGER. It would have to be decided upon by a vote. Obviously we could not tell how 64 Senators felt with respect to a highly complex question, unless there were a ballot.

After the ballot is taken in the Democratic Party caucus, if the majority leader is in disagreement with the policy thus "formulated" the majority leader shall step aside, according to the Senator from Wisconsin.

The point I am emphasizing is this: It seems to me that the Senator from Wisconsin has brought before us nothing that gets at the root of what he claims to seek, because substantive legislation comes only from the standing committees of the Senate.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. NEUBERGER. I am happy to yield to the distinguished Senator from Pennsylvania.

Mr. CLARK. This is probably the most foolish thing I have ever done since I was elected to this body. I am intervening in a dicussion between two good friends, with whom I am almost always in accord. In the end, I shall probably find myself berated by both of them.

However, I suggest to my good friend from Oregon that it does not seem to me to be feasible in any way, in the present condition of the Democratic Party, to have a binding caucus.

I say to my good friend from Wisconsin that I do not think he ever thought we could have a binding caucus, because our party is not in a position of adequate unity. So it would not make the slightest sense to try to bind any individual. Therefore I suggest, with all deference to my very good friend from Oregon, that perhaps he is creating a straw man and knocking him down. I do not believe anyone wishes to have a binding caucus in the Democratic Senate majority as it exists today.

On the other hand, I must say that I agree with my friend from Wisconsin that it would be very helpful if we could talk these matters over with the leadership a little more freely than the present procedures make possible.

Next week there will come before us the question of temporary unemployment compensation legislation, a subject of vast importance to my State. I should like to have the opportunity to present my views and those of 17 other Senators from States which are equally concerned with this problem, one of them being the State of Oregon. In that way we could determine whether or not it would be possible or feasible to have the majority of Democrats support legislation providing temporary unemployment compensation.

However, that is not a feasible method of procedure. I have had conferences with the majority leader on the subject. He has been very kind and considerate. He has agreed to meet later with a group of Senators who feel as strongly as I do.

But all this is not in accordance with normal procedure. With all deference to my friend from Oregon, I believe it would be a good thing for party morale, and for the formulation of party policy in accordance with the party platform, if we had a regular mechanism, such as our friends across the aisle have, for considering these questions.

I do not believe the Senator from Wisconsin ever had in mind—although he may inadvertently have used some language which might be construed as pointing in that direction—that any of us should be bound by what is done in a caucus.

I note the presence in the Chamber of my good friend, the senior Senator from Florida [Mr. HOLLAND]. He and I agree upon many questions, but we also disagree on many others. I should not wish to go into a caucus where I would be required to sustain the position of the Senator from Florida if I disagreed with it.

With all due deference to my good friends, let me say that probably it was quite unwise for me to take the floor. However, I believe my friend from Oregon is pressing my friend from Wisconsin a little further than he ever intended to go.

Mr. NEUBERGER. I am very happy that the Senator from Pennsylvania has made this contribution to the discussion.

But let us presume that there is a party caucus on the question of unemployment compensation legislation; and let us assume that the Democratic Party caucus favors greatly expanded unemployment compensation benefits. I am sure the Senator from Pennsylvania would be pleased by such action. I am sure the Senator from Oregon would like to see unemployment compensation benefits expanded. Oregon happens to be a State which, unfortunately, has had rather high unemployment rates in recent years.

Let us assume that the majority leader is in disagreement with the policy agreed upon by the caucus. Under the formula presented to us by the Senator from Wisconsin, the majority leader must then step aside.

Mr. CLARK. I think not. However, I will let my friend from Wisconsin speak for himself. I did not so interpret his remarks.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. NEUBERGER. I yield.

Mr. PROXMIRE. In reply, let me say that in most cases the Senator from Texas [Mr. JOHNSON] and the majority would be together. There would be a few cases in which they would not be. When they were not together, I think we would find an accommodation, a far greater understanding, and a better degree of unity, if my suggestion were adopted. However, there is the possibility to which the Senator from Oregon has referred, that the assistant majority leader might be in disagreement with the caucus. I am sure that in most cases the Senator from Montana [Mr. MANSFIELD] would support the position of the majority. In a few cases, perhaps, neither the majority leader nor the assistant majority leader would. In such a case perhaps the Senator from Alabama [Mr. HILL], chairman of the Committee on Labor and Public Welfare, might assume the leadership. It would not matter how far down in seniority we might have to go. Eventually we would find a Senator who could act as floor manager.

Under most circumstances there would be an opportunity for the leadership and the members of the majority party to get together and agree on policy. I believe that under many circumstances—perhaps under most circumstances—the decision of the caucus would be that there should be no party policy. I think that would be a constructive decision to arrive at. We would come from the caucus with far greater understanding, and with a recognition of the fact that we do not expect to direct our leadership, because there is too much division in the party.

It seems to me that the Senator from Oregon is inventing a hypothetical situation which is not likely to occur very often. Such a conclusion, as I have stated, is in line with the practice which is followed so frequently in other legislative bodies, and with very great success.

I conclude this part of the colloquy by saying that I think we could get together, in the first place, by beginning with the party platform. With respect to many bills, we might decide that we do not wish to formulate a policy. We might decide, in a few cases, that certain bills are of sufficient importance to the country, the Democratic Party platform, and our promises that we should have a party position. Under such circumstances there would be extensive discussion to see if we could arrive at a consensus as to the timing of the legislation, and,

roughly, what our position should be. We would not have any detailed bill formulated. That is a committee project. But I believe that if we were to follow such a procedure, Senators would have far better understanding, and there would be a greater degree of unity. I believe the country would have the benefit of more positive legislation, and certainly more representative of all Democratic Senators and therefore of the interests of the country as a whole.

Mr. NEUBERGER. Mr. President, the scenery has been shifted very rapidly since the earlier recommendations were made. I have based my remarks today on earlier speeches made by the Senator from Wisconsin. In his earlier speeches, including some television programs which were transcribed and distributed on our desks, he very sharply challenged the decision taken by the Democratic Party leadership as being out of step with the views of a majority of Democratic Senators.

Now he says that there would be very few situations in which the leadership and the majority of Democrats would disagree.

Mr. PROXMIRE. My answer to that——

Mr. NEUBERGER. Please let me finish. There have been a number of long interruptions.

Secondly, in his earlier speeches the Senator from Wisconsin constantly referred to the caucus as a place where the party policy would be "formulated."

Now he tells us that there would be very few instances where the caucus would make policy. Then I am told by both the distinguished Senator from Pennsylvania [Mr. CLARK] and the distinguished Senator from Wisconsin that I misunderstand the situation if I interpret the earlier remarks of the Senator from Wisconsin to imply that the majority leader must step aside if he is in disagreement with the decision formulated by the caucus. In that connection let me quote the language of the distinguished Senator from Wisconsin which appears in the RECORD of March 9:

> Let me say, in that connection, that I think the majority leader has every right—and this has been the practice in many State legislatures—to disagree with the position taken by the majority of members of his party. However, what he does under such circumstances is to step aside. He no longer acts as majority leader. The assistant majority leader takes over, and he directs and leads the majority position on the floor. The majority leader votes in any way he desires. His conscience is not imposed upon. He votes according to his conscience. He is free to do so, as are all other Senators.

That is what I should like to ask the distinguished Senator from Pennsylvania. Let us assume that the majority leader does not agree with the decision of the caucus to expand unemployment compensation benefits. Under the formula presented by the distinguished Senator from Wisconsin—and I have quoted his exact words—the majority leader would step aside. May I ask which committee has jurisdiction over legislation dealing with unemployment compensation? I believe it is the Committee on Finance.

Mr. CLARK. The Senator is correct.

Mr. NEUBERGER. The senior Senator from Virginia is chairman of the Committee on Finance. Is that correct?

Mr. CLARK. That is correct.

Mr. NEUBERGER. Committee chairmen have great power and authority in the Senate, unless I am mistaken.

Mr. CLARK. The Senator is correct.

Mr. NEUBERGER. Does the distinguished senior Senator from Virginia have to step aside, as the chairman of the Committee on Finance, if he is in disagreement with the decision of the caucus to expand unemployment compensation benefits?

Mr. CLARK. Let me answer the Senator's question in this way. We have no rules of germaneness in the Senate, and the Senator from Oregon is therefore speaking in the time of the area redevelopment bill. I do not object to it. But I say—and I believe he and I are in accord on this point—that a rule of germaneness in the Senate would be a good thing.

Mr. NEUBERGER. The Senator from Wisconsin, in two lengthy speeches in the Senate, spoke when other proposed legislation was pending. If there is to be a rule of germaneness, it should apply to 98 Senators, not merely to 1.

Mr. PROXMIRE. I should like to add at this point, in order to clear up the situation, that on both occasions when I spoke there was no proposed legislation pending. I have checked the matter with the Parliamentarian, and I have been informeed that no proposed legislation was pending on either occasion.

Mr. CLARK. To get back to the question of the Senator from Oregon, the chairman of the Committee on Banking and Currency, the distinguished junior Senator from Virginia [Mr. ROBERTSON] is opposed to the area redevelopment bill, and voted against it in committee. He stepped aside and turned the bill over to the Senator from Illinois [Mr. DOUGLAS] to manage it on the floor. That is what the Senator from Virginia should have done, and I honor him for doing it.

Mr. NEUBERGER. That was after the bill had been reported by the committee. Is that correct?

Mr. CLARK. That is correct.

Mr. NEUBERGER. I must say that my good friends certainly shift the scenery very quickly. What I am asking about is the consideration——

Mr. CLARK. The Senator asked me about the Senator from Virginia [Mr. BYRD].

Mr. NEUBERGER. I am asking about what would happen in a certain situation. Let us take the question in proper sequence, to see what the Senators' proposal means. We have arrived at the situation where the majority leader has stepped aside because the Democratic policy caucus has voted for expanded unemployment compensation.

Mr. CLARK. No; I have not gotten that far yet. I have never suggested that we should have a binding vote on unemployment compensation legislation. I believe we should have a caucus in which to talk it over, but not a binding vote.

Mr. NEUBERGER. In other words, the Senator from Pennsylvania is in disagreement with the Senator from Wisconsin that the conference should formulate party policy in caucus, and that can be determined only by a vote.

Mr. PROXMIRE. Not a binding vote.

Mr. NEUBERGER. The Senator from Pennsylvania says he does not favor a vote on it, but the Senator from Wisconsin says a vote should be had on it.

Mr. CLARK. The Senator from Oregon—and I am sure he will excuse me for saying it—is apparently putting words in our mouths. I have never said that we should have a binding commitment on unemployment compensation bills, for example. I believe we should take the sense of the caucus. The Senator from Wisconsin will speak for himself, but I am sure that neither he nor I favor binding votes in a caucus, to bind all Members of the Senate.

Mr. NEUBERGER. The Senator from Wisconsin has said in speeches and discussions that policy should be formulated—those were his exact words—by the Democratic Party caucus. He has said that a vote would be desirable. He said that if the majority leader does not agree with the decision taken by that vote, he should step aside. I ask the Senator from Wisconsin if that is not correct.

Mr. PROXMIRE. What I said was that the caucus should formulate policy. When I said that, I meant of course that the caucus should decide first whether or not it wanted to formulate policy on particular issues or whether the Senate policy committee or the majority leader should do so.

The whole argument that I am making is that we should have a regular, systematic opportunity for all Democrats to meet together, preferable weekly, but at least monthly, so that we can decide.

Mr. CLARK. Just as the Republicans do.

Mr. PROXMIRE. Yes. So we could decide at regular intervals whether we should attempt to influence our leadership, or whether we merely want the leadership to explain to us what it was doing, and why. I do not mean that on every bill the Democratic caucus should say what the leadership position should be, but I believe it should have an opportunity if it chose to do so to use its inherent authority.

Mr. NEUBERGER. May I ask the Senator from Wisconsin a question on that point?

Mr. PROXMIRE. May I first answer the questions the Senator has asked me, or has implied I should answer, when he turned to the Senator from Pennsylvania to make further statements? The first question, I believe, was whether it was not true that when I spoke on television about this situation and discussed it that I said there were many serious disagreements with the majority leader. I said there were serious disagreements, but I did not say many serious disagreements. I am convinced that on some of those serious disagreements the caucus might come to a position which might contradict the position of the majority leader.

In the second place, the Senator from Oregon implied that I should answer the question of how I square my statement that the Democratic Party caucus should make policy with my present statement that in few instances it would make policy. I say regular caucuses would give Democrats the opportunity to make policy when they chose to do so.

To begin with, I suppose in many cases the Democrats meeting in caucus would decide that the policy committee or the leadership should make the decision, and that all the Democrats together should not try to arrive at a united position.

The third question the Senator from Oregon has asked, has already been answered.

Mr. NEUBERGER. When the able Senator from Wisconsin read the report of the American Political Science Association, or at least excerpts from the report, dealing with a responsible two-party system, he repeated one paragaph twice. It was the paragraph which recommended more frequent party caucuses, and in which he lauded the top scientists who made the recommendation. Why did he not read the next paragraph which made a recommendation for binding party caucuses and the disciplining of dissenters from the caucus?

Mr. PROXMIRE. I am delighted that the Senator should raise that point. I did say that in the 1913–16 period caucuses were binding. I made no pretense that I was reading the entire quotation from the American Political Science Association report.

Mr. NEUBERGER. It was in the next paragraph.

Mr. PROXMIRE. I said, "Whether it be called a conference or a caucus, every Senator should be given an opportunity to express himself." I believe that what the Senator has read indicates that the American Political Science Association feels that caucuses would be desirable whether members vote to bind other members or not.

Mr. NEUBERGER. The only thing I can say is that, in the report, the political scientists take a definite stand on binding caucuses, and even state that members should be disciplined who dissented from the caucus.

I am simply pointing out to the Senator that he quoted extremely selectively from this report, which he himself heralded so lavishly in his speech before the Senate.

Mr. PROXMIRE. I think this is one of the exceptions which somehow seems hard for the Senator from Oregon to understand, namely, how I can agree with some persons on some part of their position and not agree on another part.

As to the part of the proposal made by the distinguished political scientist that there should be caucuses, the scientist made sense. I think the compromise made by the La Follette-Monroney committee that kept this part, that is, holding caucuses, and provided the pressure of publicity to secure unity from those caucuses also made sense.

Mr. NEUBERGER. But the Senator does not recommend that we have binding caucuses.

Mr. PROXMIRE. No; I made it clear that I disagreed with the proposal to have binding caucuses, as I do now. The distinguished Senator from Oregon has repeatedly talked about there being no need for a caucus. The Senator from Pennsylvania and I have asked for a democratic—with a small "d"—caucus. That is a very important distinction. We do not ask for a caucus binding on anyone's conscience.

Mr. NEUBERGER. Except that of the majority leader.

Mr. PROXMIRE. No; we say that the majority leader can step aside and speak in any way he wishes.

Mr. NEUBERGER. I emphasize again that substantive legislation comes from the standing committees of the Senate. The majority leader can be asked to step aside, perhaps, but in the end it is the standing committees of the Senate where legislation originates. They still have the same personnel and the same membership.

Mr. PROXMIRE. The Senator from Oregon on February 23 said:

> I think there should be more party caucuses.

Today he started off by saying, in the body of his speech, that he favors more party caucuses.

Mr. NEUBERGER. I do not deny that. I have said it a number of times. I say that the Senator from Wisconsin has come before the Senate on his own initiative and has taken the lead in discussing this matter. He has proposed a situation in which the Democrats would have a caucus which was binding on only one man, namely, the majority leader. That seems to indicate very clearly to me that the Senator from Wisconsin has no really specific proposal for "democratizing" the procedures of the Senate.

COMMITTEES ORIGINATE SUBSTANTIVE LEGISLATION

The Senator from Wisconsin and I share a fervent interest in Federal aid to schools. I am pleased to be in allegiance with him on this very important issue. Let us presume that the Democratic Party caucus formulates a policy favoring Federal aid to schools. I trust a Democratic caucus would do that. What, then, happens? Will the Senate Committee on Labor and Public Welfare forthwith report a bill providing for Federal aid to schools? If it does not do so now, why would it do this after such a policy had been formulated by the Democratic Party caucus? According to the concept of the caucus advanced by the Senator from Wisconsin, not a single member of the Senate Committee on Labor and Public Welfare is bound to report a bill for Federal aid to schools, even after such a policy has been formulated by the party caucus which he advocates.

Mr. PROXMIRE. May I answer the Senator from Oregon at this point?

Mr. NEUBERGER. Certainly.

Mr. PROXMIRE. The situation which has obtained, in the very brief time I have been in the Senate, both in the Committee on Banking and Currency and in the Committee on Agriculture and Forestry is, on the rellay big measures, that the initiative, by and large, has been taken, according to my understanding, by the leadership. Perhaps that is as it should be. The leadership indicates when they want a farm bill or a housing bill. I think that is perfectly proper. It is necessary to have leadership in the Senate.

My proposal simply is that the Democrats, meeting in caucus, should have an opportunity to decide whether they want to influence the majority leader on a particular decision. It may be that although the majority leader wants a farm bill or a housing bill, the Committee on Banking and Currency or the Committee on Agriculture and Forestry will decide that he will not get it. That would still be true.

I would not modify the powers of the standing committees, but I should say that the opportunity or the power to make policy, which, by and large, resides in the majority leader, could properly be shared and democratized by all Democrats meeting in caucus.

Mr. NEUBERGER. Does the Senator from Wisconsin mean policy with respect to substantive legislation? I think that is a key question.

Mr. PROXMIRE. I think it is a key question, as I tried to indicate in my second speech. This is a policy which I think the caucus could make fruitful, but which largely is not being made now at all. For instance, in fiscal policy, the Committee on Banking and Currency may report a housing bill. It is very difficult for all members of the committee, in all conscience, as Democrats and as Senators, to relate the bill to the Nation's total financial responsibility.

Mr. NEUBERGER. Does the Senator say that the caucus should make policy in the fiscal realm?

Mr. PROXMIRE. I think that might be a good area which the caucus might like to consider. I favor it.

Mr. NEUBERGER. Would the caucus vote on it?

Mr. PROXMIRE. At the beginning of a session, particularly since the Democrats have an overwhelming majority in the Senate, a great responsibility attaches to us. I think we should give very careful consideration to the President's budget. On the basis of such consideration, I think we could reach a conclusion as to whether we favored a balanced budget at some level, at least tentatively.

Mr. NEUBERGER. How would the caucus reach such a conclusion? The Senator said earlier he did not think the caucus should vote on such matters. How would he have the caucus reach such a conclusion?

Mr. PROXMIRE. I did not say we should not vote. I said perhaps the caucus would want to vote; perhaps it would not. I think the caucus would reach a conclusion as it would on any other issue.

Mr. NEUBERGER. By voting on it?

Mr. PROXMIRE. No; not necessarily, but by studying the matter with great care; by listening to all the discussion in good faith; and then perhaps deciding by a vote, if that is necessary.

Mr. NEUBERGER. Now, at least, the Senator is talking about reaching a vote. The scene has been shifted again. First he would vote; then he would not vote; now he would vote again.

Mr. PROXMIRE. The scene has not been shifted one bit.

Mr. NEUBERGER. How do 64 Senators decide questions of fiscal policy, unemployment compensation, Federal aid to schools, or even when they should go out to lunch, unless they vote?

Mr. PROXMIRE. First, it must be decided if there is a consensus.

Mr. NEUBERGER. Now we are coming to votes.

Mr. PROXMIRE. There could very well be a situation such as existed when the majority leader was elected this year. It was obvious to everyone that he was the unanimous choice, so without objection, he was elected. Technically, there had been a vote.

I think the caucus might reach a decision as to a balanced budget. There may be some persons who say we should not have a balanced budget.

Mr. NEUBERGER. One minute the Senator from Wisconsin is in favor of voting. The next minute he is not in favor of voting. The next minute he quibbles whether there should be a voice vote or not. We might even have an electrical device for recording votes, such as is used in some State legislatures.

But when the Democratic caucus has formulated the policy, to quote the Senator's own words, how can that policy be substantively translated into a bill by a standing committee of the Senate when only the majority leader is to be bound by the policy thus formulated?

Mr. PROXMIRE. The way that would be done is this: The party would decide in caucus what the position should be. That position is participated in by the members of the committee. The members of the committee may or may not agree with it. I would hope that the position of the majority of the Democrats would have some influence. If it would not have any influence, there would be no way to get favorable recommendation by the committee, any more than if the majority leader had no influence on the committee, he could not get the committee to make a favorable recommendation.

I submit that the decision, the vote, the determination of all the Democratic Senators in caucus, would be persuasive with many Democratic Senators, including myself. I might often disagree with the decision of the caucus; but on occasion I would find that perhaps I should reexamine my position, or perhaps I should change it. The decision of the caucus would have great influence on me, and I think it would be a salutary influence.

Mr. NEUBERGER. In other words, in the caucus a vote would be taken. Suppose the vote taken in the caucus were on a measure dealing with schools. What would happen in the Committee on Labor and Public Welfare, to which such proposed legislation is referred? Many Federal aid-to-school bills have been referred to that committee; but, unless I am mistaken, very few of those bills, if any, have emerged from that committee. Does the Senator from Wisconsin expect that the policy formulated would change their minds?

Mr. PROXMIRE. I think it might. I think it would have great influence with them. It certainly would with me. If not, it would fail—just as the position of the majority leader fails, although very rarely.

My position is that that policy would have a chance to work, just as it does in State legislatures, and just as it has in the past in the Senate—although frequently in the Senate, as the Senator from Oregon has so ably pointed out, those caucuses have been binding.

Mr. NEUBERGER. The Senator from Wisconsin said: "Under no circumstances would I consider myself bound by the unit rule in any vote of the caucus."

Mr. PROXMIRE. That is correct.

Mr. NEUBERGER. The Senator from Wisconsin also said: "I have stated that the purpose of the caucus was to give guidance to the leadership and to let the leadership know how the rank-and-file Democratic Senators feel."

That has been the whole emphasis of the remarks of the Senator from Wisconsin—namely, that the leadership must step aside. But we have standing committees, and committee chairmen, and there are 63 other Democratic Senators. However, according to the entire emphasis of the speech of the Senator from Wisconsin, there is to be no stress or duress on them to follow the policy thus formulated.

Mr. PROXMIRE. Oh, I think there would be enormous influence on them to follow that kind of a policy. Of course there would be—just as in the case of any democratic body—enormous influence.

If the 64 Democratic Senators voted 40 in favor versus 24 opposed, on the question of having the committee report to the Senate an aid-to-education bill, the bill still might not be reported by the committee; but I think that would be a tremendously strong and very constructive weapon in the direction of getting the bill reported, and passed, too. It would constitute a real moral force on the committee.

Mr. NEUBERGER. If the Democratic caucus voted to endorse the 27½-percent depletion allowance in the case of the oil companies, would the Senator from Wisconsin be influenced by that vote?

Mr. PROXMIRE. Of course not. Often I would not agree.

Mr. NEUBERGER. A few minutes ago the Senator from Wisconsin said the decision of the caucus would have great impact on him.

Mr. PROXMIRE. It would have impact on me.

Mr. NEUBERGER. Except on the issues on which the Senator from Wisconsin has convictions.

Mr. PROXMIRE. No. There are issues on which I have deep convictions; and no doubt other Senators are in a similar position. Perhaps I would reexamine my position, although it would be very unlikely that I would change it on the depletion allowance.

Mr. NEUBERGER. In other words, the Senator from Wisconsin would expect to have Senators bound, except upon issues on which they have very deep convictions.

Does not the Senator from Wisconsin think the chairman of the Senate Committee on the Judiciary [Mr. EASTLAND] has very deep convictions on civil rights legislation?

Mr. PROXMIRE. Yes, very deep convictions; and I respect him for that.

Mr. NEUBERGER. Does not the Senator from Wisconsin think that the Senator from Virginia [Mr. BYRD] has deep convictions on deficit spending? He is chairman of the Finance Committee.

In other words, the caucus would have relatively little impact except on some minor issues on which Members did not have strong feelings.

Mr. PROXMIRE. Let me make clear that I do not say I would change my position.

However, it seems to me that it would have tremendous influence on whether I would vote to report the bill. I think I would be very much persuaded to vote to report even a bill which would go sharply against my convictions, if a majority of the Democratic Senators wanted the bill reported. I think in that case I would vote to report it, although I would fight it on the floor of the Senate. Perhaps I would fight against it, but I think I would be very much influenced by the decision of such a caucus.

Mr. NEUBERGER. In other words, if the Democratic caucus formulated a policy, then, no matter whether the Senator from Wisconsin was in disagreement with the policy, he would vote to report such a bill to the Senate, would he?

Mr. PROXMIRE. I have not said that. I have said that I probably would be greatly persuaded, and I would most likely vote to report the bill. There might be a few instances in which I would not vote to report the bill to the Senate.

But I think this would be an excellent way in which all Democratic Senators would have a voice on the policy. I think the majority leader has that power now. When the majority leader—whom all of us respect and like a great deal—comes to us, and says he wants a particular bill reported from committee, I think a majority of us say "Certainly." Those Senators may not favor the bill; and when the bill comes up on the floor of the Senate, they may speak against it, and may vote against it. But the majority leader has enormous prestige and influence.

Mr. NEUBERGER. In other words, the Senator from Wisconsin believes we should have a caucus in which we would vote——

Mr. PROXMIRE. Neither the Senator from Pennsylvania [Mr. CLARK] nor I have ever said we should not have a caucus in which a vote is taken. We have said it would not be binding. I repeat that it would not be binding.

Mr. NEUBERGER. I thought the Senator from Wisconsin said we would vote very seldom.

Mr. PROXMIRE. I said perhaps the caucus would not vote.

Yes; I think the initial caucus would rarely vote. I think during the first year, at least, we would vote on a few—perhaps on many, perhaps on none; but my guess is that we would vote on only a few.

I do not think these things are always fixed and always the same. One begins with a certain kind of institution; and it changes considerably.

I think this one would change as the Democrats found it could be used as an instrument.

Mr. NEUBERGER. How would it be used as an instrument—by voting on party policy?

Mr. PROXMIRE. Indeed it would.

Mr. NEUBERGER. That is somewhat different from the position previously taken by the Senator from Wisconsin. I gathered then that he did not favor voting on party policy.

Mr. PROXMIRE. I do not think that contradicts my earlier position at all.

Mr. NEUBERGER. Well, I believe the RECORD will show as to that.

Mr. PROXMIRE. Certainly; I think it will, too.

Mr. NEUBERGER. Mr. President, the majority leader cannot originate substantive legislation. That can be done only by the standing committees of the Senate. What is accomplished if the majority leader must step aside, but if the substantive committees remain the same?

Mr. President, if the Senator from Wisconsin wishes to assist those of us who strive for greater democracy in the Senate, I suggest that he use his great talents to see correction of the seniority system. This, in my opinion, would be a far more useful goal than a return to "King Caucus." Let me explain why.

Mr. PROXMIRE. Mr. President, at this point will the Senator from Oregon yield?

Mr. NEUBERGER. Mr. President, I prefer to continue at this time. I have already yielded a great deal.

Mr. PROXMIRE. Very well; fine.

Mr. NEUBERGER. Mr. President, under the seniority system, service as committee chairmen—with their vast authority and power—is virtually denied to the Senators representing the great two-party States where is centered the political vitality of the Nation. New York, for example, may pay over 20 percent of Federal taxes, but New York rarely has a Senator who is committee chairman, under either Democratic or under Republican majorities. This is because New York's healthy two-party political system seldom leaves a Senator in office long enough to enable him to acquire sufficient seniority to attain the chairmanship of a major Senate committee.

SYSTEM PENALIZES TWO-PARTY STATES

Thus, the seniority system penalizes the States with political vitality; it rewards the States where one-party politics is often in safe control.

I believe that by challenging the seniority system, the Senator from Wisconsin would be doing far more to democratize the Senate than by his recommendations that we consider a return to the discredited caucus of the past.

Mr. President, this is no new proposal with me. In the New York Times magazine for April 7, 1957, I contributed an article in which I questioned the wisdom of the seniority system, especially in its denial to the great two-party States of their rightful major role in Senate proceedings, and I suggested that there be efforts to relate committee assignments in Congress far more to geography and to specific State problems than to seniority; to permit committee members to elect chairmen by secret ballot, rather than by having this decided only by seniority; and to encourage real two-party political competition in all the States. I ask unanimous consent that the article containing my views on this subject be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit A.)

PRINCIPLES VERSUS PERSONALITIES

Mr. NEUBERGER. Mr. President, the recent speeches of the Senator from Wisconsin have been widely portrayed in the press as an attack upon the majority leader of the Senate, Senator LYNDON B. JOHNSON of Texas. In addition, there have been many public charges that the Senator from Texas uses retaliatory measures against Senators who do not heed his wishes or demands.

I cannot comment upon the experience of others. However, I wish to emphasize that I, myself, have encountered no such circumstances. I believe I have voted quite consistently on the liberal side of most issues—especially the civil-rights question, which is so controversial here in the Senate.

Furthermore, in 1957, we in the Senate had a very heated argument over appropriations for the U.S. Information Agency. The Senator from Texas [Mr. JOHNSON] had presided over an investigation of USIA and he was determinedly opposed to the size of the appropriation requested by the Eisenhower administration for the Agency. The Senator from Texas urged me strenuously to support his position on this issue. After listening to all the evidence, I came to the conclusion that the request of the administration was reasonable and fair. On the yea-and-nay vote, I believe I was the only Democratic Senator who voted for the administration's funds, and against the position taken by the majority leader of the Senate.

CONSTRUCTIVE CRITICISM BENEFICIAL

Surely, this was a situation in which retaliation might be forthcoming, if such were the customary practice of the Senator from Texas, as has been alleged by some.

Although I had pending many legislative matters of importance to my State, there was no instance in which they were not duly scheduled for the Senate Calendar. The majority leader may be given to the vindictiveness charged by his critics; but I have not experienced it, even under circumstances in which I differed quite spectacularly, and alone among Democratic Senators, from the views of the majority leader.

I think it is extremely important, Mr. President, that any discussion of democracy in the U.S. Senate be confined to the issues involved, and not be permitted to degenerate into an ad hominem attack on any one person. Liberalism has been responsible for many great advances, because it has been confined to principles; it has been kept above personalities.

One of the reasons why I have made this address here today is that the Senator from Wisconsin came before the Senate with this proposal, which involves very great criticism of the Democratic leadership, and suggested a party caucus. Yet when it was all narrowed down, the discipline involved descended on only one man, the majority leader. He had to stand aside if he was in disagreement with the policy formulated by the caucus. The other 63 Democrats, no matter how powerful or strategic their position, were not to be touched in any way. They did not have to stand aside. They did not have to abandon a single perquisite, a single ounce of authority or power. It seems to me this kind of proposal is not a practical one to change procedure in a great legislative body like the United States Senate.

When a Senator confines the whole impact of a policy drawn up by 64 persons to one man, what kind of a proposal is that? Again I say our legislation, substantively, is drafted and passed upon and sent to the Senate by the standing committees of the Senate. What kind of proposal is it that says to one man over there in the chair on the aisle, "If you were in disagreement with the policy formulated by our caucus you, Mr. Majority Leader, step aside," and that the other Members are free to go their own way on it and to exercise whatever power or authority they have?

The standing committees are the same. The chairmen are the same. The special committees are the same. Nothing has been changed except that one man, the majority leader, has to step aside. That is the reason why I put this particular paragraph in my address, and I repeat it:

I think it is extremely important, Mr. President, that any discussion of democracy in the United States Senate be kept on the issues involved, and not permitted to degenerate into an ad hominem attack on any one person. Liberalism has been responsible for many great advances because it has been confined to principles; it has been kept above personalities.

Mr. President, I do not hold with those who say that public discussion of the organizational machinery of the Democratic Party in the Senate is improper and that such debate should take place only behind closed doors. Such matters are of importance to the entire Nation. I believe that the recent speeches of the Senator from Wisconsin and the comments which they have stimulated, including my own, represent a healthy interchange of ideas. Constructive criticism offered with a genuine desire to

stimulate reassessment of existing practices and procedures is beneficial to the democratic process. It is in this spirit that I offer my comments today.

I am pleased they could be presented in the open arena of the Senate rather than behind the locked doors of a party caucus.

Mr. PROXMIRE. Mr. President, will the Senator yield?

Mr. NEUBERGER. I yield.

Mr. PROXMIRE. My good friend from Oregon has asked me, in substance, why I do not spend my energies on the seniority system, to which he objects. I would call the attention of my good friend from Oregon to the fact that on February 23, the junior Senator from Wisconsin stood up on the floor and this is what he said:

> Later today or tomorrow an order will be entered which will automatically pass this body designating new chairmen of the Foreign Relations Committee and the Banking and Currency Committee.
>
> Mr. President, I object to this order. I object because its passage will mean that the chairmen of 10 of the 15 major standings committees of the Senate will be from the 11 States of the Old South.
>
> I make this objection without any derogation of the excellent character and the obvious competence of the Senators who will assume these chairmanships.
>
> Under the entrenched Senate custom of seniority these Senators are automatically entitled to their chairmanships.
>
> Mr. President, I think it is time this body took a clear, open-eyed, public look at the consequences of following seniority on committee chairmanships.

Then I went into specific objection to the seniority system. I pointed out how and why I wanted it changed.

My good friend from Oregon is an excellent writer. He is one of the greatest in the country. He is recognized throughout the country as an extremely able writer. His article in the New York Times has made a great contribution. However, I think in all honesty he would have to agree that there is a great difference between writing an article for the New York Times and coming on the floor of the Senate, before Senators one likes and respects, and disagreeing with a system that has given some of them great power. That fact should be recognized. I welcome the Senator from Oregon in this battle on the seniority system, which has been limiting and undemocratic.

I should like to say also that my good friend from Oregon twice read a paragraph the implication of which was that I had engaged in an ad hominem attack on the majority leader. I have done everything I could, and I think if my good friend from Oregon will read my speeches he will be constrained to agree—though perhaps not—that I have stated I admired the abilities of the majority leader I have stated that he is a man of outstanding character and integrity. I simply disagree with a system which has centered so much power in the hands of one man. This is in no way in derogation of the majority leader, and I do not see how it can be construed as an attack on him.

I should like to make one more point. The Senator from Oregon has said that the gist of my argument is that the majority leader is singled out as the man whose prerogatives alone should be limited by the caucus. It should be underlined and emphasized that the majority leader, as the Senator from Texas, would be perfectly free to speak and vote his conscience under the proposal I make. But the majority leader as such, by the very nature of the title he bears, is representing the Democratic Party in the U.S. Senate. I do not see how we could possibly have any kind of policy formulated by a caucus and have the majority leader, acting as the majority leader, carry out a policy which disagreed with the ideas of a majority of the Democrats.

Mr. NEUBERGER. The Senator from Wisconsin has just referred to the fact that he protested on the Senate floor the confinement of committee chairmen to a comparatively small number of States. I presume he means, from the position he has taken, the chairmen of committees are extremely powerful. Am I correct?

Mr. PROXMIRE. The Senator is correct. I protested against the seniority system which permitted that. I made what I thought was a moderate proposal that the policy should be modified.

Mr. NEUBERGER. The Senator does not think that committee chairmen should step aside if they are in disagreement with the position taken by the caucus, does he?

Mr. PROXMIRE. No; only if one section of the country has more than 50 percent of the chairmanships.

Mr. NEUBERGER. The Senator from Wisconsin thinks the majority leader should step aside when he is in disagreement with the caucus, does he?

Mr. PROXMIRE. We cannot have a majority leader who is supposed to represent a majority disagreeing with that majority after a majority of the Democratic Party has decided in caucus how it should act. I do not see how he can do that and act as the majority leader.

Mr. NEUBERGER. But the Senator from Wisconsin does not think the chairmen of the committees in that particular situation would have to step aside, does he?

Mr. PROXMIRE. That is correct. I should like to conclude by saying to my good friend from Oregon that in his initial statement he made one of the finest inversions I have ever heard of Voltaire, who said, "I disagree with everything you say, but I will fight to the death for your right to say it." In that speech the Senator from Oregon seemed to agree with the need for more caucuses, but seemed to think I had no right to break out on the floor, in view of the fact that I had commended the majority leader and, in effect, had bitten the hand that fed me.

Mr. NEUBERGER. I regret that the Senator has raised this issue again. I did not intend to discuss it today or to allude to it, but inasmuch as the Senator from Wisconsin has mentioned this issue I think it ought to be referred to.

Mr. PROXMIRE. That is fine.

Mr. NEUBERGER. After the initial speech of the Senator from Wisconsin on February 23, I had some research made in the pages of the CONGRESSIONAL RECORD, as to what was said since the Senator from Wisconsin became a Member of the Senate. I will make the statement, without fear of successful contradiction, that no Member of the U.S. Senate in any comparable period of modern times for which records are available, so lavished praise on another Member of the United States Senate, as the Senator from Wisconsin did with respect to the present majority leader of the Senate, the Senator from Texas [Mr. JOHNSON]. I am sure the Senator would not deny that.

Mr. PROXMIRE. Of course I deny it. Of course I deny it. In the first place, neither the Senator from Oregon nor the Senator from Wisconsin has been here since the beginning of the Senate. When I came to the Senate there were Senators from all States praising the majority leader, and he deserved the praise. I do not begrudge the majority leader that praise.

Mr. NEUBERGER. Was it one-tenth as much as the praise of the Senator from Wisconsin?

Mr. PROXMIRE. Of course, and the Senator from Oregon knows he is beating a dead cat.

Mr. NEUBERGER. Why did the Senator bring that issue to the floor, if it is a dead cat? The Senator raised the issue. I did not raise it.

Mr. PROXMIRE. I am raising it because my good friend from Oregon has now at least resurrected Voltaire. Having inverted Voltaire—having said that he would literally fight to the death against my right to say something, although he agreed with it—he now says he disagrees with my position on the caucus. That is the burden of the Senator's speech, which ends with a very fine paragraph to say that my speech was desirable, it was a healthy interchange of ideas, and the criticism was constructive.

I am delighted that my good friend from Oregon has at last taken that position, which I think is the correct position for a great liberal from Oregon. I commend the Senator and thank him.

Mr. NEUBERGER. Mr. President, in conclusion I should like to read an excerpt from the book entitled Robert M. La Follette, written by Belle C. La Follette and Fola La Follette. The excerpt is from page 473 of the book.

> In a signed editorial entitled "King Caucus," he [La Follette] protested that this method of legislation meant that the bill would be debated "behind closed doors" where secret votes could be taken which would be considered binding upon all Democratic Senators when the measure came before the Senate. Bob thought revising a tariff bill or any other bill in party caucus was secret control of legislation. "Trades, deals, dicker and corruption thrive best in the dark," he said. "To take the public business into a corner to be transacted under a seal of confidence is the first step toward public betrayal," he wrote.

That is an excerpt from page 473 of the biography of the great liberal Senator from Wisconsin, whose portrait was recently unveiled, along with those of four other great Senators chosen from the annals of our country.

Mr. ANDERSON. Mr. President, will the Senator from Oregon yield?

Mr. NEUBERGER. I am happy to yield.

Mr. ANDERSON. I rise to commend the Senator from Oregon for keeping his good disposition throughout the discussion. I am happy to see the Senator defend the majority leader and express his viewpoint. I hope the Senator will continue, in the months to come, to keep his temper in good shape.

One of our famous writers said at one time that trouble was like hot weather, it sours milk and sweetens apples. The Senator from Oregon has had some trouble, as have some of the rest of us occasionally, with respect to his health. I was anxious this afternoon that the Senator not overdo himself in exertion on the floor.

I wish to commend the Senator from Oregon for keeping his disposition good, as has the Senator from Wisconsin. I commend the Senator further for speaking out as to what he believes is best for the Senate. I am happy the Senator's health is good enough that he feels competent to engage in this sort of discussion.

After a few years of experience, I advise the Senator to take care as to how he exerts himself, and to be sure he keeps the sweet good nature he has displayed today.

Mr. NEUBERGER. I thank the Senator from New Mexico, whom I admire so greatly, for commenting so generously about my disposition. I wish to tell the Senator that I would not undertake this task today—what might be called a self-imposed assignment—unless it were within the discretion, wisdom, and permission of my doctors.

I have found, since returning to the Senate, there is one way to fulfill a complete legislative calendar, and I think the Senator from New Mexico may be interested in this, so I will state it before I conclude.

My doctors advise me to live a normal life and to maintain a normal schedule, but not to overdo it. I have found that I can undertake all of the legislative tasks which come to me if I curtail the innumerable social events which are foisted upon every Member of the Senate—the institutional banquets, the cocktail parties and receptions every evening, and being asked to take delegations to Statuary Hall, to the Capitol Dome, and all around the Capitol grounds. By doing away with the so-called fringe responsibilities I find I can attend to my real legislative responsibilities.

I certainly appreciate the consideration for my health voiced by the Senator from New Mexico. And I again want to thank the Senator for his generous comments about my disposition. After one has had the experience and ordeal I have had, one is really not angry with anyone. I certainly am not.

Mr. President, I yield the floor.

EXHIBIT A

[From the New York Times magazine, Apr. 7, 1957]

A SENATOR'S CASE AGAINST SENIORITY

(By Hon. RICHARD L. NEUBERGER, of Oregon)

WASHINGTON.—Although I have served in the Senate only since January 1955, it has become my firm conviction during this period that seniority should not continue to be the sole determinant of congressional sovereignty and influence as reflected in committee chairmanships and committee assignments. As I see the question, seniority is wrong on three fundamental counts:

(1) It attaches little or no significance to the special abilities and experience of an individual, but only to the duration of his service.

(2) A committee chairman never can be removed, even if the national interest is jeopardized by his continuance in that post.

(3) Seniority rewards those States with one-party systems and, conversely, penalizes States in which two robust and equally matched political parties fight it out at the ballot box.

The reasons for these objections to seniority are so obvious, it seems to me, that they can be regarded as practically self-explanatory. What can be said for a method of operating Congress that will give an ordinary layman with long political tenure a greater opportunity to serve on the Joint Committee on Atomic Energy than a famous nuclear physicist who might come newly to House or Senate? A man may be a leader of the bar in his State, but will he attain the Judiciary Committee if he lacks seniority? Senator THRUSTON MORTON, of Kentucky, was President Eisenhower's Assistant Secretary of State, but the inexorable rule of seniority has given him a seat on the District of Columbia Committee rather than on the Foreign Relations Committee, where his training in the State Department could be put to practical use.

After their defeats for the Presidency, both Thomas E. Dewey and Adlai Stevenson were surrounded by rumors of senatorial ambitions. Why should men of their distinction and oratorical gift not aspire to the Senate Chamber? Yet, it later was reported that they had decided against essaying the humble and unrewarding roles of freshmen Senators. Surely the decision of men of their caliber not to try for the Senate was a loss to the whole Nation. Under a similar system in England, Winston Churchill would have had to be content with back-bench status after he dropped out of Parliament for a time and thus relinquished his seniority.

In these days of crisis, Government must be flexible to meet new situations. The earth is moving at a mad pace. Emergencies are omnipresent. Never so true was the couplet from James Russell Lowell's "The Present Crisis":

"New occasions teach new duties,
Time makes ancient good uncouth."

Yet the congressional rule of seniority is the direct antithesis of this. It is rigid, inflexible, and unyielding—particularly in the vital realm of committee chairmanship. An isolationist may head the Armed Services Committee at the height of American involvement in a worldwide conflict, and in that post he stays if seniority put him there. If seniority installs a foe of conservation as chairman of the committee charged with protecting America's dwindling supply of natural resources, draft horses and wainrope cannot drag him out of this seat. And if the allies or beneficiaries of special interests become the heads of key committees responsible for regulating those same special interests—well, that is seniority.

Ought Congress be laced into such a straitjacket? If Senators can be trusted to pass on matters as crucial as war and peace, why is it unsafe to let them pick their own committee chairmen?

This is not to claim that able men of integrity rarely rise to congressional dominance through the seniority system—far from it. For instance, Senator JAMES E. MURRAY, of Montana, an ardent conservationist at the age of 80, presides today over the Interior Committee. I have been amazed at the details concerning fiscal matters known to Senator CARL HAYDEN, of Arizona, 79, who wields the gavel in the vital Appropriations Committee.

But the point is that, even if Senator MURRAY were not so ardent a conservationist and if Senator HAYDEN possessed far less familiarity with the Federal budget, they still would head the Interior and Appropriations Committees, respectively. Their qualifications are secondary to their seniority. I wonder if this is a wise set of priorities, particularly when we consider that men critically ill have ruled strategic committees for years in absentia. As long as breath remained in their bodies, the seniority rule could not be breached. They had to retain their chairmanships.

Furthermore, under such an arrangement, seniority often becomes an end in and of itself. Electorates are told that they must keep in office a certain individual not necessarily because he is sound on the burning issues confronting America and the rest of the world, but simply because he has so much seniority on deposit in Senate vaults.

In 1954, when I ran for the Senate as a Democrat in a State which had not elected a Democratic Senator for 40 years, my opponent was an incumbent Republican who, through the inexorable workings of the seniority process, had become chairman of the Interior Committee. This is the most powerful Senate committee in dealing with problems affecting the Western States. The special advantages and benefits to Oregon of my opponent's seniority became a leading issue of the campaign. Indeed, at times it subordinated all other issues.

I shall never forget a conversation I had with an enlightened and able editor of a small-town daily newspaper whose support I was seeking. This man is an internationalist and a fervent defender of civil liberties. I cited to him my opponent's rollcall votes in the Senate against ratifying the North Atlantic Treaty Organization, against extending reciprocal trade, against point 4, against any moves toward rebuking Senator McCarthy, against confirming such appointees as CHESTER BOWLES and David E. Lilienthal, against positive Federal action in the realm of civil rights.

"Everything that you charge about your opponent's voting record is undoubtedly true," said the editor, whom I long have respected and admired. "I can't defend that record. Yet I still would hate to see our State lose all that valuable seniority in the U.S. Senate, as well as on some of its most important committees."

And, near the climax of the campaign, this internationalist, liberal-minded editor endorsed for the Senate an isolationist and adversary of civil rights.

I am convinced that such incidents are by no means uncommon. Yet an endless and self-serving circle is thus created. A one-party State produces seniority for its Senators because they serve without serious challenge to their tenure. Then, this seniority is relied upon as an all-persuasive argument for continuing the State's one-party standing.

This constitutes my principal complaint against the seniority system. It provides an argument and shield for people who fear the real workings of democracy. Despite all our vaunted devotion to the two-party system, grassroots competition between strong political parties is virtually unknown in approximately half the States of the Union. In fact, the absence of genuine political competition in so many States may be at the root of the undue emphasis on prolonged tenure in office. Such tenure is inevitably a byproduct of one-party rule.

Occasionally some of the one-party States may be breached by a Presidential nominee of the other party who possesses overwhelming personal popularity or glamour—Franklin D. Roosevelt or Dwight Eisenhower, for example. In some distressing cases, as with the religious bigotry of 1928 directed against Alfred E. Smith, a one-party State may reverse itself.

But these exceptions seldom register any lower on the ballot. Mr. Hoover, once, and Mr. Eisenhower, twice, successfully invaded much of the Deep South. Yet they brought to victory with them not a single Republican Senator from that region. Mr. Roosevelt carried Oregon decisively four times, but the State never elected a Democratic Senator on such occasions. For offices like U.S. Senator or the governorships, no fewer than 28 States may be regarded as nearly impregnable strongholds of one party or the other. These are the States which ascend most often to dominance in Congress under the seniority system.

What is a one-party State? I admit the term is susceptible to no hard and fast definition. Yet some specific standards of measurement are possible.

I have based this measurement on Senate seats because they are generally the offices fought over the hardest and national significance is most likely to attach to the results. I have gone back only to 1914, when some States first began to experiment with the direct election of Senators. Prior to that time all Senators were chosen by State legislatures, with railroads and timber companies and steamship monopolies often more influential in the choice than the will of the electorate.

With this in mind, I believe it is fair and accurate to describe as a one-party State any in which one party has held, since 1914, a preponderance of senatorial election victories of 3 to 1, or more.

I find that in 28 States the nominees of one party have regularly won Senate seats in 3 elections out of 4 or better. This is considerably more than half the States of our Nation. Some of these one-party States, especially in the South and Southwest, have been traditionally Democratic. Other States, particularly in New England and in the Corn and Wheat Belts of the Middle West, have been steadfastly Republican.

In only 20 of the States have Senate seats been divided somewhat evenly between the two parties since the direct election of Senators began to replace the appointment method. They are: Colorado, Connecticut, Delaware, Idaho, Illinois, Indiana, Iowa, Kentucky, Maryland, Massachusetts, Minnesota, Missouri, New Mexico, New York, Ohio, Rhode Island, Utah, Washington, West Virginia, and Wyoming.

It is true that these States today hold 5 chairmanships among a total of 15 permanent Senate committees. But it also is true that the chairmanships belong to the five among the two-party States that are the closest to being one-party States. In this category in New Mexico, whose senior Senator serves as chairman of the Public Works Committee. New Mexico has had its senatorial seats occupied by Democrats for a 13 to 5 supremacy during the past 43 years. This is narrowly below the 3 to 1 ratio which would add New Mexico to my list of one-party States.

Furthermore, States where the two parties are as closely matched politically as New York and Illinois have not held major Senate chairmanships for a considerable number of years, despite their vast populations and their importance to the national economy. I can think of no more compelling reason for modifying the seniority rule than the manner in which seniority must inevitably discriminate against great two-party States such as these.

Fortunately, there has been some slight recent erosion of seniority. This has occurred not in the disposition of committee chairmanships, but in the place where reform ought logically to begin—in the assignment of new Senators to committee seats.

Some weeks ago, Representative STEWART L. UDALL, of Arizona, in an able defense in this magazine of the seniority rule, stressed the change in the method of committee assignments as a hopeful sign that seniority is losing its ironclad aspects. I agree with his satisfaction over this development. However, Representative UDALL neglected to point out that this curtailment of seniority has applied thus far to only one of the two major political parties.

Upon becoming Democratic leader of the Senate in 1953, Senator LYNDON JOHNSON laid down the policy that no member of the party, regardless of his seniority, would receive a second top committe seat of his choice until every Democratic Senator had been given at least one such assignment. Up to that time, senior Senators had monopolized nearly all the prized committee posts. Newcomers were relegated to minor committees, which usually meant Rules or Post Office or District of Columbia. This is still often the fate of junior Republican Senators, because the Johnson doctrine has yet to spread across the center aisle after 4 years of operation.

Immediately after their elections, Senators MIKE MANSFIELD, or Montana, and STUART SYMINGTON, of Missouri, were seated by the Democrats on the Foreign Relations and Armed Services Committees, respectively, because of their long backgrounds in those fields. Senator WAYNE MORSE of Oregon, who once taught international law, received a Senate Foreign Relations Committee place from the Democrats even while he was still an Independent. Yet no Republican seat on the committees operating in the realm of diplomacy has gone to Senator JOHN SHERMAN COOPER of Kentucky, even though he has come to the Senate fresh from experience as President Eisenhower's Envoy to India.

Two years ago I entered the Senate as a freshman and was assigned by the Democratic leadership to the Interior and Public Works Committees, both vital to natural-resource management in my Pacific Northwest constituency. By contrast, Senator CLIFFORD CASE, of New Jersey, an Eisenhower Republican who entered the Senate with me, has been given only such typically minor berths as Post Office and District of Columbia because members of his party senior to him had laid claim to all the committee chairs of his preference.

What is to be done about this whole thorny question of seniority in Congress and of the penalty it imposes upon two-party States?

Stubborn issues rarely respond to easy or pat solutions. However, I have three specific remedies to propose:

(1) Relate committee assignments in Congress far more to geography and to specific State problems than to seniority.

(2) Permit committee members to elect a chairman by secret ballot, rather than having this decided only by seniority.

(3) Convert as many of the present one-party States as possible into two-party States.

Let me explain what I mean by the first proposal.

The people of the State of New York pay about 20 percent of all the taxes collected by the Federal Government. There should always be one Senator from New York on the Finance Committee, where taxation matters are decided. The Agricultural Committee should be balanced as fairly as possible among members from the cotton States of the South, the grain States of the Middle West and the specialty-crop States on both seacoasts. This balance does not prevail today. Among the committee's 15 members there is not one Senator from the immense rural area between the Great Plains and the shores of the Pacific Ocean.

It is my belief that, once assignment to committees has been removed from the realm of seniority, it soon will follow that each committee will be able to elect its chairman. In the Senate committees on which I serve, the chairman thus selected undoubtedly will be the same Senators who have occupied the head chair through seniority. But this would not be automatically the case in every committee, and the two-party States would find themselves at least participating in the choice; their total exclusion from such decisions might end.

My third suggestion may seem illusory and farfetched. How do you change a one-party State into a two-party State? Let me offer my own State as a prime demonstration that the feat can be accomplished.

While Franklin Roosevelt was President, only three States—Maine, Vermont, and Oregon—failed to elect Democratic Senators or third-party Senators alined with the Democrats. The last Democratic Senator from Oregon had been elected in 1914, the last Democratic Governor in 1934, and two of Oregon's four Houses seats had never in history been won by Democrats. Today, Oregon has two Democratic Senators, a Democratic Governor, and three out of its four congressional seats are occupied by Democrats.

The significant feature of Oregon's emergence from entrenched one-party status is the circumstance that two out of three Democratic senatorial victories have occurred in 1954 and again in 1956. Oregon never elected a Democratic Senator during the 12 years that the White House was occupied by Franklin D. Roosevelt, most popular of Democratic Presidents. Paradoxically, Oregon today has two Democratic Senators who were elected during the 4 years that the White House has been the residence of Dwight D. Eisenhower, most popular of Republican Presidents.

What was responsible for this?

The principal ingredient in the political upheaval in Oregon has been the refusal of the Democrats to be daunted by the deeply rooted political monopoly of the Republicans. Democratic leaders in every Oregon county decided there was no valid reason why Oregon should be the exclusive property of the Republican Party. Spirit and persistence accounted for the change.

I discuss Oregon merely as a case in point. There are other one-party bastions and they, too, can be carried by a formidable political assault. Pennsylvania, with a 14-to-4 preponderance of Republican senatorial victories throughout its modern history, is succumbing to change. JOSEPH S. CLARK, JR., is the first Democratic Senator from Pennsylvania in many years. And, now that President Eisenhower himself has twice breached many of the Democratic redoubts in the South, his party is looking southward for victories at other levels on the ballot.

Any invasion of a political stronghold, be it Republican or Democratic, is to the eventual advantage of democracy and progressive government. As one-party citadels fall, seniority will lose much of its attraction and influence in Congress. And as seniority is gradually modified, there will be less temptation for a State to continue suppliantly in

the clutches of one political party. Both of these changes will help the Nation—inside the Halls of Congress as well as far beyond the Capitol dome.

LIMITATION OF DEBATE—UNANIMOUS-CONSENT AGREEMENT

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that the order previously presented to the Senate today in connection with the pending business be entered with respect to the time limitation; that there be no votes on Friday or Saturday and that we begin the time limitation on Monday at the conclusion of the morning hour.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

ORDER FOR CONVENING ON MONDAY NEXT

Mr. JOHNSON of Texas. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER (Mr. McGEE in the chair). The Senator will state it.

Mr. JOHNSON of Texas. No order has been entered for the time of convening on Monday, I believe.

The PRESIDING OFFICER. The Senator is correct.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that when the Senate convenes on Monday it convene at 12 o'clock.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that this colloquy be printed in the RECORD after the conclusion of the remarks of the Senator from Oregon.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

UNEMPLOYMENT IN DEPRESSED AREAS

The Senate resumed the consideration of the bill (S. 722) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

Mr. MANSFIELD. Mr. President, what is the pending business?

The PRESIDING OFFICER (Mr. WILLIAMS of New Jersey in the chair). The pending business is the bill relating to unemployment in depressed areas.

Mr. BYRD of West Virginia. Mr. President, we of the 86th Congress are now considering one of the most important pieces of legislation to come before us. We are approaching the hour when we must decide what program, if any, is to be undertaken in an effort to pump new life into the areas of chronic unemployment which are constituting a drag upon our Nation's prosperity and which are undermining our national security. We are nearing a showdown on the question of whether this country—the richest, most powerful, and most highly industrialized in the world—is capable of dealing with her own economic sore spots. We soon must give one of two answers—either that America is strong and resourceful enough to impart new vitality into regions of lingering or mounting joblessness, or that our Nation is powerless or at least unwilling to cope with the problem and to offer hope to the millions of Americans now living in the affected areas.

Mr. President, in my addresses to the Senate during the past week I have stated what I believe to be the wiser course. I sincerely feel that only the most forceful and most comprehensive plan of action is adequate to come to grips with this national problem. And I feel with equal sincerity that there is only one piece of legislation now before the Congress which embodies such a plan—namely, Senate bill 722, the Area Redevelopment Act, introduced by the Senator from Illinois [Mr. DOUGLAS].

I am very grateful to the distinguished Senator from Illinois for permitting me to address this body at this time in regard to the proposal before the Senate. His profound work of legislative ingenuity and insight, which has now been approved by the Committee on Banking and Currency, is in my estimation the most practicable, most feasible, and most reasonable approach to this grievous situation that has yet been suggested. So I compliment the distinguished Senator from Illinois on the excellent work he has performed in connection with this legislation. I compliment him for the diligent and untiring effort he has put into the creation of this legislation and into the hearings which have been conducted upon it. I feel that before many days Congress, in its good judgment, will present this legislation to the President for his signature.

Mr. President, before I direct my remarks to the provisions of S. 722, I should like for a little while to discuss again the need for legislation to provide Federal assistance to areas suffering from substantial and persistent unemployment. There is in my State much suffering and hardship, and I am concerned about the desperation and the despair which generally prevails in regions where unemployment has persisted at its worst for many months. Little children are hungry. They and their parents, having exhausted unemployment compensation payments, live upon a meager allotment of surplus commodities. They are without hope. Lawlessness is on the increase as fathers have begun to steal food and clothing for their families. Men have roamed from State to State in a fruitless search for employment, and others have become too destitute to afford travel away from their habitats. During the course of the field hearings which I conducted in West Virginia 2 weeks ago, by authorization of the Senate Committee on Banking and Currency, I received testimony about the desertion of families by husbands in order that the wives and children might become elegible for State welfare assistance.

I would be remiss in my duty were I not to express my gratitude to the chairman of the Senate Committee on Banking and Currency and to the chairman of the Subcommittee on Production and Stabilization, for having made it possible for this subcommittee to go into West Virginia and conduct field hearings there, thus enabling my people to present pertinent testimony for the record. I believe that hearings in the field serve a very useful purpose. I am of the opinion that they are needful; and I want my people to know that I feel we are indebted to the chairman of the subcommittee and to the leadership of this body for making it possible for the subcommittee to go into the area and obtain first-hand information concerning the need for legislation of this nature. We learned some disturbing things.

Some schools are bankrupt because of the number of free lunches being too great, and within the next 30 days, one of the school principals of Raleigh County, my home county, testified more schools will close their lunch programs unless additional help is forthcoming. Over half of the lunches served in some of the schools are free lunches. In many of the schools, over 50 percent of the students have unemployed parents, and the remaining parents are employed only a part of the time. Is it any wonder, Mr. President, that some of our school surveys show that children in these depressed areas are below average? Let us ask ourselves this question: What do we think of if we are hungry? We think of something to eat. My subcommittee was told that some of the unemployed men have turned to moonshining to earn money.

I have mentioned these facts once or twice already on the floor of this body, but I think the people should know that such conditions exist in our own country, where warehouses are bulging as they bulged in the days of Joseph, and where there is the highest standard of living in the world. I think it is important that the country become aware of the fact that there are people living in our Nation who are hungry, ill-clothed, and poorly sheltered. We talk a great deal about giving millions and billions to our friends around the world, whose national debts, when combined, do not equal our own national debt. When we give assistance to other countries, we are exemplifying the Christian attitude. At the same time, it is most important that we be aware of the pockets of poverty, privation, suffering, and hunger within the boundaries of this America which we love so much.

For this reason I have spoken of the situation again and again. Today I again call to the attention of the country, the President, and others in the executive branch these facts, which trouble me, and which trouble my senior colleague [Mr. RANDOLPH] and other Members of this body.

Hundreds of small businessmen have closed their stores and shops due to slumping sales and mounting debts. We have heard again and again that economic conditions in the depressed areas are as bad as those which afflicted our Nation during the depression of the early thirties. Mr. President, of course,

this situation is not general throughout the Nation, as it was a quarter of a century ago. But where it exists, it is, in many instances, as bad. I came up the hard way, Mr. President, and I lived in those days of the depression. I wore tennis shoes in the snow.

There are children living today in West Virginia who have had no shoes to wear in the snow.

In late December I visited the mining town where my father used to load coal.

I talked with some of the families there. It hurt me deeply to see the equipment being brought out of the mines, to see the abandoned machine shop, to see the idle tipple in a community where mines still could produce good coal. I visited the company store where I used to work, and the inventory of goods was almost completely depleted. During the depression we sold a great deal of food and clothing in that store, but it is practically a closed operation now. Everything in the community is on the downgrade. The houses are sinking and deteriorating. Many of the windows in the houses are boarded over, and everything is in ill repair. The houses in that community have not felt the touch of a paint brush in many summers. The very atmosphere seems to be weighted down with dread and hopelessness and bleak despair.

The people have exhausted their unemployment compensation payments. The only food available in home after home which I visited was "mollygrub," the term used for commodities distributed from Government stockpiles of food surpluses accumulated under the price support program. I visited one family in which there were 9 children, and I was told by the husband and father that the family had received, as a 30-day supply of rations, 6 pounds of butter, 6 pounds of rice, 40 pounds of meal, and 5 pounds of flour. That amount of food had to do for 90 meals.

Christmas had just passed, and family after family spoke of Christmas baskets of food that had been donated by local unions and people in other communities, but Christmas baskets were gone. Through the generosity of others, these poor families had been granted a brief respite in their fight against hunger.

Mr. President, I have seen more penury and more privation and more hopelessness and more despondency and more want in 1958 than I saw in the early 1930's. Then I did not see idle tipples, and company stores closed down or open only perhaps an hour out of every 24 hours, or 1 day a week. I cannot begin to describe the lowered morale which exists in these depressed areas. It is a lower morale than I, as a lad, witnessed in the same communities a quarter of a century ago.

Mr. President, little children feel this bleak atmosphere of despondency and lowered morale. Men who are unemployed feel it and they try to find something to take their minds off their helpless, distressed situation. Some of them turn to drink, and it is a very poor subterfuge. But it is no escape from reality; it is only an escape from the frying pan into the fire. Now and then one will commit suicide. These are people with pride and people who do not want to be humiliated. These are people who have given of their fortunes, some of them of their children, in order that this country might be a great country, that it might be a free land, and that it might continue to be the hope of the world. They are good citizens. I should very much regret their seeing this proposed legislation fail of passage or receive a Presidential veto. I wonder what they would then think of the Government which they have served valiantly and for which they have given much.

As I have already said, these are people with pride. They love their country. They love their Government. They love their State. They love their communities. They love their families. They are people who do not want to be humiliated. Yet they see their children doing without clothing and doing without food, and eating out of garbage cans.

What is this situation doing to the children? Childhood is such a sensitive time. The little humiliations through which a child goes rankle in that child's bosom, and as it grows to manhood or womanhood, the child who has experienced humiliation, unfairness, and want grows up with a bitterness and a resentment against society. He will then go out and commit crimes. Immorality is bred by poverty and unemployment:

I took a piece of plastic clay
And idly fashioned it one day

And as my fingers pressed it still
It moved and yielded to my will.

I came again when days were past,
The bit of clay was hard at last.

The form I gave it, it still bore,
And I could change that form no more.

I took a piece of living clay
And gently formed it day by day,

And molded with my power and art
A young child's soft and yielding heart.

I came again when years were gone,
He was a man I looked upon.

He still that early impress wore,
And I could change him nevermore.

Mr. President, there are many thousands of little pieces of human clay growing up in these depressed communities. I am sorry to say I feel that unless we do something, and do it quickly, precious time will be lost. The time will come when these children will have grown into maturity and when they will have been hardened against the society which denied them the necessities of life.

Mr. President, as I recall these homes of extreme poverty, I think I see the explanation for the retarded educational development of many of these children. They cannot absorb the rudiments of mathematics and they cannot concentrate upon the fundamentals of science, when they are preoccupied with the distressing conditions surrounding their home life and when they have a gnawing in their stomachs.

My senior colleague and the House Members of the West Virginia delegation and I sat down this morning to a breakfast of "mollygrub," consisting of butter, flour, meal, dried milk, and rice. As I tried to partake of that food, I thought of my own two daughters and of how discouraging and sad it would be were they forced to depend upon such a meager ration for life itself. Then I thought of the many children who perhaps are not so fortunate as my own children, and who go day after day wanting enough food, and better food with which to fill their little stomachs. There are many children in West Virginia, and in other States, who will go to bed hungry tonight, children who went to bed hungry last night and who went to bed hungry a month ago last night.

So, Mr. President, warped personalities, crime, retarded physical development, declining morality, blighted mentality, and lowered morale are parts of the vicious chain of unemployment and poverty. These are the humanitarian aspects of the problem, but they are the things which so often fail to be adequately considered and properly developed in legislative bodies such as this. Not that the members of legislative bodies are out of tune with the needs of human beings, not that they are unsympathetic; but in the mad rush of things our thoughts are so often concentrated upon the effect that this or that will have upon the budget, the effect that it will have upon the national debt, the effect that it will produce in this direction or that direction, or in some other direction. Too often, the more important things are overlooked, such as the effect upon the personality, character, attitudes, mores, morale, and so on. Yet, these are, after all, the more important things, the things that shape men's souls, encourage their love for fellow creatures, strengthen their faith in fellow human beings, underlie and undergird their respect for the laws of society, and provide the anchor of their trust in Government. These are the things that are effaced and eroded when boys and girls are reared under conditions that deny them food, clothing, and opportunity, and which confront them daily with humiliation, frustration, and despair.

Mr. RANDOLPH. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield to my distinguished colleague from West Virginia, a Member of this body who has joined in cosponsoring the bill; one who is just as much concerned with its passage as I am; one who has diligently worked to bring it to fruition.

Mr. RANDOLPH. It is with reluctance that I interrupt the compelling presentation of my sincere colleague. I do so at this time to emphasize what he has so well said in the Senate. But I desire to reinforce the argument which he is so effectively bringing to our attention.

Figures are important. But in this instance the Senator from West Virginia is attempting, and is doing it splendidly, to clothe figures with faces. Silver dollars have two sides. One side is the side which is used as an exchange in the marts of trade. But turn the dollar over and search out its human side. There must be a human side to each and every dollar. Surely we will find these values to which my esteemed colleague

from West Virginia calls attention. Let us search out these human values and make them our own. There will then be additional votes in this body for S. 722.

I express the hope that on the morrow individual Senators, who have other commitments at this hour which are legitimate and are understood, will have the opportunity to read what the distinguished junior Senator from West Virginia has been saying and to evaluate further the import of his presentation.

I commend the Senator from West Virginia. I have often done so, not simply for the sake of saying pleasant words, even though the Bible tells us that pleasant words are as a honeycomb, breath to the soul, and health to the bones.

The Senator from West Virginia is speaking about the souls of men, women, and children—yes; about the bones of little boys and girls.

I appreciate the Senator's allowing me to interrupt him at this point.

Mr. BYRD of West Virginia. I thank my colleague.

The Bible says:

A word fitly spoken is like apples of gold in pictures of silver.

My colleague spoke fitly when he indicated that there are human faces, human desires, human aspirations, human dreams, and ambitions back of these statistics.

It was Emerson who said:

Not gold, but only men can make a nation great and strong;
Men who for truth and honor's sake stand fast and labor long;
Real men who work while others sleep,
Who dare while others fly.
They build a nation's pillars deep
And lift them to the sky.

We are considering legislation which deals with men; legislation which will affect the lives of our people; legislation which will enable them to use their talents and their energies to achieve the best that is within them.

Our people ask nothing more than the opportunity to labor honestly and to provide for their loved ones, and to give of their best to the upbuilding of their country.

At this point, Mr. President, in order to convey a better impression of the economic picture of at least one depressed area, I wish to read a few passages from testimony which was taken 2 weeks ago in West Virginia by the Banking and Currency Committee's Subcommittee on Production and Stabilization. In giving his evidence to our subcommittee, the Governor of West Virginia, the Honorable Cecil H. Underwood told of the suffering of many unemployed families; and then he said:

In some areas of our State, the entire economy is almost at a standstill; in others, it will shortly come to such an impasse, unless we take immediate and positive action. We are not in a general depression; instead, we are in an era of unparalleled change. In fact, we are in an industrial revolution * * * West Virginia is faced today with the stark aftermath of rapid technological advance, primarily in the coal industry. The entire State has been affected, it is true, as evidenced by a 10-year decline in population. But this change in mining practices is fundamental. Economic forces beyond man's control dictated this transformation. Had coal taken any other course, it would no longer be in the competitive fuel market. * * * We must accept the cold fact that industry in this State, as elsewhere, will continue to improve production and reduce manpower needs proportionately. * * * The first sharp increase in current unemployment occurred in November 1957. This trend continued to deepen during the winter months, reaching its peak in May 1958. Since that time, unemployment has gradually decreased. In the last 20 months, more than 50,000 workers in West Virginia have exhausted their regular unemployment benefits. Since the beginning of the Temporary Unemployment Compensation program, June 27, 1958, more than 36,000 workers have qualified for its benefits. More than 18,000 persons have exhausted these temporary payments.

The Governor's explanation as to the source of the problem was echoed by Dr. Henry L. Ash, director of the West Virginia Department of Employment Security. Dr. Ash testified that the number of coalfield jobs is no longer adequately reflected by figures on coalfield production; and he said:

To me two things are crystal clear about the coal industry in West Virginia. The first of these is that coal will remain a very vital part of our economic life in this State; the second is that mechanization has and will continue to decrease the number of employees needed. To me this is not an argument against mechanization, but a fact to reckon with. Mechanization or automation, whichever you choose to call it, has been a significant force in our economy. We have a scientific Frankenstein yet to be harnessed. We cannot and would not stay mechanization. We must learn and act to live with it and enjoy the fruits of man's ingenuity.

Finally, I should like, Mr. President, to read a few sentences from the testimony of Dr. Leo Fishman, head of the department of economics at West Virginia University. Dr. Fishman pointed out that the unemployment rate at Morgantown—the location of the university—is now 18 percent. Then he said:

The extensive and protracted unemployment in Morgantown is in large measure the result of deep-rooted structural changes in the national and world economies. These changes have led to a sharp restriction in output and employment in the basic industry of the Morgantown area, namely the bituminous coal industry. Simultaneously, technological advances in bituminous coal mining, desirable though they may be from other points of view, have aggravated the situation by causing employment to drop even more sharply than output.

The bills now being considered by the Senate Committee on Banking and Currency for the purpose of alleviating conditions of substantial and persistent unemployment and underemployment in economically depressed areas differ more in detail than in principle. My own preference is for Senate bill 722, introduced by Senator PAUL H. DOUGLAS. It impresses me as the one which is most carefully drafted and most likely to achieve the results for which it is intended.

There we have the opinion of the man who is regarded as perhaps the most learned economist in West Virginia. He believes that only a measure as forceful and imaginative as Senate bill 722 can approach being an answer to today's serious economic need. I believe that his judgment should be taken into consideration by each of us as we ponder this most vital legislation.

Mr. President, the provisions of the bill have, of course, been carefully studied in the committee, and they are explained in the committee report, which is available to all Members of the Senate. But I wish to refer to them here.

Under the provisions of Senate bill 722, there will be established, within the executive branch of the Government, an Area Redevelopment Administration. Such Administration shall be under the direction and control of an Administrator appointed by the President, by and with the advice and consent of the Senate. To advise the Administrator in the performance of functions authorized by the act, an Area Redevelopment Advisory Board would be created. The Board would consist of the Administrator as Chairman, and the Secretaries of Agriculture; Commerce; Defense; Health, Education, and Welfare; Interior; Labor; and Treasury. Also on the Board would be the Administrators of the General Services Administration, the Housing and Home Finance Agency, and the Small Business Administration, together with the Director of the Office of Civil and Defense Mobilization.

The Administrator would appoint a National Public Advisory Committee on Area Redevelopment, composed of 25 representatives of labor, management, agriculture, and the public in general. This Committee would make, to the Administrator, recommendations relative to the carrying out of his duties under the act.

The Administrator could also call upon representatives of interested governmental departments and agencies, together with representatives of transportation and other industries, including agriculture, for the purpose of conferring about problems creating unemployment or underemployment.

In the act are set forth certain criteria whereby the Administrator would be guided in designating certain areas as industrial redevelopment areas and rural redevelopment areas. The Administrator would have access to pertinent studies, information, and data collected or compiled by departments, agencies, and instrumentalities of the Federal Government, State, and local governments, universities and land-grant colleges, and private organizations.

The Administrator would be authorized to make loans to industrial redevelopment areas for the purchase or development of land or facilities, including machinery and equipment, for industrial usage. Loans could also be made to such areas for the construction, rehabilitation, alteration, conversion, or enlargement of factory buildings for industrial use. Such financial assistance could not be extended for working capital or to assist establishments relocating from one area to another when such assistance would result in substantial detriment to the area of original location, by increasing unemployment. A revolving loan fund of $100 million would be created for these purposes,

these funds to be borrowed by the Administrator from the Treasury.

In the making of such loans the Administrator would determine that the project involved would be reasonably calculated to provide more than a temporary alleviation of unemployment or underemployment, and no loan assistance would be extended unless the financial assistance applied for was determined not to be immediately available on reasonable terms from private lenders or other Federal agencies. The Administrator would advance such loans only after making a determination that a reasonable assurance of repayment existed. Loans would be made for periods of up to 30 years; and the Administrator would be permitted to extend such loans for a period of not to exceed 10 additional years, if such extension or renewal would aid in the orderly liquidation of such loan. The loans would bear a low interest rate, a rate that would not be greater than the current average yields on outstanding marketable obligations of the United States of comparable maturities, plus one-half of 1 percent per annum, of which one-fourth of 1 percent per annum would be allocated to a sinking fund to cover losses on loans. This would result in a rate of about 4½ percent. Such loan assistance could not exceed 65 percent of the aggregate cost to the applicant; and a minimum of 10 percent would be required to be supplied by the State, or any instrumentality, or political subdivision thereof, or by a community or area organization, in the form of equity capital or loan capital. Nongovernmental sources would be required to provide not less than 5 percent of the aggregate cost of the project. The security for Federal financial assistance would be subordinate to the liens securing other loans made in connection with a project.

A similar $100 million revolving loan fund, created by borrowing from the Treasury, would provide loans to projects in rural redevelopment areas.

A third $100 million revolving loan fund, such moneys being borrowed from the Treasury, would be created for the purpose of making loans to areas needing construction, rehabilitation, alteration, expansion, or improvement of public facilities. These moneys could also be used in financing the purchase or development of land for public facility usage. These loans would carry an interest rate of one-quarter of 1 percent per annum above the rate equal to the rate of interest paid by the Administrator on funds obtained from the Secretary of the Treasury. These loans would mature not later than 40 years after the date such loans were made.

It is obvious that certain redevelopment areas throughout the country would be unable to qualify for loans for public facilities, thus excluding the possibility of their undertaking certain industrial projects. In these instances, the Administrator would be authorized to make grants if he found that the project would provide more than a temporary alleviation of unemployment or underemployment in the area, and if such financial assistance would improve the opportunities in such area for the successful establishment or expansion of industrial plants.

A $75 million appropriation is authorized by the bill for the purpose of making such grants.

The Administrator would be authorized to provide technical assistance to redevelopment areas, and for this purpose appropriations are authorized by the bill in an amount not to exceed $4½ million annually. Such technical assistance would include studies evaluating the needs of, and developing potentialities for, economic growth of the areas.

Other important features of this bill are the vocational retraining provision and the subsistence payments provision. The bill provides for the vocational training or retraining of unemployed individuals residing in, or who were last employed in, redevelopment areas. The Secretary of Labor would determine the needs and cooperate with the Secretary of the Department of Health, Education, and Welfare, and with existing State and local agencies in charge of existing vocational training programs for the purpose of assuring that the facilities and services of such agencies were made available. When additional facilities or services are needed in the redevelopment areas to meet the vocational training needs, the Secretary of the Department of Health, Education, and Welfare, after having been advised by the Secretary of Labor, would give assistance, including financial assistance when necessary, to the appropriate State vocational educational agency in the provision of the necessary additional facilities or services.

Under section 17(a) of S. 722 the Secretary of Labor, in consultation with the Administrator, would enter into agreements with States in which redevelopment areas are located, under which the Secretary of Labor would make payments to such States for the purpose of enabling the States to make weekly retraining payments to unemployed individuals not entitled to unemployment compensation and who were undergoing vocational training and retraining under the act. The original bill provided that these payments would be made for a period not exceeding 13 weeks, but I introduced an amendment in the committee to extend the payment to a maximum of 16 weeks, and the amendment was adopted. Such payments would be made only during the period in which the individual was receiving vocational training or retraining under the act.

Ten million dollars is authorized by the bill for the subsistence payments. The Secretary of Labor and the Administrator are authorized to prescribe the necessary rules and regulations to carry out the provisions of the section.

Mr. President, S. 722 would achieve the humanitarian ends which we all desire—but it would do it, not through a giveaway program, but through a sensible, practical effort, an effort to revitalize the entire economy of the blighted sections. S. 722 goes deep into the heart of the American philosophy of government, for it is sound, hard-headed and businesslike. S. 722 would support private enterprise and community growth and rehabilitation. S. 722 would create wealth, not just spend it. The bill would cut down the inflationary process and promote productivity. It would not hand out government largesse, but would, instead, have the Government serve as a banker with insistence upon getting its money back, with interest.

It is my sincere belief that S. 722—instead of being a big spending bill, as some have called it—actually would save money in the long run for the American Government and the American people. Think of the staggering sums now being paid out across the Nation for unemployment compensation benefits and the other heavy expenses that are incurred when the solvent citizens must support the insolvent. During 1958 alone, the amount spent to support the unemployed was well over $4 billion. That figure includes $3.5 billion paid through State unemployment compensation programs, $318 million in the Federal temporary unemployment compensation program, $81 million in the two unemployment programs for veterans, $452 million in payments to unemployed Federal workers, and almost $230 million in payments to unemployed railroad workers. There is still more cost—an amount almost impossible to calculate—in the added burden which joblessness places upon other welfare programs not directly connected with unemployment.

Therefore, if the redevelopment program of S. 722 is put into effect, each new job created by it will mean a saving to the taxpayers, through a lessening of the tremendous expense of unemployment compensation and other welfare programs. It would mean a saving for the public, for industry, for government, and for the Nation as a whole.

To illustrate the inroads of unemployment compensation costs, I should like to read a paragraph from testimony which was gathered in my own State of West Virginia 2 weeks ago in public hearings of the Subcommittee on Production and Stabilization. In the opening testimony of the series of hearings the Governor of West Virginia said:

> During the calendar year of 1958, West Virginia paid unemployment compensation benefits totaling nearly $59 million. Payments in this volume have a marked effect on the department of employment security trust fund, and on the State's industry. During the month of January of this year (1959), 12,225 workers filed initial claims and drew their first unemployment payments. These disturbing numbers indicate the lingering effects of our industrial change and point even more dramatically to the need for a permanent solution.

Do these words not show part of the crushing burden of unemployment? And would it not be preferable for the taxpayers of America to join in a loan program to stimulate new jobs, rather than continue to support, with no hope of getting their money back, the expenses incurred through unemployment and welfare payments. To me, it seems just plain good common sense to reason that it is better to give men a chance to work,

rather than support them when they are out of work.

Mr. President, S. 722 would permit the Federal Government to help distressed areas to help themselves. It is important to our national welfare, because it would enable those depressed areas which have sound economic potential to transform themselves into productive communities enjoying a standard of living comparable to that enjoyed by the country as a whole. No longer would these vital human resources be wasted. I do not say that this bill is a panacea nor do I maintain that its beneficial results would immediately accrue on the day of its passage. The effectiveness of the measure will depend, in considerable part, on local initiative in the communities affected. The people in the depressed areas, in the final analysis, will have to help themselves, but this measure provides the key whereby the door to risk capital may be secured.

Throughout the field hearings which I conducted, I heard testimony again and again which expressed the need for long-term, low-interest capital. I can point to page after page of testimony in the printed hearings stating that risk capital—long-term, low-interest-rate capital—is simply not available to the people of West Virginia. In our State of West Virginia we do not have a single bank with total resources of $100 million. I am informed that 80 percent of the banks of West Virginia have total resources of $5 million or less.

This bill is needed to provide the financial resources with which persons in these communities, who have determination, resourcefulness, and imaginative vision, can lift themselves up by their own bootstraps. S. 722 provides the bootstraps. I contend that it is a good piece of legislation which, if properly administered, will help in the long run to remove these economic eyesores and prevent them from becoming malignancies on the body politic.

It will be an investment in America, an investment in productivity, an investment designed to bring economic life and vigor to areas that are blighted, an investment which will give new hope to despondent peoples.

Carlyle once said these words:

> Our grand business undoubtedly is, not to see what lies dimly at a distance, but to do what lies clearly at hand.

Surely the moral conscience of the country, its economic health, our world prestige, and our duty to our own people demand that S. 722 be passed—and quickly.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield.

Mr. DOUGLAS. I thank the junior Senator from West Virginia for one of the most moving addresses I have ever heard. It is made from a background of a wealth of personal testimony indicating the seriousness of the unemployment situation in his own beloved State of West Virginia.

The junior Senator from West Virginia and his colleague [Mr. RANDOLPH] have been most helpful in this entire effort. As the Senator stated, from time to time he and his colleagues conducted hearings in West Virginia on this issue.

As appears from page 1042 of the hearings, that there was introduced into the testimony a report filed by Dr. Laird, of Montgomery, which I find most impressive, and which I should like to read, after which I wish to ask the Senator from West Virginia a question or two about it. I believe Dr. Laird is in charge of the Laird Memorial Hospital at Montgomery. He filed a report which reads as follows:

> On December 8 a man was brought to the hospital in a state of absolute collapse. He was hardly more than a skeleton covered with skin. The emaciation was absolutely shocking. The diagnosis was starvation. He was almost completely dehydrated. After 24 hours' hospitalization, he was still weak and almost helpless, even though intravenous feedings were being administered. A few days after admission he died. The cause of death was recorded as starvation.

I ask the Senator from West Virginia if Dr. Laird is regarded in West Virginia as a reliable witness and a man of probity.

Mr. BYRD of West Virginia. Dr. William R. Laird is regarded as one of our foremost citizens, one of our finest medical men, and one of our truly great West Virginians.

He has sacrificed a great deal for his State and his people. He is a doctor who has contributed much of his own personal fortune to the building of medical clinics and institutions. Throughout the years I have known him I have found him to be one of the most highly respected, admired, and revered men in West Virginia, not only among members of the medical profession, but throughout the entire citizenry.

Mr. DOUGLAS. Would the Senator say that there is no possibility that he would exaggerate the situation or misstate this particular case?

Mr. BYRD of West Virginia. He would not.

Mr. DOUGLAS. I was also impressed by other testimony. Among such testimony I find that of Mrs. T. R. Fulton, a social worker in the Monongalia County Health Department, at Morgantown, W. Va. I read from her statement, beginning on page 1333 of the printed record of hearings:

> I have known about 700 children in the health department. I work only one-third of a week, and half of that time is in clinic. I have been in those homes, and these are the things I see: People living in houses without heat, houses without roofs, houses without utilities. I see children going to school without shoes and without warm clothing. I see houses and homes where children have nothing to eat except surplus commodities and the canned goods which their parents put up in the summer that they got from the fields and the bushes.
>
> I know the schools can tell you how many children are going on the free-lunch program and how many can't get on it because they haven't money in the free-lunch program to take care of it.
>
> Senator BYRD. Has the situation deteriorated from, say, what it was 2 years ago, 3 years ago?
>
> Mrs. FULTON. It has deteriorated badly. This is as bad as I saw in 1932 and 1934 in Baltimore. This is the first time I have seen children actually without shoes in the snow. It is worse.
>
> I see illness untreated because of persons who are so ashamed of having no money they are not willing to ask a doctor, who has given him more than he should of medical care, for more medical care. They can't get operations, and they can't get medicine. I know this is true.
>
> I see young people leaving school because they are embarrased at how they look and what happens to them. I see them wanting to get work and not being able to find it. I see them trying to get in the Army, and they can't get in the Army. They can't pass the physical tests. They are so hungry and they have been without proper food so long they just don't meet any of the eligibilities.
>
> I see fathers leaving home and bad things happening to their families while they hunt for work. If they are lucky enough to work, then there isn't near enough money to move a family of 6 or 7 or 8 to a new town where the rent is 10 times as much. There isn't enough money to pay for room and board and to send something home to take care of the wife and children.
>
> And when you add to this that our legislature hasn't appropriated enough money to any of our public assistance programs that we can give them enough to eat and enough to manage on, and when you add to that, that this county is so poor that the United Fund can't make its goal, and there is no voluntary money, you see people in very bad circumstances.
>
> You can take what I say and multiply it by five with the public health nurses who visit all the time. They have been in 15 times as many homes as I have been in. And we know, because we see every week children whose illness stems more from being hungry than from any functional disease.

May I ask if Mrs. Fulton is regarded as a competent witness?

Mr. BYRD of West Virginia. She certainly is. She is a very reputable person and a witness who, I believe, gave the committee very telling testimony. It was a privilege to have had the opportunity to hear this lady speak, out of the great storehouse of her experiences.

Mr. DOUGLAS. We tend to become insulated here in Washington. There is poverty all about us, but it is hidden from us. A great deal of the publicity which has issued from the official departments downtown has been to the effect that we are rapidly getting out of the recession, and that there are no real human problems with which we must deal. An attempt is being made to more or less anesthetize the conscience and awareness of the American people.

I wish every Member of the Senate could have been present tonight to listen to the able Senator from West Virginia. It is true that those who are not physically present usually read the RECORD, and they will know second hand, at least, something of the very moving testimony which the Senator has produced.

I wish that this message might in some way be brought to the attention of the President of the United States. I can remember when the President of the United States made a most eloquent plea in 1946 for the extension of the United Nations Relief and Rehabilitation Administration, to aid the children and families of the allies who had suffered during the war. It was a very humanitarian move on the part of the President. At that time my wife happened to be a

member of the Foreign Affairs Committee of the House, and UNRRA, as it was called, was under very severe fire.

The present President of the United States, then Commander in Chief of the Armies, left his sick bed, where he had come down with the flu, to give eloquent testimony as to the need for UNRRA. I believe it was his testimony which was largely successful in obtaining the authorization and the appropriation from Congress.

So there is no question that the President of the United States, if he could be reached, would be found to have a warm heart. But unfortunately the President of the United States is surrounded by people who are not alert to these conditions—people with either hard hearts or impenetrable ignorance.

I hope the message of the Senator from West Virginia may get to the President, and that marked copies of the CONGRESSIONAL RECORD may be sent to him with the plea "Please read the statement of the Senator from West Virginia."

I hope the financial reporters who like to say that we are now in the 11th month of recovery may study the speech of the Senator from West Virginia. It is true that things began to look up last April; but the question is, How far have they gone?

There is a great deal of unemployment not only in West Virginia, but also in Kentucky, as the noble Senator from Kentucky [Mr. COOPER] will shortly testify, I am sure. From the coal mining regions of my own State of Illinois and from Pennsylvania, as well as from a multitude of other localities all over the country, this testimony is coming in. I hope those who at the moment are unconvinced may read and may study and may investigate. If they do that, I am sure they will become convinced.

As the Senator from West Virginia was making his very eloquent speech, my mind turned back to the English poet Thomas Hood, who a century and a quarter ago tried to penetrate the conscience of Victorian England with his account of the suffering of the working people of England. In his "Song of the Shirt" he spoke of the woman who had to work so hard and was paid so little that she virtually was starving to death. I was reminded of the lines with which Thomas Hood tried to pierce the conscience of England:

O God! that bread should be so dear,
And flesh and blood so cheap!
In poverty, hunger, and dirt,
And still with a voice of dolorous pitch,
Would that its tone could reach the rich,
She sang this "Song of the shirt!"

I congratulate the Senator on one of the finest addresses I have ever heard in what promises to be a magnificent senatorial career.

Mr. BYRD of West Virginia. I thank my beloved and delightful chairman of the subcommittee for the kind things he has said concerning me. It does not matter a great deal whether I am heard or not. I am doing the very best I can to bring to the attention of this body the facts concerning conditions as they exist in the depressed areas in West Virginia. Words do not adequately portray these conditions. I have some pictures. They are on the table behind my desk. I trust that Members of the Senate will look at them during the remaining days that we are considering the bill. They are pictures of abandoned machine shops, deteriorating houses, idle coal tipples, and so on. They are pictures of families who are without food now and without any hope of adequate sustenance in the future.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I yield to the Senator from Kentucky, one of the authors of the pending bill, who represents a State which, like my own, is suffering from unemployment and privation.

Mr. COOPER. Mr. President, I wish to express my appreciation for the very forceful and compelling argument the able Senator from West Virginia has made this afternoon in support of S. 722. Like him and others, I can bear witness to the conditions in the mining sections of West Virginia which he has so movingly described with sadness this afternoon, because the same conditions exist in the eastern area of Kentucky, the section in which I live.

I am saddened that the Senator found it necessary to speak as he did, but I am glad that he emphasized the human aspects of the present persistent unemployment and want and suffering and hunger, which actually exist. I think it is very difficult for many people in this country to realize that these conditions exist. They do exist. I have seen them in recent months in eastern Kentucky and in some parts of western Kentucky.

I know that what the Senator has said this afternoon is true. I know the Senator will agree that even if there were a general economic recovery in the coal-producing areas of our country, these conditions would not be completely solved.

Mr. BYRD of West Virginia. That is correct.

Mr. COOPER. My reason for my joining as a cosponsor of the bill under the able direction and leadership of the Senator from Illinois [Mr. DOUGLAS], and choosing this bill in preference to the administration bill, is that I know it will take a bill of at least the sweep of this measure to make any impact upon such areas as the Senator from West Virginia has described this afternoon.

Therefore, I join others in commending the Senator upon a true presentation of the condition in his State, comparable to conditions which exist also in many other States in the Union.

Mr. BYRD of West Virginia. I thank the distinguished Senator from Kentucky. I should like to say, in regard to the comment that was made a few minutes ago by the Senator from Illinois, that I agree with him, and I believe that the President of the United States, were he to view with his own eyes the conditions I have described, and were he to be confronted with them as some of us have been confronted with them, would understand. I think he is a man of compassion and understanding.

I join with my colleague in feeling that the President may be surrounded by persons who perhaps are not in tune with the situation, and who really think that some of the things we are saying are exaggerated. The statements I have made are not exaggerations. They are statements of fact, as I have seen the conditions.

I trust that in the hours which lie just ahead, the Senate and the House of Representatives will act to pass S. 722, and thus make it possible for the President to have the opportunity to sign it.

The President is very strong in his support of the mutual security bill, legislation which will provide assistance to other countries. As a member of the House Committee on Foreign Affairs for 6 years, I recognize the need for our country to give assistance to some of the other countries of the world. But I cannot believe that it is necessary for the United States to continue to pour out its fortune in 64 countries, as it did in the last year. I feel very strongly that the time has come when we should give attention to those areas in our own country which are just as badly in need of assistance as are some of the countries which are the recipients of our foreign aid moneys.

Mr. President, I ask unanimous consent to have printed at the end of my remarks the names of the persons who appeared during the 3 days of field hearings in West Virginia, and who gave testimony to the subcommittee.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. BYRD of West Virginia. Mr. President, I express my gratitude to those fine leaders and citizens of West Virginia, the men and women who came from all walks of life, from industry, agriculture, and the ranks of labor, and who spoke out of their hearts to the subcommittee. I know that they spoke with confidence that this great body would respond, as I am hopeful and as I feel certain it will respond within a very short time, by enacting S. 722, the area redevelopment bill.

Mr. CARROLL. Mr. President, will the Senator from West Virginia yield?

Mr. BYRD of West Virginia. I yield.

Mr. CARROLL. I join with those who have commended the very great, humanitarian, heart-warming speech which the junior Senator from West Virginia has given today. The subject matter of Senate bill 722 is one which has been worked on by the distinguished senior Senator from Illinois [Mr. DOULAS] since I first came to the Senate as a very junior Senator 2 years ago. He has been unrelenting and unremitting in his efforts on behalf of this type of legislation, because he knew then, as we know now, that such legislation is necessary in all areas of the country.

There are areas in my State of Colorado which are not nearly so desperate as those in the depressed areas of West Virginia or Pennsylvania or other States. The bill does not really cover some of the areas of my State which need help. My point is not that Colorado does not need help; but Colorado is perhaps more fortunate than the other States whose conditions have been described to us by both

the distinguished Senators from West Virginia.

Although the bill does not specifically apply to my State, I know of the suffering, poverty, unemployment, and heartbreaking conditions of many people throughout the Nation. I sincerely hope that there will be such an overwhelming vote for the passage of the bill that the executive department will recognize the importance of it to the people of the Nation.

I again commend the very able and clear presentation made by the distinguished junior Senator from West Virginia.

Mr. BYRD of West Virginia. I share the hope which has been expressed by the able Senator from Colorado that the measure will pass by such an overwhelming majority that it will impress itself in such a manner upon the Chief Executive of the Nation that he will not hesitate to attach his signature to it. I appreciate the fact that even though Colorado has not experienced the kind of suffering which the people of West Virginia are undergoing, nevertheless the Senator intends to support the measure.

I feel very strongly that if there were not a single unemployed person in West Virginia, I would support legislation of this kind, because I am, first of all, a Senator of the United States; and if there is suffering anywhere in the country which contributes to the weakened security of the Nation, I should help to alleviate it. I do not feel that simply because suffering and unemployment may be confined to a few areas, we should not be mindful of the fact that the country as a whole is affected.

The bill is important to the security of of our Nation. It is important to the national defense. If people are to defend themselves, they must have the heart and soul, the backbone and courage, to do so. If they are hungry and have lost confidence in their Government, they will not have the determination and the willpower which are so necessary to stand firm when the chips are down.

Mr. RANDOLPH. Mr. President, will my colleague yield again?

Mr. BYRD of West Virginia. I gladly yield.

Mr. RANDOLPH. The Senators who have spoken, all conscious of the problem we face, and working cooperatively to bring about a sensible solution, have demonstrated a togetherness which I hope will be reflected in a substantial majority early next week when votes on amendments and the vote on the passage of the bill will be taken.

It has been indicated that the President, if the matter is properly brought to his attention, will respond affirmatively. I shall only reinforce what certain Senators have so well said that this is more than a West Virginia problem, more than an Illinois problem, more than a Kentucky problem. It begins, to a very considerable degree, to spread to other areas of the country. The President himself recognizes this fact, because he has invited at least eight Governors to a conference next Monday concerning the matter of unemployment. He apparently believes serious problems are coming to the surface, and to an extent which he had not recognized before.

So I say to my able colleague from West Virginia that we hope the ground swells are moving in, not to blow this subject out of proportion, but to bring it into true focus.

Mr. President, those of us who are here will long remember the speech of the Senator from West Virginia [Mr. BYRD]. We shall recall his graphic portrayal of existing conditions. In his presentation of them, he has not overstated the case. He has submitted to the Senate factual evidence, in no wise exaggerated.

The lights will be dimmed in a few minutes in this Chamber. A speech such as that which Senator ROBERT BYRD has given tonight will keep aglow this forum. Let us leave here with a determination to secure the passage of S. 722.

When the doors are closed this evening, the words which the junior Senator from West Virginia has spoken will not be closeted. These sentiments will linger to stimulate and challenge.

Mr. BYRD of West Virginia. Mr. President, I thank my colleague for his compliments. I do not feel that I deserve them.

I have only done my best, and in doing my best, I have done my duty.

I yield the floor.

EXHIBIT 1

Anderson, E. W., mayor, Princeton, W. Va.
Anderson, Harry, managing director, Beckley (W. Va.) Chamber of Commerce.
Angotti, S. J., for the mayor, Morgantown, W. Va.
Arnold, Gilbert E., Terra Alta, W. Va.
Ash, Henry L., director, West Virginia Department of Employment Security.
Beacom, J. Patrick, city director, Fairmont, W. Va.
Bean, Ralph J., president, Senate of West Virginia.
Bennett, Hunter, attorney, Weston, W. Va.

Tsutras, Frank G., managing director, Tug Valley Chamber of Commerce, Williamson, W. Va.
Underwood, Cecil H., Governor, State of West Virginia.
Urbaniak, Cecil J., president, District 31, United Mine Workers.
Van Gilder, Merl, Marion County, W. Va.
Walker, C. E., president, Raleigh County, W. Va., Educational Association.
Williams, Delbert E., West Virginia branch manager, Small Business Administration.
Winkler, Grant, Webster Springs, W. Va.

During the delivery of the speech of Mr. BYRD of West Virginia on the area redevelopment bill:

Mr. CLARK. Mr. President, will the Senator yield?

Mr. BYRD of West Virginia. I am delighted to yield to the Senator from Pennsylvania.

Mr. CLARK. I very much appreciate the courtesy of my friend from West Virginia.

Mr. President, I ask unanimous consent that my remarks may appear at the end of the prepared address of the Senator from West Virginia.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CLARK. Mr. President, the distinguished junior Senator from West Virginia has just made an outstanding and very moving address on the pending bill, for which I should like very much to commend him. He has said so eloquently what some of the rest of us feel about this measure that I can be quite brief in my remarks.

Both political parties have endorsed the principle of aid to areas of heavy and chronic unemployment in their platforms. The President has endorsed the objective. The Congress last year passed a bill by decisive majorities.

So the issue is no longer one of principle or objective. The issue is one of detail—of the means to the end on which there is broad and general agreement.

The question is whether S. 722 is soundly conceived and properly drawn.

I submit that it is an excellent bill. It will do the job for which it is designed. It is an economical bill, which will save the taxpayers more money than it will cost. In its details, it has been improved over the bill we passed last year, and some adjustments have been made to meet some of the objections stated in the President's veto message.

Mr. President, this bill means perhaps as much to Pennsylvania as will any bill which will come before the Congress this year. To us, it is the difference between giving hope to our hard-hit communities or condemning them to wither away.

The question is whether we appropriate some Federal money—most of which is in the form of loans to be paid back—or whether we tell these communities that it is national policy to let them become ghost towns.

I say, let us preserve these communities and their homes and schools and churches. Let us avoid the enormous social waste of forcing people to pull up stakes and leave. Let us save the heavy economic cost of unemployment compensation and public assistance in these islands of distress.

Mr. President, Pennsylvania does not come to the United States like a mendicant, cup in hand, asking for a handout. Quite the contrary, Pennsylvania appeals to you today as a Commonwealth whose people are undertaking heroic measures of self-help and whose State government is setting the pace for all of the States of the Union in its own appropriations to assist in developing industry.

Our communities have raised millions of dollars by popular subscription and payroll deductions which have literally built our funds dollar by dollar. Our Commonwealth has appropriated $10 million of State funds, and the Governor has asked for $10 million more in the budget now pending before the legislature. But this combined effort has not been enough—and will not be enough—to fill the employment vacuum created by the decline of the coal industry, the decline of the textile industry in the North, and the loss of jobs through increased output per worker in such basic industries as steel. The Federal Government has a responsibility too.

The Governor of Pennsylvania, the Honorable David L. Lawrence, has presented to both the Senate and the House Banking and Currency Committees a full report on the problems of Pennsylvania's unemployment areas and on what our Commonwealth and its people have done to help ourselves.

I ask unanimous consent, Mr. President, that the statement of Governor Lawrence submitted to the House committee this week, which brings up to date the testimony presented earlier to the Senate committee, be inserted in the RECORD at this point as a part of my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF GOV. DAVID L. LAWRENCE OF PENNSYLVANIA

First, I want to thank the subcommittee and its distinguished chairman, Mr. PATMAN, for this opportunity to present the Pennsylvania position on Federal area redevelopment legislation.

In the short time I have been Governor of Pennsylvania, I have presented statements before committees of the Congress three times—once on the desperately needed housing and urban renewal legislation, and now, for the second time, following my recent appearance before the Senate committee, on the equally desperate need for legislation on Federal aid for area economic redevelopment.

There is nothing pending before the Congress of greater direct importance to Pennsylvania than the proposals for Federal aid on urban redevelopment and area redevelopment of our distressed areas, the latter of which is the subject of your hearings today.

In preparing this statement I have reviewed the provisions of the area redevelopment bills introduced by the eminent chairman of your parent committee, Mr. SPENCE (H.R. 3505) and Mr. FLOOD (H.R. 3466). I note that they are identical with respect to all major points, and I want to endorse them wholeheartedly. I note, also, that they take the same line as the bill introduced by Senators DOUGLAS and CLARK and a very large number of their colleagues from both parties.

Pennsylvania is proud that two of her own leaders in the Congress, Senator CLARK and Representative FLOOD, have taken so aggressive a role as proponents and authors of this program, and that others of our Pennsylvania congressional delegation are identified with proposals which, while differing on major and minor points, nonetheless are solidly behind the need for Federal legislation in this matter.

I do believe, however, that the provisions of the legislation as proposed by Mr. SPENCE and Mr. FLOOD (carried also in the Douglas-Clark bill) are to be preferred, and this statement is in support of those provisions and the action program that would ensue from them.

We cannot emphasize too strongly our concern with Federal area redevelopment legislation. Such a program is vital to the economic well-being of our Commonwealth. Today, Pennsylvania has more than its share of areas of chronic economic distress. It faces no greater problem than finding a cure for this long-term unemployment.

The passage by Congress of a Federal area redevelopment program during the previous session was most encouraging to the people of Pennsylvania. The President's veto was a bitter disappointment. We hope the Congress will pass a really effective bill in this session, and that the President will see his way clear to sign it.

Pennsylvania is no Johnny-come-lately in the matter of the distressed area problem. It has lived with it for a long time and is still living with it. Over 500,000 workers are jobless; 11 percent of its labor force is unemployed. This in a State that ranks second in manufacturing and the production of coal and third in population.

Even in 1957, a year of national prosperity, one-fifth of our people lived in areas of substantial labor surplus.

When things are bad nationally, they are worse in Pennsylvania.

Why? For two reasons:

First, the long term decline in our basic industries has left communities and workers stranded.

Second, we're a heavy manufacturing State, and heavy manufacturing was hardest hit in the recent recession.

Coal was king, but no more. Thirty years ago, production of anthracite was at its peak; 150,000 men were at work. Last year, only 20,000 jobs were left. But hard coal is still the hard core of the economy in these northeastern counties. There is little agriculture, and not enough plants where a man can work. The switch from coal has cut away the economic base.

Bituminous coal forms the rest of our coal picture. Production has held up better than anthracite. Yet employment here also has consistently declined. Mine mechanization and the growth of surface or strip mining has resulted in the output of more coal with fewer workers. Our central and southwestern counties, which comprise our bituminous area, continue to be depressed. This chart shows the radical decline in jobs in the entire coal industry.

What has happened to coal has happened to railroads. Railway shop and maintenance employment was the backbone of communities such as Altoona, Renovo and Dunmore. The arrival of the diesel engine and heightened competition from other sources drastically reduced employment.

We have also lost 60,000 jobs in the textile industry. And 36,000 in the steel industry in the last 8 years, thanks to modernization of steelmaking processes.

As you can see, we have lost jobs in our four major industries during a period of rapid economic and population growth for the Nation as a whole, and not enough new industry has come in to take up the slack.

Since the beginning of the recent recession 11 additional areas in Pennsylvania—6

of them major metropolitan areas—have been classified as areas of substantial labor surplus. This brings to 23 the number of areas so classified.

This map, showing the location of these classified areas, also shows other smaller areas which would qualify as areas of substantial labor surplus. Only 9 of Pennsylvania's 67 counties do not have a labor surplus.

Of the 23 classified areas, 12 would qualify for assistance under this legislation.

These 12 areas are:

Major areas: Altoona, Erie, Johnstown, Scranton, Wilkes-Barre-Hazleton.

Smaller areas: Berwick-Bloomsburg, Clearfield-Du Bois, Lewistown, Lock Haven, Pottsville (Schuylkill County), Sunbury-Shamokin-Mount Carmel, Uniontown-Connellsville.

Unemployment in these areas runs as high as 24 percent in Uniontown and Connellsville—one out of every four workers. The severity of unemployment in each of these areas is shown on this chart. (Charts omitted in RECORD.)

Pennsylvania's disproportionate unemployment has cost the Federal and State taxpayers billions of dollars. Between 1950–58 $1.6 billion was paid out in unemployment benefits, and another billion dollars was doled out in public assistance.

A substantial part of these payments went into these hard-hit communities. Only one-sixth of the labor force lives in these areas, yet 30 percent of all payments went to them.

Unemployment compensation and public assistance in our 12 major areas alone totaled $558 million. If unemployment in these areas had been reduced to 3 percent of the labor force, $306 million in unemployment compensation benefits and $67 million in public assistance payments could have been saved. Thirty-one million dollars of this $67 million came from the Federal Government.

It costs far less to create new jobs by one-time investments than it does to underwrite joblessness by continuing subsidies.

As you can see from these figures, the unemployment bill in our State alone for the last 5 years could have financed the Douglas bill for the entire country.

It is for all these reasons that Pennsylvania is here making a plea for Federal aid for area economic redevelopment. It is for these same reasons that Pennsylvania is already deeply involved in a program of self-help on this same problem. Pennsylvania does not believe it would be proper to come here with this plea without being willing to carry her share of the burden, and without having, first, done her best to lick the problem on her own.

Avoiding tedious detail, here is the story of Pennsylvania's effort to cope with the problem of distressed areas:

1. Between the end of World War II and September of 1956, 52 Pennsylvania communities financed the construction of 151 factory buildings costing $54 million that in normal times employ 31,000 factory workers. They did it with a combination of mortgage loans from banks and funds raised in local subscription drives. Virtually all of these plants are in distressed areas;

2. Beginning in September 1956, the State, itself, through the new Pennsylvania Industrial Development Authority, joined with distressed area community groups, banks and insurance companies, in more of this same kind of financing. Since that time they have jointly financed, or are in the process of financing, 77 additional plants and plant expansions, costing almost $30 million, creating just over 13,500 new factory jobs; in this period of just under 3 years, the State has appropriated $10,200,000 for these industrial loans, and another $10 million appropriation for the same purpose is presently before the general assembly in my recommended budget;

3. We now have 43 slum-clearance-urban-redevelopment authorities, created by Pennsylvania municipalities and counties to eliminate urban blight. Most of them are in our distressed areas, where tax revenues have not been adequate to maintain modern facilities and services, and where unemployment and underemployment has left us with extensive residential blight. The State makes cash grants to these local authorities for slum clearance work. Since 1949 the State has appropriated $12 million toward this work, $8 million of it during the past 3 years. My present budget recommendations propose another $10 million for the purpose. We are most grateful for past Federal aid in this program, each State and local dollar being matched 2 to 1 with Federal funds; we have made an earnest plea that the Federal program, which broke down last year, be resumed, expanded and made a continuing thing upon which municipalities can count for the next several years;

4. We have almost 100 communities—most all of them in our distressed areas—at work, under the Federal urban planning assistance program, making comprehensive planning studies to eliminate the results of topsy-turvy growth, slums and the like, and make themselves efficient and attractive for industrial expansion and better living.

But these efforts have not been enough. In coal, in railroading, in steel technological and market changes are displacing more and more of our people from employment. There is a grave shortage of job opportunities for on-coming youth. Even where production rises substantially, as in steel, fewer workers are required. We are attracting many new industries. We are no longer losing industries, except in rare instances. But we continue to lose jobs in our existing basic industries. And our gains in new jobs coming directly and indirectly from expanding and new industries is simply not enough to balance our job losses and pull us out of the red and on the way toward our complete, Statewide economic redevelopment.

We are completely convinced that we shall achieve that goal, in our distressed areas and statewide, only with a special program of Federal aid of the type Messrs. SPENCE and FLOOD have projected. Their proposals deal directly with the practicalities of the problem, as we see that problem.

We note with real interest that this is not a program for urban centers of economic distress alone. It is also a rural program. Most of our agriculture in Pennsylvania is prosperous. But not all of it. We have many areas where a rural population, once hard at work at lumbering and farming, now finds itself in the low-income levels mentioned in the proposed bills, and without the alternative job opportunities new industry can provide. Yet, industry has not come into those areas. We believe the provisions for industrial loans proposed for such rural redevelopment areas will create the incentives and inducements that will bring industry to such areas.

Accordingly, I have these specific comments on major provisions of the legislation:

1. The bills I am discussing provide $100 million for industrial loans in urban redevelopment areas and a like sum for such loans in rural redevelopment areas. This proposed $200 million will at least assure an all-out attack on the problem. Too often in Federal programs of the past we have done "too little too late," with the result that precious Federal tax dollars have been dissipated in ineffectual projects and programs. If the Federal Government is to enter this field, it should do so on an adequate basis. Further, the wisdom of the $200 million of funds that would be available under this legislation assure that there will be continuity in the program over the initial years when it will meet its severest test; funds in this amount remove the danger of uncertainty stemming from year-to-year appropriations during that period.

2. We especially endorse the provision that Federal industrial-loan assistance be limited to 65 percent of the cost of projects, with the balance from other governmental, private, or civic sources. As I have indicated, our own communities and the State itself have done and stand ready to do their share of financial participation in this type of industrial financing.

3. We have found, too, that our banks, within the limits of their resources and regulatory requirements, will enter into industrial financing in distressed areas. We think the provisions of the leigslation that require private financing to be used wherever and to the extent available are extremely wise; the provisions for subordination of Federal loans, both as to repayment and security, will tend to assure the maximum flow of private investment funds into this redevelopment program.

4. In the State community bank type of industrial financing we have under way in Pennsylvania, we have found that the low interest rates on the nonbank segment of the financing of a given project has been a very real, tangible factor in encouraging companies to enter our distressed areas with new production facilities. We are, therefore, highly encouraged to see that the proposed legislation would establish an interest rate policy providing this same kind of inducement factor.

5. I do not believe that the distressed areas of Pennsylvania can finance the public facilities they need in order to attract and accommodate industry without special Federal aid. Their declining revenues have left them without the tax base, the tax revenues, or the private borrowing capacity to do that financing. They are doing and will do what they can. For the rest, they are in dire need of access to the new source of credit and liberal borrowing terms that would be available in the $100 million authorized for public facilities loans under the proposed legislation—and they will need, also, access to the $75 million authorized for outright Federal grants for public facilities;

6. Almost by definition, the problem of our distressed areas is a problem of people transferring from occupations in declining industries to occupations in types of industrial and business pursuits for which they are not trained. I therefore heartily endorse the provisions of the legislation looking toward special Federal assistance in vocational training and retraining.

7. I have referred to the planning and urban renewal activities under way in a very large number of our Pennsylvania distressed area communities, and the extensive problem of residential and other blight they face by virtue of their past and present economic difficulties. The limitations of the present Federal urban renewal program, in its emphasis on the residential aspect of the matter, present a roadblock to full and adequate urban renewal in these communities. They have areas of industrial and commercial—as well as residential—slums that need to be cleared. And in many instances the reuse of these areas can and should go into sorely needed new industrial and commercial projects. We are therefore highly pleased to see these limitations lifted, as to distressed areas, under the proposed legislation.

At the outset of this statement I trust I made clear that unemployment is a desperate problem in Pennsylvania, not only now, when we have such an enormous volume of recession unemployment, but chronically, over the years, because of readjustments in our basic industries.

Pennsylvania is a very large and great State faced with a problem that is beyond the power of private enterprise and State and local government to solve alone. It is part and parcel of our American system that people

and areas caught up in the throes of such a situation turn to their Federal Government.

But Pennsylvania is not alone in this. I note that the record of the hearings on this matter carry accounts of distressed areas in other parts of the Nation—in sections of the South, in New England, in Michigan, Illinois, Indiana, Kentucky, West Virginia.

In all sincerity, I suggest that the sum of these problems in the several States adds up to a problem for the Nation itself, and a most proper object of concern for the Congress and the executive branch. Moreover, it is not a new problem. For several years there have been bills and hearings on the matter in the Congress.

The Nation is late in getting around to the problem of her distressed areas. In the meantime, those areas create a heavy drain on the financial resources of State and local government. They involve enormous losses in wasted manpower and unused resources. Most of all, their plight brings intense misery and suffering to thousands of people, through no fault of their own, misery and suffering from which they cannot possibly escape in their own in sufficient numbers to solve the problem.

For all these reasons this legislation has our wholehearted endorsement. But may I also thank its authors and this committee for the realistic hope they have given us that finally distressed areas may be about to receive Federal assistance on their problem.

Mr. CLARK. Mr. President, I also ask unanimous consent to have inserted in the RECORD at this point a tabulation of public assistance benefits paid in 12 areas of chronic labor surplus in Pennsylvania.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Total amount of public assistance benefits paid in 12 Pennsylvania chronic surplus labor areas by source of funds—State and Federal, 1953–58

	Total	State	Federal
1953	$23,380,000	$11,924,000	$11,456,000
1954	26,485,000	15,096,000	11,389,000
1955	30,699,000	17,191,000	13,508,000
1956	29,291,000	15,524,000	13,767,000
1957	30,681,000	15,954,000	14,727,000
1958	33,192,000	17,260,000	15,932,000
Estimate of benefits which would have been paid annually if unemployment had been reduced to 3 percent of the labor force	17,746,000	9,494,000	8,252,000
Estimate of total amount which would have been saved if unemployment had been reduced to 3 percent of the labor force	67,252,000	35,985,000	31,267,000

Mr. CLARK. Mr. President, this table, prepared by the Director of the Bureau of Employment Security, shows the cost of public assistance in the past 6 years, with an estimate of the savings which would have been achieved if the rate of unemployment had been 3 percent. The savings to the Federal Government would have been $31 million, and to the State $36 million.

The $31 million saved for the Federal Government in these 6 years alone would, according to the estimates of the Commonwealth, have amounted to more than the prospective volume of loans which would be available to Pennsylvania under the pending bill—and I repeat that these loans are ultimately no cost at all, because they would be repaid, with interest.

Moreover, this comparison of cost and savings does not take into account the annual return to the Federal Government in increased income taxes from the economic activity that is created.

I can summarize this section of my remarks, Mr. President, by saying these figures prove what is really self-evident: That there is no economic waste greater than unemployment. It is a burden on our economy. It is a burden on public budgets at every level—Federal as well as State and local. It is a burden on our whole society. When we pass a bill that creates jobs through loans, we are passing a bill which represents true economy and a net gain in every way. S. 722 is that kind of bill.

Mr. President, I now want to turn briefly to some of the arguments that have been used against this bill, and I take as my text the minority views contained in the committee report signed by six of our distinguished colleagues. With all due respect, these minority arguments just do not stand up under analysis.

The distinguished minority argues, first, that the bill discriminates in favor of only a few of the unemployed of the United States. The answer is, of course it does. It should. The area redevelopment bill has never been conceived as a measure to relieve all unemployment in the United States. When national unemployment levels reach as high as 6 percent or more, as during this recession, obviously measures of general application must be taken.

But after national measures are taken, and unemployment nationally is reduced to a minimum level, there will still be areas which have unemployment at recession and depression levels, because of local circumstances. These areas were depressed before the recession. They were depressed during the recession. They will still be depressed after the recession is history. Their problem is chronic, not temporary. This bill is designed for that specific problem of localized, chronic unemployment. It cannot be dealt with except through such a special measure.

Second, the minority report presents cost estimates ranging up to $5 billion. This figure is ridiculous. It is based upon assumptions which were thoroughly refuted in the hearings. I only wish that my able colleagues had either attended or read the hearings before they lent their names to any such inaccurate figures.

They arrived at their total by multiplying three figures—$10,000 to $15,000 per job, 65 percent as the Federal share, and 390,000 jobs to be created. All three of these figures are wrong. The $10,000 to $15,000 figure includes working capital and inventories, which the bill clearly and specifically excludes from Federal help. The Commonwealth of Pennsylvania has found the aggregate cost of land and buildings to be slightly over $2,000 in the projects which we have aided. While S. 722 would permit assistance also for machinery and equipment, the extent to which loans for this purpose would be sought is problematical.

The 65 percent Federal share which the minority uses as a flat figure is a maximum, not an average. I would expect that this maximum would rarely be utilized, and the average would be far lower. Again, our experience in Pennsylvania shows that private capital normally can be found for 50 percent of the land and building cost of these projects. Moreover, States and local communities would continue to participate for a part of the remaining 50 percent.

Finally, the 390,000 figure includes every single new job required in a community to reduce its unemployment to 6 percent. This ignores the fact, which was fully discussed in the hearings, that industrial jobs automatically create service and other non-industrial jobs at a ratio in the neighborhood of 1 to 1.

When one re-computes the cost of the basis of sensible figures, drawn from the testimony, one comes out in the neighborhood of the $100 million provided in S. 722 for industrial areas. This figure may turn out to be slightly on the low side, but remember that the fund revolves, and repayments will be coming in to offset future requirements. Certainly, the $100 million will suffice for a considerable period of time to come, after which we can re-appraise the situation.

With an appropriation of $10 million, the Commonwealth of Pennsylvania has assisted in the creation of 13,500 jobs in 77 new plants. This shows how a little money can go a long way.

In any case, the minority will have to concede that if the $100 million is too little, as they contend, the more limited figure provided by the Administration bill would be even less adequate.

Third, the minority contends that we are including communities suffering not from chronic, but from cyclical, unemployment. They also object that the criteria for eligibility are arbitrary.

I admit that the criteria are a bit arbitrary. They have to be, because we do not want to place the Administrator in the position of having to use his own judgment in deciding who should and should not be included. We feel he should be relieved of that kind of pressure.

But the so-called arbitrary standards are very well designed to distinguish between areas which are temporarily distressed and those which are chronically distressed—which is our purpose. These standards reflect one of the major adjustments made in the bill to bring it more closely into accord with the Administration views. We adopted the Administration's own formula, with some modification.

Fourth, the minority views, on page 41, discuss a project for relocating a plant, as though this would be a typical project. This appears to be a subtle trap for the unwary. Everyone who has studied the bill knows that the bill is not intended for plant relocation—the money would not be used for that purpose, and the legislative history is perfectly clear on that point.

Fifth, the minority argues that the bill's basic defect is that it runs counter to the precepts of the private market mechanism. That market mechanism, it is held, should allocate industry among locations, and if that means ghost towns in Pennsylvania or Massachusetts or perpetual rural poverty in the Appalachians and the Ozarks, then so be it.

This, of course, is a legitimate philosophic position. It happens to be in disagreement with the expressed view of the Republican Party, the Democratic Party, the executive branch of the Government, and the legislative branch as expressed in our action last year. It is an obsolete philosophy, but I suppose it can be honestly held.

If the market mechanism worked perfectly to serve human welfare, this bill would never have been introduced. Every time this body attempts to deal with any aspect of the social evils of unemployment and poverty, we are infering with the private market mechanisms. But if the private economy left to itself does produce social evils, then it is the business of an intelligent, self-governing society to improve on that private economy. I dread to think what this Nation would be like if we refrained from all such action.

Sixth, the minority repeatedly suggests that any growth brought about in the unemployment areas would be at the expense of other areas. But this is not the case. What we are talking about in this bill is promoting additional new growth in the economy. Our economy should not be static. It should be constantly growing. This bill will help it grow faster, and steer some of the new growth into areas where the most idle resources exist. Resources otherwise wasted would be put to work.

Finally, the minority speaks of duplication of the Small Business Investment Act. There is no duplication. That act is of national application. For reasons which I have stated, the areas of chronic unemployment need to be dealt with through an act of local application. To the extent to which the Small Business Investment Act does succeed in assisting the depressed areas, of course, the Area Redevelopment Administration will be relieved of that much burden. I hope it will help some. But we all know it will not solve the problem by itself.

Mr. President, this bill is not a bill for handouts. It is a bill to make the free-enterprise system work.

It is not socialism. It is free enterprise in action.

It is not charity. It is a bill to help people help themselves.

It would create wealth. It would eliminate doles.

When we bind up social and economic wounds, we help the whole body of the patient, the whole economy. No blood is taken away from any other part.

We are utilizing the brains and ingenuity and know-how of the American people to create something that did not previously exist.

So I say, Mr. President, this is a bill in the tradition of America. It is a free enterprise bill. It is a bill which should pass, and pass by a resounding majority.

TRIBUTE TO THE LATE WILLIAM (BILLY) McNICHOLS, OF DENVER

Mr. CARROLL. Mr. President, last week one of the great and respected citizens of Colorado, William H. (Billy) McNichols, Denver city auditor from 1931 to 1953, passed from this mortal scene. Requiem high mass was sung last Wednesday; and more than 800 persons from all walks of life paid their final respects to this man, who played such a prominent part in the political and business life of Denver and of Colorado.

At this time, I desire to pay my tribute to Billy McNichols as a kindly man, a conscientious public servant, a sincere fighter, and a dynamic individualist.

He was the father of Stephen L. R. McNichols, present Governor of Colorado, and of the Governor's secretary, William H. McNichols, Jr. He took great pride in the activities of his sons. His sage political advice was heeded by many who have held high positions in the political life of Colorado.

The Right Reverend Monsignor Gregor Smith expressed it well at the funeral service, when he said:

> The fact that Governor McNichols is such a fine Governor indicates that he had a fine father * * *; and never was a father prouder of his son.

For more than two decades, Billy McNichols was city auditor in Denver. He was known as "the watchdog of the treasury." He was a careful guardian of the public funds, and that often entailed battles with mayors of Denver, for he believed it was his duty to protect the money of the taxpayers.

Ill health forced his retirement in 1953, after an illustrious career in public office.

Billy McNichols was 84. He was a native of Iowa. At an early age he came to the booming mining camp of Aspen, Colo.; and he resided there for many years. Before moving to Denver, in 1909, he was treasurer of Pitkin County.

He served as secretary of the Colorado Senate, as a member of the State land board, as deputy State auditor, and as deputy Colorado secretary of state. For many years he was secretary of the Denver Democratic club. He was past grand exalted ruler of the Elks, and he was active in the Knights of Columbus.

Billy McNichols had a distinguished career as a public servant. But, more than that, he was a trusted and valued friend of many, many thousands of people of Colorado.

His death leaves a great void in my home State of Colorado. I will be among the many who will miss the kind and wise guidance of my long-time friend, Billy McNichols.

Through these years of service to the people of Denver and Colorado, he had the wise and patient counsel of his faithful wife, who aided him in his steadfast course for the common good. I and my family join with the rest of Colorado's congressional delegation in expressing to Mrs. McNichols, their sons and their daughters, our deepest and most sincere sympathy in their hour of grief.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD, following my remarks, an article entitled "'Watchdog' Billy McNichols Leaves a Host of Friends."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Denver Post, Mar. 7, 1959]

"WATCHDOG" BILLY McNICHOLS LEAVES A HOST OF FRIENDS

(By John Buchanan)

Memories—so many of them stood in line to wait their turn—rushed through our mind this week when we learned of the death of William H. McNichols, former auditor of our city.

Watchdog of the city pocketbook, Mr. Mac, Uncle Billy.

These and other words came to mind.

Warm friend. Treasured hours of conversation. Gay fighter. Dynamic individualist. Shrewd politician. Proud husband and father. Idealist. Truth teller. Conscience perched on the shoulder of city government. Conscientious public servant, who gave much of himself and his life to the stream of good government.

It was just a little more than a dozen years ago when on our first day as a city hall reporter we walked through the third floor double doors with the name "auditor" on the transom.

Mr. Mac smoked a cigar. And on the scales of physical appearance he outweighed them all that day: handsome, piercing eyes, gay smile, tweed suit of fibers imported from his Irish homeland, venerable white mane.

This was the giant in public office who kept close watch on city affairs.

It never ceased to be a thrill to a reporter to find, someday, Mr. Mac sniffing the air like the veteran watchdog that he was, sensing an issue that demanded his action.

It usually meant strong black headlines that marched through the composing room until they found their place on page 1 of our paper.

Just as carefully as Mr. Mac sniffing for issues, city hall reporters learned to sniff for the blue smoke of his ever burning cigar as they approached the auditor's office.

A thin, Indian-summer haze drifting from the inner office meant that the gears of city government were in mesh, and running smoothly. Thick, blue smoke meant—ere you stepped across his threshold—that the signals of a fight were being lifted.

He was never more alert; his wit never sharper; his step never brisker; his verve never higher, than during these battles, when the watchdog came roaring out of his door, biting and slashing at the things which had offended his credo.

He could "work with" as well as fight, and he did both with Mayors Stapleton and Quigg Newton.

He had many a tussle with the impatient, young Newton. Newton thought the world of him. On meeting in the halls, or at affairs of state, Newton would often place his hand on the auditor's shoulder and ask: "How are you, Billy?"

We remember when we first learned that Newton, a political neutral, finally registered as a Democrat.

We rushed up to Mr. Mac's office to obtain a quote from him on the fact that the man with whom he'd often tussled was now a member of the McNichols party.

He drew a couple of puffs on his cigar, and a smile crept over his lips.

"Well, he joined the right party."

Where do a reporter's memories stop on a man like Billy McNichols? They don't, and of course they never will.

A great personal loss. A great loss to his host of friends. But the beginning of a legend.

INTERVIEW WITH ISRAEL'S AMBASSADOR ABBA EBAN

Mr. CARROLL. Mr. President, a distinguished statesman, one of the world's great orators, and certainly one of the foremost thinkers of the day on the international scene, is Israel's spokesman to the world, Abba Eban, Ambassador to the United States, and Israel's permanent representative to the United Nations.

On Friday, March 20, Ambassador Eban will speak in Denver. I sincerely regret that I cannot be in Denver on that occasion, not only to meet the Ambassador personally, but also—as always—to receive the benefit of his great brain.

I am informed that Ambassador Eban is about to leave the United States to return to Israel. That is very significant, to me, in the light of recent international events, which always—or, at least, recently—have been foreseen by Ambassador Eban.

Mr. President, I ask unanimous consent to have printed in the RECORD a television broadcast, entitled "Celebrity Parade," which is an interview with the Israeli Ambassador by Mr. Joseph McCaffrey, one of the distinguished newspaper, radio, and television men of the Nation's Capital.

I make this request because in the interview there are set forth Ambassador Eban's vision and prophecy in regard to what is happening today in Iraq and what is happening to Nasser. I believe the interview will be well worth the reading of all Members of the Senate and all Members of the other body, as well, and also all others who have access to the RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

CELEBRITY PARADE

(Interview with the Israeli Ambassador by Mr. Joseph McCaffrey)

Mr. MCCAFFREY. Good afternoon. Welcome once again to Celebrity Parade. It's indeed a privilege and an honor to have as our guest today one of the world's outstanding diplomats, Mr. Abba Eban, who is the Israeli Ambassador to the United Nations and the United States. Mr. Ambassador, nice to have you here.

Ambassador EBAN. Nice to be here, Mr. McCaffrey.

Mr. MCCAFFREY. I think probably before we start talking we ought to take a look at the map of Israel and I think our listeners will get a better understanding of the problems your country faces. Here is Israel, which is bordered by Jordan for 330 miles; by Egypt for 165 miles; Lebanon, 49 miles; and bordered by Syria for 47 miles. I've always thought, Mr. Ambassador, that of all the tinder spots we have in the world today, that probably the one that might explode into a great war might be the Middle East situation. I was just wondering, in your opinion, how tensions along Israeli borders lessened, let us say, in the last year.

Ambassador EBAN. Mr. McCaffrey, I don't believe that the Arab-Israel conflict is the most dangerous of those that confront the world today. The recent crisis over the Formosa Strait, the present tension over Berlin, are, I think, more crucial for world peace. There will not be any world war arising from Israel's relations with her neighbors, nor do I think there will be a local war. On our frontiers, which are embattled and tense, there has been more tranquillity in the past year than ever before. Since the Sinai campaign there has been relative quiescence—an occasional eruption at a dangerous point, but nothing to indicate that any of the governments concerned plan any sustained renewal of conflict.

Mr. MCCAFFREY. Mr. Ambassador, is this because perhaps there is lessening of hostility on the part of your Arab neighbors?

Ambassador EBAN. Well, there is no evidence of a lessening of hostility. Their leaders still articulate the dream of our extinction. But I think that thoughtful Arabs must be increasingly impressed with the manifest spectacle of our permanence and stability. I doubt if any intelligent Arab, any man of capacity, could really believe that we are going to disappear.

Mr. MCCAFFREY. Well, is Nasser the focal point of Arab hostility, in your opinion?

Ambassador EBAN. Yes; but whether he believes it or not, it is he who articulates and expands and exploits the hostility to Israel, and it is his constant agitation on that sphere that keeps the Arab-Israel conflict alive.

Mr. MCCAFFREY. It seems to me, on the basis of what we have seen in the last 12 months, let us say, that the Arabs are having trouble among themselves. Is it possible for the Arabs to ever unite against Israel on that one particular issue?

Ambassador EBAN. Well, I think you are quite right there. The tensions between the Arab States, themselves, have recently been far more acute than their tension with us. They have been so busy jumping at each other's throats that they have hardly had any time for preoccupation with us. The issue there is a simple one. Shall each Arab State and each Middle Eastern State have a right to its free and separate existence, or shall they be forced under the domination of Cairo? That is the issue which now agitates the Arab world, and the Arab world is so absorbed in that historic issue that it seems to have its attention diverted from us. The only things that unite them, unfortunately, are negative objectives, such as hostility to Israel. But, at present, I should say that their disunity, the fear of Nasser on the part of his neighbors, these are so acute that they show no signs of cooperating for any purpose, even a negative purpose, such as an assault upon Israel.

Mr. MCCAFFREY. This might not be a diplomatic question to ask a diplomat, but do I gather, then, that you think that Nasser is bound to fail eventually?

Ambassador EBAN. I think that in the last 6 months, especially since the crisis of the summer, it has been revealed that Middle Eastern States are not desirous of being swallowed up in a Nasserist empire. There has been one success for this concept of Arab union—Syria has celebrated its union with Egypt. I think it's rather like the kind of unity that our ancestor Jonah celebrated with the whale, and the gastric rumblings from Damascus and Cairo prove that the digestion has been neither smooth nor effective. But in Tunis, in Libya, in Sudan, in Jordan, in Lebanon, even in Iraq, one finds resistance to this concept of other states giving up their sovereignty to Nasser and being preoccupied by that position. Feeling also the dangers perhaps of a one-sided alinement in international politics with the Soviet Union, Nasser has fallen into troubles and there is a kind of torment and anguish about his policy today.

Mr. MCCAFFREY. How much influence has communism in the Middle East, would you say, in your appraisal?

Ambassador EBAN. Well, communism has an easy arena in which to play amongst the impoverished, depressed Arab masses. But the issue isn't so much communism, it's the tendency of Arab States, in their revolt against Western control, against the memories of imperialism, to exploit the great power conflict, and to enter into these very close alliances and acts of collusion with the Soviet Union. I think it's relations between the Arab Government and the great powers which are of greater importance than the question of communism within Arab States themselves.

Mr. MCCAFFREY. Of course, one of the many trouble spots in the Middle East is that the Arabs are afraid the Israelis will attack them and the Israelis are afraid the Arabs will attack them. On the basis of what happened in 1956, when Israel did move out, isn't it your thinking that perhaps the Arabs might have reason to fear Israel?

Ambassador EBAN. Well, we did not start a war in 1956. They started a war in 1948. They maintained it ever since. In 1956 they intensified it by blockade and by commando raids, and the Sinai expedition was our reaction to this intensification of a state of war which they have maintained continuously the whole time. They need have no fear that we will initiate conflict. We are prepared to renounce state of war, and indeed to enter into peace treaties immediately, based upon the existing territorial structure of all the states of the Middle East.

Mr. MCCAFFREY. Mr. Ambassador, looking back now for almost 2½ years, do you regret the Sinai campaign, or do you think there have been some benefits accruing to Israel from it?

Ambassador EBAN. I think the position has cleared since then and has improved. I think the legend of Nasser's military superiority has been destroyed, and not only Israel but other states in our area breathe more freely. We have open access now to the continents of Asia and Africa through the Gulf of Aqaba. There is a more peaceful situation near Gaza than there was before, and the world has awakened, I think, to the genuineness of Israel's grievance, surrounded by these hostile neighbors. I think there have been tangible gains for Middle Eastern stability since the Sinai expedition.

Mr. MCCAFFREY. Isn't there still a segment of public opinion in Israel that advocates preventive war, even at this point?

Ambassador EBAN. Well, there is no authoritative policy in that direction. Those who advocate either war or expansion have been repudiated by more than 80 percent of our people in its previous elections, and I think would be repudiated again. We are prepared for peaceful consolidaton based on the existing territorial and political structure.

Mr. MCCAFFREY. We have been talking about the military threats involved in the Middle East, but actually, isn't the great threat of Israel in the Middle East its economic threat? As Israel progresses and improves living conditions, isn't that a threat to the existing states in the Middle East where the Arab is pretty downtrodden?

Ambassador EBAN. Well, perhaps backward, reactionary governments might see a threat in our social dynamism. But surely for the peoples of the Middle East the spectacle of our social and economic and cultural progress should be an encouragement to them. Perhaps we set an example which they could well emulate, and if not in the Arab world, at least throughout Asia and Africa there are States who see a great hope, a great vision, in Israel's swift, purposeful, dynamic advance in the social and economic fields.

Mr. MCCAFFREY. Whenever we talk about the problems in the Middle East, we come to the problem of the some 900,000 refugees from Israel. Let me ask you first a very general question. Let us say that overnight we could solve the problem of the 900,000 refugees. Would that immediately bring sweetness and light to the Middle East?

Ambassador EBAN. I think it's the other way about, Mr. McCaffrey. If the Arab States wanted peace with us they would not see any advantage in artificially maintain-

ing this refugee problem, because they, with assistance from the world community and some assistance from Israel, could easily solve it in their huge territories with their abundant supplies of water and oil and manpower, and with their priceless gift of Arab societies in which these refugees could be loyally integrated. The maintenace of the refugee problem is a result, a consequence of their refusal to make peace. I think it could be solved, but its solution requires a subjective change of attitude on their part.

Mr. McCAFFREY. What, in your opinion, could be done to solve the refugee problem?

Ambassador EBAN. I think the solution lies along the road which your own Government and most other Western governments, and the Government of Israel have for long upheld—the resettlement of these refugees in the expanding economic labor markets of the Middle East in the Arab countries to which they are akin and loyal, and not their forcing back into Israel, to which they are alien and hostile.

Mr. McCAFFREY. Your Government has made a series of offers over the years to sit down and talk this problem over, haven't you? In fact, just recently, I think, you have made some offer?

Ambassador EBAN. Yes, we have made progress in our compensation offer, and we would also contribute to a resettlement program. But what is needed is a decision by Arab governments to stop obstructing these solutions.

Mr. McCAFFREY. Do you think the day is coming when they will stop obstructing the solutions, or do you think it is to their political advantage to maintain the refugee problem as an active and continuing sore point?

Ambassador EBAN. Well, they seem to take the latter view. I think it's a wrong view and that the rest of the world is getting tired of the artificial perpetuation of the problem and would like to see it solved, but I see no immediate light on the horizon.

Mr. McCAFFREY. Many people say that the refugees are the problem of Israel because Israel had caused the refugee problem.

Ambassador EBAN. Well, our answer is that the problem was not caused by the establishment of Israel, it was caused by the attempt to destroy Israel by force. It was the result of a war. If there had not been a war, there would not have been the refugee problem, and therefore those who caused the war, namely the Arab governments, are responsible for the creation of the problem.

Mr. McCAFFREY. Let's talk a little about Israel, itself. I noted the other day, for example, that Meyer Levin, the author, is living now in Israel where he is completing a novel. What is this great attraction that Israel has?

Ambassador EBAN. I think it's the sense of growth. The feeling that everything is in its beginning, in its infancy. A kind of exhilaration which must have existed in this country in the early period of your national formation. The sense of being rooted in the future. The swift expansion of agriculture, industry, culture. To see something being born and grow has a special thrill which does not belong to the contemplation of societies which are already firmly established.

Mr. McCAFFREY. Actually, you are not a native. You came from South Africa, I believe, and then London.

Ambassador EBAN. Yes; I would say that 80 or 90 percent of our population are immigrants. As you walk the streets of our cities and villages, three out of every four people were not there on that immortal and incomparable day when our independence was proclaimed 10 years ago.

Mr. McCAFFREY. Many people say, Mr. Ambassador, that Israel can never be self-supporting, and especially because there are so many people moving in there almost every year, every month, for that matter. Will the day come when Israel could be self-supporting?

Ambassador EBAN. I always avoid using the word "never" in political and historical processes. We are progressing toward self-support. The gap in our balance of payments is growing less. To give an example, our population has increased by 29 percent in the last 10 years—in the last 7 years—whereas our production, the national product, has increased by 76 percent. People are not simply consumers—they are also producers. They are the best raw material that a nation can have. In the short run they may be a burden, but, as I think your own people can testify, no country that has ever accepted immigration has failed to be strengthened by immigration. In the modern world absorptive capacity is not a function of space. It depends on the industrial and scientific development of a nation. There are other peoples in Europe, Holland, Belgium, Denmark, which have created a high standard of living: Switzerland, on small areas; and I think we can follow their example.

Mr. McCAFFREY. One out of every nine Israelis is an Arab, and the Arabs are reproducing about twice as fast as the Israelis. Is the Arab minority a problem or potential problem in Israel, Mr. Ambassador?

Ambassador EBAN. I hadn't realized that they were increasing at such a fast rate. They are not a problem. They have equal rights before the law. They have a higher standard of economic development and educational and social progress than their neighbors in Arab countries. I don't think they form a real problem.

Mr. McCAFFREY. In your opinion, and again, perhaps not a diplomatic question to ask a diplomat, but do you think the United States is doing as much as it can, or as you believe it should, to ease the Middle East tensions and perhaps aid your country?

Ambassador EBAN. We are very grateful to the United States for its massive infusion of aid into our economy, society, and culture. I think the United States supports the integrity and independence of Middle Eastern States. Perhaps that policy could be given greater publicity and solemnity but we think the United States is a stabilizing element in our region, both by supporting the integrity and independence of States, including Israel, and by these very enlightened programs of economic and social assistance.

Mr. McCAFFREY. Is there still more or less an arms race in the Middle East?

Ambassador EBAN. There is, I am afraid, but we are no longer being left behind. We are finding easier access now to the equipment that we need. The Western Powers especially are much more responsive than they used to be to our requests. And I think that we have now a strong deterrent power and a good defensive posture, although we should like to have to devote less of our resources than we do to military progress.

Mr. McCAFFREY. Is your military budget reaching a point where it is a drain on your economy?

Ambassador EBAN. It is a drain but I was relieved to hear that even in a country as great as yours you face that problem. We would like to see it reduced but we can see no early possibility of reducing it.

Mr. McCAFFREY. Let me ask you this, Mr. Ambassador. As a diplomat, do you believe that diplomacy is keeping up with modern, atomic-age weapons of war, or do your think diplomacy is being left behind by space and all these other things?

Ambassador EBAN. I think, unfortunately, the great discoveries in nature, the new forces that have been liberated and revealed, have not yet been brought under a system of international restraints. The greatest task which faces international diplomacy is to establish control of law and a system of accepted restraints over these vast forces. That has not yet been done, and I think it's the greatest task which faces the United Nations. Disarmament, control of outer space, control of nuclear energy. The great task of diplomacy today is to meet the challenge of the scientific revolution.

Mr. McCAFFREY. You are an Ambassador to the United Nations and of course a very keen observer at the U.N. There seems to be, unfortunately, I think, a growing segment in America that is disillusioned with the United Nations, that think it hasn't done enough, that it has been rather impotent. What is your appraisal of the United Nations?

Ambassador EBAN. I can understand a feeling of frustration, as you listen to these long, tedious, sometimes hostile speeches. But there ought to be a sense of perspective, I think, Mr. McCaffrey. It took a long time for tribes to develop into villages, villages into cities, and cities into states, and what we are trying to do in the United Nations is to establish community attitudes between sovereign states. I think there is growing up a habit of intercourse, of responsibility, of mutual accountability, in which you can see the seed of a system of law founded on justice and peace, and therefore in the long perspective I believe that such an attitude of disillusionment is not justified.

Mr. McCAFFREY. A hypothetical question: Where would we be today in this modern age if we had no United Nations or a counterpart to it?

Ambassador EBAN. Well, we'd be sitting down, working out a method of creating it, because with all its defects you do need a universal platform in which all states confront each other on a basis of sovereign equality. You need a parliament, you need a bridge, and I think that with all its imperfections that it is an indispensable part of our world and one of the restraints which pulls us back from the abyss of disaster.

Mr. McCAFFREY. We're now in what someone calls the "delicate balance of terror." Do you believe that the world can avoid an all-out atomic war, Mr. Ambassador?

Ambassador EBAN. I think so. I believe that the very facts of the scientific revolution are a safeguard against war, for good or for ill, but in any case irrevocably science has placed us on a crossroads from which two roads converge, the one leading to catastrophe and the other to abundance. I think the sheer desire of the human race for survival will act as a brake upon the policies of the atomic powers and that this instinct of self-preservation, if nothing else, will hold us back from the abyss. Now, if we can produce a period of tranquility, perhaps a more affirmative opportunity for diplomacy will be created. But I think that in the long run the scientific revolution will turn out to be a benefit to our generation and will not be the source of doom.

Mr. McCAFFREY. As an interested observer, do you believe that the present visit of Mikoyan may lessen cold-war tensions?

Ambassador EBAN. I think that any process of mutual intercourse between the atomic power is vital and I think any understanding by them of each other's policies and attitudes and preoccupations is a contribution, although one shouldn't exaggerate by thinking that the basic conflicts between them will be alleviated by such encounters.

Mr. McCAFFREY. You are basically a very optimistic man, aren't you?

Ambassador EBAN. I am, and I am optimistic not only as an individual but as an Israeli. As we look back over the past 10 years, we divide our problems into two categories: Those problems that we have solved in the past, and those that we are going to solve in the future.

Mr. McCAFFREY. Of course, optimism seems to be inherent in Israel. All Israelis are very optimistic that their troubles with the

Arabs are going to work out all right. Looking back over your very brief history, do you hold this optimism that everything eventually will work out all right?

Ambassador EBAN. I think so. Nobody would have imagined 10 years ago that this little community of 650,000 would now be over 2 million. Nobody who looked at our landscape then would have envisaged the transformation that has come over it since. And I think that with time and patience the Arab States will get used to our existence and will awaken to the sheer compulsion of the future to be shared with us in peace.

Mr. MCCAFFREY. Speaking domestically, and forgetting your borders and the problems involved there, what would you say is the one great need in Israel today?

Ambassador EBAN. Well, the great need is to find economic resources with which to integrate our growing population. We now have renewed immigration from central and eastern Europe and the greatest concern of our government now is to maintain economic dynamism with which to absorb the great blessing of this new infusion of manpower into our economy, society, and culture.

Mr. MCCAFFREY. For many years there have been Israeli bonds sold here in the United States. How helpful have they been to your economy, Mr. Ambassador?

Ambassador EBAN. Quite indispensable, indispensable. Without that $360 million of capital investment we should have never been able to make these advances, the advances which have earned such international applause throughout the 10 years of our existence, and applause which reached its climax during the anniversary celebrations last year.

Mr. MCCAFFREY. Mr. Ambassador, could I ask you one more question? What are your own personal plans? There has been some talk that you probably will be leaving us within the year.

Ambassador EBAN. Mr. McCaffrey, there are no such things as indiscreet questions, there are only indiscreet answers. My present plans are to continue with my work. Tomorrow I hope to be discussing these matters with the Secretary of State. Then I shall be at the Soviet Embassy with Mr. Mikoyan, and so my work continues. There is an election in Israel at the end of October or early November, and I do not exclude the prospect that I might there seek some broader sphere of responsibility, but there is nothing officially decided in that connection as yet.

Mr. MCCAFFREY. We'll endorse you. You say that tomorrow you will be meeting with Secretary Dulles. Have you found, as an individual, that you have received cooperation on all the levels that you have worked with here in this country?

Ambassador EBAN. Yes. Whether or not we always agree on the fundamental points, we do agree that we have always found a courteous reception and our discussions with your Government are always conducted on a high level of intellectual and moral sympathy.

Mr. MCCAFFREY. I thank you very much. I've enjoyed this chat a great deal. Very glad that you dropped around.

Ambassador EBAN. Thank you very much.

ADJOURNMENT

Mr. DOUGLAS. Mr. President, in accordance with the order previously entered, I now move that the Senate adjourn until tomorrow at 12 o'clock noon.

The motion was agreed to; and, at 7 o'clock and 6 minutes p.m., the Senate adjourned until tomorrow, Friday, March 20, 1959, at 12 o'clock noon.

NOMINATIONS

Executive nominations received by the Senate March 19, 1959:

IN THE REGULAR AIR FORCE

The following-named officers for promotion in the Regular Air Force under the provisions of section 8298, title 10, United States Code. All officers are subject to physical examination required by law:

SECOND LIEUTENANT TO FIRST LIEUTENANT

Line of the Air Force

Fletcher, William E., 48326A.
May, Curtis D., 29583A.
Field, Edsel R., 29582A.
Simmons, Albert P., 29830A.
Tollefson, James L., 29584A.
Hanson, Jack L., 48328A.
Teague, Reily R., 48327A.
Yates, Mannifred, 31909A.
Nummon, Guy A., 2d, 29600A.
Twark, John M., 29598A.
Turoski, Richard F., 29599A.
Todt, William E., 48329A.
Carbaugh, Carol C., 48333A.
Smith, Thomas J., 3d, 48331A.
Mulhauser, Harvey, 48330A.
Stewart, William M., 3d, 48332A.
Tobiason, Kenneth F., 48334A.
Stone, Charles H., 29601A.
McLaughlin, Daniel P., 29703A.
Evans, Donald L., 48337A.
Hejde, Daniel I., 48336A.
Morgan, Clark R., 48339A.
Jefferis, Joe A., 48340A.
Carwile, Elford L., 48343A.
Taylor, Edward G., 48341A.
Philler, William J., 48344A.
Dean, William F., Jr., 49664A.
Hornbarger, Harold A., 48342A.
Mease, Robert D., 48345A.
Greseth, Benoyne S., 29734A.
McComb, Leo E., 29735A.
Luttrell, James H., 48346A.
Bendell, Donald D., 29695A.
Slater, David A., 29736A.
Peterson, Allen B., 29737A.
Beasley, Billy J., 29912A.
Hand, Harry E., 48347A.
Plumb, Glenn E., 48348A.
Barker, Ronald L., 48349A.
Van Leuven, Dean R., 29602A.
Pladars, Zigurds, 48350A.
Gangol, Anthony J., 29603A.
Volz, Donald H., 48351A.
Ford, Tim C., 29604A.
Sakry, John F., 48355A.
Stallings, Joe B., 48356A.
Gober, James L., 48353A.
Flentje, Stanley K., 48357A.
Williams, Tony G., 29605A.
Coryell, Kendrick S., 48359A.
Terrell, James E., 48358A.
Daily, James H., 29738A.
Jackson, George G., 29739A.
Van Zandt, Richard D., 48360A.
Applebaugh, Robert G., 29696A.
Brug, Walter J., Jr., 29740A.
Sibson, Donald A., 29744A.
Freund, Thomas C., 29741A.
Sweeney, James E., 29743A.
Jassmann, Franklin E., 29742A.
Grosh, Karl H., 48361A.
Moore, Hayden C., 48363A.
Trapp, John C., 48362A.
Willis, Arthur R. D., 48369A.
Moss, Carlton H., 48370A.
Walker, Donald E., 48371A.
Miller, Edward D., 29697A.
Wiltse, George A., 29746A.
Hering, David J., 29747A.
Weibel, Donald L., 29745A.
Land, Charles P., 29748A.
Toljanic, Anthony J., 48373A.
Schnucker, Paul H., 48374A.
Weseman, Henry E., 29607A.
Brown, Bevan H., 29608A.
Kerr, Henry F., Jr., 48376A.
Knox, Lawrence E., 48378A.
Marler, Donald D., 29704A.
Sidwell, Edward N., 48381A.
Hollis, Donald R., 48379A.
Davis, Frank R., 29698A.
Musgrove, Richard W., 48382A.
Hanks, Kenneth G., 48383A.
Stewart, Robert A., 29230A.
Denson, Lee A., Jr., 29045A.
Schwartz, Marvin F., Jr., 29211A.
Ackerman, Don E., 28984A.
Park, Robert E., 29183A.
Kelly, John D., 29130A.
Cecil, Robert S., 29020A.
Anderson, B. Conn, Jr., 28987A.
Alser, Donald J., 28986A.
Wallace, Bruce M., Jr., 29249A.
Studdard, Otis P., 29234A.
Piske, Andreus A., Jr., 29190A.
Tucker, Richard P. 29242A.
Flaherty, Dundas I., 29067A.
Kamm, John M., Jr., 29125A.
Gollehon, George B., 29082A.
Smith, Richard E., 29224A.
Johnson, Douglas S., 29122A.
Hallisey, Alfred J., 29097A.
Warren, Richard H., 29251A.
Daleski, Richard J., 29036A.
Waters, Joseph P., 29252A.
Ernst, Fred H., 29061A.
Dunsavage, William P., 29054A.
Kirchgessner, Thomas E., 29132A.
Chavarria, Charles N., 29022A.
Beyer, Robert C., Jr., 28999A.
Schoep, John C., 29210A.
Stockham, Leo W., 29232A.
Maio, Armand D., 29155A.
Stroface, Joseph F., 29233A.
Cannon, Howard R., 29018A.
Eggert, Duane C., 29057A.
Holmquist, Harold G., 29112A.
Tindall, John B., Jr., 29240A.
Buckelew, Jesse W., 29011A.
Hanna, Hugh E., Jr., 29100A.
Armstrong, Spence M., 28990A.
Parent, Edward J., 29182A.
Denezza, Eugene J., 29043A.
Olson, James K., 29180A.
Wetzel, Robert, 29258A.
Nicolais, Mario A., 29175A.
Missler, Charles W., 29168A.
Robertson, Charles W., 29200A.
Dowell, Richard P., 29053A.
Dwyer, Michael J., Jr., 29055A.
Smith, Perry M., 29223A.
Jacobson, Ralph H., 29118A.
Ross, Thomas E., Jr., 29203A.
Niles, William H., 29176A.
Krutz, Robert D., 29135A.
Mayer, Irwin B., 29159A.
Karas, John, 29127A.
Berger, Lawrence W., 28998A.
Lake, Jerome G., 29137A.
Brandt, Thomas C., 29006A.
Smith, Mark E., 3d, 29222A.
Dander, Vernon A., 29037A.
Peterson, Clifford D., 29186A.
Harris, Lyell F., 29105A.
Flood, Donald T., 29069A.
Olds, Ernest A., 29179A.
Reinhardt, Thomas E., 29197A.
Schaefer, John E., 29207A.
Black, William H., 29000A.
Collins, John B., 29026A.
Shortridge, James C., Jr., 29220A.
Head, Richard H., 29106A.
Van Ry, Charles D., 29244A.
Kamp, James J., Jr., 29126A.
Werbel, Jerome H., 29256A.
Fleming, Raymond J., 29068A.
Davis, Joe R., 29038A.
Lewis, Reed H., 29144A.
Hamm, Charles R., 29098A.
Dougherty, Joseph M., 29051A.
Detore, James V., Jr., 29047A.
Spaeni, Herbert H., Jr., 29226.
Alexander, Michael H., 28985A.
Wolverton, James R., 29267A.
George, Benjamin W., 29079A.

Sheridan, Robert B., 29218A.
Young, Romain A., Jr., 29270.
Leonard, George F., 29142A.
Filbey, Hugh L., 29066A.
James, Edward C., 29120A.
Torrey, Charles C., 29241A.
Bryant, Richard G., 29010A.
Gromek, John M., 29089A.
Quinn, Matthew J., Jr., 29194A.
Van Vonderen, Vernon R., 29245A.
Eri, James P., 29059A.
Lyle, Roger H., 29150A.
Mushalko, George, 29172A.
Shannon, William C., 29213A.
Loggins, Aaron B., 29146A.
O'Hara, Mark A., Jr., 29178A.
Curtis, Charles G., 29034A.
Wilson, Powell J., Jr., 29266A.
Haddad, Albert G., 29093A.
Lynch, George P., Jr., 29151A.
Koerkenmeier, Leo J., 29133A.
Sager, Walter C., 29204A.
Rosenhauer, George L., 29202A.
Sharkey, Jack J., 29214A.
Buddle, James W., 29012A.
Petch, Kenneth M., 29185A.
McChristian, Lester S., Jr., 29160A.
Johnston, Jerry R., 29123A.
Faurer, Theodore M., 29063A.
Noonan, David J., 29177A.
Colman, Thomas M., 29027A.
Sheehan, Leo J., 29217A.
Zehnder, Robert E., 29271A.
Faust, Donald O., 29064A.
Green, Merrill A., Jr., 29086A.
Boshoven, Bernard W., 29003A.
Burhans, Edmund D., 2d, 29015A.
Wolff, Marc T., 29115A.
Luft, Neale M., 29149A.
Delgado, Arsenio L., 29042A.
Shaud, John A., 29215A.
White, Frank D., 29261A.
Marr, Lawrence O., 29156A.
Masterson, Jerry P., 29157A.
Lynch, Thomas C., 29152A.
Burgk, Norman A., 29014A.
Rensvold, Rand E., 29199A.
Arnold, Steven W. N., 28992A.
Burd, Frank A., Jr., 29013A.
Grassberger, Robert E., 29085A.
Butler, Dennis L., 29016A.
Conway, John E., 29028A.
Kendall, Lisle G., Jr., 29131A.
Greene, Robert M., 29087A.
Schaumberg, G. Richard, 29209A.
Block, Emil N., Jr., 29002A.
Palmer, David L., 29181A.
Stein, Robert K., Jr., 29229A.
Dent, Frederick R., 3d, 29046A.
Jakus, Paul A., 29119A.
Debus, David L., 29040A.
Myers, Barton, 3d, 29173A.
Bruno, Nicholas J., 29009A.
White, George T., 29262A.
Sutherland, John S., 29236A.
Sanders, Joe E., 29205A.
Chartrand, David P., 29021A.
Kauffman, Richard H., 29128A.
Kautz, James G., 29129A.
Schwartz, Thomas, 29212A.
Williams, Oscar E., Jr., 29265A.
Weisner, Thomas L., 29254A.
DeVoll, Nathaniel O., 29048A.
Hansen, Charles J., Jr., 29101A.
Thelin, Alan L., 29239A.
Wetzel, William T., 29259A.
Piatt, Raleigh E., Jr., 29188A.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 19, 1959:

UNITED NATIONS

Thomas C. Mann, of Texas, Assistant Secretary of State for Economic Affairs, to be the representative of the United States of America on the Commission on International Commodity Trade of the Economic and Social Council of the United Nations.

DISTRICT OF COLUMBIA REDEVELOPMENT LAND AGENCY

Francis F. Healy, to be a member of the District of Columbia Redevelopment Land Agency, for a term of 5 years, effective on and after March 4, 1959.

HOUSE OF REPRESENTATIVES

THURSDAY, MARCH 19, 1959

The House met at 11 o'clock a.m.

Rev. Paul J. Harrell, Memorial Baptist Church, Arlington, Va., offered the following prayer:

God is not far from each of us, for in Him we live and move and have our being.—Acts 17:27–28.

Eternal God, our Heavenly Father, whose mercies are many and whose saving grace is from everlasting to everlasting, reveal Thyself as we approach Thee in prayer, that we may have the confidence that Thou art the rewarder of all those who diligently seek Thee.

We acknowledge Thee as Supreme Ruler of the universe, from whom proceedeth all power and dominion in heaven and on earth. In Thee we trust. We praise Thee for the history and heritage of this Nation; that through Thy providence it was established in freedom and preserved in union.

We bear up in our intercession before Thee Thy servants whom Thou hast counted worthy to be called to positions of trust. We pray for the President of the United States, for the Speaker and Members of this body now in session. Imbue them with the spirit of wisdom, goodness, and truth. Guide them by Thy counsel to the end that the safety, honor, and welfare of this Nation may be advanced.

In the name of Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. McGown, one of its clerks, announced that the Senate had passed without amendment a bill and a joint resolution of the House of the following titles:

H.R. 2294. An act for the relief of the Ellis Timber Co.; and

H.J. Res. 198. Joint resolution to provide for the reappointment of Robert V. Fleming as citizen regent of the Board of Regents of the Smithsonian Institution.

The message also announced that the Senate had passed bills and a joint resolution of the following titles, in which the concurrence of the House is requested:

S. 46. An act for the relief of Ben Chassin;

S. 102. An act for the relief of Stanislawa Wojczul;

S. 110. An act for the relief of Yaeko Inouye;

S. 175. An act to provide transportation on Canadian vessels between ports in southeastern Alaska, and between Hyder, Alaska, and other points in southeastern Alaska, and between Hyder, Alaska, and other points in the United States outside Alaska, either directly or via a foreign port, or for any part of the transportation;

S. 191. An act for the relief of Marie Silk;

S. 192. An act for the relief of Clarinda da Veiga;

S. 210. An act for the relief of Pantaleon Ibarra, also known as Elmo Gomes Arcibal;

S. 244. An act for the relief of Alexander Antoniou;

S. 319. An act for the relief of Theodore Burtzos;

S. 320. An act for the relief of Sofija Laica;

S. 322. An act for the relief of Dr. Stasys Sereika;

S. 323. An act for the relief of David Forbes;

S. 324. An act for the relief of Johann Kalatschan;

S. 327. An act for the relief of Cwy Pinkusiewicz;

S. 328. An act for the relief of Ellen B. Mueller;

S. 330. An act for the relief of Erminio Neglia;

S. 331. An act for the relief of Jakob Liblang, Jr.;

S. 332. An act for the relief of Martin Albert;

S. 333. An act for the relief of Ethel Auth;

S. 355. An act to amend title 18 of the United States Code so as to prohibit the misuse by collecting agencies or private detective agencies of names, emblems, and insignia to indicate Federal agency;

S. 381. An act for the relief of Peter E. Dietrich;

S. 425. An act for the relief of Klarchen Huebner and her minor children, Carl Johann and Marine Claire;

S. 458. An act for the relief of Maria Bogatkin Manea;

S. 459. An act for the relief of Penelope Carnavas Kafos;

S. 460. An act for the relief of Gorjana Grdjic;

S. 501. An act for the relief of Balbina Borenstein;

S. 537. An act for the relief of Benedict Eremenko (Ben Zuke), Victor Tartarnikov (Victor Kalin), Mikhail Ivankov-Nikolov (Michael Nikolas), and Victor Solovyev;

S. 607. An act for the relief of the estate of Sinclair G. Stanley;

S. 624. An An act for the relief of Girolamo Naselli;

S. 633. An act for the relief of Yasuko Kitano;

S. 667. An act for the relief of Pauline D. Kimbrough;

S. 726. An act to amend section 11 of the Clayton Act to provide for the more expeditious enforcement of cease and desist orders issued thereunder, and for other purposes;

S. 758. An act for the relief of Viktors Neimanis;

S. 869. An act for the relief of Konstantinos A. Kostalas;

S. 947. An act for the relief of the estate of Verentes Bent, deceased;

S. 1207. An act for the relief of Rosette Sorge Savorgnan; and

S.J. Res. 19. Joint resolution authorizing the Architect of the Capitol to present to the Senators and Representative in Congress from the State of Alaska the official flag of the United States bearing 49 stars which is first flown over the west front of the U.S. Capitol.

The message also announced that the Vice President has appointed Mr. JOHNSTON of South Carolina and Mr. CARLSON members of the joint select committee on the part of the Senate, as provided for in the act of August 5, 1939, entitled "An act to provide for the disposition of certain records of the U.S. Government," for the disposition of executive papers referred to in the report of the Archivist of the United States No. 59–7.

SUBCOMMITTEE ON INDIAN AFFAIRS OF COMMITTEE ON INTERIOR AND INSULAR AFFAIRS

Mr. ASPINALL. Mr. Speaker, I ask unanimous consent that the Subcommittee on Indian Affairs may have permission to sit this afternoon during general debate on the bill, H.R. 5805, the appropriation bill for the Treasury and Post Office Departments.

The SPEAKER. Is there objection to the request of the gentleman from Colorado?

There was no objection.

CALL OF THE HOUSE

Mr. FLYNT. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently no quorum is present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 18]

Bolton	Hall	Philbin
Broyhill	Harmon	Pilcher
Carter	Holifield	Porter
Celler	Keith	Powell
Curtis, Mo.	McIntire	Rivers, S. C.
Dingell	Mack, Wash.	Taylor
Foley	Martin	Teague, Tex.
Frelinghuysen	Miller,	Thompson, La.
Gallagher	George P.	Wilson

The SPEAKER. On this rollcall 402 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

INTERIOR DEPARTMENT APPROPRIATION BILL, 1960, AND SECOND SUPPLEMENTAL APPROPRIATION BILL, 1959

Mr. CANNON. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tomorrow to file reports on two appropriation bills, one the Interior Department appropriation bill, 1960, and the other the second supplemental appropriation bill, 1959.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. JENSEN reserved all points of order on both bills.

AMENDMENTS TO FEDERAL AIRPORT ACT

Mr. HARRIS. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill (H.R. 1011) to amend the Federal Airport Act in order to extend the time for making grants under the provisions of such act, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the further consideration of the bill H.R. 1011, with Mr. METCALF in the chair.

The Clerk read the title of the bill.

The CHAIRMAN. When the Committee rose on yesterday there was pending the amendment offered by the gentle-

man from Illinois [Mr. SPRINGER] in the nature of a substitute.

The Chair recognizes the gentleman from Illinois [Mr. SPRINGER] for 5 minutes in support of his amendment.

Mr. SPRINGER. Mr. Chairman, in view of the fact that this will be the real fight on what is voted on, whether we shall take the bill H.R. 1011 or the administration's substitute, I ask unanimous consent that I may proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Illinois?

There was no objection.

Mr. SPRINGER. Mr. Chairman, for the benefit of those who were not here when we adjourned yesterday, we were discussing the bill under consideration, H.R. 1011. Just before we were ready to adjourn at the end of the reading of the first paragraph I offered a motion to substitute what is substantially the administration bill, which was under discussion yesterday.

That is what I wanted to talk about this morning.

Mr. HARRIS. Mr. Chairman, will the gentleman yield for a point of explanation so that everyone may understand. The gentleman just mentioned that his substitute is substantially the administration bill. Yesterday, when the gentleman offered his substitute, I asked him if it was the administration bill, and I understand the gentleman said it was.

Mr. SPRINGER. It is.

Mr. HARRIS. Is your substitute identical with H.R. 3267 offered by the gentleman from Michigan [Mr. BENNETT]?

Mr. SPRINGER. It is. The administration bill is H.R. 3267 introduced by the gentleman from Michigan [Mr. BENNETT] on January 26, 1958. I believe there are two features which this House would be interested in in the Bennett bill.

In the first place, the administration bill will cost only $200 million. That is the figure requested in the budget. That is the figure which was testified to by Mr. Quesada who is the Administrator of the Federal Aviation Agency and who, under both direct and cross examination said that figure would be adequate and that he could do the job with $200 million. The bill under discussion calls for $297 million. That is a substantial difference and the first and biggest difference between the bill presently before us and the administration bill—$97 million. Now, there is a second feature which I believe would be more helpful to those communities who are likely to get the lion's share of this money. In the administration bill, the Administrator asks that the money be divided into two parts, and that 50 percent of this be administered or distributed in accordance with a formula. The present law is that it shall be distributed 75 percent in accordance with the formula and 25 percent to be in what is known as the discretionary fund. The administration asks that that be put in a 50–50 arrangement whereby 50 percent would be administered by the Federal Aviation Administrator in accordance with this formula and 50 percent would be in the discretionary fund that he could allot in accordance with what he believed ought to be done in some of the more critical areas.

The gentleman from California [Mr. ROOSEVELT] raised a question yesterday about Los Angeles. In my opinion, it would be much more possible in his particular instance to get the funds which he needs under a 50–50 arrangement than it would be under a 75 percent–25 percent arrangement, and since there will only be about 50 communities, which will probably get at least nearly 95 percent of all this money. I think you can see giving the Administrator at this point flexibility makes it possible for him to give out to some of the airport authorities a larger sum where it is actually needed in order to prepare for the jet age. It is true that of the 3,000 airports in this country, only about 500 to 600 could possibly benefit from the bill. Most of this money which would come from this legislation would go to 50 larger communities. We are attempting to prepare for the jet age. About 25 of the 75 large airports in the country already can comply with the regulations of the Federal Aviation Administration with reference to safety and length of runways at the present time. There are about 50 which would need these funds. So may I say if there is any thought on the part of any Member of this House that his community is likely to get any money under this bill, I think it is a foregone conclusion that it would not.

May I repeat, if there are Members on this floor who believe they are likely to get any money from this bill, let it be said that they are most likely not to, because practically all of this money, in my estimation, will ultimately land in 50 large communities in this country who are getting ready to go into the jet age.

From a financial standpoint the average Member of the House has very little interest in the bill insofar as getting any dollars in his own district is concerned.

There are many on this floor who are under the impression that the money contained in this bill is an appropriation or authorization of some kind for the Federal Aviation Agency current expenses. May I disillusion those in the House who do believe that, because undoubtedly you are going to be asked later on to approve the expenditure of about $560 million to carry on the current operations of the Federal Aviation Agency. The money contained in this bill only has to do with airport construction. I am talking about the actual physical construction of airports themselves.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. SPRINGER. Yes, I yield.

Mr. HARRIS. The gentleman does not contend that this would go principally to airport terminals?

Mr. SPRINGER. I would say this, that under this bill, as I said yesterday, to whatever extent those agencies were housed in the terminal, the funds contained in his bill would go to the terminal.

Mr. HARRIS. But primarily, even the gentleman's bill or the committee bill is not a bill that would permit a 50–50 construction of terminal buildings as such?

Mr. SPRINGER. No; because undoubtedly most of these terminals are built, but it would take in all of the expansion of the terminal facilities, like the one in Los Angeles the gentleman was talking about.

Mr. HARRIS. The gentleman does not contend there is any authorization to put any of this money into terminal facilities?

Mr. SPRINGER. For whatever Federal facility is housed there.

Mr. HARRIS. But only to that extent?

Mr. SPRINGER. That is correct. To that extent. The bill which I am presenting to the House does not contain any feature like that, and that is a local responsibility.

Mr. HARRIS. The gentleman does not want to be incorrect.

Mr. SPRINGER. I do not yield further. The gentleman has his own time and he can explain it then.

Mr. HARRIS. It is my intention to correct it as soon as the gentleman gets through.

Mr. SPRINGER. Now there has been raised by the majority leader the question of a motion to recommit, with instructions to report this bill back to the House. I personally, if given the opportunity, intend to make this motion to recommit with instructions to report my bill back, and I intend to support it and vote for it, because it contains only $200 million. I think it is a substantial and substantive amendment that goes to the heart of the question of how much money we are going to devote to this particular problem.

We are now arriving at a time, may I say, Mr. Chairman, when I think we ought to withdraw this type of Federal subsidy except what is called the door-to-door policy, where our requirements of Federal financial assistance shall be in the form of safety to the person who enters an airplane and ends when he gets off the airplane.

Mr. Chairman, I believe this amendment which I have offered is in the best interests of all the country. It provides a definite philosophy of our approach to the entire question of airport grants and subsidies for the future, and I recommend it to the House.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. HARRIS. Mr. Chairman, I ask unanimous consent that the gentleman's time be extended for 2 minutes for the purpose of asking him a question.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. SPRINGER. I yield.

Mr. HARRIS. With reference to the authority in the bill regarding the application of these funds for terminal buildings, does the gentleman have a copy of his substitute before him?

Mr. SPRINGER. I do.

Mr. HARRIS. Will you please turn to page 2?

Mr. SPRINGER. Yes; I am at page 2.

Mr. HARRIS. And on line 6, with reference to utilization of this program, we find the following language:

but excluding construction, improvement, alteration or repair of any building or portion thereof, other than those required to house air traffic control activities, weather reporting activities and communications activities related to air traffic control.

To that extent, the gentleman's substitute permits funds to be utilized in connection with the terminal structures.

Mr. SPRINGER. Not of terminals; I do not understand it that way. I beg to disagree with my chairman. This refers to other buildings.

Mr. HARRIS. The gentleman had better read the language of his own bill.

Mr. SPRINGER. I have read the language; I am familiar with it.

Mr. HARRIS. That is precisely what the language says.

Mr. SPRINGER. There is quite a distinction there. It applies to buildings used to house these facilities other than those in any terminal.

Mr. HARRIS. If they are housed in terminals.

Mr. SPRINGER. That is right.

Mr. HARRIS. I have read the language of the gentleman's bill. I will now read the language of the committee bill, found on page 7, line 14:

(d) Notwithstanding any other provision of this Act, to the extent that the project costs of an approved project represent the cost of constructing, altering, or repairing that portion of any airport building required to house air traffic control activities, weather reporting activities, communications activities related to air traffic control, or any other activity of the United States with respect to which the Administrator determines that it is in the best interests of the Government to provide facilities.

There you have the identical provision in the two bills.

Mr. SPRINGER. I disagree with the gentleman that the provisions are identical.

Mr. MACK of Illinois. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I must say, quite frankly, that I favor a more liberal bill than either of the two proposals before us.

Let me call the attention of my friend and colleague from Illinois to the fact that his district has been treated very well under the Federal Airport Construction Act. At this very time his hometown of Champaign has a project which has been placed under agreement to construct a terminal building, with utilities, control tower with utilities, and to relocate a beacon. Therefore, I cannot understand how the gentleman can be opposed to the construction of terminal buildings when he has one constructed in his hometown.

I want to tell the House my feeling about the question of separation of control towers from the terminal buildings. I happen to know a little about aviation; I have done a modest amount of flying myself.

It is ridiculous to think that the Congress would require the Federal Aviation Agency to locate separate facilities for control towers. The proper place to locate a control tower is on top of the terminal building. It gives the tower elevation, they have the rest of their facilities nearby below the control tower, they have their traffic centers and air traffic control so that they can coordinate their activities. It is ridiculous to think that the Congress would inaugurate a program to require them to construct separate control facilities. This certainly would not be in the interest of aviation safety.

Mr. Chairman, I have heard many of my colleagues come down to the well of the House and tell us what an authority General Quesada is on aviation and particularly civil aviation. We have had Member after Member come down into the well here and say he is going to support the Quesada bill which, I understand, has been offered by my friend from Illinois and state that he is a great authority on civil aviation, therefore they want to follow his advice on this matter. May I say that if I am going to follow the advice of an authority on aviation I am going to follow the advice of my chairman, the gentleman from Arkansas [Mr. HARRIS], a man who helped write all of the aviation legislation that we have had since 1940, a man who helped write the original Airport Act of 1946. He understands the problems confronting us.

I have nothing against General Quesada personally, but I want to use a fact sheet here that he wrote himself, so it must be accurate, about his background. General Quesada entered the Army in 1924. Soon after, he entered the air service primary flying school. He was commissioned as a second lieutenant and served continuously from 1927. He retired with the rank of lieutenant general in 1951. This man did not know that the airport program was underway until he got out of the Air Force. How can he be a great authority on civil airport construction and tell the Congress how to vote on this airport construction bill? As a said before, if I am looking for a leader I am going to look in the opposite direction from General Quesada.

Mr. BENNETT of Michigan. Mr. Chairman, will the gentleman yield?

Mr. MACK of Illinois. I yield.

Mr. BENNETT of Michigan. Is it not a fact that the chairman himself reduced his own bill from $100 million in the first year to $63 million for fiscal 1960, which is $2 million below the figure that General Quesada recommended? There was no action in the committee on that. The chairman of his own volition took $37 million out of his own bill for fiscal 1960. He admits that General Quesada is right for 1960. Why is General Quesada wrong in his estimates for succeeding years?

Mr. MACK of Illinois. I did not hear him say that General Quesada was right, but I think the gentleman is making a wonderful argument in favor of this bill and that is we are going to save money by taking the committee bill because the Quesada bill will cost us more money the first year. It will cost us more money every year that that act is being administered because we are going to have to start paying through the nose for all of the Federal facilities throughout the country. If I understand General Quesada's argument correctly, he wants us to start paying for the military planes which land at these airports.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

By unanimous consent (at the request of Mr. MACK of Illinois) he was allowed to proceed for 1 additional minute.

Mr. MACK of Illinois. At the present time every military plane in the country can land free at any airport constructed under the Federal Airport Act. Now, if I understand General Quesada's testimony correctly—and I must admit that it is difficult—then in the future he wants us to start paying, reimbursing these airports for what the Government uses in all of these areas, and eventually, as I understand it, he wants the military to start paying for their landings at all these fields. I know the Baltimore-Friendship Airport is used by military planes, with ILS approaches, instrument approaches, touch-and-go landings. It is a Federally constructed airport. It does not cost our Government one penny, and that is a real investment and it is a saving for America if we go along with the committee bill.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. BENNETT of Michigan. Mr. Chairman, I ask unanimous consent that the gentleman from Illinois [Mr. MACK] may proceed for 1 additional minute.

The CHAIRMAN. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. BENNETT of Michigan. Mr. Chairman, the gentleman is not saying that the cost of military use of these airports ought to be chargeable to civilian appropriations, is he? Now, there has been some confusion on that. It is my understanding—and I think it is borne out not only by our record but in the record of the Armed Services Appropriations Committee—that when the military need an extension of a jet runway on a civilian airport, they pay for it. They have plenty of money in their budget for that purpose.

Mr. MACK of Illinois. They should pay it.

Mr. BENNETT of Michigan. It is a military obligation and they ought to pay for it. What we are talking about here is a civilian airport program.

Mr. MACK of Illinois. That is correct.

Mr. BENNETT of Michigan. And it ought not to be confused with the military.

Mr. MACK of Illinois. The gentleman is absolutely correct. Every time we have a military installation, with the joint use of an airport, the military will pay for their portion of the expansion. But, the point that I made still stands. That is that the military planes land at civilian airports throughout the country which were constructed under the Federal Airport Act, and they do so without charge to the Federal Government.

The CHAIRMAN. The time of the gentleman from Illinois has again expired.

Mr. HALLECK. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, in yesterday's remarks I took occasion to say that in the consideration of this bill we will have an opportunity, in one of the first measures coming along, to see who the people are who want to spend more money and who the people are who want to save some money. There has been a lot of lip service given to the balancing of the budget and, as indicated yesterday, everyone seems to be for it, but I think all thoughtful people realize that continued deficit spending can only lead to severe economic tragedy. I have listened to the debate as it has gone along, and I must say that those who are opposing this substitute are those who insist on spending more money. Maybe some are a little disturbed at the fact that the responsible people in charge of this program have not asked for as much money as some would like to spend. To me, that may be for some a novel experience, but I think it is a mighty good one. General Quesada, who has been appearing before the committee, who has talked with us individually, in my opinion is one of the most knowledgeable and dedicated men that I have ever seen in the public service. And, when he told me once that he has flown all sorts of airplanes in and out of all sorts of airports, that he had been in a lot of bad weather, and a lot of difficult situations, but that he had never longed for a fancy terminal building, believe me, that struck home with me.

Now, then, actually here is a substitute that follows the proposal of the administration. It will cost over the next 4 years $97 million less than the committee bill, the bill which it seeks to supplant. I want us to have a teller vote on this amendment to see from whence come the votes to save $97 million in the upcoming 4 years. Now, that is not as large an amount as will be involved in some of the bills that are coming along, but it is a very substantial amount. Now, I want to make another thing crystal clear. In the debate yesterday they had us all on the banks of the Wabash, they had us all wondering about new starts and various other things that I did not think had very much to do with this bill.

But some of us believe that it is about time to think of the taxpayers who are putting up the money, and to think of the fiscal solvency of our Government. And if that means the political destruction of my party, all right; but I am going to stand on that.

This substitute is offered in good faith. It is no legislative sneak. It does provide for an airport program of sufficient dimensions to meet the reasonable needs of the foreseeable future. If it does not meet them, we can always appropriate more money for more programs. But why this great rush now to appropriate $97 million more?

Now with reference to the motion to recommit, first of all this amendment is the amendment that will determine whether you want to spend more money or less. If this amendment does not carry then, as has been suggested, we will have a motion to recommit. And may I say again that that is not a legislative sneak. And I say this for the benefit of some of the newer Members who have asked me just what it means. The motion to recommit would provide that the bill be referred back to the committee with instructions to report back forthwith with the amendment which has been offered. And when you vote for that, you do not vote against anything. You vote for an airport program. If that motion to recommit carries, or if this amendment carries, immediately you are voting for that program. But with particular reference to the motion to recommit, if it prevails, the bill actually would not have to go back to the committee. The chairman would rise and move to amend the bill in accordance with the instructions contained in that motion to recommit, and as quickly as the roll could be called, you would have an airport program on the way to being on the books. That is no legislative sneak. That has been the practice here through all the years, and it is a good practice.

As far as I am concerned, I said yesterday that when I vote for the motion to recommit I shall be voting for an airport program that is adequate.

There was a lot of talk here about the blood being on the hands of those who do not vote for a larger amount. I suppose it would not make any difference how much money were spent—and, believe me, we spend hundreds of millions of dollars every year for navigational aids for air transport; this is just a small part of it. But you could spend all you wanted and you would still have people dying in airplane accidents. The question is, what is reasonable?

After I have voted for the motion to recommit I say that I have voted affirmatively and positively for an adequate airport program. And if that motion to recommit does not prevail, it will not bother me to vote against the bill, because it provides for spending too much money, and in other instances, is not good for the country.

I want everyone to understand, particularly the Members on my side, that when they vote for that motion to recommit, even as when they vote for this amendment, they are voting for an airport program; they will have put themselves on record for an airport program, but they would not be participating in the spending of more money than is necessary for the needs before us.

Mr. WILLIAMS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I think the record I have made in my 13 years in Congress in the interest of economy and against spending bills will compare favorably with that of the distinguished minority leader.

I might add, with respect to my distinguished friend, the minority leader, that while he is straining at this gnat today I would predict that by the time OTTO PASSMAN gets through with the foreign-aid appropriation bill, a couple of months hence, he will be trying to persuade the House to swallow a foreign aid camel.

Seriously, the difference in the allocation formulas for airport construction in the committee bill and the substitute bill is a matter which should give us all concern; much more than the difference in the amounts carried in the respective alternatives.

In the substitute bill, it is provided that only 50 percent of the money will be distributed to the States under the existing and well-established formula. The other 50 percent, or $100 million, will be turned over to the Administrator to allocate at his discretion. When this money is turned over to the Administrator, it is quite obvious, according to the testimony before the committee, that most of this money will go into the large city airports. Very little will go into the so-called general, or smaller, airports.

About 2 months ago, in the State of Mississippi, four military jet aircraft were caught in bad weather. They found themselves running low on fuel. There was not a large airport within 70 miles. But fortunately there had just been completed a small municipal airport in the vicinity of where these planes were flying. They did not have enough gas to go the additional 70 miles to Memphis, so they had to make an emergency landing at this small airport; one which had just been completed with the assistance, of course, of the Federal Government under this program.

It is quite obvious, if this airport had not been built, these four jets obviously would have been lost to the Federal Government, not to mention the possibility of injury or death to the men who were flying them. The cost of these four jets alone amounted to more than the entire Federal contribution that had gone into constructing this particular airport.

Undoubtedly funds for this type airport will be reduced to a minimum under the disproportionate discretionary authority given to the Administrator in the substitute bill.

The committee bill is the product of hard work on the part of this committee. It has been reduced from its original figure of some $465 million to $297 million. It represents the collective and considered judgment of a majority of the committee. However, the mere amount of money provided is secondary in importance to the issues presented in the legislative language of the two versions.

With respect to the terminal building situation, as my distinguished chairman pointed out to one of the Members on the minority side a few minutes ago, both bills provide authority for the Federal Government to participate in terminal-building construction to the extent of the space being used by the Federal Government itself. The committee bill makes it discretionary with the Administrator, when he feels that in the interest of economy it would be better for the Federal Government to contribute its share of space than having to lease it at a high rate of rent. If you will turn to page 58 of the hearings, you will find that I mentioned to General Quesada that I could conceive of a situation where it would

be cheaper in the long run for the Federal Government to contribute a part of the cost of the terminal and receive office space free in return than it would be to withhold any contribution and have to pay rent. I asked him if he did not feel that the committee should give some consideration to giving him some kind of discretionary authority in this regard, particularly when the interests of economy could be served. His answer was in the affirmative. The committee bill carries out his wishes in that respect.

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Mr. FLYNT. Mr. Chairman, I move to strike out the last word.

Mr. FLYNT. Mr. Chairman, stripped of all the legislative phrases and language in the committee bill, and in the administration substitute offered by the gentleman from Illinois [Mr. SPRINGER] the basic difference boils down to two primary features. The first of these is the difference in the monetary amount. The amount of the committee bill is $297 million and the amount of the administration substitute is $200 million, a difference of $97 million.

The second and more important major difference in these proposals is the manner in which these funds are allocated. Under the committee bill 75 percent of the total funds, the funds are allocated according to a formula and 25 percent is placed in the discretionary fund. The formula gives a guide to the local authorities by airports which they can plan and know the minimum amount they can expect in order that they may most wisely, most efficiently, and most economically use their own funds which are matched on a 50–50 basis by Federal funds. Under the administration proposal, $100 million, 50 percent of the entire amount, is to be expended at the discretion of the Administrator without any advance information to the local authorities upon which they can preplan and adequately plan how to spend the money which will be provided under the terms of this bill.

A few moments ago, the distinguished minority leader said that the difference between these two bills was an effort on the part of the administration to save $97 million. Only on yesterday, as reported in the press this morning, one of the committees of the House granted the request of the administration to increase the U.S. subscriptions to the World Bank and International Monetary Fund by a total of $4,300 million or more than 46 times the amount of the difference in the administration substitute for the committee bill here today.

I sincerely hope that the minority leader and those of his party will join with those of us who actually and sincerely are trying to cut down on wasteful financial Federal expenditures, and oppose this increase of $4,300 million, when it comes to the floor of this House.

I might ask him if he intends to join with us to oppose the President's request for $3,930 million in foreign aid authorization and appropriation which the administration has asked for in fiscal 1960. Those two matters put together make a total of $8,230 million, more than 85 times the amount he says he is trying to save in this administration substitute which is offered for the committee bill.

I hope that this committee will be realistic and separate the wheat from the chaff and evaluate and appraise these two measures for what they really are. The committee bill is one which is offered in a sincere effort to let the States and other local political organizations know how much they can expect in the coming fiscal year. The committee bill, in spite of the fact that it is $97 million higher than the substitute, is one which is based on a sound fiscal policy, and which will result in the saving of millions of dollars in the construction of airports in the coming fiscal year.

The CHAIRMAN. The time of the gentleman from Georgia [Mr. FLYNT] has expired.

Mr. ARENDS. Mr. Chairman, I move to strike out the required number of words.

Mr. Chairman, however long one is a Member of this body, he will never be able to understand inconsistency. The inconsistency of talking one way one day and another way the next day is something I cannot understand. It does not make sense to talk about economy one day and the next day argue for more spending.

We have not had a factual explanation from any Member of this House as to why, when the administrator of any agency or any department downtown says they can do a job for a certain number of dollars, we in Congress insist on giving them more dollars than they have asked for. That happened not too many years ago, to the tune of about $900 million dollars. When we forced this extra money on the Defense Department they said they had no need for it and they did not spend the money.

Here today, at this very moment, subcommittee after subcommittee of the Appropriations Committee is sitting, and from the information I can get from them, they are striving to cut the budget requests of the department heads on the money to be made available for their respective departments. At the same time we are today saying, "We are going to give you more money than you really want." To me it is inconsistent to have one committee trying to save and another trying to spend.

I cannot get an answer to the question as to why we are trying to force the Federal Aviation Agency to take more money than they are asking for.

What will be the value of our savings for the education of our children? What will be the value of Government bonds when they are ready for college if we continue this procedure of appropriating more money than we should? We are following a course that reduces the value of the dollar.

Consider what we are doing to future generations when we pile deficit upon deficit. Oh, you can talk about an eleven- or twelve-billion-dollar deficit we likely will have this fiscal year, 1959.

Let me say to you that deficits are the accumulated result of what the Congress of the United States has done in the starting of this project and that project. The program grows and grows, and we of the Congress are responsible.

To be sure, under this bill, there will not be much impact on the budget this coming fiscal year. It is, in general, a good bill as it came from the committee, except for the dollar amount. But the effect of this additional $97 million above the budget and the other additions that might be made during the session of Congress to various programs cannot but result in more spendings, more debts, and less value to the dollar.

A couple of days ago I visited with some young pilots working for one of the corporations of this country. As we sat down and discussed this particular bill they brought to me very important angles of concern to them.

One said to me: "Congressman, we are not concerned about the luxuries of the airport to which we are destined. We are concerned whether they have the runways, that they have the proper information, that they make the proper reports, and also that we are properly equipped in our planes. There are many things that can be done to make flying safer. The passengers are not the only ones concerned about safety, so are the pilots."

You cannot make flying safe with money alone, any more than you can expect a doctor to be able to cure all ills. You cannot do everything with money alone. So the story these boys brought me impressed on me deeply the actual air-travel problem we Members of Congress have to meet. Certainly we are not going to solve it just by pouring in additional sums of money as is proposed in this bill. Putting more money into the hands of those who are to administer this program who do not need it and cannot use it is not the answer.

I urge you this afternoon, in the interest of the economy of this country and in the best interest of our country's future, that we stop spending our people's money for things not essential.

Mr. MOSS. Mr. Chairman, I rise in opposition to the pro forma amendment.

Mr. Chairman, I am going to tell you why I as a member of the committee am voting and urging you to vote to give to the administrator of this program more money than he requested.

I directed a question to General Quesada. I asked:

> I note that you arrive at the conclusion that all of the needs in these stations in the various studies are vastly overstated. Who has the responsibility for formulating the national airport policy to advise us as to the type of facilities, the location of facilities, generally, whether adequate for our national network of airways?
>
> Mr. QUESADA. We, the Federal Aviation Agency, are required to develop each year a national airport plan.

They are required by law to advise us as to the needs of this Nation, and they submitted to the committee a study of a plan, and here is their evaluation of that plan. I asked:

> Mr. Moss. Have we that plan, is that encompassed in the $1,290 million?
>
> Mr. QUESADA. That is the plan.
>
> Mr. Moss. It is of little use if it is so badly overstated.
>
> Mr. QUESADA. I agree.

Here we have the Administrator coming to the responsible committee of Congress and telling us that the studies he gave us were so largely overstated, so deficient, as to be meaningless and have no value for the purposes of making a decision.

Mr. DEROUNIAN. Mr. Chairman, will the gentleman tell us how long General Quesada has been in his position as Administrator?

Mr. MOSS. I am glad the gentleman asked that question. He has been in office very briefly, he is not the great authority, the distinguished authority we have been told. He is a very capable gentleman, but he is not the distinguished authority in this field. He is not the distinguished authority in this field that some would have you believe.

Mr. DEROUNIAN. Did the gentleman express his preference for or against him at the recent confirmation over in the Senate? Did he tell his Senator not to confirm him, as the Senator did?

Mr. MOSS. Mr. Chairman, the President nominated the gentleman. I think he is competent, I think he will do a good job, given time to get a grasp of his responsibilities. But at this moment I do not regard him as the best authority in this field. I will take the consensus of opinion of those who daily operate the airports around this Nation, who came to the committee and told us:

"Gentlemen, the administration's request is too low, it does not meet our needs."

That is the type of opinion I will take, far more compelling, far more informative, and I think based up on a much broader experience in the field of civil aviation.

Mr. Chairman, it is time also that we recognize that the attempt to obscure the facts here and to lead us to believe we are appropriating for some luxurious terminal facilities is just not the case. We are not providing in either the committee bill or the substitute proposed by the gentleman from Illinois to undertake the construction of terminal facilities. We provide only a discretion in the Administrator to underwrite that portion of our physical plant which is required by the Federal agencies. We are not providing any docks for passengers, any waiting rooms, or things of that type. This is the minimum program.

It is not a question of who are the savers and who are the spenders. But I say to the minority leader, if he wants to brand me as a spender for using my best judgment, then go ahead, because they did that to me in my last campaign and I beat my opposition overwhelmingly. I will bear that cross again and not be frightened one bit.

You are not saving dollars here; you are shifting from one taxpaying group to another a part of the cost. These are going to be publicly constructed facilities whether they come from the dollars of the small homeowner or from the broader Federal tax base. Most of these airports are financed by general obligation bonds.

The time of the gentleman from California has expired.

(By unanimous consent (at the request of Mr. Moss) he was allowed to proceed for 1 additional minute.)

Mr. MOSS. Mr. Chairman, the bonds which constitute a lien on all of the property in an area are involved here. So this is not a case of saving dollars. Do not buy that sort of a story. The men who are urging a larger program are in every sense as responsible, in every sense as able, and sense as sincere as those who urge the lesser figure.

Mr. YOUNGER. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, unless we adopt this substitute, we are going to be in a very untenable position, unfortunately.

In the first place, we are trying to force on the Administrator additional funds. He is charged with administration of the Federal Aviation Agency.

We are creating a record here by a bitter attack on General Quesada. Only last year the general came before our committee and recommended for the administration the establishment of the Federal Aviation Agency. Our committee, the House, and the other body accepted that recommendation gladly. We recognized at that time that Mr. Quesada was a man of competence; that he was an authority in this field, and we gladly accepted that recommendation. But, what has happened now? Whether for political reasons or otherwise I do not know, but this bitter attack on General Quesada as to his competence, I think, is entirely uncalled for, and it puts the administration in a position where, out of self-respect, they cannot accept the committee bill. We are creating a record here against a man which is unjustified. Even those members of our committee who have voted against every amendment to reduce this bill come up now and make a bitter attack upon the general. I think it is most uncalled for and most unfortunate that this debate has sunk so low, as we are losing complete observance of what this substitute bill is intended to do. Every member of our committee, including the chairman, has said that they do not believe that this is a permanent program and that it ought to be phased out, yet the committee not only does not phase it out, but it balloons the payments to a point where it would leave the inference that this is a program that will continue and the people can expect it, yet I doubt whether there is a member of our committee who thinks it is. I know our chairman said so, that he did not consider this was to be a permanent program.

So, for that reason, I am going to support this substitute bill. I want to say again that I think the debate here is most unfortunate as to this bitter attack by men who never lifted a hand to go over to the other body to tell the committee not to approve him. He was one of the President's nominees who was approved promptly by the Members of the other body. And, at no time has anybody ever come before our committee attacking General Quesada, the Administrator, for incompetence.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. YOUNGER. Yes, I yield to my chairman.

Mr. HARRIS. I did not understand any Member who has spoken on this matter to make any bitter attack on General Quesada. As I understood, each Member who spoke highly complimented General Quesada, and certainly I do not recall anyone attacking him on the basis of incompetency. They said he was an outstanding man but did not consider him the most outstanding authority. Now, that is not a bitter attack.

Mr. YOUNGER. I am not going to yield any more, but I shall let the record speak for itself. The record is there. Anybody who reads what has been said on this floor and does not consider it a bitter attack upon General Quesada, then I do not understand what the English language means.

Mr. HEMPHILL. Mr. Chairman, I move to strike out the last word.

Mr. MOSS. Mr. Chairman, will the gentleman yield?

Mr. HEMPHILL. I yield to the gentleman.

Mr. MOSS. Mr. Chairman, in connection with the remarks of my distinguished colleague, the gentleman from California [Mr. YOUNGER], I should like to make this observation. I shall not change one word of the statement I made on this floor. But for anyone to attempt to construe it as an attack and a bitter attack is, I think, somewhat of a departure from reality, because my statement was that I do not regard him—General Quesada—as the outstanding authority. When asked by the gentleman from New York [Mr. DEROUNIAN], why I did not oppose his nomination I said the President had nominated him, and I regarded him as an able, competent man who, when he had a full grasp of his job, would do an outstanding job. I change no part of that statement.

Mr. HEMPHILL. Mr. Chairman, I believe my vote here for the past 2½ years has been as conservative as that of any Member of this House. Yet I rise in opposition to the amendment of the gentleman from Illinois [Mr. SPRINGER]. I am not interested in the merits or demerits of the question whether or not there has been any attack on General Quesada. I recognize none, except necessary reference in the ordinary course of debate. But the facts have not all been brought out.

On page 7 of the report we find the following information, which is information of importance to this Committee:

> In 1946, the Nation's domestic scheduled airlines carried 12,213,000 passengers nearly 6 billion miles. The CAA estimated that in 1958 this figure increased to about 49 million passengers who flew more than 26 billion passenger-miles.

Let me call this to your attention, as indicated in the report. It is estimated that in 1965 you will have 107,000 civilian aircraft. So what we are dealing with today is not a question of whether or not there is a subsidy. It is a question whether or not we are going to sacrifice safety for political expediency, because we have to recognize the fact that this is not a yearly handout. This is not something that is handed out every year.

An airport is not built in a year. And if we find ourselves in the jet age with insufficient airports; if we find 107,000 aircraft in the air, what good are the $2 or $3 billion that we spend for navigation aids when the plane finds, as it gets ready to take off or comes in to land, that it has *not* sufficient room?

So what we are subsidizing, if we are subsidizing anything, is the safety of the American people. And if the number of passenger-miles has run up from 6 billion to 29 billion in 10 years, with the increase in air travel, what will it be in 1968?

Let me call this to your attention. This is an investment in America. This is an investment in the local airport, in the city, or the town. We have spent money to build airports all over the known world. Here we are trying to give the American people a little more safety, somewhat better airports, and guarantee our ability to compete in the jet age of the future. And still we are quibbling about $97 million, when the lives of American people are at stake.

If anyone has ever witnessed one of these air crashes or has visited the scene of one after it occurred, he will recognize the helplessness of Americans riding in either civilian or military aircraft. He will recognize the fact that the person who pays the fare has the right to ask that he be carried safely. The law recognizes that. Then what is it that is up to the Congress to do?

In the first instance, the first appropriation for 1960 is within the budget. The amounts we have provided for future years are for this purpose: We in the committee feel, under the testimony given to us, that it is necessary for this Congress to say to the Federal Aviation Agency and to say to those whose estimates we are not satisfied with, "We are going to give you the money, and then we demand of you the kind of program the American people deserve."

That is what is at issue here today, not whether or not somebody is a spender. I am no spender.

The question is whether or not on the anvil of expediency you will cut these necessary funds which this committee has voted on, whether or not you are willing to make an investment in Ameria, because these airports are not going to be given away; they will be there tomorrow and you will land on them. They will be there tomorrow when your constituents take off and land in the jet age. They will be there tomorrow as an investment which you as a Member of Congress either voted or did not vote for the American people. A vote for the committee bill is a vote for better safety, better service for the American people. And who owns the airports? Not the airlines. The American people own the airports through the governmental subdivision which has charge of the airport. We are saying to the Federal Aviation Agency: Now give us the best in safety and service in the jet age. Our American people deserve the best and the safest.

Mr. BENNETT of Michigan. Mr. Chairman, I move to strike out the last word.

Mr. BENNETT of Michigan. Mr. Chairman, I regret that my friend who has just spoken used the term "political expediency." Despite what has been said here on the floor by the majority and minority leaders, I do not regard this bill as being a political measure in any sense of the word. This program has had for all practical purposes the unanimous support of our committee since it was first started back in 1946. The only essential difference of opinion between us today is a matter of dollars and cents—whether we accept the recommendations of the people in the Agency which will administer this program or whether we take some figure out of the air, as our chairman has in this instance, and say, "What you are proposing, Mr. Administrator, is completely inadequate, and therefore we need more."

As an indication of the fact that the Agency itself is correct in its estimate of the needs for this program let me call your attention to this: Our distinguished chairman, Mr. HARRIS, of his own volition reduced his bill from $437 million to $365 million. He had $37 million in it for the remainder of this fiscal year. He took that out. The committee did not ask him to take it out, he took it out voluntarily because I think he was convinced that the Agency was right when they said they did not need the money. Actually they have on hand some $11½ million in unexpended funds for this fiscal year.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. BENNETT of Michigan. In addition, the gentleman voluntarily took an additional $37 million out of his bill for the fiscal year 1960; that is the coming year. So without any committee action he brought the bill down to $2 million less for the coming fiscal year than General Quesada had asked for. I am sure the gentleman will say that he did so because he recognized that $63 million was completely adequate for the program each year.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. BENNETT of Michigan. I yield to the gentleman from Arkansas.

Mr. HARRIS. Before the gentleman gets too far away from the statement that I consider to be erroneous that he made about my position, I said yesterday I requested the $37 million that was in the original bill for this fiscal year be deleted simply because the bill was not going to get through in time for it to be programed for this fiscal year. That is the practical situation.

Mr. BENNETT of Michigan. All right; then what about the $37 million the gentleman took out for the fiscal year 1960?

Mr. HARRIS. That was the $37 million I am talking about. That was the $37 million for the fiscal year 1959.

Mr. BENNETT of Michigan. No; the gentleman is mistaken. He took out two sums. First of all he took out $37 million for the fiscal year 1959. In addition, he took out of his bill $37 million for fiscal 1960. In other words he reduced the amount from $100 million, which was in his bill for 1960, to $63 million. Why did he do that?

Mr. HARRIS. Simply because in the development of this matter before the committee, during the course of the hearings, it was quite apparent that if the terminal building was not going to be continued to the extent that the members of the committee had indicated heretofore they wanted, that much money would not be needed. That is precisely the reason. A little later I am going to give the gentleman facts and figures as to why it was reduced to the present figure of $297 million.

Mr. BENNETT of Michigan. Mr. Chairman, the fact remains that the chairman of our committee, the author of the bill, was willing to accept the recommendation of the Agency and, in fact, go below it in 1960 and that makes his argument and similar arguments unsound and inconsistent as they relate to his present recommendation for the fiscal years subsequent to 1960. There are adequate funds in General Quesada's bill for this program. Of course, $97 million does not sound like much money. I desire to state very candidly, Mr. Chairman that I have on a number of occasions voted for funds over the President's budget recommendation. I will do so again whenever there are sound and compelling reasons for it. But, why fly right in the face of undisputed facts? There is nothing of substance in this record, as I pointed out yesterday, except the unverified estimates submitted by airport operators to justify the chairman's bill. The fact that $97 million is involved may not be important. I do not regard $97 million as a sum that will be the straw pushing our Government into bankruptcy. But, when we do not need $97 million; and when we have nothing in the record of these hearings or anywhere else to justify it; then I say, ladies and gentlemen of the House, why should we put the $97 million extra in the bill? Do you not think that there will be dozens of other measures before this House where $97 million will be of vital importance to a critical program?

Mr. Chairman, there is one further thought that I have in conclusion. There has been a great deal said here about the needs of civilian jets for additional runway space. What about the obligation of the airlines to assume some part of this cost? What would this Congress say if a railroad came here when they inaugurated a new type train and said that because of additional safety factors required for operation of the new train that Congress should provide them with a new right-of-way for that purpose? Why, they would be laughed out of the Halls of Congress, and justifiably so. And, yet, the very subsidies that we have been providing for the airlines over the years have been in large measure responsible for putting the airlines in a better competitive position with relation to the railroads. In the last 10 years, railroad employment has gone down from 1,600,000 to about 800,000. Does that not mean anything in the continuation of these subsidies? This unfair competition is being accelerated by the constant subsidizing of the airlines by the Federal Government in programs such as this. Are we going to continue

forever to assume the primary obligations of this one phase of the transportation industry to the exclusion of all others?

Mr. Chairman, there is no essential difference in the two bills before us except the amount of money, and it has been demonstrated on the record that there is nothing of substance to support the $297 million figure.

Mr. Chairman, I hope the substitute amendment will be approved.

Mr. HARRIS. Mr. Chairman, I ask unanimous consent that all debate on the pending amendment be concluded at 1:30 p.m. and that I may be recognized for the last 5 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. BOGGS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I have listened since last year to the charges made by the minority leader, and others, about wild spenders, and inflation, and so on.

Now, as Al Smith used to say, "Let's take a look at the record."

Insofar as the present bill is concerned, I have complete confidence in the gentleman from Arkansas [Mr. HARRIS], chairman of the committee. He is a fair man. He is certainly not a radical man. He is anything but a wild spender. As one of the authors of one of the bills before the committee, I suggest that he has done a thorough job, a sound job, and, as far as I am concerned, I am honored and pleased to accept his proposal rather than the substitute proposal.

I might say that if the sole issue was the saving of money, then it would be equally distasteful, it would seem to me, to vote for the substitute, because in both instances a commitment is made to spend money.

I want to talk a little about this wild spending business. Every fairminded person knows that this Congress has demonstrated sound leadership over the years. Let us take a look at the total amount requested by President Eisenhower since he has been in the White House. The Congress over that period of time has consistently reduced those requests. As a matter of fact, in the first session of the 85th Congress, if my memory does not fail me, we cut something like $5 billion from the requests made by President Eisenhower, which were sent to this Congress.

Now what happened this year, fiscal 1959? Is the $13 billion deficit the result of appropriations made by the Congress or is it the result of something else? If you will take the trouble to examine the testimony before the Joint Committee on the Economic Report, you will find that at least half of this is the failure to produce the revenues estimated by the Treasury Department. Why? Because of the recession. Why the recession? We might argue about that for the rest of the day, but in any event we had it, and it was not the appropriations made by Congress that brought about this $13 billion deficit.

We are now in a tremendous argument about wild spending and fiscal responsibility. A few years ago, when this administration came into power, we were paying less than $5 billion a year interest on the national debt. Today we are paying almost $9 billion interest on the national debt. That has been an increase of almost $4 billion. As a matter of fact, you talk about inflation. As far as I know, this is the first time in the modern history of the American Government where American business and American people are showing more confidence in the common stocks for sale on the stock market than they are in the securities of the American Government.

All of you know what the bond situation is confronting this Government today. Let us not try to call black white and white black and try to confuse people. Let us admit it is the administration themselves that brought about this lack of confidence in the securities of the Government of the United States.

Talk about spending. Look at the farm problem. That is a good one. Seven billion dollars for Mr. Benson's farm program in the current estimate for 1960. As far as I know, there is not a farmer in the United States pleased with it. God knows the consumers are not pleased with it.

So I say, Mr. Chairman, if I may, that it is all very well and good to throw these scare words around. to talk about fiscal irresponsibility, to brand the chairman of this committee as a wild spender in this attempt to bring forward here a sound constructive program which does project us into the jet era; and whether we like it or not, we are in that era. I believe that the American people will again repudiate this business of trying to make the facts something they are not.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan [Mr. JOHANSEN].

Mr. JOHANSEN. Mr. Chairman, I rise in support of the substitute amendment offered by the gentleman from Illinois [Mr. SPRINGER].

I am taking this time to pursue further the question raised yesterday by the distinguished chairman of the Manpower Utilization Subcommittee of the Post Office and Civil Service Committee, the gentleman from Georgia [Mr. DAVIS], relative to application of Public Law 801 of the 84th Congress to this proposed legislation.

As a member of the Manpower Utilization Subcommittee for the past 4 years, I have grown somewhat weary—as I am sure the able chairman and our colleagues on the subcommittee also have—of the standard alibi offered by departmental witnesses whenever we have questioned the increases in civilian personnel and in payroll costs of the Federal Government.

That standard alibi has been that the additional personnel was a direct and unavoidable consequence of the mandate of Congress and that the mandate was inherently enacted by the Congress creating new, additional, or expanded functions, activities, or authority.

Perhaps, in all candor, one reason for the irritation with this explanation was the fact that it contained an element of unpleasant truth, to wit, that the Congress, in exercising its authorizing and appropriating powers, failed to give appropriate consideration to the manpower and payroll implications of proposed legislation.

The fact was—and apparently still is—that in most instances no one bothers even to inquire as to what the manpower implications of the proposed legislation might be.

With a view to correcting this situation, the Congress, in May 1956, enacted Public Law 801, requiring that any agency or department recommending or reporting on proposed legislation, entailing an estimated expenditure in excess of $1 million in appropriated funds, provide the Congress with information on the estimated maximum additional man-years of civilian employment and expenditures for personal services involved in the proposed legislation.

Now, Mr. Chairman, it seems to me we face the question as to whether either the departments or the Bureau of the Budget—from the executive side of the picture—or the legislative committees or the Members of Congress—from the legislative side of the picture—regard Public Law 801 with any seriousness or concern. To put it bluntly, there is a question whether there is even any interest in obeying the law.

The present legislation offers a perfect case in point, and I hope the distinguished chairman of the House Committee on Interstate and Foreign Commerce will recognize that I am being critical with complete impartiality as between the executive and the legislative branches.

So far as I can determine, there was no move made by the committee to comply with Public Law 801 or to determine whether this law was applicable with respect to this legislation until the matter had been brought to the attention of the chairman of the legislative committee by the chairman of the Manpower Utilization Subcommittee on February 18.

Thereafter, on February 23, the chairman of the Interstate and Foreign Commerce Committee directed a letter to the Federal Aviation Agency requesting the information, which information had not been received at the time of the colloquy yesterday between the gentleman from Arkansas [Mr. HARRIS] and the gentleman from Georgia [Mr. DAVIS].

The other side of the story, of course, is that there had been no evident effort whatever on the part of the Federal Aviation Agency to comply with Public Law 801 prior to the February 23 inquiry from the chairman of the legislative committee and there is no evidence that the Bureau of the Budget, which presumably has some policing responsibilities, had made any move to see that the Federal Aviation Agency complied with Public Law 801.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. JOHANSEN. Mr. Chairman, I offer a preferential motion.

The CHAIRMAN. The Clerk will report the motion.

The Clerk read as follows:

Mr. JOHANSEN moves that the Committee do now rise and report the bill back to the House with the recommendation that the enacting clause be stricken out.

The CHAIRMAN. The gentleman from Michigan is recognized for 5 minutes on his motion.

Mr. JOHANSEN. Mr. Chairman, I am reluctant to take this step, but we have not been permitted to discuss this very clear disregard of the law.

Nor is that all. I am firmly convinced that, if the question had not been raised by the gentleman from Georgia yesterday, and, if I may be pardoned for saying it, if I had not myself thereafter contacted the Federal Aviation Agency, there would have been no information supplied this House relative to the manpower implications of this legislation and pursuant to Public Law 801 prior to action by this House on this legislation.

That is to say, there would have been, for all practical purposes, a complete failure on the part of both the executive and legislative branches to comply with the clear provisions of Public Law 801. This is scarcely an admirable example for our fellow citizens.

Now, what is the upshot of the matter so far as the manpower implications of this legislation are concerned?

I am advised by telephone—and I understand that this same information has been similarly transmitted to the chairmen of both the legislative committee and the Manpower Utilization Subcommittee—that the $200 million program called for in this substitute amendment would involve no additional personnel.

I am advised that the committee bill would involve 10 to 20 additional personnel or, since this is a 4-year program, 40 to 80 additional man-years.

I am further advised that, under the bill adopted by the other body, the increase would be some 60 personnel or 240 additional man-years.

I am also advised that the estimated cost per person per year of increase in the number of personnel would be $10,000.

This involves a possible annual increase of $200,000 per year under the committee bill and of over half a million dollars a year under the bill passed by the other body.

Mr. Chairman, it seems to me that this is all information which the Members of this House ought to have and need to have to pass judgment on the alternative legislative proposals. Even more to the point, this is the type of information which the law says we must have before acting on such a legislative proposal. Here is the key to the burgeoning of Federal civilian personnel which has been sufficiently serious to prompt the creation of a special subcommittee to combat the problem. Here is one reason why the Federal civilian payroll has increased from $940 million a month 2 years ago to $1.1 billion a month now. Here is one of the reasons we now have 2,320,000 employees on the Federal payroll. Here is one of the reasons the distinguished chairman of the Committee on Appropriations has urged an even more radical reduction of Federal personnel through the nonfilling of vacancies than that which has been proposed by the Manpower Utilization Subcommittee.

Why then, Mr. Chairman, is it like pulling teeth to secure from the agencies the information which the law decrees that they must provide and why, Mr. Chairman, is it like pulling teeth to get the members of the legislative committees of this House to take seriously the mandate of the law which passed this very House under the consent calendar on May 21, 1956?

I share the concern of the distinguished chairman of my subcommittee and of my colleagues on that subcommittee regarding this problem and I share their determination to continue to battle for obedience of the law by both the executive and legislative branches, in respect to Public Law 801.

Mr. HARRIS. Mr. Chairman, I rise in opposition to the gentleman's motion.

Mr. Chairman, I may say to the gentleman that I share his concern about the continuous requirements of increased costs due to manpower requirements. I am fully aware of the provisions of the law that the gentleman has referred to. The chairman of his own subcommittee has contacted our committee about this problem and, by direction of the subcommittee I am sure, he wrote a letter to our committee about it. That letter was transmitted to the Federal Aviation Agency for a report. As I advised the House yesterday, we have not received a report. I did have a telephonic report that the Agency has not yet completed a detailed report on the request, merely because there are so many proposals before the Agency. There was a report to the extent that under the committee bill and the substitute bill there would not be any requirements for any change, particularly in the manpower field, more than the present program or what the program has been for the last few years.

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Michigan.

Mr. JOHANSEN. Do I understand the gentleman to say that his information is that under neither the committee bill nor the substitute there would be any additional personnel required?

Mr. HARRIS. That is true, because under the present program and as it has been for the last 4 years there is an authorization of some $63 million a year. The committee bill does not increase that authorization or allocation to the States. It merely provides some increases in the discretionary fund, therefore it would not require any change in the manpower requirements.

Mr. JOHANSEN. Of course, I am not quarreling with the gentleman's statement or with his informant. My informant gave me different information regarding the committee bill. I suggest that points up the importance of having the information as required by law at least during committee hearings and in time to have consideration on the floor of the House.

Mr. HARRIS. I do understand that if the larger amount passed by the other body were to be approved, then that would have some effect on the manpower requirements.

Mr. JOHANSEN. Would the chairman agree that it is fundamentally desirable that the House conform to the law and that we have the information during debate on the floor?

Mr. HARRIS. I certainly think that the gentleman is entitled to the information and, so far as the House is concerned, that is part of its legislative responsibility. And, if the program is needed in the public interest and it requires additional personnel, then it is up to the House to make that determination.

Mr. JOHANSEN. I am not quarreling with the gentleman about the merits or faults of the respective proposals. I am merely raising the question as to whether the gentleman does not agree that it is desirable that on all legislation of this type we conform to Public Law 801.

Mr. HARRIS. I think it is desirable for the House to get all information that can be had about any project that comes before it.

The CHAIRMAN. The question is on the motion offered by the gentleman from Michigan [Mr. JOHANSEN].

The motion was rejected.

The CHAIRMAN. The Chair recognizes the gentleman from Missouri [Mr. CURTIS].

Mr. CURTIS of Missouri. Mr. Chairman, I think we are seeing, my colleagues, the error of writing or trying to write legislation that includes both the authorization and appropriation. Half of the arguments that we hear on the floor are devoted to the authorization aspects of this legislation while at the same time the other remarks are devoted to the details of appropriations. Now, the danger in this sort of procedure is that we do not do an adequate appropriation job.

I was somewhat surprised when the gentleman from Mississippi, who is a cosigner of the additional views in the committee report, took the floor to argue for the bigger bill, inasmuch as the gentleman does agree that there should not be this back-door method to appropriations. Here is why I say so to the gentleman: We are talking in this bill about appropriations beyond the fiscal year 1960. Apparently, for 1960 it is $2 million below the appropriation bill requested by the President. So, what we are really talking about is an appropriation for 3 years hence, and I think it would be a great act of wisdom on the part of this House, if it has a choice, to at least use the smaller amount today and come back next year if more is needed. But, by all means, let us get this appropriation back under the Committee on Appropriations. Then, I think, we are going to write sounder legislation and really give the money that is necessary and can be utilized.

Mr. WILLIAMS. Mr. Chairman, will the gentleman yield?

Mr. CURTIS of Missouri. I yield to the gentleman from Mississippi.

Mr. WILLIAMS. May I say that the gentleman has not read the administration bill very carefully. It is in identical form with our bill.

Mr. CURTIS of Missouri. I have read the administration's bill and the gentleman is correct in saying that in respect to the failure to separate out the appropriation aspects of this legislation the two bills are identical and equally faulty. However, the administration bill has a lower sum escaping the proper review of the Appropriations Committee and to that extent I would think the gentleman would believe it is an improvement over the committee bill.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

The Chair recognizes the gentleman from California [Mr. ROOSEVELT].

Mr. ROOSEVELT. Mr. Chairman, in view of the remarks of the gentleman from Illinois, we should set the record straight. Under the 50–50 formula of the substitute the Administrator would have $100 million in his discretionary fund. Under the committee bill he would have $98½ million. So the gentleman is not offering us much, if any, more, even if we believed the FAA would be generous to us. Certainly the committee bill will raise more matching funds, local participation to which I thought the minority was devoted. No, Mr. Chairman, this is an attempt to raise a hobgoblin of fear instead of meeting a vital need. To prove it I submit a telegram to me signed by the mayor of Los Angeles, a former Republican Member of this House and the president of the airport commissioners, a respected leader of the business community:

LOS ANGELES, CALIF., *March 18, 1959.*
The Honorable JAMES ROOSEVELT,
House Office Building, Washington D. C.:

Yes; Los Angeles International Airport is operating at a good profit, but under our city charter all income from the airport, except operating expenses, must be used to pay interest and principal on our municipal airport bonds. This year, for instance, we will pay for bond redemption and interest approximately $2,941,000. As we stated before the Harris committee, we thoroughly agree that after local bond issues are retired, we are willing to repay future matching funds less appropriate deductions for space used by Federal agencies such as FAA control tower, Communications, Weather Bureau, Customs, Immigration, Public Health, and Agriculture and for landing area use by the military. Also as you suggested, Poulson and I are wiring Republican Congressmen from California as follows: "Understand there is question about Los Angeles International Airport request for matching funds when maximum to any city has been limited to $1 million in any year. Wish call your attention that this is a regulation of Administrator and not part of the act. Administrator has already indicated in testimony that he wishes to put larger amounts where they are vitally needed, such as critical jet airport developments. Los Angeles International is going to bid in a few months on $32 million work which is reason why we are vitally concerned with passage of H.R. 1011 and its matching fund provisions. It should be noted that while matching fund provisions of the existing act permit 54 percent participation by the Federal Government, the Los Angeles percentage to date, now stands at 15.7 percent which is lower than other airports. We sincerely hope you will support the bill." Best regards.

NORRIS POULSON,
Mayor of Los Angeles.
DON BELDING,
President, Board of Airport Commissioners.

The CHAIRMAN. The Chair recognizes the gentleman from Kansas [Mr. AVERY].

Mr. AVERY. Mr. Chairman, this debate has gone on now for 2 days. I do not think we are going to change any votes from here on out. But there is one matter I should like to bring to your attention. If you can see this chart, I should like to have you see what has happened by way of increase in air passenger traffic. From January of 1938, when we had less than 2 million paid passengers and now 1958, we find 48 million passengers that were hauled on our commercial airlines.

Let us think about that for just a minute. We are not going to reconcile these two figures on how much money is needed. On one side of the aisle we think it is $200 million that is enough. On the other side of the aisle they are asking for nearly $300 million. My point is this. The airlines are providing a preferential service for those persons who use the airlines. Why cannot the people who use the airlines pay for that preferential service instead of putting it on the back of the taxpayer? I think that reasoning is sound and logical. Why should the farmers in Kansas, a great many of whom never get on an airplane, help to subsidize the airlines? Why should the automobile worker who does not ride an airline very often help to subsidize them, any more than we are already doing? It seems to me, if we would add $1 to each passenger fare, it would pretty nearly make up the deficit. Certainly the people who are the recipients of this preferential service should be paying for it. Nobody, I think, can argue against the logic of that.

The CHAIRMAN. The Chair recognizes the gentleman from Mississippi [Mr. ABERNETHY].

Mr. ABERNETHY. Mr. Chairman, I probably could cover what little I know about aviation in 2 minutes, so I am not going to complain about the amount of time that has been allotted me.

I am confused from the debate; I think there are a number of Members of the House who are confused over what ought to be done with this bill. All of us, I am sure, want to do the right thing. Aviation is important to our economy and all of us desire to see it move forward in keeping with the times. On the other hand we certainly do not want to overspend. We are living in an era of inflation, much of which is attributable to Government spending.

Originally the bill introduced in the other body called for $575 million. They passed a bill over there which provided for something like $465 million; I don't recall exactly how much, but it was a lot of money. Then the chairman of the House committee, whom I regard very highly, introduced a bill calling for $400 and some odd million. The committee reported out a bill calling for $297 million. The administration has asked for $200 million. So I am not sure what the need is.

It is very difficult to determine the need. Should it be $575 million or $200 million? The debate hasn't afforded a very good answer. Hence, the confusion.

I would be more impressed with the position advanced by the minority if I did not think there was something of a sneaker in the 8 pages of language that was required to make up the amendment. The big issue of the debate up to now has been over the difference between $200 million and $297 million. I hold in my hand the minority amendment which they say simply reduces the spending by $97 million. If so, then why all of these 8 pages of language? Very frankly, I am suspicious of what this unexplained language may do. Undoubtedly there is something in it that is quite different from the language contained in the committee bill. Undoubtedly it confers some other authority on the administrators of the program; otherwise the minority amendment would not require 8 pages to reduce the committee bill by $97 million. A proper draft would merely require a substitution of figures.

I would deeply appreciate it if someone in the minority who is supporting the amendment would arise and tell us what these 8 pages will do other than reduce the spending by $97 million.

Up until now they have very carefully avoided an explanation of the new language. I have been told that it confers broad powers on the administrators which would permit them to play a little politics, if they saw fit, with the program.

I wish to make it perfectly clear that I favor reducing the spending by $97 million but I don't wish to be made to accept some lengthy unexplained language along with it. Unless there is a satisfactory explanation made of the language then I shall vote with the committee and against the amendment.

I do hope, however, that before the day is concluded that we will have an opportunity for a straight vote on the question of reducing the spending by $97 million. The administrators say the amount of $200 million is adequate and I am willing to take their word for it. Although somewhat confused, I remain unconvinced that there is a need for more.

The CHAIRMAN. The Chair recognizes the gentleman from Texas [Mr. ALGER].

Mr. ALGER. Mr. Chairman, I have listened carefully to the gentlemen on both sides of the aisle. I have heard many fine arguments, and I have seen a number disproved. These are my conclusions, for whatever they are worth.

First. I think the time has come to taper off Federal airport aid.

Second. There is less need for Federal aid because of the revenue-producing aspect of terminals, which has not been sufficiently stressed, in debate, though covered somewhat in the hearings. Wherever there are airports, there are revenue-producing businesses, and the more of that we have, the less need for more Federal aid.

Third. The FAA is going to have $600 million appropriations in addition to these funds for airport construction.

Fourth. Whenever the Government comes here and says they can do a job with a certain amount of money, in this case $200 million, for us to cram more money down their throats is absolutely inconceivable to me.

Fifth. I am convinced there is no safety factor involved in this bill whatsoever because of the lesser amount under this substitute bill. Money for safety measures is covered by the $600 million FAA appropriations bill.

Sixth. I am for less, not more, Federal spending wherever possible.

Lastly, I am ready to vote for less money or none at all as compared with voting for more. Therefore, I may vote against both. But if I have to vote for one of the two, I am for the lesser amount.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois [Mr. MACK].

Mr. MACK of Illinois. Mr. Chairman, I take this time to restate what I had to say about General Quesada. I do not know whether or not the gentleman from California was referring to me a few minutes ago. Certainly I did not bitterly attack General Quesada. I stated that he was a military man, I believe one of our great military heroes, but he just is not very well informed on the civilian phase of aviation and certainly not informed on the Federal aviation program under the Federal Airport Act. I think if you read the hearings you will soon find that General Quesada is not really well informed on his own bill. I quote from page 55 of the hearings:

Mr. WILLIAMS. Then do I understand that the Federal Government would be able to contribute the cost of the control tower and the facilities to be occupied by Federal agencies?

Mr. QUESADA. No, sir, it doesn't. It limits it to control towers.

Mr. WILLIAMS. To control towers?

Mr. QUESADA. Yes, sir.

Mr. WILLIAMS. Where the terminal itself may house the local FAA office, for instance, or your weather station, there are no provisions whereby the Federal Government can participate in that?

Mr. QUESADA. No, sir.

I think that indicates that the General does not know too much about this legislation. If he is correct in the statement he has made, I should like one of the opponents of the bill or the proponents of the substitute to explain just what this substitute would do.

There is one very important point, and I am glad the gentleman from Mississippi [Mr. ABERNETHY] brought out the point about the discretionary fund. There is also another very important point, and that involves the safety of air transportation. How are you going to get these communities to build control towers so vital to safety of air navigation when the Government will not participate or contribute anything to the cost of construction?

The CHAIRMAN. The Chair recognizes the gentleman from Iowa [Mr. HOEVEN].

Mr. HOEVEN. Mr. Chairman, the longer I serve in the Congress the more disillusioned I become. Everybody talks about economy and no one seems to do much about it. Here we are again busting the budget to the tune of $97 million. Everyone who has served in this body any length of time knows full well that when this bill gets over to the Senate it will be increased perhaps to the $450 million mark, or whatever it may be. The question, therefore, naturally arises, whether we really want an airport bill. I am not here to speak for the President of the United States, but it is my personal opinion that with this reckless spending program being inaugurated so early in the session you are really running a chance of not having an airport bill at all. The $97 million figure we have been talking about is not justified, and that alone should justify a vote for the administration substitute.

The American people are way ahead of the Congress. They want economy in Government. Our national debt today is more than the national debt of all the nations of the world put together. We are having difficulty, as has already been stated, in selling U.S. bonds. Is not this a warning sign? Do you want to flirt with inflation? Are we going to live within our means so we may look forward to some tax reduction?

Let us support the administration substitute. This will be the best assurance that we will actually have a bill which can be enacted into law.

The CHAIRMAN. The Chair recognizes the gentleman from Alabama [Mr. ROBERTS].

Mr. ROBERTS. Mr. Chairman, I would like to address some thought to this proposition of how much the local governments, and I mean the States, counties, and cities, have spent on the airport program in the last 10 years. I think the figures will show that at the end of 1955 out of $579 million that have been spent in 19 of 21 major hub areas, local sources accounted for about $338 million. I think also it can be shown that the local sources get far less than the Federal Government in tax revenues. How anyone can say that an airport is strictly a local proposition, I simply cannot see. Every airport is a part of a national system, and today with jet air transportation, they are a part, defensewise, of an international system. I think the passenger who is boarding a plane at the Washington National Airport should have the same assurance that he is not going to be penalized so far as safety is concerned regardless of where that plane in which he is riding may land. Safety must be adequate regardless of the financial ability of local government.

Recently, we had a very serious accident at La Guardia Airport in New York. I certainly would not presume to say that it could have been prevented by having an additional protective runway. But the fact remains that the runway on which that Lockheed Electra was sought to be placed was not an adequately protected runway. It only had threshold and boundary lights and did not have any high intensity lights or guide beams.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts [Mr. CURTIS].

Mr. CURTIS of Massachusetts. Mr. Chairman, I rise in support of the substitute bill. First, I refer to the statement just made about the accident at La Guardia Airport, because I think there is some misconception in this House that the purposes of this bill go to skyway safety devices. There is no question but that the main provisions for safety on the skyways are in another bill for which large amounts will be appropriated by the House later in the year. I would like to quote a statement from an authoritative source about the New York accident:

The adequacy of electronic navigation and landing systems may be involved at La Guardia. This is a vital safety question and should be thoroughly aired.

But such systems are provided by separate legislation recommended by the President, which is in no way related to the purposes of the Airport Act.

Mr. Chairman, we have here one of these difficult questions of Federal aid which involves State sharing of funds. The President in his veto message last year said that the time has come for more local responsibility in this field. I agree with that, and I think that that objective will be better achieved if this House votes for the smaller of the two figures that are now before us.

The Federal Government has no money to apportion around to the States except that which it first taxes from the people of the States. But when the apportionment takes place, some States which have contributed less get more, and others which have contributed more get less. Massachusetts, as a high taxpaying State, usually fairs badly under this system. Many of us support the principle that there should be greater local responsibility, and that we should not build up a governmental colossus in Washington. Here is a field where greater local responsibility can and should be assumed. I believe that the Congress should support the President in this objective. I hope that the House will vote for the substitute bill.

The CHAIRMAN. The Chair recognizes the gentleman from Arkansas [Mr. HARRIS].

Mr. HARRIS. Mr. Chairman, I ask unanimous consent that all Members may have leave to extend their remarks on this substitute proposal at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

Mr. CRAMER. Mr. Chairman, I support the Springer substitute to H.R. 1011 which amendment would provide for $200 million for Federal aid to airports for the next 4 years and which would have made this money available principally for safety purposes which I think is the priority responsibility of the Federal Government in the field of aviation. If a choice must be made between safety features and terminal facilities, which appears to be the case, then I, of course, support the expenditure of Federal funds for safety purposes first. The Springer amendment would accomplish this objective and, in my opinion, knowing that there is a limita-

tion of funds that can be made available for airport improvement purposes if we are to balance the budget, I support this safety-first approach.

I personally am convinced that the committee bill will not meet with the President's approval and, therefore, cannot become law. I am for a reasonable airport improvement program consistent with these expressed views. Undoubtedly, the other body will insist on making substantial increases in the House bill in conference and if the past pattern is to apply, which I think it will, then the House figure of $297 million will be increased substantially, guaranteeing a veto. To vote for the committee bill, H.R. 1011, as reported by the committee thus, in my opinion, would have the ultimate effect of denying any Federal aid to airports which I am the first to admit is needed for safety purposes and I, of course, have been a supporter of justified Federal assistance in that it involves interstate commerce.

I hope the House approves the Springer amendment which can become law but if it does not, I will feel compelled to vote against the committee bill which means no bill at all. Legislation that can become law is critically needed with the fast growing air traffic and the advent of the jet age. It is unfortunate that politics is being played with this legislation. I refuse to be a part of those politics in the interest of providing needed Federal assistance for air safety in the gate-to-gate airport development program throughout the Nation. I further refuse to join the free-spenders who are supporting spending the $97 million more contained in the committee bill.

I trust that should the President veto the bill as finally passed, that Congress will measure up to its full responsibilities and will report out a bill that can become law.

Mr. ABERNETHY. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield.

Mr. ABERNETHY. The gentleman heard my remarks a few moments ago. What concerns me about the substitute is that it contains eight pages of language to which none of the debate has been directed. What does that language do?

Mr. HARRIS. Let me tell the gentleman.

We are going to vote on a very important proposition for the American people in about 5 minutes.

I can well appreciate the attitude of Members regarding this proposal. It has been obvious from the beginning of this year; as a matter of fact since last year, when the bill at that time was vetoed, that this was going to be a political vehicle by which it was going to be brought to the American people to show who is trying to spend a lot of money. I hope this legislation will not be decided on that basis. It is too important. The committee has worked out a bill by the will of the committee, working with the information it had before it. Yes; the gentleman is concerned about eight pages in the bill.

First let me tell you that the substitute bill and the committee proposal on the question of terminal facilities, those facilities utilized 100 percent by the Federal Government, are substantially the same. The treatment of Alaska, and now Hawaii, is identical. The question is not $297 million versus $200 million. No. Let me emphasize to the gentleman from Mississippi, here is the issue today: The issue is, Are we going to throw overboard this formula for the allocation of funds for the construction of airports, that has existed since 1946, and give to an administrator of an agency, a bureau, twice as much to use at his discretion? That is the issue. That is the eight pages the gentleman is referring to. Today under the law, and it has been throughout, 75 percent of the total to be allocated to the States is for the State programs, 25 percent to the Administrator to take care of emergencies. This substitute bill proposed by my friends on the minority would destroy the longtime formula, and you would take twice the amount and give it to one man to distribute and allocate as he chooses, as he sees fit. That is the issue we have got today. They say they are going to liberalize the Los Angeles Airport program with less money. The gentleman is right. It cannot be done. How ridiculous can you get?

In trying to propose that, it seems to me it is the greatest lip service to economy that has ever been offered to the American people. It has been said we arrived at a figure not justified by the record. I say the figure is justified by the record, notwithstanding the attack on the airlines. Yes, we subsidized the railroads. We subsidized the highways. We subsidized the waterways. Why the attack on the airlines that are providing service to the American people? Why the attack on the Airport Operators Council? Why the attack on the National Association of State Aviation Officials and others who supported this program, to try to make the American people believe that we are getting something by simply a reduction of $97 million? No; the issue here is, Are you going to give more power to one man or are you going to require him to follow the 1946 law? This is a good bill, worked out on the basis of the record. I urge that the substitute be defeated and that the committee bill be supported.

The CHAIRMAN. All time for debate on this amendment has expired. The question is on the substitute offered by the gentleman from Illinois [Mr. SPRINGER].

Mr. SPRINGER. Mr. Chairman, on that I demand tellers.

Tellers were ordered, and the Chair appointed as tellers Mr. SPRINGER and Mr. HARRIS.

The Committee divided, and the tellers reported that there were—ayes 144, noes 181.

So the amendment was rejected.

Mr. DAVIS of Georgia. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. DAVIS of Georgia: Page 4, line 24, strike out "for" and all that follows down through the period in line 1, page 5, and insert the following "for the fiscal year ending June 30, 1960, the sum of $29,800,000 for each of the fiscal years ending June 30, 1961, and June 30, 1962, and the sum of $29,700,000 for the fiscal year ending June 30, 1963."

Mr. DAVIS of Georgia. Mr. Chairman, I want to express the appreciation which I feel to the committee for reducing the figure to the amount now contained in the bill. I feel, however, that $200 million, the amount which is stated by the head of the Agency to be sufficient, ought to be the amount which this bill carries. I have therefore offered this amendment which deals with nothing but the amount of money in the bill. It reduces the amount from $297 million, which is provided in the bill, to $200 million.

The reduction is effected in the following manner:

There is no reduction for 1960. The bill leaves an authorization of $62.1 million for fiscal year 1960. This amendment affects the paragraph beginning on page 4 of the committee bill, beginning on line 15 and ending over on line 5 of page 5. For fiscal year 1961 the reduction is $32.3 million, leaving an authorization of $29.8 million. For 1962 the reduction is $32.3 million, leaving an authorization of $29.8 million, and for 1963 a reduction of $32.4 million, leaving an authorization of $29.7 million. That will cut the amount in this bill down to $200 million.

Mr. Chairman, I think this is a fair proposal, and I think that this amendment should be adopted. I do not think that the bill as it finally passes the House is the one which will go to the White House for signature, anyway. There is going to be considerable maneuvering and negotiating when this bill goes to the committee of conference. To effect this cut today will put us in a bargaining position where I think that the final bill which comes out will be one of which we might be proud and that all of us could support and feel that equity is done and that an adequate bill will be sent to the White House. This amendment does not affect the proposal on page 6 of the committee bill which deals with the additional discretionary fund. It does not present any of the difficulties which were involved in the substitute which was just voted upon. It simply authorizes a cut of $97 million, and I think that it is a fair proposal. I solicit your support for it.

Mr. HARRIS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, we have had rather full debate on this question. I ask unanimous consent that all debate on this amendment close in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

Mr. COLMER. Mr. Chairman, reserving the right to object——

Mr. HARRIS. I withdraw it.

The CHAIRMAN. Very well.

Mr. HARRIS. Mr. Chairman, I rise in opposition to the amendment. As I have stated, we have had a rather full discussion on this question. I fully realize the feeling that has been expressed throughout the country and the Congress on this question of reducing the

budget. It seems to me, however, it is rather unfortunate that at the outset we take one of the most important programs for the interest and the safety of the American people for the application of this principle. There is no question but what the record shows that to meet the requirements of local sponsors that the Federal Government's share would be approximately $477 million. Now, that was information developed during the course of hearings in our committee. In 1955 the question arose as to whether or not the Federal Government should share in the construction of terminal buildings. The Congress approved a policy that terminal buildings were a part of the national airport program. Now the question arises to what extent terminal buildings shall become part of it. It was apparently the overwhelming sentiment of the committee, from the hearings that we had, that we should not fully share in the 50–50 matching in connection with terminal buildings. Then it developed that some 30 to 35 percent of the total sponsors estimated would be needed would have gone into the terminal buildings program. Therefore the committee first reduced the amount to $363 million before cutting out the terminal building program, except for the space used by the agencies themselves. Then in a later move, there was a further reduction, through an amendment offered by one of the members of the committee, so that it was reduced to $297 million on reconsideration. That was arrived at in this way. You take 35 percent of the estimated needs to meet this program from the $477 million and you get approximately $300 million. That is the way the committee arrived at this figure of $297 million. So that under the present law, working out the formula under the allocation, we have a uniform airport construction program that the committee felt would meet the needs during the next 4 years.

Mr. Chairman, I will say to my colleagues that there has been no greater consideration given to any legislation in this Congress than this committee has given to this bill to try to justify the needs, and yet to meet the requirements that are necessary to carry out the national airport plan.

Mr. ABERNETHY. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Mississippi.

Mr. ABERNETHY. I have two questions. Does the gentleman feel that the figure $297 million or thereabouts—$1 million or so either way—will be adequate to carry out the objectives of the bill?

Mr. HARRIS. I think the $297 million may ultimately prove to be a little low. But we feel that with the sponsors of those programs making special efforts, we can fairly do the job.

Mr. ABERNETHY. Mr. Chairman, I want to ask the gentleman one other question. I realize in asking it that he cannot answer for somebody else. But there is concern in this Chamber on both sides of the aisle regarding the financial structure of our country. I am sure the gentleman is concerned about it; in fact, I know he is.

Does the gentleman feel that if this bill is passed with this figure, that there will be sufficient strength and force behind it to get the other body to accept it in conference?

Mr. HARRIS. Let me say to my friend from Mississippi that I appreciate the compliment he has paid me. I am concerned about the budget. That is the reason I made the suggestion to the committee that we live within the budget that was sent down to us by the White House. We are $2 million under the budget figure in this bill we have. If we could get the solid support of this House to back up this committee, in my humble judgment we could go a long way toward convincing the other body that this is something like the figure that, No. 1, is needed and justified and, No. 2, would fairly well meet the requirements. But if the gentlemen, as they have indicated over there, admit defeat to start with and send me to conference with that kind of mandate, I do not know what we will be able to do. I am asking the House to back up the committee in what it has done in its reduction of these figures and give us your solid support. I think we can get a bill that will go to the White House within the budget, and surely, surely reasonableness would dictate its approval.

Mr. COLMER. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, I do not like to inject myself into this debate for several reasons. One is the very high regard and the great personal affection I have for the chairman of this committee, the gentleman from Arkansas [Mr. HARRIS]. But, Mr. Chairman, if we are ever going to begin to do something about this deficit spending, if we are ever going to do anything about trying to stop the fire of inflation, we must begin now to do it on these authorization and appropriation bills.

We are all of course interested in airports and in airways, but the thing I am most concerned about now is where we are going if we do not start applying the brakes.

We have seen some partisan exhibitions here today and probably yesterday. I want to just tell you people over here on my left and you people over here on my right that I am not so much concerned about the future of the Republican Party or the Democratic Party in this country, the thing I am most concerned about is the future of the Communist Party in this country, because once you destroy the value of the dollar and the credit of the Government the Communists are going to move in. That was the prescription the original Communist—Lenin—blueprinted when he said the way to destroy America, the chief potential enemy, was to make it spend itself into bankruptcy.

I ask you, where are we headed?

I was talking with the Secretary of the Treasury, Mr. Anderson, the other day. When I started that conversation I was worried about the future of my grandchildren, but when I got through talking with this man, who knows more about it than I do, I was worried about myself, not about my grandchildren. I am worried as to what the future is going to be in my time if we continue this deficit spending. I would like to see this amendment adopted.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. COLMER. I will have to yield to my devoted friend.

Mr. HARRIS. I share the gentleman's concern about deficit spending, but the gentleman does realize that the bill we are presenting to you here is within the budget that was presented to the Congress by about $2 million.

Mr. COLMER. I just got through telling my friend that I am not concerned about the President's budget or whether it is realistic, or phony as it is sometimes charged. What I am concerned about is the spending of Federal money, inflation, the soundness of the dollar and the future of the Republic. Why, do you know that President Roosevelt and I came to Washington together. We both ran at the same time on an economy platform. We charged Hoover with being a spendthrift because he was spending a little better than $4 billion a year. Today, after President Roosevelt and President Truman and President Eisenhower, we are spending twice that much to service the national debt. How long can we go on with this type of Federal spending without somewhere down the line reaching the day of reckoning? I repeat—once you destroy the credit of the U.S. Government, then everything will be gone and then the Communists are going to move in. So let us cut down on expenditures a little bit here. Certainly if we cannot live within our income now in an alltime high period of peacetime economy and a record high level of peacetime taxes we will never do so.

Mr. Chairman, I am sure that my position here today comes as no surprise to my colleagues, particularly the older Members. I have been expounding this same philosophy for many years. In this connection, I am submitting herewith for the RECORD a speech which I made on this subject almost exactly 7 years ago. The speech is as follows:

HIGH TAXES RESULT OF UNBRIDLED SPENDING

Mr. COLMER. Mr. Speaker, I call up House Resolution 578 and ask for its immediate consideration.

Mr. Speaker, I yield 30 minutes to the gentleman from Illinois [Mr. ALLEN], and pending that, I yield myself 15 minutes at this time.

Mr. Speaker, for the past two decades this splendid young Republic has been going through one crisis after another; some were real, others mere political creations advanced to perpetuate those in control of the government in power. Today we are faced with another crisis, a real crisis, a crisis that threatens to destroy the fiscal foundation of the Republic. We are on the brink of the precipice of national bankruptcy. More and more thoughtful citizens throughout the country are realizing and fully appreciating the dangers ahead if this unbridled governmental spending is permitted to continue.

Today we, the representatives of the people, are given an opportunity to apply the brakes and thus make a further contribution toward reversing the trend in extravagant governmental spending.

This rule makes in order the consideration of H.R. 7072, the annual independent offices appropriation bill, a bill appropriating funds for the next fiscal year for most of the Federal bureaus. The President, through his Budget Bureau, requested of the Congress a total of $2,085,097,390 for these bureaus. The Appropriations Committee, under the able leadership of its subcommittee chairman, the gentleman from Texas [Mr. THOMAS], has cut that request by a total of $700,048,695. In every case the committee has made substantial reductions excepting, of course, such items which are fixed and not susceptible to reduction.

As one who has long been interested in this economy drive, I desire now to express, in the premises, on my own part and on the part of my coworkers, the gratitude of all economy-minded Members of this body for the committee's efforts. While further efforts will be made in the form of appropriate amendments to make even further economies, I apprehend that determined efforts will be made by those Members of the House who consider themselves liberal minded to restore the reductions made by the committee in an effort to continue the spending spree. This effort must not prevail. The line must be held.

BALANCED BUDGET

Mr. Speaker, I have been alarmed for the past several years over the dismal picture presented of the country going deeper and deeper each year into the red while the Federal Government digs deeper and deeper into the pocket of the American taxpayers. More than a year ago a little band of southern Democrats, with the aid of others, in this body got together and agreed to accept the President's challenge to cut his budget. Last year we succeeded in trimming that budget several hundred million dollars. This year others have joined our group and the work continues. We have reason to believe that, with the addition of more and more converts to the cause, the budget can be balanced this year in spite of the $82 billion request of the President with the resultant $14 billion proposed deficit. If the economy line is held on this bill and the succeeding appropriation bills yet to come before us, there will be no necessity for any deficit. We can place ourselves on a pay-as-you-go basis. Therefore our immediate objective this year should be a balanced budget.

It is as obvious as the noonday sun that if we cannot balance the budget now, with an all-time high national income of cheap money together with an all-time high taxing program, the hope of ever balancing the Nation's budget is indeed dim. In fact, prudence suggests that under such conditions we should be retiring a part of our gargantuan debt and fortifying our fiscal condition for the eventual rainy day.

FANTASTIC GROWTH OF NATIONAL DEBT

Mr. Speaker, the growth of our national debt and the fantastic amount of taxes extracted from our people has caused me to do a little research. I thought it might be well to call the attention of the Congress and the country to some comparative figures of taxes and expenditures by our Federal Government at 25-year intervals over a period of the past 160 years of the country's history. The startling results are as follows:

Period	Total expenditures	Net receipts	Change in public debt
1789 to 1813	$219,233,000	$221,816,000	[1] $6,024,000.00
1814 to 1838	534,759,000	644,634,000	−71,053,000.00
1839 to 1863	2,232,812,000	1,130,702,000	1,109,339,000.00
1864 to 1888	8,833,181,000	8,881,529,000	264,858,000.00
1889 to 1913	12,701,857,000	12,787,468,000	−191,584,000.00
1914 to 1938	124,883,429,000	89,393,932,000	35,971,693,000.00
1939 to 1952 [2]	638,131,389,000	419,494,298,000	260,193,628,740.39

[1] 1790 to 1813.
[2] To Mar. 13, 1952.

To say that the figures are startling is an understatement. It is significant to note that in the first period of the country's existence, when the Jeffersonian principle that the people who are least governed are best governed was in full bloom, and prior to the growth of the doctrine of paternalism that the poor young striving Republic actually had a substantial balance of more than $6 million in the Treasury. Compare that figure with the national debt of more than $260 billion today and one is compelled to question the oft-repeated statement that the country today is more prosperous than ever before in its history. Moreover, I desire to again call the attention of my colleagues to the fact that the Government is no different in its fiscal affairs from the individual or a corporation. The management of Government is a business matter. The fact that Government is big business makes no difference. And I repeat what I have often stated on the floor of this House, "There is a bottom to the Government's meal barrel as well as to the individual's or the corporation's."

INCONCEIVABLE DEBT

Mr. Speaker, we have been lulled into complacency so long by the so-called liberal thinkers and have been so accustomed to appropriating the taxpayers' money in denominations of billions that it is impossible to comprehend what a billion really is. Some mathematician, in an effort to comprehend a billion dollar figure, has come up with this startling illustration:

"If a person had started in business in the year A.D. 1 with a billion dollar capital, and if he had managed his business so poorly that he lost $1,000 each day, in 1952 he still would have enough capital left out of his original billion to continue in business, losing $1,000 a day, for almost an additional 800 years, or until the year 2739."

Now in order to attempt to get some conception of how long it will take us to retire the present national debt of over $260 billion let us assume that we are frugal and prudent and start retiring that debt at the rate of $500 million a year, 520 years would be required to retire the debt.

Moreover, Mr. Speaker, if further emphasis is desired on our financial status one needs only to refer to the fact that it now requires more than $6 billion per annum in the form of interest to service this enormous debt. The Treasury has now asked for and we appropriated last week an increase of $300 million to take care of the increased interest on that debt over last year. In other words, the interest alone on our national debt is costing the taxpayers now about 1½ times as much as the total expenditures for 1 year of the Federal Government in the period 1914–38.

DARK BUT NOT HOPELESS

Mr. Speaker, that, sir, is the fiscal condition of the greatest business in the world, the United States of America. It is an unpleasant picture. It cannot be passed off lightly with the explanation that we are in a global warfare against communism, another crisis. Neither can we comfort ourselves into further complacency by adding to that the fact that we have recently emerged victoriously from a global strife with Nazi Germany and totalitarian Japan. The fact is that the country has been victorious in other contests at arms and through other crises throughout its history without serious impairment of its financial structure. Those crises, prior to World War II and prior to the Soviet Russian menace, were serious, too, in their day. Can it be logically reasoned that the situation in this country for the past 6 years has been so grave as to require the extraction of more taxes from the American people than was taken from them in the first 156 years of the country's existence? I think not.

Permit me to again point out to my colleagues what I have repeatedly pointed out on the floor of this House during the past 6 years that so far as the masters of the Kremlin are concerned they want neither war nor peace. Their main purpose, in my humble judgment, is to conquer this country, as they have conquered all others, by the simple procedure of bleeding us white in the destruction of our economy. They would accomplish this here as elsewhere through fear, infiltration, by prodding us into national bankruptcy, and taking over in the resultant confusion of chaos and hunger. No one realizes more than the Kremlin strategists that a hungry belly cares little about the type of government it lives under. In substantiation of this I call your attention to the well-known fact that more than 600 million people have been drawn behind the Iron Curtain without the firing of a single gun by a Russian soldier.

When the blank checks, running into untold billions, are requested of the Congress for national defense and military and economic aid to foreign countries, we of the Congress, the representatives, and spokesmen for the American taxpayers, must stop and ponder. We must approach these requests realistically, giving due weight to the probability of the correctness of this view. For, it must be obvious to all that we Americans cannot indefinitely continue to arm and feed half the world. America is a rich Nation but there is a limit even to the resources of this great Nation. As one who made an on-the-spot study of world conditions in 13 foreign countires immediately following the war, I have always recognized the necessity for a helping hand to those who were making an honest effort to resist the plague of communism. But I have always consistently opposed the enormous amounts involved and advocated a more realistic contribution. It is unthinkable that we should now comply with the President's request for another $8 million contribution.

CONGRESSIONAL RESPONSIBILITY

Mr. Speaker, the solution to our financial problem and the responsibility therefor are strictly up to the Congress. More than that it is up to this House to see that the dangerous trend is reversed. I need not remind you that the wise men who founded this Government provided that because we of the House must originate all taxes and appropriations we should be elected every 2 years. We cannot hide behind the Chief Executive or complain of the traditional policy of the other body to increase appropriations. Certainly, at best the responsibility is twofold, the President and the Congress. Furthermore, I should like to refresh your memories today by calling your attention to the fact that the people of America are tax conscious as never before. The income tax, originally designed and practiced as a soak-the-rich tax, has become so enlarged that it now digs into the pockets of the smallest business man, the white-collar worker, and the day laborer. The policy, under the Fair Deal program, of everybody "touching" the Federal Government has likewise developed into the policy

of the Federal Government "touching" everybody. Even the humblest citizen now realizes that the Federal Government is no Santa Claus. In fact, we have reached the saturation point in taxation. With the tax rate as high as 90 percent in the upper brackets, the incentive for businessmen to make money scarcely exists, while the day laborer and the middle class find it difficult to live under the high rate of their own taxes.

Yes, Mr. Speaker, the people, the overburdened taxpayers of this country, are looking to us, as their representatives, to at least balance the budget. In fairness to those who founded this Republic and to the generations of future Americans yet unborn, we can do no less.

SOLUTION

Mr. Speaker, I fear that I have been boresome, and that I may even be charged with pessimism, in this long recital in an effort to emphasize the seriousness of the situation. It is serious. America is at the crossroads in its fiscal policy. If we do not change that policy we become a bankrupt people. If we destroy the faith and credit of the Government we lose everything, our economy, our standard of living, yes, even our cherished liberties.

If the Congress is to regain its constitutional control of the purse strings; if the budget is to be balanced; if we are ever to liquidate this enormous debt, I respectfully suggest and urge that the following formula be adopted:

First. Our legislative committees, as well as Committees on Appropriations, must cease reporting out bills except those which are absolutely essential to our economy and national defense.

Second. Every Member of this body must recognize that the objective of balancing the budget is his most important assignment.

Third. Sectionalism, partisan politics, responsiveness to highly organized minorities, must give way to the national need for a sound financial policy.

Fourth. Every dollar appropriated must be considered as carefully as if it were coming out of the pockets of the Members themselves, as indeed the Members' proportionate share is.

Fifth. Our congressional committees, particularly the Appropriation Committees, must be staffed with an adequate staff of experts equal in efficiency to the staffs of the various governmental agencies who appear before them seeking appropriations.

Sixth. The Congress and the country must recognize that financial solvency is as important as military might in preparing ourselves against any potential foreign aggressor, a fact which our military captains should be made to understand.

Seventh. Our foreign friends must be made to understand that there is a limit to the resources of America.

Eighth. The system of permitting the carryover of unspent funds from the current fiscal year into the new year must be abandoned. A meticulous study of the 1,200 pages of the President's budget this year will show that the carryover of unspent funds from the current fiscal year will exceed $60 billion.

Ninth. The procurement of military requirements, which constitute more than 50 percent of our expenditures, must be placed in the hands of trained civilians who appreciate the value of the dollar.

Tenth. And, finally, the citizens of the Republic, now conscious as never before of the burdens of taxation, must practice the doctrine of States responsibility as well as States rights. The practice of looking to Washington for Federal aid in civil responsibilities of their own must cease. They must realize that there is no State, county, or city whose financial statement is not sounder than that of the Federal Government.

Finally, Mr. Speaker and Members of the House, this budget can be balanced and must be balanced this year. Whatever it takes to balance it must be done. A $14 billion deficit under the President's budget recommendations is unthinkable. If this country, the last fortress and haven of a free people, is to survive our fiscal policy must be placed on a sound basis. The time is now. Next year may be too late. Now is the time to place the country above party.

In the name of the Founding Fathers who gave the country its birth, in the name of the untold thousands who have died to preserve it, in the name of free peoples everywhere, I beseech you to save the Nation from bankruptcy and thus perpetuate this, the most glorious form of free government ever conceived by the minds of men.

Mr. SMITH of Virginia. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I rise in support of the amendment offered by the gentleman from Georgia. I thought I was going to have something to say, but the gentleman from Mississippi got up in the well of the House before me and said it for me in a much better way than I can say it. We have all been disturbed, as the country is disturbed by the tremendous expenditures that are pending in this Congress. I guess we have all written to our constituents and told them how much we are interested in getting a balanced budget and a sensible fiscal situation during this present Congress. We have already been labeled as a spending Congress. Here is your opportunity to let it be known which side of this thing you are on. I think this is the first large authorization bill that we have had. We have some more pending and they are going to be coming along pretty soon, gentlemen, and then you are going to have your opportunity to see which side of this fence you are on. I am deeply disturbed about the fiscal situation of this country. I remember last year by reason of the tremendous expenditures of the last Congress, it was necessary for us to increase the debt limit twice in one year, and now we are told that before this good year of our Lord expires, we will again have to increase the debt limit. Yet, when it comes down to specific measures that may affect us a little bit back home in our own districts, we have that natural inclination to just go along with this one, but "We are going to do better on the next one." Gentlemen, here is the opportunity—here is the opportunity to demonstrate whether you propose to cut these expenditures this year or not. Remember this—there is some talk about the President's budget—the President's budget is not even a balanced budget. It is teetering on a very small balance and you all know that it is not going to stick. Remember another thing, gentlemen, that your Government bonds have reached such a point where they have disturbed the financial institutions of the country and your interest rate has been increased and is increasing. Your bonds are becoming difficult to sell on the open market—we might as well admit it. What are you going to do when we reach the point where you cannot sell your Government bonds—if we do reach that point—and I hope that we never do. But we are drifting in that direction.

Now, for one time, let us demonstrate that we are going to cut these things down as they come along, and perhaps in the end the committees will recognize that it is necessary. I do not say this in criticism of the committee that brought this bill in, because I think they did a good job. They cut it quite a bit. But we all know that the tremendous bill passed in the other body, even if we adopt this amendment, when it goes to conference you will spend more money by a considerable amount by the time the usual compromise is made than the agency that has got to carry this thing on says it needs. If the agency which knows the situation says they do not need the money and cannot use it, why should we insist upon voting more money than is needed for the project?

Mr. MOSS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, it seems to me that the amendment before us is being offered not on its merits, but with a force of reasoning which is designed to frighten us. I point out that this Nation is today on the threshold of the jet age; that we have moved very rapidly in recent years, and that we should now talk about the perfecting of the necessary national network of airways. I point out to you that this network is essential to the growth of the economy of this Nation. Mark my words. The $97 million being authorized by the committee's action, over the figure proposed in the amendment before us, if you measure it in percentages of the budget, is an infinitesimal portion. An important portion, however. But if we are so desperate, if we are to the point where this $97 million over a period of 4 years is going to push us into some form of fiscal panic, then I suggest that this Congress apply its talents to searching out the waste and inefficiency in the military program; in the program of economic assistance, and of military assistance, which every one of us knows full well exists. If we want to apply those talents we can dig up not only this $97 million but many times as much. I think we should concern ourselves with the objectives of this legislation, the objective of giving some stimulus to the governmental units who are obligated just as much by financial problems as are we who have a much narrower base from which to seek other revenues, who are not permitted to regulate the commercial air industry. Then, if we followed the advice of the gentleman from Michigan and levied a $1 tax on each passenger, it would not put 1 cent into the hands of the local governments in the use of this program. The Federal Government controls this whole activity. It lays down the standards. Then we say to local governments: "You are taking a free ride." "You should look yourselves to meeting the needs of this Nation in this area, where the construction of adequate programs not only contributes to our country but contributes to our ability to defend ourselves."

Mr. HARRIS. Mr. Chairman, I think the Members of the House realize that under the amendment offered by the gentleman from Georgia [Mr. DAVIS]

after the first year there would be $29 million, as I understand, for each year, to be utilized in the airport construction program. Under the law 25 percent of that is discretionary with the Administrator, as it has always been. That means that only 75 percent of $29 million can be allocated to the States during each of the next 3 years. I think you should know there will be only about $21 million to be allocated for airport construction to the States for this program. Consequently there would not be enough for any airport program after the first year, and you might as well recognize that fact. Some of the smaller States of the country would get practically nothing at all.

Mr. MOSS. I thank my chairman, and I would urge all members of this Committee to vote with the confidence we must have in this case to meet the problems of our Nation, and not from fear. We are not going under on the basis of this airport program. If we want to seek the opportunity to save there are many areas where we can save much more.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Georgia [Mr. DAVIS].

The question was taken and the Chair announced that the noes seemed to have it.

Mr. SPRINGER. Mr. Chairman, on that I ask for tellers.

Tellers were ordered and the Chair appointed as tellers Mr. DAVIS of Georgia and Mr. HARRIS.

The Committee divided, and the tellers reported that there were—ayes 168, noes 157.

So the amendment was agreed to.

Mr. WILLIAMS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. WILLIAMS: On page 5, line 5, immediately before the quotation marks, insert the following:

"Notwithstanding any other provision of this Act, no amounts may be obligated pursuant to this subsection or subsection (b) of section 6 of this Act in any fiscal year by the execution of grant agreements pursuant to section 12 of this Act until appropriations have been made for the liquidation of such obligations, which appropriations are hereby authorized."

Mr. WILLIAMS. Mr. Chairman, I have three additional amendments at the Speaker's desk, all of which are directly related to the amendment just offered, merely carrying out the purpose of this amendment as related to other parts of the bill, and I ask unanimous consent, Mr. Chairman, that they may be considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Mississippi?

There was no objection.

The Clerk read as follows:

Amendment offered by Mr. WILLIAMS: On page 6, line 3, immediately before the quotation marks, insert the following:

"Notwithstanding any other provision of this Act, no amounts may be obligated pursuant to this subsection in any fiscal year by the execution of grant agreements pursuant to section 12 of this Act until appropriations have been made for the liquidation of such obligations, which appropriations are hereby authorized."

Amendment offered by Mr. WILLIAMS: On page 6, line 20, immediately before the quotation marks, insert the following:

"Notwithstanding any other provision of this Act, no amounts may be obligated pursuant to this subsection in any fiscal year until appropriations have been made for the liquidation of such obligations, which appropriations are hereby authorized."

Amendment offered by Mr. WILLIAMS: On page 9, after line 25, insert a new section, as follows:

"Sums appropriated pursuant to this Act with respect to any fiscal year beginning after June 30, 1959, shall remain available until expended."

Mr. WILLIAMS. Mr. Chairman, the purpose of these amendments is to provide for congressional control over the expenditure of the funds authorized in this bill.

First, may I say this: I know that quite often when someone offers an amendment of this type he is accused of being against the bill or attempting to gut the bill. Quite often he is asked the question if his amendment is adopted, or not adopted, will he support the bill. May I say that I am for this bill; I intend to support it whether these amendments are adopted or not. However, it is my belief that the amendments which I have offered should be adopted by the House. Otherwise, we will simply be handing over to the Administrator of the Federal Aviation Agency a signed blank check to draw on our account.

I have never felt that it was a good practice for Congress to authorize executive agencies to obligate the Congress or the Treasury in advance of appropriations. In this bill, as it came from the committee, Mr. Quesada's agency may obligate the expenditure of these funds; and, while it is true that he must have an appropriation from the Congress, the action of the Congress is more or less ministerial, and comes, in a manner of speaking, "after the fact." In any event, by the time it reaches the Appropriations Committee, it is too late for anything to be done, as the contract has already been made and the Congress committed. It becomes a matter over which the Congress has no control and no alternative but to pay the check drawn against the people's account, over which we are responsible as trustees.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. WILLIAMS. I yield to the gentleman from West Virginia.

Mr. BAILEY. When the appropriation comes up for economic aid abroad, will the gentleman offer the same qualifying amendment?

Mr. WILLIAMS. I should be delighted to do that, and then I shall vote against the whole bill, along with the gentleman from West Virginia. Now there is where we can effect some real economy. I thank the gentleman for mentioning that, and I hope other economy-minded Members will take the same kind of dim view of that as he and I do.

I know there are ample precedents for the type of contract authority carried in this bill. But the mere fact that there are precedents, and that it has been done in the past, is not—by any means—a justification for it. Such procedure is merely an abdication of the congressional responsibility that we, as elected Representatives of our people, are presumed to exercise and are charged to perform by the American Constitution.

This is what we have heard called a "backdoor approach" to the Treasury. We are delegating authority to the Aviation Agency Director, Mr. Quesada, in effect, to commit public funds without any control by the Congress, the elected Representatives of the people who must pay the bills.

If we enact the bill in its present form we will find that these expenditures cannot be budgeted by the President in line with, and with regard to, the general overall condition of the Treasury. Rather, he will have no alternative but to send us the exact amount which has previously been obligated by the Federal Aviation Agency. The language presently in the bill is a "gimmick", a means of bypassing the Appropriations Committee's authority, and would be an act of delegating a constitutional responsibility which we, ourselves, are obligated to assume.

I feel that we would be guilty of exercising gross fiscal irresponsibility by delegating spending authority to an appointed agent of the executive branch. This amendment offers the Congress an opportunity to regain control to some extent over the financial operations of the Government through the elimination of the language that opens the back door to the Treasury.

Mr. YOUNGER. Mr. Chairman, I move to strike out the requisite number of words.

Mr. YOUNGER. Mr. Chairman, I rise in support of this amendment. We have a rather peculiar situation facing us in regard to the Aviation Agency. If you will notice, in the budget for 1960 there is a total of $760 million. Only $65 million of which does not have the annual review of the Committee on Appropriations. That is the amount that we just passed for aid to airports.

The capital investment, which is $145 million, comes from the Appropriations Committee.

Operations and maintenance, $328 million, comes from the Appropriations Committee.

Research and development, $63 million, comes from the Appropriations Committee.

Subsidy for airlines, $61 million, comes from the Appropriations Committee.

Service mail pay, $77 million, comes from the Appropriations Committee.

Aviation weather, $18 million, comes from the Appropriations Committee.

Every one of these items is annually reviewed by the Appropriations Committee. If we do not adopt the amendment offered by the gentleman from Mississippi, the Appropriations Committee will have no right to review annually that money for aid to airports. The Administrator can commit all of these funds over the period, and all the Appropriations Committee can do is appropriate the money to pay for an obligation already committed in the name of the Government.

I think it is highly essential, if the House is to regain control of the purse strings, for us to depend on the Appropriations Committee. I submit to you that this is a test vote of whether we want an orderly process by the Congress in appropriating funds. I certainly heartily support the amendment submitted by the gentleman.

One other item: This will not in any way prevent the Administrator from planning, because there is a provision that funds appropriated shall remain available until expended. So this amendment does in no way infringe on the ability of the Administrator to make his plans for the future.

Mr. HARRIS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, may I suggest to my colleagues that if you want to finish the airport bill it could be done by adopting this amendment. We tried the proposed procedure following 1946. As I indicated yesterday in the general debate, there was an appropriation of $45 million the first year, less the second year, and so on until in 1953 there was exactly nothing. The Appropriations Committee had a reason for it. The reason was that it takes a long time to prepare plans. The advance program for airports could not be developed in order to present a budget to the Appropriations Committee that would justify appropriations.

Let me describe to you for just a moment how this program works. Both the bill presented by the committee and the substitute bill of the administration which was offered and considered, carried this contract obligation authority. I would like to describe just how this program works. In the first place, under the authorization at the beginning of each year there is a distribution made by the Administrator of the amount authorized to the various States. That is the first step. The second step is the developing of plans by the sponsors in the various States through the regional offices. That requires time. It takes not 1 year but sometimes 2 or 3 years. The sponsors have to go in and arrange for local financing, perhaps by a bond issue. Everyone knows that that takes time.

The third step is for the Federal Aviation Agency to put the project in the program, which means funds are earmarked for that project. In the next step you obligate the money under grant agreements. Then, after the obligation and the grant agreement is entered into, the sponsor then makes a construction contract. That in itself requires time. After the work has been done, the sponsor comes to the FAA for payment and payment is made from funds appropriated by Congress in accordance with the provisions of the amendments to the Federal Airport Act made by the 84th Congress, which authorizes appropriations necessary to liquidate the obligations incurred.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HARRIS. Mr. Chairman, I ask unanimous consent to proceed for 3 additional minutes.

The CHAIRMAN. Without objection, it is so ordered.

There was no objection.

Mr. HARRIS. Mr. Chairman, I think it is very important to understand just what this procedure is. Each year the administrator makes an estimate of what will be needed to meet these obligations during the next fiscal year. Then the budget comes to the Congress. It goes to the Committee on Appropriations.

Mr. WILLIAMS. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield.

Mr. WILLIAMS. What the gentleman is saying is true except that the money has already been obligated by the time it reaches the Budget and by the time it reaches the Congress, and Congress has no alternative but to pay the bill. The gentleman knows that.

Mr. HARRIS. I cannot agree with that at all. That is not the necessary procedure and it is not the law, and I disagree with my distinguished colleague as to the procedure. The Committee on Appropriations can slow this thing down to zero if it wants to by reviewing it because these obligations and authorizations are pretty well agreed to. It is the responsibility of the Committee on Appropriations to review and report to this Congress and appropriate the amount necessary to meet these obligations.

Mr. WILLIAMS. If it was done the way the gentleman says it is done, then my amendment would not be necessary. The fact is all of the language in the bill would not be necessary to bypass the Appropriations Committee. The point is that this money is already obligated under the authority of this act before it is budgeted and sent to the Congress.

Mr. HARRIS. The gentleman has stated that three times. I am trying to explain how this program works. You have to have something that the sponsors themselves can depend on. They cannot make their plans in 1 year. No Appropriations Committee is going to appropriate money in anticipation that 3 years from now a program will be worked out. The program has to be worked out first. The local financing is second. Then we have to have the application, and the programing by the FAA and the signing of the grant agreement, and then we have to enter into a contract, and then appropriate the money. The last step is to draw a voucher on the Treasury, just like the Constitution provides.

The CHAIRMAN. The time of the gentleman from Arkansas [Mr. HARRIS] has expired.

Mr. JONAS. Mr. Chairman, I rise in support of the amendments.

Mr. Chairman, once funds have been obligated legally, the Appropriations Committee has no choice but to grant the appropriation.

In support of this proposition, I would like to cite House Report No. 216, which was filed in the first session of the 85th Congress. This was a report prepared by a special subcommittee appointed by the distinguished chairman of the House Committee on Appropriations. That subcommittee gave some study to this very problem, and it filed its report, as I have indicated, in 1957. The title of the report is "The Administration Plan To Improve Congressional Control of the Budget."

The distinguished gentleman from Texas [Mr. MAHON] was chairman of that subcommittee, and if I may have the attention of the distinguished chairman of the House Committee on Interstate and Foreign Commerce, apropos of his comment toward the conclusion of his remarks, I would like to read what Mr. MAHON and his subcommittee said with respect to this proposal. I am reading from page 9 of House Report No. 216, made to the 1st session of the 85th Congress:

> It may come as a surprise to many to know that while the last session of Congress was reducing the President's requests for "appropriations" in appropriation bills by $257 million, it was at the same time, in other than appropriation bills, increasing the President's requests for other types of obligating and spending authority about $1,736 million. These types of authority result in expenditures from the Treasury just as do expenditures from appropriations.

Then the chairman of this very important subcommittee listed the items that made up that $1,736 million in increased spending authority over and above budget requests and over and above appropriation bills, and then he said this:

> The practice continues to grow. Recent examples in point indicate the trend. The multibillion dollar Federal aid highway grant program figures have dropped from budget totals. The law actually appropriates the receipts to a so-called trust fund for the next 16 years, to be obligated through contract authority, removing approximately $2 billion a year from determination in the annual appropriation process. In 1955—

And this is point I would like for the chairman to hear—

> In 1955, contract authority ($63 million a year for 3 years) for airport-construction grants was enacted in basic legislation for the first time. In the annual budget Congress is presented with the bill and has no choice but to grant the appropriation.

Mr. BAILEY. Mr. Chairman, will the gentleman yield?

Mr. JONAS. I yield to the gentleman from West Virginia.

Mr. BAILEY. Does the gentleman understand that if this amendment is approved and we apply a similar amendment to the mutual aid appropriation bill that it will automatically kill $5,800 million authorization for which the Congress has so far made no appropriation? Does the gentleman think the President would approve the bill?

Mr. JONAS. I do not know whether the President would approve the bill; I am simply saying that here on these amendments offered by the gentleman from Mississippi the Congress is being given another opportunity to put an end to this practice of authorizing executive agencies to obligate the credit of the United States by bypassing the budget and appropriating processes. It is not a good practice; I think it ought to be discontinued.

I have just pointed out how in one session of the Congress we increased

spending authority over and above appropriation bills—in one session of Congress alone—by $1,736 million.

Just a few weeks ago the gentleman from Virginia [Mr. GARY], pointed out on this floor how last year, during another single session of Congress, we did the same thing except that last year the sum amounted to more than $4 billion, and the other body passed bills authorizing spending outside of appropriation bills in an amount that totaled $9 billion.

I do not think that is a proper way for Congress to discharge its traditional and constitutional authority and responsibility to exercise control over Government spending. It is, in my judgment, an unwise practice and should be discontinued. We can make a start today in the direction of regaining some congressional control over spending by adopting the pending amendments. I urge the committee to adopt them.

Mr. FLYNT. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Georgia is recognized.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. FLYNT. I am glad to yield to my chairman.

Mr. HARRIS. I hate to interrupt the gentleman or take any of his time, but I have to do it in order to answer the gentleman from North Carolina. I would like to advise, Mr. Chairman, that a letter from the Administrator to the committee, dated February 19, on this very program states that during the fiscal year of 1957 Congress appropriated $30 million in order to meet obligated contractual programs; in 1958 the Congress appropriated $25 million, $5 million less than the year before. In 1959, the Congress appropriated $30 million for the purpose. Therefore, the Appropriations Committee and the Congress does each year review and appropriate the funds for this program.

Mr. FLYNT. Mr. Chairman, on this amendment offered by the gentleman from Mississippi, I regret to find myself in a position contrary to that of my distinguished chairman. However, I supported the Williams amendments in committee and for the same reasons.

I now support the amendment offered by the gentleman from Mississippi. I believe with the adoption of this amendment we will provide more in the way of airport improvements than would be provided by the funds authorized in the bill without the amendment.

Any time that the Congress gets two opportunities to find out if money is being spent in violation of law we save tax money from going down ratholes and gutters in wasteful and extravagant expenditures. Let me give you just one example of cost analysis. This is very close to me, for it is within my district. There was a General Services Administration invitation to bid put out on a 3-year lease basis.

There was no suitable building in this city to house the Federal agency. So a building had to be built. The regional office of the General Services Administration entered into a contract with the builder of this building at an annual rental rate which is reported to me to be sufficient to pay for the entire cost of construction in 3 years' time. It is the worst example of short amortization I have ever had reported to me. If there had been a subsequent requirement for that Administrator to come back before the Committee on Appropriations so that the Congress could see how this money was wasted, I believe that the United States Government and the taxpayers of this country could have been saved as much as 50 percent of the cost of this 3-year lease agreement.

The same thing can just as easily apply in the administration of the Federal Airport Act. I have no apprehension along the line expressed a while ago by the chairman of our committee when he said there would be unconscionable delays and that the program would fail. I do not believe that this Congress would ever fail to appropriate a single dollar that was properly spent by the Administrator under the authorizing authority contained in this bill if the amendment offered by the gentleman from Mississippi is adopted.

If there are any abuses in the administration of this act, assuming adoption of the amendment offered by the gentleman from Mississippi, and I hope it will be adopted, those abuses can be corrected when the Administrator comes back before the Congress to obtain an appropriation to pay the money that has been authorized. On the other hand, if you reject this amendment, he can squander, waste, or illegally spend as much as 40 to 50 percent of this money and there would be no way on earth under the law to prevent it.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

(By unanimous consent (at the request of Mr. FLYNT) he was allowed to proceed for 2 additional minutes.)

Mr. FLYNT. Mr. Chairman, in this connection we must realize that while responsible officials will be required to appear before the Congress each year and request funds to pay for the financial obligations previously created under the authority of this bill, the annual appropriation action by the Congress will be merely ministerial in nature and will come too late to provide any safeguards or any control over illegal expenditure of the tax money.

Mr. Chairman, I believe the adoption of the pending amendments will strengthen this bill. It will in no way weaken it, it will in no way affect the application of the act, it will not slow down airport construction, but I do think it will provide an unmistakable guarantee against corruption, against waste, and against the illegal expenditure of money.

Mr. Chairman, I ask the Committee of the Whole to adopt the amendments offered by the gentleman from Mississippi.

The CHAIRMAN. The question is on the several amendments offered by the gentleman from Mississippi [Mr. WILLIAMS].

Mr. WILLIAMS. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. HARRIS and Mr. WILLIAMS.

The Committee divided, and the tellers reported that there were—ayes 169, noes 154.

So the amendments were agreed to.

The CHAIRMAN. The Clerk will read.

Mr. HARRIS: Mr. Chairman, I ask unanimous consent that the remainder of the bill be considered as read and open to amendment at any point.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The remainder of the bill follows:

SEC. 2. Section 5(b) of the Federal Airport Act, as amended (49 U.S.C. 1104(b)), is amended to read as follows:

"(b) For the purpose of carrying out this Act with respect to projects in Puerto Rico and the Virgin Islands, there is authorized to be obligated by the execution of grant agreements pursuant to section 12 of this Act the sum of $2,500,000 for the fiscal year ending June 30, 1956, and the sum of $3,000,000 for each of the fiscal years ending June 30, 1957, June 30, 1958, and June 30, 1959, and the sum of $900,000 for each of the fiscal years ending June 30, 1960, June 30, 1961, June 30, 1962, and June 30, 1963. Each such authorized amount shall become available for obligation beginning July 1 of the fiscal year for which it is authorized, and shall continue to be so available until so obligated. Of the sum of $900,000 authorized by this subsection for the fiscal year ending June 30, 1960, and for each of the following fiscal years, the sum of $600,000 shall be available for projects in Puerto Rico and the sum of $300,000 shall be available for projects in the Virgin Islands."

SEC. 3. Section 5 of the Federal Airport Act, as amended (49 U.S.C. 1104), is amended by adding at the end thereof the following new subsection:

"ADDITIONAL DISCRETIONARY FUND

"(e) In addition to the sums authorized in subsections (a) and (b) of this section, the Administrator is authorized to obligate in his discretion the sum of $20,000,000 for the fiscal year ending June 30, 1961, and the sum of $15,000,000 for the fiscal year ending June 30, 1962, and the sum of $10,000,000 for the fiscal year ending June 30, 1963, which sums shall be available to pay the United States share of costs of any approved project, and shall be administered as a separate fund without regard to the provisions of section 6 of this Act. Each of the sums authorized to be obligated under this subsection shall become available for obligation beginning July 1 of the fiscal year for which it is so authorized, and shall continue to be so available until so obligated."

SEC. 4. Section 6 of the Federal Airport Act, as amended (49 U.S.C. 1105), is amended as follows:

(1) Strike out the second sentence of subsection (a) and insert in lieu thereof the following: "Each amount so apportioned for a State shall, during the fiscal year for which it was first authorized to be obligated and the fiscal year immediately following, be available only for grants for approved projects located in that State, or sponsored by that State or some public agency thereof but located in an adjoining State, and thereafter any portion of such amount which remains unobligated shall be transferred to and become part of the discretionary fund provided for by subsection (b)."

(2) Strike out subsection (c).

SEC. 5. Section 10 of the Federal Airport Act, as amended (49 U.S.C. 1109), is amended by inserting immediately after subsection (c) the following new subsection:

"FACILITIES USED FOR UNITED STATES ACTIVITIES

"(d) Notwithstanding any other provision of this Act, to the extent that the project

costs of an approved project represent the costs of constructing, altering, or repairing that portion of any airport building required to house air traffic control activities, weather reporting activities, communications activities related to air traffic control, or any other activity of the United States with respect to which the Administrator determines that it is in the best interests of the Government to provide facilities therefor, the United States share shall be not to exceed 100 per centum of the allowable costs of such facilities. The United States share shall not include any amount attributable to the cost of constructing, altering, or repairing any other portion of an airport building, or any amount attributable to that part of a project intended for use as a passenger automobile parking facility."

SEC. 6. Section 4 of the Federal Airport Act, as amended (49 U.S.C. 1103), is amended by inserting "(a)" after "SEC. 4." and by adding a subsection to read as follows:

"(b) It shall be the duty of the Administrator to make public by January 1 of each year the proposed program of airport development intended to be undertaken during the fiscal year next ensuing."

SEC. 7. (a) Section 2(a) of the Federal Airport Act, as amended (49 U.S.C. 1101(a)), is amended as follows:

(1) In paragraph (7), strike out "the Territory of Alaska, the Territory of Hawaii, or Puerto Rico and the Virgin Islands" and insert "Puerto Rico, or the Virgin Islands".

(2) Amend paragraph (12) to read as follows:

"(12) 'State' means a State of the United States, the District of Columbia, or the Territory of Hawaii."

(b) Section 3(a) of such Act, as amended (49 U.S.C. 1102(a)), is amended as follows:

(1) In the first sentence, strike out "the Territory of Alaska,".

(2) In the third sentence, strike out "the Territories, and".

(c) Section 7 of such Act, as amended (49 U.S.C. 1106), is amended as follows:

(1) Strike out "in the Territory of Alaska, in the Territory of Hawaii, or".

(2) Amend the section heading to read as follows:

"AVAILABILITY OF FUNDS FOR PROJECTS IN PUERTO RICO AND THE VIRGIN ISLANDS"

(d) Section 9(c) of such Act, as amended (49 U.S.C. 1108(c)), is amended by striking out "the Territory of Alaska, the Territory of Hawaii, Puerto Rico and" and inserting "Puerto Rico or".

(e) Section 10(c) of such Act, as amended (49 U.S.C. 1109(c)), is amended as follows:

(1) Strike out "the Territory of Alaska and".

(2) Amend the subsection heading to read as follows: "Projects in the Virgin Islands".

SEC. 8. The amendments made by this Act shall not apply with respect to projects for which amounts have been obligated by the execution of grant agreements before July 1, 1959, or the date of the enactment of this Act, whichever is the later date, and, with respect to such projects, the Federal Airport Act shall continue to apply as if this Act had not been enacted.

Mr. HARRIS. Mr. Chairman, I offer a technical amendment.

The Clerk read as follows:

Amendment offered by Mr. HARRIS: Page 6, line 21, insert "(a)" after "SEC. 4."

Page 7, after line 9, insert the following subsection:

"(b) Notwithstanding the amendments made by subsection (a) of this section, if prior to the date of the enactment of this act a reapportionment was made to a State under section 6(c) of the Federal Airport Act, as heretofore in effect, and the fiscal year for which the reapportionment was made has not expired, any unobligated portion of the amount so reapportioned to such State shall remain available for obligation, only for grants for approved projects located in that State, or sponsored by that State or some public agency thereof but located in an adjoining State, until the end of such fiscal year, but any portion of such amount which still remains unobligated at the expiration of such fiscal year shall be transferred to and become a part of the discretionary fund provided for by section 6(b) of such act."

Mr. HARRIS. Mr. Chairman, I offer this amendment as a technical amendment in order to clear up one problem in connection with the reapportionment of funds under this bill. Section 6 of the bill repeals the provision of the present law which provides for reapportionment of funds. However, under the present law reapportionments are made for a period of 1 fiscal year, and it is likely that as of the enactment date of this legislation States will have to their credit, as the result of a reapportionment, obligational authority which but for the repeal of the reapportionment provision they would continue to have until the end of the fiscal year for which such reapportionment was made.

The bill does not clearly provide for what is to happen to this particular obligational authority.

The purpose of the amendment is merely to make it clear in any such case, (1) that the State will continue, until the end of the fiscal year for which the reapportionment was made, to have the authority to obligate such funds for approved projects, and (2) that any such obligational authority which remains unused at the end of such fiscal year shall be transferred to the discretionary fund provided for by section 6(b) of the present law.

This is to clear up the status of the reapportioned funds which go back under this bill to the discretionary fund instead of being apportioned under the formula.

Mr. BENNETT of Michigan. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield.

Mr. BENNETT of Michigan. As I understand it, the purpose of the amendment is to make it clear that if this bill becomes law before the end of the fiscal year, before July 1, the unallocated funds of this fiscal year will not be affected?

Mr. HARRIS. That is correct.

Mr. ROGERS of Colorado. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield.

Mr. ROGERS of Colorado. The amendment proposes to keep in effect allocations heretofore made. As an example, it was pointed out yesterday that there were 14 States which have not made complete use of the allocations under the old formula. Section 8 of this bill provides in effect that unless there is an executed grant agreement before July 1, 1959, this money would not be available. Do I correctly understand that the gentleman's amendment clarifies this so that any allocation heretofore made under the old law will be available regardless of whether or not a grant agreement has been entered into on or before July 1 of 1959?

Mr. HARRIS. Yes; until the time it reverts to the fund.

Mr. ROGERS of Colorado. A reversion, however, would not go to the reapportionment as existed heretofore?

Mr. HARRIS. No, it would not; that is right.

Mr. ROGERS of Colorado. It would go to the discretionary fund and still be available?

Mr. HARRIS. Yes.

Mr. ROGERS of Colorado. I thank the gentleman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Arkansas.

The amendment was agreed to.

Mr. HAYS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I want to philosophize for a few minutes on how you can sort out the spenders from the savers. Presumably if there is a separate vote asked for on the Davis amendment, and I understand there will be, and you vote for it, you are a saver, and if you vote against it you are a spender.

I would be interested to see how the leadership on the side of the gentleman from Missouri [Mr. CURTIS], who just now made some inaudible comment, vote when the foreign aid bill comes up, because in that bill this same administration that is talking about the spenders and the savers is asking for enough money for three Caribbean nations, whose leaders right now are talking about going to war with each other, to put landing lights on a thousand airports. I suppose if we vote for that we are statesmen, but if we vote to light up an airport to save 57 or 59 lives, like those who were lost recently in New York, we are spenders. If that is the way you have to be judged, if that is the way you have to decide how to be a saver or a spender, I am going to be a spender.

There is almost enough money that went down the drain in Iraq in past foreign aid bills to equal as much money as the Davis amendment will save. Now let us make no mistake about it. I have supported the foreign aid bills for the 10 years, which is the total number of years I have been in this body. If the committee takes enough of the junk out of it this year before it gets to the floor, I am going to support it again. If they do not, I am going to try to take some out on the floor and hope then that I will be able to support it. But, I think it is only fair, especially for the new Members of the House, to point out that since this airport bill has been made a political issue and since we are talking about balancing the budget that there is more than one way to balance the budget. I hope the Davis amendment will be defeated. Then I will help you to take enough of the junk out of the foreign aid bill to more than balance the amount that has been kept in by defeating the Davis amendment.

Mr. MEADER. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. MEADER: On page 9 immediately below line 2, insert the following:

"(3) In the third sentence, insert immediately before 'and such other considerations' the following: 'the advantages and

disadvantages of airport sites and proposed airport sites, as shown by studies conducted through flight simulator tests and otherwise of en route, holding, and approach air traffic patterns, the desirability of promoting safety in aviation by minimizing interference between civilian and military air operations,'."

Mr. HARRIS. Mr. Chairman, I reserve a point of order against the amendment.

The CHAIRMAN. The gentleman from Arkansas reserves a point of order against the amendment.

The gentleman from Michigan is recognized.

Mr. MEADER. Mr. Chairman, I offer this amendment for improved planning of airports by the Federal Aviation Agency.

I submitted a statement to the Committee on Interstate and Foreign Commerce which appears on page 42 of the hearing on the bill before us. That statement explains my proposal in detail.

The amendment simply requires the Federal Aviation Administrator in formulating the national airport plan to take into account two objectives in addition to the three now contained in the Airport Act.

Under section 3 of the Federal Airport Act, the Administrator is required to take into account the following things in formulating a national airport plan:

One. The needs of both air commerce and private flying.

Two. The probable technological developments in the science of aeronautics.

Three. The probable growth and requirements of civil aeronautics and such other considerations as he deems appropriate.

My amendment, if adopted, would require the Administrator to take into account two additional things:

First, the proper siting or location of airports with reference to en route, holding and approach patterns so that we do not get airports too close together, and

Second, the need for minimizing interference between military and civilian flying.

Those of us who have been aroused by the disastrous crashes and the near misses between military aircraft and civilian air carriers realize it is important to avoid conflict between military and civilian flight operations.

One way of minimizing such conflicts is to avoid locating a civilian airport in the vicinity of a military air base. An airport is an intersection and one intersection should not be located on top of one another.

Shall we blindly commit money—both Federal and local—to the building of airports on the pattern of today, which has grown like Topsy without plan and without reference to other activities which, as we have seen, can tend to limit the capacity and usefulness of the airport?

Or, are we going to take a hard look at the future, assessing critically and scientifically the immediate and future demands on airspace, both military and civilian, and establish principles for airport construction to permit this explosive industry to grow and to develop, free from the shackles of habit and short-sighted capital investment?

I wish I didn't feel that Congress has abdicated its authority to so-called experts—in what used to be the Office of Airports of the Civil Aeronautics Administration. I wish I had more confidence in the judgment of those experts.

In the 84th and 85th Congresses, I was privileged to serve on the Legal and Monetary Affairs Subcommittee of the House Committee on Government Operations, which over a 3-year span studied the Federal Government's role in aviation. The committee held hearings in June and July 1956 and again in May and June 1958. It issued reports—House Report No. 2949, 84th Congress, 2d session, and House Report No. 2679, 85th Congress, 2d session. Those hearings and reports are, of course, available to your committee.

I have excerpted, however, from that material some passages I believe are pertinent to our consideration of the airport aid program. That evidence compels the conclusion that persons responsible for airport planning and the allocation of airport aid funds have lacked imagination, foresight, and aggressiveness in planning and developing the airport pattern of the United States.

The subcommittee on pages 6 and 7 of its 1956 report—House Report No. 2949, 84th Congress, 2d session—found:

Airport planning has been on a hit-and-miss basis. Congress, in the Federal Airport Act of 1946, as amended, directs the Secretary of Commerce, after consulting with other Government agencies, "to prepare and revise annually a national plan for the development of public airports taking into account the needs of both air commerce and private flying, the probable technical developments in the science of aeronautics, the probable growth and requirements of civil aeronautics."

The subcommittee recognizes and approves the role of municipalities and local governments as well as the States in the development of airports to serve communities. However, the Federal Government alone is capable of making the studies on a nationwide and international basis to provide direction and planning for a national airport plan to meet the rapid growth of air transportation. On that subject the Harding committee report said:

"Cities and local communities should be advised of traffic requirements which their airports should be prepared to meet in 1960, 1965, and in 1975 so that airports will not become bottlenecks of an improved aviation facilities system. They should be provided with continuously revised estimates of plane movements in order that ample terminal facilities and handling space can be provided; the operating characteristics and tire footprint pressures of future aircraft, etc., in order that land acquisition, runway lengths, and weight bearing characteristics will be adequate. Plans for nearby military and civil airports should be coordinated in order that runways may be properly located and traffic control procedures properly integrated."

Said the Honorable Edward P. Curtis, then special aviation adviser to the President in 1957:

Airports are an integral part of the system of aviation facilities. However, unlike other elements of the system, airports are designed, built, financed, and operated by local authorities. The increase in overall traffic will require a modernization of airports and an increase in their numbers. This imposes the necessity for coordinated national and local effort to insure that airports do not become a neglected element of the system, and thus be a future bottleneck.

The Federal Government should carry out airport research and experimentation so that local planning for new airports can be done on a sound basis. (P. 16, Aviation Facilities Planning, a Report by the President's Special Assistant, May 10, 1957.)

Gen. Milton W. Arnold, vice president of the Air Transport Association, testified before our subcommittee July 2, 1956, in response to my question:

Mr. MEADER. Just to close up this business of the airport fund allocations, do you feel that the CAA in exerting its influence on the airport pattern and character of airplanes, has been looking ahead into the future of flying, or have they simply gone along on the pattern of allocations that they have had in the past?

Mr. ARNOLD. I think your last statement is correct, that they have gone along with the way the wind is blowing, and I don't think they have done any concerted development in airports. I think it is a factual statement that the airports today are further behind in relationship.

In other words, our feeling, Mr. Chairman, is the airplane is ahead of the air traffic control system and the facilities available.

Yet the air traffic control system is far ahead of our airports. So, the weakest link in this chain I think is in the capacity and operation of the airport. (P. 197, Federal Role in Aviation, 1956, hearings before a subcommittee of the Committee on Government Operations, House of Representatives, 84th Cong., 2d sess.)

Further, July 30, 1958, Mr. E. Thomas Burnard, executive director of the Airport Operators Council of Washington, had this to say:

In the early years of the Federal airport program, funds were appropriated not only for financial assistance to airport sponsors but also to provide for Government planning and research useful both to the local sponsors and to the Federal agency designated to administer the act. This basic planning data, however, reached a peak in the years 1948 to 1950. Through lack of funds appropriated by the Congress, and through lack of forceful leadership and adequate planning by the Federal agency, this data and information has become obsolete and inadequate for present and future planning.

We believe that CAA Administrator Pyle and his staff are working overtime now trying to make up for this deficiency, but much remains to be done.

In the matter of jet planning, for instance, even today, in July 1958, with only a few months remaining before jet transports are scheduled to go into service, few reliable facts have become available from any source on such vital matters as airports to be served, runway lengths, ramp handling, passenger and baggage loading, and other terminal facilities needed. (Pp. 309–310, the Federal Role in Aviation (1958), hearings before a subcommittee of the Committee on Government Operations, House of Representatives, 85th Cong., 2d sess.)

Mr. Burnard continued:

We believe that many of today's problems can be minimized and many of tomorrow's may be eliminated if a coordinated systems approach is made to aviation's problems. Expedience has been the only approach to date, both in Government and in industry.

Aircraft designers and manufacturers, spurred by military requirements, have designed and built aircraft with little or no regard for the support facilities required to keep them operating. The whole ground and air environment, both in military and

civil operations, has been expected to adjust with each new development, but the time is fast approaching, if it has not already been reached, when aircraft development must be integrated with support services development. Investments in ground services, which no doubt exceed investments in airborne equipment, cannot, in civil transport service, be jeopardized without good reason. They don't need to be if a proper planning relationship is established between the aircraft producers, the aircraft users, the airport providers and the providers of traffic control, navigational aids, communications, weather services and the like.

Ideally, such coordination would be done voluntarily and at an early stage of development of significantly different aircraft. History has shown that it has not been done voluntarily, so it becomes important that the Federal Government assures coordination.

Research and development on airport design, configurations, and capacity has been the most neglected of all aviation subjects. Huge sums of money are spent annually by governments, universities, and industry on aerodynamics, propulsion, communications, navigation, air traffic control, and other basic elements of aviation, and tremendous progress has been made.

Among the more urgent of these technical problems on which research is needed are the following. They relate primarily to the increase or determination of airport capacity and include:

(a) Runway and taxiway configurations.
(b) Visual aids.
(c) Ground traffic control.
(d) Multiple airport configurations.
(e) New airport locations.
(f) Airport layouts.

In this connection * * * I might say that on the first item, that of runway and taxiway configurations, we are still trying to find out from some authoritative source just how far apart parallel runways should be.

It has not been possible to date to get from the CAA or any other official source an authoritative answer on just how far apart parallel runways should be to obtain maximum utilization of those runways (pp. 315–316).

Later on, Mr. Burnard had this to say:

Because airports must be financed on a long-term basis of 20 to 30 years, it is imperative to know reasonably well in advance what developments to expect in order to build in appropriate safeguards and expansion possibilities. It is a sad fact that, among airport operators, each new major terminal development, which takes years to achieve, is dedicated with the realization that it is probably obsolete or too small on dedication day. After the aeronautical needs are determined, it takes years to arrange the financing and construction. The airport facilities needed for the jets of tomorrow should have been known at least 3 to 5 years ago (p. 319).

Mr. Burnard added further:

Our basic philosophy is not to stymie all progress in aviation and say, "Well, now here's an airport; never build an airplane that won't fit that." But what we do say is, "If you're thinking about building a new airplane, let us in on what you are talking about and let's see if we can't fit the ground facilities to the airplane to the benefit of all; but don't let's wait and bring a plane out and say, all of a sudden, we must change all our ground facilities and air traffic control system, etc., to fit the airplane."

Mr. PLAPINGER. Well, then, is your complaint not with the aircraft manufacturers but rather with the CAA at that stage?

Mr. BURNARD. I don't know that you'd call it a complaint; it is a basic deficiency in our overall aviation planning in this country. It is a dynamic industry. The aviation designers and builders in private enterprise are building the best aerodynamically conceived vehicles. They have done a wonderful job; there is no question about that. The airline operators have been dynamic and have served a very useful purpose and try, as good businessmen should, to make the vehicle pay. We as ground-facility providers have in our own way tried to provide the best facilities to make the operation of the airports most efficient. But, frankly, it gets a little difficult when we are told on a sunny October morning in 1955 that airplanes twice as big as anything we have seen heretofore, which may require runways half again as long and may require them half again as strong, are going to be dropped in our laps in 1958 or 1959 with no advance planning or coordination on the subject.

Mr. MEADER. Well, that is where I would like to get into the act with the Civil Aeronautics Administration. What did they know about the design of the aircraft and their requirements for airports, and how did they gear that into their expenditure this—what is it, 4 times 63?

Mr. BURNARD. The present program?

Mr. MEADER. Yes; a quarter of a billion dollars?

Mr. PLAPINGER. Two-hundred-some-odd million.

Mr. MEADER. Did the CAA, in your judgment—were they alert to these developments and did they in their allocation of airport-aid funds encourage the construction of airports to meet the jets?

Mr. BURNARD. Frankly, we feel that a far better job could have been done (pp. 332–333).

I do not believe it is too much to demand that the "experts" in the Federal Aviation Agency keep abreast of developments in aviation and use that information in planning airports adequate for air traffic, not only for today but for the future as well.

I do not overlook the fact that the Federal Government does not have complete control over airport construction. Of course, this is one of the grant-in-aid programs in which the Federal Government must work with State and local governments and I am not suggesting that method of handling airport development be changed. Yet a municipality or a State does not have the opportunity to watch closely new developments in airplane characteristics or traffic control. Only the Federal Government and specifically the Federal Aviation Agency, has access to the vast body of data and information necessary on which to base a sound airport program.

Only the Federal Aviation Agency has facilities for conducting experiments and studies in the field of aviation and has access to information in other agencies of the Federal Government, notably the Department of Defense, which have an important bearing on possible future civilian aircraft, and other segments of our civil aviation system.

I am disturbed at what appears to be waste in the expenditure of Federal tax dollars for airport construction. But I think even more serious is the wasting of funds of States and municipalities, already finding it ever more difficult to raise sufficient tax revenue for their own day-to-day operations. But perhaps even more important than the wasting of money, whether it be Federal or local, is the creation of bottlenecks and restrictions in air transportation in the future because of poorly planned capital investments in airports right now.

It is because I believe the record of airport planning in the past has been poor that I am disturbed that the Congress now seems to contemplate vesting vast new authority and huge sums of money in the same agency which has failed to exhibit foresight in the past. Congress, on the other hand, has a very good record in support of aviation but now seems bent on taking itself completely out of the picture. The very least we can do is to require the Federal Aviation Agency to show that it is alert to aviation requirements in the future and what airports we will need, not today, not 5 years from now, but 10 and 20 years from now, before we entrust them with this vast power over air transportation of the future.

These questions ought to be answered before additional grants of power are made to those so-called experts in the FAA:

First. What standards or criteria have been developed for airport construction since the Airport Design Manual of CAA of 1949?

Second. What use, if any, is made by the Office of Airports in allocating airport funds, of the air route, holding and approach patterns, studies made by the Technical Development Center of CAA?

Third. What, if any, consideration is given to military bases and military flight operation in the location of civilian airports?

Fourth. What consideration is given to vested interests in airspace in its relation to operations in and out of airports?

Fifth. What studies have been made of soil conditions, runway strength, weather conditions, proximity to present and future centers of population, the highway network, residential areas, runway and rapid turn-off design, runway direction, multiple, directional runways, proximity to other airports, and a multitude of other technical problems that ought to be considered in the location, design, and construction of an airport.

Mr. Chairman, so far as I know only one airport in the United States was originally located pursuant to a study by simulator test of en route, holding and approach patterns, and that is the Chantilly Airport now being built to serve the city of Washington.

It would seem to me only commonsense that studies of the en route, holding and approach patterns which would affect the capacity of an airport to handle traffic would automatically be given consideration before municipalities are encouraged to build an airport or to expand an existing one. Yet there seems to be no regulation requiring this information to be taken into account either in the formulation of the national airport plan or in the approval of sites for airports. Correspondence bearing on

this subject is incorporated at this point in my remarks:

HOUSE OF REPRESENTATIVES,
LEGAL AND MONETARY AFFAIRS
SUBCOMMITTEE OF THE COMMITTEE
ON GOVERNMENT OPERATIONS,
Washington, D.C., December 9, 1958.

Hon. J. T. PYLE,
Administrator, Civil Aeronautics Administration, Washington, D.C.

DEAR MR. PYLE: The report received by the subcommittee from Congressman MEADER makes us all extremely anxious to accept your repeated invitation to visit your Technical Development Center at the earliest opportunity.

Mr. MEADER's description of the simulator and your remarks on this device at our July hearings suggest that it may be capable of significant contribution not only in air traffic matters but as well in airport planning.

We would be interested in your advice as to what CAA procedures, regulations or practices, if any, require the utilization of the simulator with respect to air traffic matters, including holding and approach patterns and to what extent CAA regulations, procedures or practices require that results of simulator tests be brought to the attention of the Office of Airports and be given consideration in the allocation of Federal-aid airport funds by that office.

We would also appreciate it if examples were cited of the use of simulator test results in prescribing or revising air traffic patterns and in airport aid allocations, during the past 5 years.

With kind personal regards.

Sincerely yours,

JOHN A. BLATNIK,
Member of Congress, Chairman.

FEBRUARY 2, 1959.

Hon. JOHN A. BLATNIK,
House of Representatives, Washington, D.C.

DEAR MR. BLATNIK: The following information is submitted in reply to your letter of December 9, 1958.

The dynamic simulator at the Federal Aviation Agency's Technical Development Center in Indianapolis, Ind., has been used in many studies relative to air traffic control problems throughout the United States. During the past 5 years, the simulation program has included 13 individual terminal area studies which have contributed to better handling of greater volumes of air traffic at our airport complexes. Most of the studies have resulted in a rearrangement of navigation aids and traffic patterns which have permitted the airports to serve additional traffic with less delays.

For example, simulation of the Fort Worth-Dallas terminal area brought forth new procedures which expedited departing aircraft and provided general relief to the overall traffic-control problem. In another study, one of several of the Washington, D.C., area, procedures were developed which permitted a smooth transition from nonradar control to radar control when radar equipment became available. Based on a simulation study of the New York area, new twin-stack, radar approach control procedures and a realined route structure were implemented, permitting a considerable gain in air traffic capacity at La Guardia Airport and improvements in traffic handling at Idlewild and Newark Airports. Similar benefits were obtained for the San Francisco-Oakland complex, where new radar procedures, an improved route structure, side feeder fixes independent of departure routes, and preferential departure and arrival routes were the result of a simulation study. From a simulation study of the Chicago area, a dual approach system to be used by the new airline jet aircraft operating from O'Hara Field was developed, as well as control procedures to be used as O'Hara becomes the second major airport in the Chicago terminal area.

With regard to airport development projects, the Manual of Operations covering Federal-aid airport program activities requires that all airport construction projects be coordinated by regional airports' chiefs with other FAA operating segments. Studies of air traffic problems, where they relate to or affect airport configurations or siting, are thus brought to the attention of airports' personnel. Findings from all those studies, included among which are air traffic simulations, are thus included in project analysis and programing recommendations.

As an example of the use of a simulator study and its effect on airport development, reference is made to the investigation of O'Hare Field previously mentioned. This study led to recommendations by the airports division regarding revision of the airport master plan layout to provide optimum runway configuration and phasing of runway development proposed for accomplishment under the Federal-aid airport program.

In addition, simulation studies have been conducted for the purpose of siting proposed airports in such a way as to enhance the capability of the Federal Aviation Agency to provide adequate air traffic control services. The location of the new Chantilly Airport is a prime example of the results of many studies conducted in an effort to obtain the optimum location for a major terminal. The proposed Tacoma, Wash., airport was considered in the Seattle simulation study completed on December 4, 1948. Siting problems for new airports in the Detroit, Mich., and Annapolis, Md., areas were also given careful consideration during simulation studies of those areas.

The Technical Development Center simulator is scheduled to operate 16 hours a day, 8 hours for the Bureau of Research and Development and 8 hours for other FAA activities. More requests for simulation are received than can be scheduled each year, resulting in some areas being without the benefit of new techniques that would be available if adequate simulation time was possible.

The Federal Aviation Agency plans to increase the simulation capacity by a considerable amount to cope with the increasing simulation requirements.

Sincerely yours,

E. R. QUESADA,
Administrator.

It is significant to note in the reply of Mr. Quesada, above quoted in full, the assertion that studies of traffic patterns are taken into account at the regional level, but the letter carefully fails to state that there is any regulation requiring consideration of traffic pattern studies by the Office of Airports in allocating airport aid funds.

I hope the committee will adopt my amendment at this time, but in case it is rejected, I hope the Interstate and Foreign Commerce Committee will study and hold hearings on my bill H.R. 3913 which contains the same text as that of my amendment. An adverse vote on the amendment should not be construed to mean that the Federal Aviation Administrator ought not to seek to minimize interference between military and civilian aviation in formulating a National Airport plan or that he should disregard studies of en route, holding and approach patterns in approving the location of airports.

Mr. Chairman, with reference to the bill itself, on which we will vote shortly, I intend to support the bill if the Davis and Williams amendments stay in the bill. If they are rejected, I intend to vote against the bill in the hope that before this session of Congress adjourns we will have an opportunity to vote on a reasonable and proper airport bill which does not contain the objectionable features of the committee bill.

The CHAIRMAN. Does the gentleman from Arkansas insist on his point of order?

Mr. HARRIS. I withdraw the reservation of a point of order.

I rise in opposition to the amendment, Mr. Chairman.

Mr. Chairman, this has to do with the formulation of a National Airport plan, which is required by law. However, I would question the amendment being in the interest of the airport plan. We provided authority in the Federal Aviation Act that was enacted last year for the Administrator to try to minimize those differences between the civilian and military programs. I question whether it would be in the interest of the airport plan and the operation of both civil and military planes to further make such requirements in the formation of our airport plans.

Obviously the gentleman's amendment must have some reference to a specific program in his area, which has been before us some time.

I respectfully ask that the amendment be rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Michigan [Mr. MEADER].

The amendment was rejected.

The CHAIRMAN. The question is on the committee amendment, as amended.

The committee amendment, as amended, was agreed to.

Mr. WOLF. Mr. Chairman, I feel very strongly the need for air safety. I am supporting the committee bill. The undisputed statement of the chairman, the gentleman from Arkansas [Mr. HARRIS], was that the additional $97 million goes completely for air safety.

As air travel increases the problems of air safety will greatly increase. It is the responsibility of Congress to provide for the safety of the people of this country.

The overwhelming testimony of the men who operate airports from coast to coast before the committee proves the need for a tremendous increase in money for air safety.

Several very tragic air crashes have been traced directly back to length of runways and lack of adequate electronic equipment. Mr. Chairman, who can judge in money the value of a single life, yet here hundreds have been forfeit.

Those who oppose this bill do so because it will upset the budget, they say. Mr. Chairman, I would suggest they ask to remove from the President's budget some $77 million which was suggested for executive aircraft. Let these executives ride now existing aircraft to save this sum of money, and devote it instead to air safety which is the primary program involved under the committee bill.

Mr. McGINLEY. Mr. Chairman, in voting against this bill, H.R. 1011, I want to make it clear that I am aware of the great demand on the part of small communities and cities for an orderly development of air service facilities.

However—despite the demand that exists—it does not appear evident to me that a competent study has been made to determine the ability of local units to finance airport development. It appears to me that in this bill we are trying to make funds available in wholesale lot on the basis of the maximum improvements desirable for the expanding air age, rather than on the basis of maximum improvements likely or possible on a year-to-year appropriation basis.

I feel sure that Congress can go along with a 4-year plan for airport improvement and development but also refrain from authorizing amounts now that are to be spent in fiscal years beyond 1960.

Therefore, my protest is against the method used by this bill in making public funds available for necessary progress in our expanding air age, rather than the refusal to acknowledge the need.

I am sure that the people expect Congress to be responsive and assistive to our air-age development, but I also am sure that the people want Congress to exercise a wise restraint in their methods of meeting the problem.

Mr. FLYNT. Mr. Chairman, it is my fervent desire to see a Federal Airport Act passed by both Houses of Congress and signed into law by the President. A few minutes ago in the debate on the administration substitute to the committee bill I opposed the administration's substitute because the substitute would have destroyed the formula for allocation of funds which has been in effect since, I believe, 1946. During the debate on the substitute, it was brought out that the only two major differences between the committee bill and the substitute proposals were: First, the monetary difference between $297 million and $200 million; second, the committee bill provided for continued use for the allocation formula and the Administration proposes to abandon the formula and put 50 percent of the total amount into the discretionary fund.

This amendment, which has been well explained by its author, my distinguished colleague from Georgia, differs substantially from the substitute proposal in this request: It reduces the monetary amount in the bill from $297 million to $200 million, but it retains intact the formula for allocation by States.

The Administrator of the Federal Aviation Agency has testified before the House Committee on Interstate and Foreign Commerce that the Agency can judiciously, efficiently and economically expend $200 million during the next 4 fiscal years. Since he was a spokesman for the administration, we have every reason to believe that a Federal Airport Act providing $200 million might be favorably received and will reconcile all existing differences between the Congress and the executive branch of the Federal Government. I am sure that all of us are confident that if more money is needed and the need is clearly demonstrated and justified, that the amount can be increased at any time during the 4-year life of the Federal Airport Act of 1959.

It is with a real desire to obtain final passage and enactment into law of a Federal airport act during this year that I support the Davis amendment and urge its adoption. My position in supporting this amendment should not be construed as an action designed to weaken this legislation, because I am in favor of the bill in principle and in substance. I take this position in an effort to bring about reasonable reconciliation between the Congress and the executive without compromising principle to the slightest extent. I believe that adoption of this amendment will mean that this legislation will be enacted into law before June 30, 1959.

Mr. Chairman, I urge the adoption of the amendment offered by my colleague from Georgia.

Mr. REES of Kansas. Mr. Chairman, I regret that I do not support the legislation proposed by the committee, being for the sum of $297 million. The agency's report states that $200 million is adequate. I see no reason for voting more money than is requested by the Government itself. I am in favor of sufficient funds to take care of any and all safety devices, runways, and other things that may be required for the airports of our country.

I realize too that because air service is growing, these obligations are increased. I do not believe it is necessary for the Federal Government to provide buildings and equipment belonging thereto. These should be paid for by local municipalities.

I just do not believe the American taxpayers should be charged with items other than those needed for the welfare and safety of the traveling public. I believe the amount provided in the administration's proposal is sufficient. I shall vote for $200 million, but shall vote against $297 million.

Let me repeat, local authorities and airlines should take care of the cost of terminal sites, buildings, restaurants, theaters, private clubs, cocktail lounges, garages, hotel rooms, parking lots, and other similar items. We ought not to expect our taxpayers to take care of these expenditures. Our Government has already spent millions of dollars for facilities that ought to be charged either to the municipalities or the airlines or both. If additional funds are needed beyond those furnished by the Federal Government and municipalities and airlines, then let the traveling public pay a share of the additional cost rather than charge such items to the Federal Treasury.

Mr. PASSMAN. Mr. Chairman, I am supporting this bill—which, wisely, has been consideraly modified and greatly reduced in amount from the proposal as originally introduced—because I am convinced that in preponderant measure the aid which it authorizes for airport improvement and development is of vital importance to the welfare of our Nation.

This bill is not, contrary to the claims of its opponents, a "spending bill," nor does it provide an unwarranted Federal subsidy. What it does provide, however, is authorization for an investment in the safety and general improvement of civil air travel and other transportation, the utmost importance of which no person can successfully discount or dispute.

It should be noted that the outlay of cash under this bill for fiscal 1960 is less than the amount that would be expended under the administration's proposal. It should also be noted that many who oppose this bill, which makes possible something very worthwhile for America, will vote, nonetheless, in favor of financing from U.S. Treasury funds, at a cost much more than the amount here in question, numerous civil aviation projects in many foreign nations of the world.

My own record, Mr. Chairman, in opposing waste and supporting sound fiscal policies in the operation of our Government has been firmly established through the years; and it is a record which I have no intention of changing. In supporting this bill, I act in good conscience, not as a waster or wild spender of public funds, but with confidence that I am making a sound and important contribution to the public interest.

Mr. COFFIN. Mr. Chairman, I rise in support of H.R. 1011. This legislation, as reported by the committee, represents a sound investment in the economic development of our Nation. It is directed toward the whole Nation, taking into account the needs of large cities with airports designed to handle continental and international aircraft in the jet age, and small communities providing needed air service in areas remote from urban centers.

I have received five telegrams from town officials in five counties in my district, a telegram from the Governor of the State of Maine, and a telegram from the executive secretary of the Maine Municipal Association in support of this legislation. In fact, several officials preferred the Senate bill, with recommendations for the full $100 million annual authorization.

One month ago, Scott K. Higgins, director of the Maine Aeronautics Commission, advised us that the minimum amount to meet rockbottom rural State needs would be a $65 million authorization.

Recent studies indicate that 50 airports are needed for general and commercial aviation needs in the State of Maine. Thirty-nine of these airports are in existence and 11 new fields should be constructed. The total estimated cost is $9,928,400.

The bill which is before us today falls within the President's budgetary proposals. In fact, as reported by the committee, it is $2 million less than the President's proposal for fiscal year 1960.

We have then a bill which will provide for a basic and much-needed program to maintain, modernize, and improve airport facilities in all areas of our country. We can do this within the most conservative estimates of our fiscal requirements. If we do take this necessary step we will be making an investment in improved and safer transportation along the air-

ways of the United States. I urge adoption of H.R. 1011 at least at the minimum level recommended by the House Committee on Interstate and Foreign Commerce.

The CHAIRMAN. Under the rule the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. METCALF, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 1011) to amend the Federal Airport Act in order to extend the time for making grants under the provisions of such act, and for other purposes, pursuant to House Resolution 215, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

Mr. HARRIS. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. Is a separate vote demanded on any amendment?

Mr. HARRIS. Mr. Speaker, I ask for a separate vote on two amendments; first the Davis amendment, and later the Williams amendment.

The SPEAKER. The Clerk will report the first amendment on which a separate vote has been demanded.

The Clerk read as follows:

Page 4, line 24, strike out "for" and all that follows down through the period in line 1, page 5, and insert the following: "for the fiscal year ending June 30, 1960, the sum of $29,800,000 for each of the fiscal years ending June 30, 1961, and June 30, 1962, and the sum of $29,700,000 for the fiscal year ending June 30, 1963."

The SPEAKER. The question is on the amendment.

Mr. HARRIS. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 194, nays 214, not voting 26, as follows:

McIntire	Sheppard	

So the amendment was rejected.

The Clerk announced the following pairs:

On this vote:

Mr. Taber for, with Mr. Keogh against.

Mr. Hoffman of Michigan for, with Mr. Daddario against.

Mr. Wilson for, with Mr. Anfuso against.

Mr. Freylinghuysen for, with Mr. Buckley against.

Mr. McIntire for, with Mr. Thompson of Louisiana against.

Until further notice:

Mr. Dent with Mr. Broyhill.

Mr. Carter with Mr. Withrow.

Mr. Hall with Mr. Taylor.

Mr. Porter with Mr. Mack.

Mr. Monagan with Mr. Martin.

The result of the vote was announced as above recorded.

The SPEAKER. The Clerk will report the Williams amendment.

The Clerk read as follows:

On page 5, line 5, immediately before the quotation marks insert the following:

"Notwithstanding any other provision of this Act, no amounts may be obligated pursuant to this subsection or subsection (b) of section 6 of this Act in any fiscal year by the execution of grant agreements pursuant to section 12 of this Act until appropriations have been made for the liquidation of such obligations, which appropriations are hereby authorized."

On page 6, line 3, immediately before the quotation marks, insert the following:

"Notwithstanding any other provision of this Act, no amounts may be obligated pursuant to this subsection in any fiscal year by the execution of grant agreements pursuant to section 12 of this Act until appropriations have been made for the liquidation of such obligations, which appropriations are hereby authorized."

On page 6, line 20, immediately before the quotation marks, insert the following:

"Notwithstanding any other provision of this Act, no amounts may be obligated pursuant to this subsection in any fiscal year until appropriations have been made for the liquidation of such obligations, which appropriations are hereby authorized."

On page 9, after line 25, insert a new section as follows:

"Sums appropriated pursuant to this Act with respect to any fiscal year beginning after June 30, 1959, shall remain available until expended."

The SPEAKER. The question is on the amendment.

The question was taken, and the Speaker announced that the noes appeared to have it.

Mr. WILLIAMS. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 191, nays 216, not voting 27, as follows:

Mr. Monagan with Mr. Broyhill.

Mr. Harmon with Mr. Mack of Washington.

Mr. Porter with Mr. Taylor.

Mr. Hall with Mr. Withrow.

The result of the vote was announced as above recorded.

Mr. HARRIS. Mr. Speaker, I ask unanimous consent to take from the Speaker's table the bill (S. 1) to amend the Federal Airport Act in order to extend the time for making grants under the provisions of such act, and for other purposes, strike out all after the enacting clause, and substitute the bill just passed, H.R. 1011.

The Clerk read the title of the Senate bill.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

The SPEAKER. The Clerk will report the amendment.

The Clerk read as follows:

Amendment offered by Mr. HARRIS: Strike out all after the enacting clause and insert the provisions of H.R. 1011, to amend the Federal Airport Act in order to extend the time for making grants under the provisions of such act, and for other purposes, as passed.

The SPEAKER. The question is on the amendment.

The amendment was agreed to.

The Senate bill was ordered to be read a third time, was read the third time, and passed.

A motion to reconsider and a similar House bill (H.R. 1011) were laid on the table.

GENERAL LEAVE TO EXTEND

Mr. HARRIS. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Arkansas?

There was no objection.

AMENDING BRETTON WOODS AGREEMENTS ACT

Mr. O'NEILL, from the Committee on Rules, reported the following privileged resolution (H. Res. 217, Rept. No. 233) which was referred to the House Calendar and ordered to be printed:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 4452) to amend the Bretton Woods Agreements Act, and all points of order against said bill are hereby waived. After general debate, which shall be confined to the bill, and shall continue not to exceed two hours, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Banking and Currency, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

ANNOUNCEMENT

Mr. ASPINALL. Mr. Speaker, I was necessarily absent from the Chamber when the roll was called on the Davis amendment to H.R. 1011. Had I been present I would have voted "no."

TREASURY AND POST OFFICE DEPARTMENTS AND THE TAX COURT OF THE UNITED STATES APPROPRIATION BILL, 1960

Mr. GARY. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 5805) making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States, for the fiscal year ending June 30, 1960, and for other purposes; and pending that motion, Mr. Speaker, I ask unanimous consent that general debate be limited to not to exceed 2 hours, the time to be equally divided and controlled by the gentleman from New Jersey [Mr. CANFIELD] and myself.

The SPEAKER. Is there objection to the request of the gentleman from Virginia?

There was no objection.

The SPEAKER. The question is on the motion offered by the gentleman from Virginia.

The motion was agreed to.

Accordingly, the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H.R. 5805, with Mr. BLATNIK in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. GARY. Mr. Chairman, I yield myself 20 minutes.

Mr. Chairman, this is one of the most important bills to come before this Congress. It is the second largest appropriation bill that will be presented this year.

Let me call your attention to the fact that the bill now before the committee appropriates $26,947,494,000. I hasten to say, however, that of that amount $8,775,166,000 is for the permanent indefinite appropriations, the largest single amount of which is $8 billion for the interest on the public debt. The amounts of the permanent indefinite appropriations are fixed and are not subject to annual appropriation action by the Congress.

In addition, the trust funds appropriated under this bill amount to $13,544,231,000. The largest single items in that amount are the Federal old-age and survivors insurance, for which the estimate for 1960 is $10,456,515,000; Federal disability insurance, $1,055,969,000, and unemployment compensation, $2,017,612,000. The payments of those amounts from the trust funds are fixed by law and therefore cannot be changed by our committee.

This leaves a balance of $4,628,097,000 for the Treasury and Post Office Departments and the Tax Court of the United States over which the committee does have jurisdiction.

The appropriation request for the Treasury Department for fiscal year 1960 was $787,712,000. The appropriation for 1959 to date—and I say "to date" because there are some supplementals pending which will be acted on by the House next week—the appropriations for 1959 to date were $706,277,000. Our committee recommends in the bill before you $779,402,000. This is an increase of $73,125,000. But, let me say to you that of that amount approximately $51 million is for mandatory increases which are required by the increased salary bills, the increase in postal rates, and the 1 day additional service next year, 1960, being a leap year. The amount recommended by the committee is a decrease of $8,310,000 below the budget request.

The appropriation for the Treasury Department is broken down into a number of different items. First is the Office of the Secretary, and in that item there has been no change other than to allow the mandatory increases. No additional money was requested beyond the mandatory increase and the amount requested is recommended.

For the Bureau of Accounts the committee recommends an increase of $354,000, but $292,000 of that was for mandatory increases and the balance was to take care of an additional workload.

Mrs. CHURCH. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentlewoman from Illinois.

Mrs. CHURCH. If this is an inappropriate point to interrupt, I apologize, but in going over the report there

seems to be a substantial reduction in the appropriation for the Coast Guard, and I wondered whether that made for any diminution in protection for the Great Lakes region.

Mr. GARY. It did not, but I will be glad to discuss that when we get to the Coast Guard appropriation.

Mr. FULTON. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman.

Mr. FULTON. Mr. Chairman, I want to congratulate the gentleman on his comprehensive knowledge of this subject, and then I should like to ask a question. When I first came to Congress I thought that I would be able to vote on the record on various items of appropriation, and then add them up and see what the total budget was that I voted for that year. When we come to a bill like this, we are given a double loaf and told that there is so much money money here provided for the Treasury Department and so much for the Post Office Department.

Would it not be a good idea to have a series of amendments sponsored by the committee that would show what particular major items of appropriation we Members favor and which items we might vote to reduce? Why is there not that kind of a series of amendments offered so that we can have a vote on appropriations?

So many times, the bill is passed by a voice vote and there is no record vote on major appropriations, so that I do not know how much I voted for. For example, in the last session of Congress I voted on 13 out of 14 small appropriations, comparatively negligible, and then there were a couple of big ones that just went through by voice vote. So that I really voted for a budget lower than that voted by Senator BYRD of Virginia, but it does not show here.

Mr. GARY. I am trying to tell the House at the present time that we have cut the budget estimates. All appropriations for the Federal Government are contained in the budget, except those bills passed by the Congress, which are not recommended by the President. The President presents his budget for the year and we can very easily measure what the Congress is doing by comparing the amounts voted by the Congress in each bill with the amount requested in the budget. In the case of the Treasury Department we have cut the President's budget request $8,310,000.

Mr. FULTON. Will we have a record vote to approve or disapprove that budget cut below the President's request? Is there not some way we can get on record here as ordinary Members to show what was the total budget that we voted for, so that they can add it up in our home district?

Mr. GARY. The gentleman may ask for a rollcall vote, and if it is ordered by the House, he will get a rollcall vote.

Mr. FULTON. I have tried that once or twice in connection with certain committees.

Mr. GARY. Frankly, I will say to the gentleman that I am not going to ask for a rollcall vote. Let me say this further. We bring to the House a unanimous report. The report on this bill was unanimously agreed upon in our subcommittee that worked on the bill, and it was also unanimously approved by the Committee on Appropriations. We hope that our committee has done its work so well that when we get through explaining the bill, the Members of the House will be entirely satisfied with it and will be willing to approve it without a record vote.

Mr. PASSMAN. Mr. Chairman, will the distinguished gentleman yield?

Mr. GARY. I yield to the gentleman from Louisiana.

Mr. PASSMAN. Is it not true that the information which the gentleman from Pennsylvania [Mr. FULTON] has requested can be found in the report? There are six pages in the report detailing each item of the budget request, showing by how much it has been reduced. The gentleman will find a very complete table in the back of the report.

Mr. FULTON. If the gentleman will yield to me for a moment, I will say to the gentleman from Louisiana and the gentleman from Virginia that they both do a good job. But how does an ordinary Member on the floor show how much he has voted for in a particular year? It is impossible under the present system. I might vote for maybe one elephant, one donkey, and a whole bunch of rabbits if the bill is passed by voice vote, and nobody knows about it. For the average Member, this method of voting on budgets is crazy, because we do not know how much we are voting for in a particular year.

Mr. GARY. I shall point out as well as I can to the gentleman just what he is voting for in this bill because I think the House ought to know what it is voting for.

Mr. FULTON. May I say that on this bill, I shall be voting in accordance with the gentleman's judgment, although it may not be a record vote.

Mr. GARY. To the division of disbursement, which is the division that issues all the checks for most of the Government agencies, we allowed an increase of $4,219,000, $3,033,000 of which was for the mandatory increases demanded by law. We reduced the budget estimate $780,000. Government checks have tremendously increased in number, as everyone knows. This division sends out the checks for Social Security, the Veterans Administration, and various other departments of the Government. We felt that they needed some additional funds because of the increased workload, but we have cut them down believing that they can shave their expenses to the point that they can live within the appropriation.

The Bureau of the Public Debt this year asked for an increase in appropriations of only $1,500,000, and their mandatory increases were $1,272,000.

We reduced them $500,000 in the hope that they could save that amount by the use of the improved machinery they are using. They are using electronic machines wherever practical, which enables them to do a much larger volume of work with less manpower.

There was a reduction in the amount requested by the Office of the Treasurer. A large part of this appropriation is for printing the currency of the United States. While we were sitting we were told by the Bureau of Printing and Engraving that they were going to reduce the unit cost on that printing this year. The President sent over a supplemental appropriation request for the Office of the Treasurer reducing the original request $900,000 for the year 1960. The reduction in the unit cost of printing the currency goes into effect immediately. We felt that the Treasurer could save at least $250,000 this year and thereby build up their inventory, which would enable them to cut their expenditures by that amount next. We have therefore recommended an additional cut of $250,000.

The next item is one of the larger items, the Bureau of Customs. Its appropriation for 1959 was $48 million. They requested $53,865,000, which was an increase of $5,865,000 over their 1959 appropriation, $4,453,265 of which was a mandatory increase. We allowed the total amount requested in this instance because there has been a tremendous increase in the volume of the workload of the Bureau of Customs due to the increase in our foreign trade and travel.

Our committee suspended its hearings to go to New York to visit the Customs installations there. They are doing a magnificent job. Anyone who will go to the Idlewild Airport and look at the improvements they have put in at that airport will certainly take his hat off to the Bureau of Customs. One day we went to one of the wharves to see the unloading of an incoming steamer, and the next day to Idlewild. You cannot imagine the contrast. On the wharf there were practically no facilities. The baggage was on the floor. The customs officers were examining it as people sat around with practically no facilities at all. Whereas, at Idlewild they had counters set up with adequate facilities so that the people could just pass through and have their baggage checked immediately and go right on out. Notwithstanding these improvements, they do have a backlog of work and, consequently, we have allowed them the full amount of their request.

The next item is the largest division of the Treasury, the Internal Revenue Service. Their appropriations in 1959 were $325,500,000. The estimate for 1960 was $365,500,000. Our committee allowed them $363 million which is an increase of $37,500,000 over the 1959 appropriation. But, of that the mandatory increase was approximately $32 million. We recommend that the budget request be cut $2,500,000.

Some of you will remember that not too long ago a fellow townsman of mine, Mr. T. Coleman Andrews, was the Commissioner of Internal Revenue. Mr. Andrews advised our committee that the Internal Revenue Service needed 5,000 additional employees and he stated that he was going to ask for a thousand each year, until the 5,000 had been added to the rolls. He felt that the increase would justify itself because, they tell us,

that for every dollar they spend for a revenue agent, they get from $10 to $20 in additional revenue. But, of course, eventually you are bound to reach the point of diminishing returns. Just exactly where that point is, nobody knows. But, we allowed at that time about 2,000 additional employees. Then Mr. Harrington came in as Commissioner. He told our committee that he was going to consolidate the gains that had been made and that he was not going to ask for any additional personnel for the time being. He carried on with the personnel available, and apparently got along very nicely. Now we have a new Commissioner, Mr. Latham, and he is asking for an increase of $8 million over and above the mandatory increase. We felt that was quite a substantial increase and yet we felt that they might need a few more men in view of the large increase in the number of tax returns. We, therefore, allowed them about half of the increase requested in personnel and more than half of the funds requested over and above the mandatory increase.

The next item is the Bureau of Narcotics. Our committee was very much gratified over the report of Dr. Anslinger, the Commissioner of Narcotics. He presented charts showing a tremendous decrease in the number of dope addicts in this country today. Dr. Anslinger has been in that bureau for a number of years and is one of the outstanding administrators in the Government, in my judgment. He attributes the decrease in the number of addicts to the more stringent laws that the Congress and a number of the States have enacted, increasing the penalties for violations of the narcotic laws. He did not ask for any increase over 1959, other than the mandatory increase, and we gave him everything he asked for.

In the case of the U.S. Secret Service, they asked for a few more men to guard the President and Vice President. Realizing that we are separate and independent branches of the Government we never challenge the request of the administrative branch for the men necessary to protect the President of the United States, the Vice President, and the others whom they are required by law to protect. We think that is a matter which should be left to the Secret Service. Consequently, we allowed the additional manpower they requested for that purpose.

The Secret Service is also having a great deal of difficulty with counterfeiting. I suppose many of you read in the papers just a few days ago that they have just broken one of the greatest counterfeiting rings that ever existed in this country. It extended practically throughout the United States. Their workload has tremendously increased. They asked for some additional men for the work; we allowed them an increase of $539,000 of which the mandatory increase was $259,886.

We cut them only $100,000.

The Secret Service White House Police: At the present time the White House is using some rooms over in the Executive Office building across the street from the White House. They have never used White House Police outside the White House grounds, but they are using a portion of the Executive Office building for White House officials and they have some very highly classified files there. They thought they needed the protection of White House Police. We do not want to take any chances with those files, so we allowed their request. The Secret Service guard force is practically the same amount as last year.

The Bureau of the Mint: There were no changes over last year's appropriation.

Now we come to the U.S. Coast Guard. The appropriation for operating expenses of the U.S. Coast Guard in 1959 was $171,700,000. The estimate for 1960 was $190,780,000. The committee recommends $189 million, which is an increase of $17,300,000 over 1959. The mandatory increase is $8,081,000. The decrease below the budget estimate is $1,780,000.

Now I shall be very glad to answer the question of the gentlewoman from Illinois with reference to the Coast Guard.

Mrs. CHURCH. I greatly appreciate the courtesy of the chairman of this subcommittee. I have no reason to suspect that he would do anything but justice in connection with the Coast Guard, but those of us around the Great Lakes who have become increasingly aware of the danger to life and limb as well as to property through increased boating, are much concerned over this cut of $1 million, and I was wondering if the gentleman could satisfy or assure me that there would be no increased danger because of the diminution of Coast Guard activities in that area.

Mr. GARY. I will assure the gentlewoman from Illinois that there will be no decrease so far as the Great Lakes are concerned in the service that the Coast Guard is rendering.

This is true: You will recall that last year the Congress passed the Federal Boating Act. That act has to be coordinated with the activities of the various States. The Coast Guard did not ask for any appropriation to implement the act that we passed last year, because their program has not been sufficiently formulated. I would be unfair to the House if I did not tell you that they will probably come in for a supplemental appriation later on for the necessary funds to implement the Federal Boating Act which was passed last year.

That act raises certain funds through the licensing of small boats, so we do not know yet what the act will cost, but so far as small boats are concerned there will probably have to be some money which we hope will be covered by increased receipts paid into the Treasury. The regular Coast Guard activities, we feel, are fully provided for.

Mrs. CHURCH. I thank the gentleman.

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Michigan.

Mr. JOHANSEN. I want to preface my remarks by commending the gentleman for his presentation. I observe he remarked that many of the increases in the respective items are due to pay increases voted in the Pay Act of last year.

I should like to ask the gentleman, since I am sure he is aware of the provision in that act, of which I happen to be the author, calling for absorption as far as possible of the cost of this increase through the nonfilling of vacancies, and I am sure the gentleman is also aware of the Executive order for a 2 percent reduction in personnel also through nonfilling of vacancies for the purpose of absorbing that cost. I should like to ask the gentleman if in the budget request and in the studies that his able subcommittee has made he has detected any evidence whatsoever of conformity either to that legislation or to that Executive order that is reflected in any savings in the matter of pay increase costs?

Mr. GARY. I may say to the gentleman that we have gone into the question of personnel very carefully in connection with each agency. But this country is growing, and consequently the workload of practically every agency of the Government is increasing annually, particularly in the case of the Treasury Department. You cannot handle these increases in service without having some increase in personnel. We have not been able to cut off all increases in personnel because of the fact that we are faced with greatly increased workloads in many of the divisions.

Mr. JOHANSEN. I understand completely the gentleman's point that many of the services in this particular bill reflect the growth of the country; on the other hand, am I to assume that the gentleman says there are no cases in which due to duplication of activities or functions there cannot or has not been some possible reduction, even though not net overall made possible through a reduction?

Mr. CANFIELD. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from New Jersey.

Mr. CANFIELD. Is it not proper to point out to the gentleman from Michigan that in the Treasury Department today, quoting last December figures, there were 14,000 fewer employees than there were 7 years ago? That is in the Treasury Department alone.

Mr. GARY. I thank the gentleman.

Mr. ALEXANDER. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from North Carolina.

Mr. ALEXANDER. May I add for the information of the gentleman from Michigan that the amount absorbed by administrative action in the Treasury Department alone in the current fiscal year will be $4,096,233. I am sure the gentleman will be interested in that.

Mr. JOHANSEN. I am happy to hear that. Do I understand by that statement the gentleman implies part of that is through the nonfilling of vacancies in employment? In other words, that is a part of the administrative action?

Mr. ALEXANDER. That is true. This figure I gave was the saving in 1959.

Mr. JOHANSEN. I thank the gentleman.

Mr. CURTIS of Missouri. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Missouri.

Mr. CURTIS of Missouri. This very point that has just been brought up I was going to ask some questions on, but in the other direction. I refer to the Internal Revenue Service. I note in the committee report the statement:

> The amount recommended is sufficient for adequate administration of the tax laws, and will permit the service to proceed with approximately one-half the requested augmentation of employment.

My Committee on Ways and Means is right now conducting hearings on the administration of the Bureau of Internal Revenue. There has been a considerable reorganization of that bureau during the past few years, which has resulted in considerable diminishing of personnel. But, now, having done that, the Treasury is requesting an additional $40 million instead of the $37,500,000 that the committee has granted because, they are telling you, they can use it now. The concern I am expressing is this: We are right now at the very nub of collecting the revenues, and the Treasury officials have informed me, Mr. Chairman, that with this additional $2.5 million which you have cut out, if you were to put that back in, they could collect several million dollars over and above that with this additional personnel.

Mr. GARY. I will say to the gentleman that this is not a new story. We have been told that every year since I have been on this committee, and that has been about 10 or 12 years. But, we feel that additional revenue agents should not be recruited too rapidly because the Department ought to get the very best men they can for that service and they ought to be adequately trained. We believe that we have allowed a sufficient number of men for them to select and train during the year 1960. We have allowed about half of the number requested.

Mr. CURTIS of Missouri. The gentleman does realize that this is one service, the Bureau of Internal Revenue, that the Committee on Ways and Means, of course, is particularly concerned with, and the administration of that service, and has been for many, many reasons. Now, the gentleman does recognize that there was a considerable reorganization.

Mr. GARY. Yes, we recognize that.

Mr. CURTIS of Missouri. Let me get this point in. I think the record will show that we have in the service some 7,000 or 8,000 less employees today than we had some 8 or 10 years ago when we were collecting only a fraction of the revenue now collected. So, you are talking about a service that has, with the help of your committee, I might say, taken a new look at this but are now coming in here and telling you that with this additional personnel we can get more revenue right now; not tomorrow, but right now.

Mr. GARY. Let me say to the gentleman that is true of the entire Treasury Department. The Treasury Department has had a management committee in operation since the days of Secretary Snyder. He set up a management committee when he was Secretary of the Treasury, and they have kept it there since that time, working permanently on methods of reorganization so as to get greater efficiency and economy, and I personally feel that it is the most economically, and most efficiently operated department in the entire Government of the United States.

Mr. CURTIS of Missouri. Well, I thank the gentleman. I want to say this. This is a very unusual role that I am taking, because I highly appreciate the work that the gentleman and the members of the Committee on Appropriations do. This is something, though, that our committee has been following closely, and I know we are concerned about this particular cut.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Iowa.

Mr. GROSS. I call the gentleman's attention to the language in the report at the bottom of page 13 and the top of page 14 dealing with payment for public services and ask him why the committee saw fit to castigate those of us on the House Committee on Post Office and Civil Service and those on the same committee in the other body for taking the position that we did in support of this.

Mr. GARY. That relates to the Post Office Department. If the gentleman will wait until we get to the Post Office Department, I will have some more to say about that.

Mr. BOWLES. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Connecticut.

Mr. BOWLES. The gentleman has always been one of the very best friends of the Coast Guard Academy at New London, Conn. He was one of the Board of Visitors last year that reported on the problems of the Coast Guard Academy with the greatest sympathy and understanding. The commission that was set up recommended certain new buildings, a new auditorium and facilities for classrooms and dormitories, and I would like to know if you would like to comment on that, because it is not in the bill.

Mr. GARY. I will say to the gentleman that I have had the privilege of serving on the Congressional Board of Visitors of the Coast Guard Academy for the past 4 years. Every year we have gone over the plant very carefully. We have noted certain needs of the Academy, and I will say that some of those needs were very vital. The most vital need, however, was for the replacement of wooden temporary dormitories in which the men were housed. Last year the House appropriated $2 million to replace these temporary barracks. The work is now just about ready to begin. They had to get plans drawn, but they have been working steadily on it. The construction of those new barracks will start very shortly. Those barracks will be sufficient to house the entire Academy.

In addition to the Academy, we did have on the Academy grounds, placed there during the war when they had to devise, hastily, means of training officers for the war emergency, the Coast Guard Officer Candidate School. They were housed in wooden barracks but no request was made to change those because that arrangement has never worked satisfactorily. In other words, those boys had graduated from other schools. They were older than the regular Academy boys. They would take their 6 months of training and get their commission. They sort of look down on the Academy boys as school kids. The boys at the Academy were going to college for the first time. On the other hand, the Academy boys would say, "Well, these fellows come up here, take a 6 months course and get a commission. We have to work 4 years for ours." They overlooked the fact that those boys had already spent 4 years in college.

So the arrangement has never worked satisfactorily. The Coast Guard looked all over the country, on the west coast, the gulf coast, the Atlantic coast, to find a proper place for that school. It just so happened, shortly before Christmas, the Navy was abandoning a mine warfare school at Yorktown, Va. The Coast Guard found that it could acquire that site which was ideally suited for the training of these Reserve officers. So they are moving that unit to Yorktown which will enable them to dispense with the use of the rest of the temporary buildings at the Academy.

The Coast Guard Academy has other needs. They need a new auditorium. They need some improvements in the gymnasium. Our committee did not feel that we should undertake those improvements this year when they already have a $2 million construction program planned. But I will say to the gentleman that our committee is sympathetic toward those needs, and I hope we can get around to them next year after we have finished this other project.

Mr. BOWLES. I am very grateful to the gentleman for his assurances; I know they will be appreciated in New London.

Mr. GARY. There is one item in connection with the Coast Guard to which I should like to call attention. That is what we in the committe have called Operation "Guinea Pig." Some of you will remember that last year we passed a bill, H.R. 8002. A bill was recommended by the Hoover Commission. Information was sent out all over the United States that this bill would save the taxpayers of the Nation $4 billion. We did not pass the bill as presented, but a substitute bill designed for the same purpose was passed.

This year they began to put it into effect and let me tell you to what extent it has been put into effect. They applied the annual accrued expenditure limitations to six items of the budget. Those six items were: One for the Veterans' Administration, one for General Services, two for the Army civilian functions, and two for the Coast Guard.

The total amount of those appropriations is $341,286,000, or forty-four one-hundredths of 1 percent of the total

budget. You will never save $4 billion in that way.

They applied it to the Coast Guard which is recognized as one of the most economical divisions of the entire Government. They propose to limit their expenditures because they are efficient.

Our committee did not feel that the Coast Guard ought to be made the guinea pig of this experiment, and consequently we struck the limitation from the bill.

Mr. PASSMAN. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from Louisiana.

Mr. PASSMAN. Is it not true that they applied this limitation to items for which in all probability there would be no carryover and those items would otherwise be expended?

Mr. GARY. That is absolutely correct. Moreover, no one who appeared before the committee could tell us where one single dollar would be saved by the process. We asked the specific question of those appearing as to how much it would cost, how many additional employees it would require, and we were told by the Coast Guard that they estimated it would take one additional employee for each Coast Guard accounting center, and there are 16 centers; so we would have to provide 16 additional employees and get absolutely no benefit from the experiment.

Mr. LIPSCOMB. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield to the gentleman from California.

Mr. LIPSCOMB. I think it would be only fair if the gentleman would explain that the reason more items were not included in this budget on the accrued expenditure limitation basis is that we do not have adequate accounting systems throughout the Government to put this plan into effect. The reason the Coast Guard was chosen as one of the best agencies to put H.R. 8002 into operation was that they had an excellent cost accounting system, and this was the agency of Government where the executive branch could prove to the Congress and to the people that this was a program that could do some good. It is not that only 45/100th of 1 percent of the budget is involved. It is that this is the best place we can try it. As the gentleman knows, the Department of Defense has the biggest portion of the budget, over 50 percent, but they do not have an adequate accounting system to put this into effect yet. It is estimated it may take 6 or 7 years to get such an accounting system.

Mr. GARY. Our committee felt it would cost money, and we would not save anything by it. Therefore, it has been stricken out.

Mr. PASSMAN. If the gentleman will yield further, may I say that our distinguished chairman is unduly modest. It was the chairman's brother who, as chief of the accounting staff of the first Hoover Commission, recommended this cost accounting procedure and subsequently installed it in the Coast Guard. The system has worked so well that it has come to be accepted not only as outstanding for the use of the Coast Guard, but as a model for other agencies of the Federal Government.

Mr. ROGERS of Florida. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield.

Mr. ROGERS of Florida. May I say that I understand the gentleman's position. I have read the report and the hearings. I must admit I am somewhat disappointed at the attitude of the committee, since I felt it was the will of Congress by passing this bill H.R. 802 with a vote of 311 to 87 in the House alone. I realize the gentleman did not favor that bill, and I understand his reasons, but I felt that after a very fair discussion we might at least give it a try for a year, which was what the Treasury Department was asking. As I understand, they did pick the Coast Guard because they do have a very fine cost accounting system. They have been on cost accounting for 3 years now, and they felt they could best show it in operation. I hope the committee will take a look at it to see if we cannot at least give it a try.

Mr. GARY. When we reach the point where we can make a real trial of it, that might save the country some money, I will advocate a trial run. If at any time it can be demonstrated to me that it will save money I shall certainly be for it.

Mr. ROGERS of Florida. I appreciate the gentleman's attitude, and am glad to know he is willing to give it a trial.

Mr. LIPSCOMB. Mr. Chairman, if the gentleman will yield further. I want to be sure it is clear to the agencies and departments of the Government that the language that is contained in the report of the committee in no way gives them any authority nor should they interpret this as a directive to retard the efforts they are making to improve the accounting systems throughout the Government under Public Law 863, 84th Congress.

Mr. GARY. That is absolutely true. May I say that our subcommittee has led the fight for better accounting procedures in the Government agencies. As a matter of fact, it was our committee that really sponsored the investigations that caused the setup of the Joint Accounting Committee of the Treasury, the General Accounting Office, and the Bureau of the Budget. That Committee is in operation today trying to get adequate systems installed in the various departments. Our committee is very much interested in the work of that Committee and has given them our full cooperation and shall continue to do so. This has absolutely nothing to do with setting up proper systems within the departments. But, until they do set them up, we see no reason for making the Coast Guard a guinea pig for this experiment. When they get enough systems installed to make an experiment worthwhile, if we can gain something by the bill, H.R. 8002, then I will take off my hat to the gentlemen who have sponsored it.

Mr. Chairman, in the case of the Post Office appropriation the request for 1959 was $3,402 million. The estimate for 1960 is $3,889,080,000. We recommend in the bill $3,847,160,000. That is an increase over the 1959 appropriation of $445,160,000. Of that, the mandatory increase is $272,820. In other words, we cut the request $51,920,000. Let me say those cuts were based on the fact that we thought the Post Office had overestimated its increase in volume, and we believe that it can handle the volume of mail that it will have without any difficulty with the appropriation we are recommending.

Mr. McDONOUGH. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield.

Mr. McDONOUGH. I notice in the item on the Post Office here in your bill there is the item of postal modernization which is a new item. As I read the hearings and the report, included in that item is modernization of existing buildings.

Mr. GARY. That is right.

Mr. McDONOUGH. I have an unusual situation in a very large post office which is one of the largest post offices of the Nation where air ventilation and air conditioning is very urgently needed. That is in the terminal annex post office in Los Angeles. Do I understand that under this item that this could be considered by the Building Department of the Post Office to installing such a facility in that building?

Mr. GARY. Funds for air conditioning are included in the program and will not be disturbed by the cut we are recommending.

Mr. McDONOUGH. The gentleman means then that it is understood that air conditioning will be installed in that building?

Mr. GARY. Yes; the funds are not disturbed by our cut and the Post Office Department could consider installing that facility as part of its modernization program.

Mr. McDONOUGH. I thank the gentleman.

Mr. MACDONALD. Mr. Chairman, will the gentleman yield?

Mr. GARY. I yield.

Mr. MACDONALD. I notice on page 13 of the report there is set out the volume of mail pieces, and so forth, and that the estimate is that it is going up 4.3 percent by 1960. I was wondering if the gentleman knew how much of this volume in small pieces is due to fourth-class mail.

Mr. GARY. We probably have that figure. Let me say with reference to that that they are estimating a 4.3-percent increase.

Mr. MACDONALD. That is right.

Mr. GARY. In 1956 they estimated an increase of 3 percent; the actual increase was 2.19 percent. In 1957 they estimated the increase to be 2.64 percent and in that year we had an unusual situation and the increase was 4.67 percent. In 1958 they estimated a 2.82-percent increase and it was 1.78 percent. We do not think they are going to have as large an increase as estimated this year. It will be an increase of about 2.5 percent, according to our estimates.

Mr. MACDONALD. Does the gentleman happen to know how much the Post Office loses on this fourth class handling of mail?

Mr. GARY. That information is available to our committee.

Mr. GROSS. Mr. Chairman, if the gentleman will yield. Fourth-class mail is parcel post, and I believe the gentleman is referring to some other class of mail.

Mr. MACDONALD. No; I am not.

Mr. GARY. I am very sorry, but my time has expired. I must leave time for members of my committee to make their presentation to you, Mr. Chairman. Of course, I am very glad to give any information that I can, but I feel that I must leave some of the time at my disposal to other members of my committee. I regret that I have already consumed more time than I should.

Mr. GARY. Mr. Chairman, I ask unanimous consent that the gentleman from South Carolina [Mr. HEMPHILL] may extend his remarks at this point in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Virginia?

There was no objection.

Mr. HEMPHILL. Mr. Chairman, when I read the report on H.R. 5805, it immediately camc to my attention that perhaps we have here a back door approach to legislation which is the province of another committee. Too often we have heard of a back-door or side-door approach to appropriations.

The policy of the Post Office Department, is characterized by its place in the American scene of yesterday, today, and in the future. The original concept of the postal service was a concept of service, service to the American people. It was early recognized that, in the interest of a high standard of living, and in the promotion of good ideas and good organization, that the Post Office Department must give service, and help same organization. To give you some examples—the American Legion, V.F.W. and DAV magazines—all serving high purposes—the Presbyterian Survey—the Baptist Courier—all get special treatment, and well they should. The Post Office Department cannot deny this service.

Are we to abandon the concept of service as the first purpose of the Post Office Department.

I was not only shocked with the refusal of the committee to grant the administration's request for public services, but I believe the language contained in the report is wholly misleading. Based on my experience on the House Post Office and Civil Service Committee, I am inclined to believe this language was written by the Post Office Department, itself. It smacks of their illogical and erroneous contentions that have previously been presented to the committee, of which I am a member.

I just want to ask one question: Is this an example of an Executive department undercutting the President's budget, of which we have heard so much lately?

For my purposes, I should like to take some bold words that refer to postal policy. The report refers to public services in this bill, and for that matter the basic law set forth in Public Law 85–426, as quoted: "a defective concept, unwisely conceived and inaccurately priced."

Is it a defective concept to say that the total losses on free and nonprofit services should be brought out in the light where the public can view them? Is it a defective concept to say that free-in-county mail, which costs the taxpayers $15 million a year, should be identified so that the taxpayers know that this type of service is provided free? I have listened to the Post Office Department many times in committee and know that they would place a public service value of approximately $1 million on this item representing rate concession, which I note was used in the report. The simple question remains: Who will pay the additional $14 million loss?

Likewise, the nonprofit newspapers and magazines, items for which the present administration has never requested a rate increase, the total loss on this is someplace over $63 million. Should this item not be fully identified and set out so the public can view it? If we are not going to seek rate increases for this category of mail, who then will pay it? Likewise, the many other free and low-cost items which the Congress has repeatedly approved for many years. Is this a defective concept? I think not. In my opinion, it is a deceptive concept not to bring these to the attention of the American public.

The Post Office and Civil Service Committees of both Houses have worked on this matter of postal policy for many years now and I am shocked that a committee of Congress would label their work as "unwisely conceived." I recognize that in the bargaining processes of democracy many compromises are necessary—we would not have it any other way. I, for one, felt that Public Law 85–426, which raised postal rates, granted pay increases and set forth a modern concept of postal policy, was a very sound piece of legislation.

I ask the Members of this House if public services as submitted by the administration were inaccurately priced. I note from the report that the Post Office Department was granted an increase of $445 million over 1959. If the administration's public service items were inaccurately priced, how can we trust any other figures that were submitted in this budget?

In the last Congress the Postmaster General appeared before the Senate Appropriations Committee on public services for 1959, the total of which amounted to more than $171 million. At that time he submitted an estimate similar to the one he submits to this Congress, and I am advised that he had the full cooperation of the General Accounting Office on this matter. Does the House Appropriations Committee wish us to believe that he misled both the Senate committee last year and the House committee this year?

I do not think it was a question of erroneous or inaccurately priced figures, I think this whole matter is a question of the Post Office Department's deliberately defying the provisions of law in order to return to a less accurate system that will continue to hide from the American public the real subsidies involved in certain free and low-priced services.

Back in 1954 the Senate committee, under the leadership of Senator FRANK CARLSON, engaged the firm of Price, Waterhouse & Co. to make a study of public services, and they found at that time a total of $274 million representing free and low-cost services in the interest of the national welfare. Since that time the Senate committee has developed other computations based on the Post Office Department's own cost ascertainment system. If you accept the mandate set forth in Public Law 85–426, then the computations submitted under that law to the Congress of the United States should also be accepted.

The Post Office Department omitted in its submission, total losses on third- and fourth-class post offices and the star route system, saying it could not possibly determine the loss. Yet on page 214 of the hearings before the House Appropriations Committee this year, it is very confident of the fact that each time they close a fourth-class post office they save $1,400 annually on each one. They cannot determine the public welfare costs on fourth-class post offices, and yet in practically the same breath they ask us to accept this figure.

Mr. Chairman, I would remind the House that back in 1954 Price, Waterhouse & Co. found a loss of $23 million on fourth-class post offices alone and a loss of over $7 million on delivery of mail by star route contract. These determinations were made after a full study in the Post Office Department of that Department's figures.

I am of the opinion that the Post Office Department will only supply figures when such figures serve their interests. I am deeply shocked that after many years of hard work on the need for identification of public services in the Post Office Department, this work has resulted in naught because the Post Office Department did not agree with the legislative will of Congress. This is not the first time the Post Office Department has defied the Congress and the law.

I, for one, believe that in the national interest, the public service functions of the Post Office Department for the small county newspapers, for the nonprofit church and fraternal groups, for the blind, for our libraries and educational institutions, and yes, for the fulfillment of certain international obligations, should be set out where the American public can properly review and pass judgment on them.

Mr. Chairman, I would like to insert at this point a speech made by Hon. RICHARD L. NEUBERGER, of Oregon. I disagree with that gentleman in many areas but his speech on the public service feature of postal operations is a good one:

REMARKS BY HON. RICHARD L. NEUBERGER, OF OREGON, MEMBER OF SENATE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, TO MEMBERS OF OREGON NEWSPAPER PUBLISHERS ASSOCIATION, IN PORTLAND, OREG., ON DECEMBER 6, 1957

I am happy to have this opportunity to discuss with you the pending postal rate increase bill now before the Congress. Undoubtedly, you are generally familiar with the proposals in H.R. 5836. They call for

substantial increases in the rates to be charged for the several classes of mail. But before discussing with you the proposals and philosophy contained in the new postal rate increase bill, I should like to review, in a broad way, the indispensable place the post office has in our economy and the close, personal importance it holds for each of us.

Our postal service has had a vital part in the growth and development of America. History records the fact that the postal service was substantially responsible for the creation and growth of our merchant marine; that the fundamental need of our people for adequate postal service contributed heavily to the growth and development of our vast system of railroads. Until recently, our postal service provided substantial subsidies essential to the growth and development of the airlines. If there is any question in your mind having to do with the vital part the postal service contributes to the continuing operation of the railroads, we need look no further than the frantic protests raised when a branch rail line is proposed to be discontinued as a result of the cancellation of an existing mail-carrying contract with a railroad.

Beneficial postage rates have given many an infant business its start in life to grow, to employ people, to pay taxes, to help make America strong and great. Fair postal rates have greatly aided in making Americans the best informed people on the face of the earth, have broadened and strengthened our cultural and spiritual heritage. There is no doubt in my mind that the postal service of the United States provides a tremendous bulwark to all the many phases of our national life and, as such, is an essential public service.

The 83d Congress in 1954 gave full confirmation to the public service concept when the Senate Post Office and Civil Service Committee, under the leadership of Senator FRANK CARLSON, Republican, of Kansas, through its advisory council, declared: "The Post Office Department is fundamentally a public service to the people of the United States, and should be so considered."

More recently this year, under the leadership of Senator OLIN D. JOHNSTON, Democrat, of South Carolina, a citizen's advisory council filed with the Senate committee a substantial and detailed report entitled "The Post Office as a Public Service." The council declared its finding that the total public service values that could be definitely pinpointed in cost figures were greater in total than the deficit stated as having been established by the Post Office Department for fiscal year 1955. It is in the area of public service, in the identification and cost of the several items of public service, that we come into bona fide conflict with the present administration and its postal philosophy.

The present Postmaster General has referred to the Post Office Department as a public utility, or as a business which should be fully self-supported through postal fees paid by users of the mails. That sounds fine as a superficial theory, until the Postmaster General's theory runs head on into the practical consideration of the large deficits on specific public service items for which the Congress has declared low beneficial postal rates.

For example, the hundreds of nonprofit magazines and newspapers of this country have a large annual circulation. They serve principally religious, fraternal, and scientific groups. These publications incur a postal deficit of approximately $50 million per year, that is, the difference between postal revenues and allocated expenses. In the several rate bills proposed by the present administration since 1952 there has been no effort made to increase the below-cost postal rates on this type of publication. It is my belief Congress was wise in authorizing beneficial below-cost postal rates for such public service cultural publications. But, when questioned on postal revenue losses in this area of service, the Postmaster General has been distinctly evasive.

To be consistent in his contention that the Post Office Department should be on a pay-as-you-go basis, why has the Postmaster General not asked for substantial increases in postal rates for this particular category of mail? The Postmaster General's testimony to Congress gives clear impression that he feels these losses from below-cost postal rates in the public service should be borne by other mail users through excessively high postal charges. Such a policy is practically punitive in its effect, particularly on small businesses. I don't think we have reached a point in this country where we are going to ask businesses—which must make a profit or perish—to underwrite such public service postal losses, particularly as such nonprofit publications compete for advertising with the "in-business-for-profit" newspapers and magazines.

Another type of desirable public service in the field of publishing, which has substantially contributed to our national advancement, is the free-in-county newspapers. These cost the Post Office a net revenue loss of approximately $14 million a year. To be consistent in its pay-as-you-go philosophy, the Post Office Department should charge full cost for this kind of service. But, to put that service on a pay-as-you-go basis, would sound the death knell of many of our fine and valuable county newspapers. There are many other types of public services which could be enumerated to emphasize the point.

Rural free delivery is one of these. Rural free delivery was established in 1896. Today, it serves approximately one-fifth of the Nation. R.F.D. carriers deliver mail to more than 35 million of our people, to our approximately 9½ million farm and suburban families. This year, the citizens' advisory council reported that approximately $95 million was the cost of the public welfare service provided in rural free delivery. Were the Post Office to insist on a pay-as-you-go basis for rural free delivery, farm families would pay much more for postal service than they do now. Frequently it costs 10 times more to deliver a letter on a remote rural route than in a crowded city. The rural free delivery system was established to provide our farm and suburban folks with benefits equal to those of the city dweller. Without rural free delivery, families in lonely rural areas would be heavily penalized.

Consider, too, America's parcel post service, which annually carries upwards of a billion small packages to even the most remote regions of our country. Parcel post is a constant and personal part of the life of each of us—businessmen, farmers, householders. We're all particularly aware of that fact right now in sending and receiving our Christmas packages.

But the essential national function of parcel post, a self-supporting service with rates set by the Postmaster General and the Interstate Commerce Commission and not by Congress, is being curtailed.

Throughout the Nation's legislative history in the development and growth of our great postal service, there is constant, frequent reference to the fact that adequate postal communication should be provided to all Americans, everywhere, without primary considerations of cost or profit to the Government of the United States. Postal service has always been considered primarily and basically a vital public service.

These examples are cited to demonstrate the fallacy of the present administration's philosophy that the Post Office is a public utility, or should be considered as a business on a pay-as-you-go basis. Carrying the administration's philosophy to the ultimate would mean that we would have to pay much more for postal services. Such higher postal rates would be manifestly unfair in many respects, because the ordinary mailer would thus also be carrying the burden of losses on public service items. Or it would mean the elimination of uneconomic operations as is the practice in private business which, in turn, would deny many of our citizens an adequate mail service.

I am not afraid to vote general taxes to help make up any postal operating deficit which is due to an adequate and efficient postal system which serves the American public at fair and equitable rates. Our Federal Government consists of some 10 major departments and hundreds of lesser bureaus. There is no valid reason why the Post Office should be singled out for operation at a profit, while all the others can incur large deficits which amount up to many billions of dollars.

Postal rates could be raised to a point where they hampered and choked off many legitimate business undertakings. This might be necessary for a profit-making postal system. Yet would it be wise?

I have not subscribed to the so-called Hoover Commission theory that "those who get governmental services should pay for them." It sounds persuasive. When adapted to our postal system, it demands stiff rates from certain users. Yet, apply it to other spheres of Government and see what happens.

Would not this theory exempt from school taxes all families without children of their own? What about local fire protection? Would not the Hoover theory result in billing a household for turning out the hook-and-ladder to douse an attic fire? If an elderly woman faints on the sidewalk, should her family be billed for the hourly wages and motor vehicle costs of the patrolman who drives her to a hospital or doctor's office? These are questions implicit in the whole idea of "those who get governmental services should pay for them."

I consider the Post Office a service institution. I want revenues to be as near as possible to postal costs and expenses. But I do not want a false standard raised for fusing these two areas. We could balance the postal budget at the cost of impairing the Nation's economy, particularly to the detriment of the less favored users of our mail system.

You have commented considerably, pro and con, in your columns on the current postal rate controversy. I know the American Newspaper Publishers Association has declared it wants no subsidies, and that the association has resisted postal rate increases until publishers may know precisely what the costs are. Unfortunately, much of the Post Office Department propaganda has found its way into newspaper columns. Much of it is so misleading that the average American finds it difficult to arrive at a sound judgment. For example, the Postmaster General has frequently referred to the fact that the Post Office Department incurs a $250 million annual loss on second-class mail. Second-class mail, as you know, is the category including newspapers and magazines.

Recently, in a nationwide telecast, Mr. Summerfield said that the loss on second-class mail amounted to $250 million per year, and further commented that "the newspapers are responsible for a small portion of the total loss of second-class mail." In short, he placed most of the blame squarely on the backs of the magazine publishers. But what is the actual truth?

In the cost ascertainment report for 1956, the Post Office shows the total loss on second-class mail as amounting to $269 million. Of this loss, the newspapers account for approximately $104 million, and that is making no allowance for that portion of exempt publications which is used by newspapers.

Despite Mr. Summerfield's statement that the newspapers are responsible for a small portion of this alleged loss, his own accounting facts reveal that they are responsible for approximately 50 percent of this alleged loss. I do not make this statement as being critical in any essential of our newspaper industry but, rather, as showing the confusion that exists in the public mind as a result of misleading information and inaccurate statements.

I referred to the $269 million as an alleged loss. This alleged loss, and others, are based on mere cost ascertainment determinations, and the Post Office Department has repeatedly warned the Congress that to use cost ascertainment exclusively as a ratemaking device is a fallacy. Accordingly, the Post Office Department has modified cost ascertainment by making certain provisions for the usual allocation of costs based on standard ratemaking factors, such as priority and preferment of service, value of product, ability to pay, and other intangible factors. When this formula is applied to Post Office Department costs, an amazing result is revealed. The alleged second class deficit of $269 million, so glibly asserted by the Postmaster General in publicity statements, suddenly shrinks to $102 million. That is a reduction of $167 million. And the $102 million still remaining includes many items of public service for which the Post Office itself has requested no increase.

If second-class mail is to be placed on a pay-as-you-go basis, then many publishers of newspapers and magazines would be required to foot the bill for much free and privileged mail, some of which is in direct competition with your industry.

The forthcoming session of the 85th Congress will see great pressures being exerted for the enactment of a postal rate increase bill. This undoubtedly will be used by the administration as a basis for approving Federal and postal employees' pay increases. I am thoroughly opposed to linking pay increases with rates, for it doesn't make sense.

There are now over 2 million employees in the Federal Government. Approximately one-fourth of these work for the Post Office Department. Is it the administration's contention that mailers, through increased postal rates, should bear the brunt of employee pay increases for the entire Federal Government? Certainly, the Federal Government is not asking for increases in visitors' fees to the national parks, for increases in Patent Office fees, for increases in airline fees for use of airway facilities, nor for increases in payment for other public services provided by the Federal Government.

I support a fair and adequate pay increase for Federal and postal employees. But such pay increases should be considered strictly on their own merits, with no relation whatsoever to rates or fees to be charged the American public for services provided by the Federal Government.

I wonder how often we tend to forget that in the early days of the postal service the recipient paid for the transmission of mail at the time he received it. The high rates imposed, and the difficulty of collecting, led the Congress early to enact lower beneficial postal rates in the public interest.

In 1792 George Washington mde the following statement to the Congress: "In consequence of the rate of postage imposed on the transmission of newspapers by the Post Office law, many persons in Virginia who had heretofore taken newspapers from this city had declined receiving them any longer; and that many others declared that they had only continued to take them under a full persuasion that the rates of postage would be reduced during the present session of Congress, and that if such reduction would not take place they would desire their printers to stop their papers." The public service obligations of our postal system to the American people were obvious then as they are now.

For a moment or two let us analyze the rate bill as it passed the House. You will recall that it provides for a 1-cent increase in first-class mail—that is letter mail; a 1-cent increase in airmail, and increasing the postal card rate from 2 cents to 3 cents. The bill provides for an increase of 60 percent on second-class mail, spread over a period of 4 years. It also provides that the 5,000-press-run newspapers will be exempted from the rate increase. There is also a provision limiting the subsidy to any one publication to $100,000 based on the Post Office Department's cost ascertainment figures.

For third-class mail, the bill provides for immediate hiking of the bulk minimum per piece rate from 1½ cents to 2½ cents.

The House bill also carries, as title II, a postal policy which is not only inconsistent with the Post Office Department's own philosophy respecting postal rates, but does nothing to resolve many of the public service problems of the Post Office Department. A policy provision such as the one contained in this bill is not self-executing, and needs revision if it is to provide a workable and equitable basis for present and future postal rate action.

I do not favor the postal rate bill as passed the House. I believe there is much work still to be done before we can properly or fairly solve the perennial postal rate dilemma.

First of all, Congress should adopt a modern postal policy enumerating the public services properly to be paid for out of the general tax funds as expenditures in the public welfare. The present bill does not include such essential policy provisions.

As I have mentioned, the present postal rate bill provides that the 5,000-press-run newspapers shall be exempted from postal rates increases. This may be a valid provision, although certain newspaper groups have strenuously objected to it. But my point is this: if this provision remains in the bill, then I insist it is incumbent upon the Congress to put a dollar value on the subsidy involved, and provide that it be borne from the general tax funds. It should not fall upon other postal customers. Depending upon which set of figures is used, this subsidy could run anywhere from $10 million to upward of $20 million or more per annum.

At the present time, postal rates are being determined by the Post Office Department, the Interstate Commerce Commission, and the Congress of the United States. Once the Congress has adopted a much needed postal policy, I believe that all postal ratemaking authority should be vested in the Congress, so as to insure continuing consistency with postal policy.

With respect to the proposed increase in first class mail, for years this category has shown a substantial profit. Now, under the present Post Office formula, costs have been shifted so that it carries a substantial loss. However, the Post Office formula was adopted without benefit of a congressional policy enactment, which makes their findings inconclusive and possibly inaccurate.

The proposed rate increases for second class mail, in my opinion, would tender to foster monopoly. Bear in mind that there are 25,000 publications equally divided between newspapers and magazines entered as second class mail. Unquestionably, some of the larger publications could stand a 60 percent increase in rates spread over 4 years, but what about the smaller publications whose profit margins are declining, and whose struggle to stay in business would end if faced with a 60 percent increase? Are we ready in this country to turn our press over to the hands of a few, and vest it in a quasi-monopoly? Under such circumstances I doubt if our press would be any longer free.

Would it possibly dare to call to the attention of our people the shortcomings of the present administration with respect to our scientific race with other nations? Would the publication Aviation Weekly have told us, as it did in a recent edition, that the technological and scientific developments of Russia have been observed for a period of 2 years through our radar installations in Turkey?

Our press discharges the obligation our forefathers placed upon it when it brings to public light mistakes and inconsistencies of our leaders, who are held responsible for action which benefits the general welfare.

I recognize that many daily newspapers have found other ways to distribute their mail than through the post office. Editor and Publisher recently reported a 11 percent decline in the use of the mails for newspaper distribution since the last 30 percent increase went into effect in 1951. But many weekly newspapers and magazines, totally dependent on mail for delivery, may not be able to withstand the impact of a drastic rate increase such as is currently proposed; 60 percent added to present second class mail rates would mean a total increase of 108 percent since 1951. I believe this is a cost factor far in excess of the increases in other business costs.

You have perhaps given some thought to the so-called Rhodes amendment, which limits the subsidy of any one periodical to $100,000 per annum to be determined by cost ascertainment findings of the Post Office Department. Just a word on that. In the first place, the Post Office Department itself has condemned cost ascertainment as a sole basis for postal ratemaking. Secondly, it seems to me the Rhodes amendment would vest in the Postmaster General a power over the free press perilous to our country's welfare.

The proposed arrangement would permit one individual, the Postmaster General, to set varying costs on competing publications. He could give preferment to one publication over another. Bias could enter into such judgments. The implications of such a dictatorship are obvious. Even the present Postmaster General admits the Rhodes amendment is unworkable. I, for one, am reluctant to support it.

The proposal to raise the per piece rate on third-class mail from 1½ cents to 2½ cents is far too drastic. It would cause widespread damage to small business, which is already in sore straits. Many small businesses in this country find third-class mail essential as an effective and economical means of advertising and selling their products. These are the small businesses which cannot afford the substantial cost of advertising through radio, television and the press.

I feel that the U.S. Government owes small business every possible encouragement to prosper and grow. There has been testimony before the committees of Congress that small businesses dependent upon the mails could not survive this large increase proposed in postal rates. Bear in mind that there are 225,000 third-class mail permits in existence today. It is estimated that the users of these permits have built up a total of about $15 billion annual business. I, for one, would want to approach the matter of increasing third-class mail rates with exceeding caution, and with the full knowledge of the great damage to the national economy which could easily result from ill-considered congressional action.

The present administration is asking our people to pay more money for less service. It is asking us to pay a premium for built-in waste and inefficiency. The Oakland Tribune of Oakland, Calif., in an editorial dated August 20, 1957, asked that we bring back the pony express, and stated: "The truth must

be faced: Whatever the reason, mail service in the bay area is little better than in the days of its infancy."

There is general complaint that the mail service is deteriorating throughout the Nation. Senator OLIN D. JOHNSTON of South Carolina, who is chairman of the Senate Post Office and Civil Service Committee, has offered a bill to provide modernization of postal facilities. He proposed to borrow $2 billion from the Federal Employees' Retirement Fund. He believes this will provide better service to the American people at drastically reduced costs. I shall support him in this effort.

The Postmaster General has laid the blame on Congress for not providing sufficient money for modernization and technical improvement. But the Congress has given him practically every dollar he has requested. Last year, for example, he asked for $22,200,000 for administration and research, of which $4 million was actually for research. Initially he got $20,500,000 of this, plus another $2 million in the form of a supplemental request. Of $229,500,000 which he requested for buildings and facilities, Congress initially voted $220 million, and added $17 million in a supplemental appropriation.

The Senate Post Office and Civil Service Committee has spent many thousands of dollars investigating these postal problems. I don't want to see this substantial expenditure of the taxpayers' money wasted. I am thoroughly convinced it will be possible in the next session of Congress to develop a modern postal policy so greatly needed. Once Congress has accomplished this, I feel we will then be in a position to act intelligently and constructively on postal rate increases and other crucial postal matters.

Mr. CANFIELD. Mr. Chairman, I yield myself 20 minutes.

Mrs. ROGERS of Massachusetts. Mr. Chairman, will the gentleman yield?

Mr. CANFIELD. I yield to the gentlewoman from Massachusetts.

Mrs. ROGERS of Massachusetts. I have had a great many protests and letters from postal workers regarding the number who will probably lose their jobs because of mechanization or automation, or whatever it is called by the Post Office Department. They are very anxious. I know the great interest the gentleman has in postal workers. Can he give me any information about that?

Mr. CANFIELD. Briefly. I shall be glad to read to the gentlewoman from Massachusetts a paragraph in a newsletter distributed last week by the United National Association of Post Office Craftsmen. This paragraph reads:

> Those attending our meeting were taken on a tour of the modernized and mechanized Washington Post Office and were astounded at what they saw. All agreed that such modernization must come.

May I say to the gentlewoman from Massachusetts that over the years the volume of mail steadily increases. It is projected in the new fiscal year covered by this bill more than 12,000 new postal workers will have to be taken on, this with all the new automation. So generally speaking, I believe that the postal workers of the Nation need not fear the effects of automation at this time.

Mr. EVINS. Mr. Chairman, will the gentleman yield?

Mr. CANFIELD. I shall be glad to yield to the gentleman from Tennessee, a member of our committee.

Mr. EVINS. I thank the gentleman. We serve on the same committee. I did not have a chance to have my question answered earlier. It is on the same subject. Quite a number of Members attended the opening of the most modern postal installation in the world. I notice that in the bill $75 million is carried for modernization. The work will continue in the District of Columbia. I am concerned that all of this fund be not expended in the District of Columbia, but that portions of it be allocated on a fair basis throughout the United States. I hope the gentleman from New Jersey will assure us that that will be done.

Mr. CANFIELD. I can assure the gentleman on that score.

Mrs. ROGERS of Massachusetts. Mr. Chairman, will the gentleman yield further?

Mr. CANFIELD. I shall be glad to yield later.

Mr. Chairman, I am very glad to be a member of the Gary subcommittee of the House Appropriations Committee. It is a hard-working committee and it does an outstanding job.

I wish to discuss at this time, Mr. Chairman, two items in the Treasury phase of the bill now before us. One is Customs. While the amount allowed in this bill for Customs has not been cut, we know that over a period of years, the Bureau of the Budget has denied Customs additional funds sought for port protection and antismuggling activities.

It was most unfortunate that Customs, overexpended in expenditures, was forced during the 2-day Christmas period of last year to take a calculated risk and to cut out the port patrol service of our seaboard cities. Ports were unguarded because the record of previous years showed there were no records of smuggling or seizures on Christmas. One of the ports was Philadelphia, another was New York, another was Boston. The resultant publicity caused great concern.

The New York Times on March 2, 1959, editorialized as follows:

> In the last 15 years the antismuggling responsibilities of the Customs Service in the port of New York have been carried out by a steadily declining staff. During the war years there were approximately 800 enforcement men in this important arm of the Treasury Department. After the war the roster was reduced to about 500 men. Now it is less than 250. The 5-day week means that it is no longer possible to maintain constant surveillance on the hundreds of piers where ocean vessels dock. Nowadays on the average pier there is no regularly assigned Customs man to check ships and their seamen against illicit imports, including narcotics. New York is an obvious target for every heroin-smuggling ring serving as a transmission belt from Europe or Asia. The potential apparatus for smuggling includes many of the 12,000 ships that come into this port every year.

Mr. BYRNE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. CANFIELD. I yield to the gentleman from Pennsylvania who has been so rightfully upset about the Customs personnel action last Christmas.

Mr. BYRNE of Pennsylvania. I would like to compliment the gentleman from New Jersey [Mr. CANFIELD] for the statement be made, which is true. The port of Philadelphia was not covered by a single port patrolman on the whole river front of the Delaware River in Philadelphia during the Christmas and New Year holidays. The collector of the port just released figures for the port of Philadelphia for the year 1958 which would show that $57 million was collected at the port of Philadelphia customs.

We in Philadelphia were annoyed, we are still annoyed over the fact that our port is not protected on holidays and weekends. I know that the gentleman, with the delegation from Philadelphia, has called to the attention of Mr. Kelley, the Commissioner of Customs, that this system must be broken up.

Mr. CANFIELD. Mr. Chairman, when customs officials were before us this year, they testified that the funds now reported in this bill today would give them 30 additional plainclothesmen for their customs agency which would improve coverage of waterfront areas, notably those in New York. Commissioner Kelley then said:

> We will see how effective they are in making seizures on these piers which lately are not completely guarded.

He went on to say that Customs was now in an exploratory stage of a new type of enforcement work and if the new group was successful, more people would be requested.

It is my feeling that there is definite need now for a larger group of customs agents, trained to apprehend those who deal in the devious arts of smuggling and the illicit narcotics traffic and more attention must be paid the matter of port protection.

I am today proposing that the staff of the House Appropriations Committee be directed to make a thorough study of the adequacy of customs enforcement, in our major ports with reference to port security and smuggling. I live in the metropolitan area of New York and it disturbs me no end that the Commissioner of Narcotics, Dr. Anslinger, tells us that 43 percent of all drug addiction in the United States is to be found in New York City. Organized dope gangs, with headquarters in foreign countries, are still getting this awful stuff to our shores.

Now, Mr. Chairman, I desire briefly to touch on another Treasury item which I do not think is being given proper attention at this time because of what it means to the maintenance of our fiscal system and our economy. I refer to the Internal Revenue Service.

No one, perhaps, will ever know what vast sums are lost to the Treasury of the United States through ignorance, neglect, evasion, and fraud.

When the new Commissioner of Internal Revenue was before us a few weeks back, I asked him what he thought about the number of people who should know better and who were simply not filing tax returns. His answer was: "Congressman, it is amazing."

Commissioner Latham told us this year that 93.5 million returns were filed during the calendar year, 1958, 33 million of which called for refunds. The audit force, he went on to say, had completed the examination of 2.6 million

returns, which audit provided for the Government $1.5 billion additional revenue. Very properly I think, he went on to say he proposed within the limitation of the budget to step up the number of returns audited each year and he warned the public to realize that the Service does not have a set pattern in the matter of auditing returns. It is pursuing a trial-and-error method with changes each year.

Some years back, authorities of the Internal Revenue Service indicated to us that the then examination of returns might possibly be reaching a point of diminishing returns insofar as the Treasury is concerned but today this is not the testimony of our Treasury chiefs. Mr. Rose, Assistant Secretary of the Treasury, told us this year every dollar spent on enforcement this year would probably bring upwards of $10 and Mr. Latham himself said that his latest appraisal indicated $13.

This being so, I cannot help but wonder if we are serving the best interests of the Treasury and all the taxpayers of the United States if we do not provide realistic sums for enforcement and collections.

I am proposing, therefore, that the House Appropriations Committee staff make a thorough study to ascertain the facts so that the Congress can properly determine whether or not additional funds for enforcement purposes would enhance the Treasury and do justice to those honest taxpayers who carry their full burden of taxation.

Mr. CURTIS of Missouri. Mr. Chairman, will the gentleman yield?

Mr. CANFIELD. I yield to the gentleman from Missouri.

Mr. CURTIS of Missouri. I rise simply to make this observation, that the Committee on Ways and Means has been conducting such a study over the period of the past 2 to 3 years, and beginning 2 days ago we went into executive session hearings with the Director of the Bureau of Internal Revenue and the other Treasury officials concerned with this. I think that such a study as the gentleman has mentioned is available, and I think what is needed is some coordination between the Committee on Ways and Means who have been conducting this study and the gentleman's committee. I am going to urge, just as soon as I can get around to it, tomorrow morning, that the chairman of the Committee on Ways and Means consult with the chairman of this committee to gain the benefit of what our studies have shown to date. I might say that our studies to date certainly bear out the request of the Bureau of Internal Revenue, and my preliminary conclusion would be, as the gentleman has suggested, that it would be really a loss in revenue right at the front line not to be able to have the manpower to do the job.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. CANFIELD. I yield to the gentleman from Iowa.

Mr. GROSS. Did I understand this bill calls for the spending of some $29 billion?

Mr. CANFIELD. Yes; that is true. But, as the chairman well pointed out a few moments ago, the major dollar figures in that sum are chargeable to indefinite expenditures, such as the $8 billion plus item for interest on our public debt and trust fund items. We have no control outside of the Treasury items, Post Office and Tax Court items in this bill. They aggregate, roughly, $4,600 million.

Mr. GROSS. Mr. Chairman, there cannot be over 30 Members on the floor. I think we ought to have more Members here to hear the arguments in favor of a $29 billion bill. Therefore I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

Mr. GARY. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. BLATNIK, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 5805) making appropriations for the Treasury and Post Office Departments, and the Tax Court of the United States for the fiscal year ending June 30, 1960, and for other purposes, had come to no resolution thereon.

DAVID ABSHIRE

Mr. CURTIS of Missouri. Mr. Speaker, on behalf of the gentleman from Illinois [Mr. ARENDS], I offer a resolution—House Resolution 218—and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That pursuant to the Legislative Pay Act of 1929, as amended, one of the minority employees authorized therein shall be the following-named person, effective March 1, 1959, until otherwise ordered by the House, to-wit: David Abshire, to receive compensation at the basic rate of $4,500 per annum.

The resolution was agreed to.

A motion to reconsider was laid on the table.

NATIONAL LOTTERY

Mr. FINO. Mr. Speaker, I ask unanimous consent to revise and extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

Mr. FINO. Mr. Speaker, while we in Congress persist in refusing to capitalize on the natural gambling spirit of the American people, and while we continue to ignore the tremendous revenue-producing features of a national lottery, billions of American dollars leave our shores every year in support of foreign-operated lotteries and other gambling activities.

Because of our blind stubbornness in refusing to take full advantage of this human betting urge of our American people, we have become the principal contributors to many of these foreign lotteries.

Mr. Speaker, a few days ago the official list of the numbers drawn for the 95th Irish sweepstakes was published in our newspapers. Thousands of Americans across the country will be anxiously awaiting the results, which in some cases will mean the happy fulfillment of a dream.

Mr. Speaker, I wonder how many of the Members of this House know what the total proceeds were from the world-wide sale of these Irish sweepstake tickets? A record high of over $15¼ million. I also wonder how many of you know what part of this amount represents our own American dollars? Probably $12 million of the total.

Mr. Speaker, unfortunately, our loss is Ireland's gain. The Irish Government, 410 hospitals, and the Irish Red Cross fund will again be the beneficiaries of an additional $6½ million—most of it painlessly and voluntarily donated by our American wage earners.

Mr. Speaker, a majority of the American people want to know how long are we going to permit and allow hypocrisy to blind us from the obvious? How long are we going to continue our reluctance to recognize a known fact that the urge to gamble is deeply ingrained in human beings?

Mr. Speaker, judging from the millions of dollars that pour into Ireland, which has a population of less than 3 million people, and into other countries, it would not be difficult to conclude that a national lottery in America would bring into the coffers of our Government $10 billion a year in additional revenue.

Mr. Speaker, are we ever going to banish hypocrisy? Or are we willing to content ourselves with the collection of only income taxes from these sweepstake and foreign lottery winners?

AWARD OF YOUNG AMERICAN MEDAL FOR BRAVERY

Mr. ADAIR. Mr. Speaker, I ask unanimous consent to extend my remarks at this point.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

Mr. ADAIR. Mr. Speaker, I rise to invite the attention of the House to an award that has been made to a young man who lives in my district. William Joseph Steury, of Bluffton, Ind., has been given the Young American Medal for Bravery for the year 1957. The Committee recommending the award to the Attorney General is composed of J. Edgar Hoover, Director of the Federal Bureau of Investigation, Chairman; Solicitor General J. Lee Rankin; and Luther A. Huston, Director of Public Information. The medal will be presented to Steury by President Eisenhower at the White House.

The medal itself was established by the Congress in 1950 to be awarded to boys and girls who prior to their 19th birthdays performed outstanding acts of bravery. Recommendations for the awards must be submitted by the State Governors. In the case of Steury, the recommendation of Governor Handley of In-

diana was supported enthusiastically by a great many other individuals and organizations.

The recipient, who is now a student at the University of New Mexico, is the son of Mr. and Mrs. Amos Steury, of Bluffton. The award was made for saving the life of Rev. Wayne Piety, who while fishing upon the ice of Kunkel Lake, broke through and was in imminent danger of drowning. Young Steury with great bravery and presence of mind crawled out on the treacherous ice and extended a tree limb across the hole in the ice so that Reverend Piety could hang on and keep his head above water. Thereafter, Steury assisted him in such ways as he could until the State police and local firemen arrived with equipment which would permit them to get on the rotten ice and remove Reverend Piety from the water.

His home community, our congressional district and, I am sure, the entire Nation are proud of this young man and pay tribute to the courage and presence of mind that he displayed.

OCEANIC RESEARCH

Mr. OLIVER. Mr. Speaker, I ask unanimous consent to extend my remarks at this point and include two newspaper articles.

The SPEAKER. Is there objection to the request of the gentleman from Maine?

There was no objection.

Mr. OLIVER. Mr. Speaker, for approximately a week during the month of February, the attention of the entire country was focused on the need for expanded research into our oceanic depths. Scarcely a newspaper or magazine failed to include an article on the National Academy of Sciences, Committee on Oceanography, report recommending a vigorous national program of oceanic research. The report among other things dealt with the greater military importance of the ocean depths when compared with outer space; the need for developing the protein sources of the ocean depths; the possibility of controlling weather through a more thorough understanding of oceanic phenomena; the possibilities of the development of underseas mineral resources and many other practical and essential objectives.

Today, less than a month later, we have increased demands for additional funds to increase expenditures in the field of outer space; while the demands for additional research expenditures in oceanic research are still being unanswered. Even if we should ignore all other aspects, we cannot ignore the fact that Russia has some 105 research vessels presently engaged in oceanic research, to say nothing of her frenzied efforts to expand in this area, while we have only 45 ships, for the most part seriously outmoded, now in research operations.

What is more significant is that we appear to be unwilling to maintain the status quo. The Bureau of Commercial Fisheries recently announced the deactivation of the *Albatross III*, a converted fishing trawler, on the grounds of inefficiency of operation. The Bureau plans to replace the *Albatross III* with privately chartered fishing vessels. The Bureau's Director admits that the use of fishing trawlers will result in the curtailment of some of the research activities of the laboratory, but further states that these curtailments are required in the light of budgetary limitations. Because of these same budgetary limitations, the present Commercial Fisheries budget does not request funds for the construction of a new research vessel to replace the *Albatross III*. Thus, it seems to me that the Bureau of Commercial Fisheries has replaced one inefficient operation with another still more inefficient operation. The obvious necessity of providing a substitute vessel for the *Albatross III* is not demanded. To me, this is an example of the worst type of penny wise, pound foolish economy. We know that this research field is essential to our security now and in the future. We know that Russia is extremely active and expanding in oceanic research. It is not my intention to detract from the importance of space research, but it is just as important that we do not delude ourselves through apathy or neglect as to the true importance and necessity for intensive concentration on oceanographic research. Since we all are agreed that more rather than less fiscal expenditures are required for additional exploration into outer space, it seems obvious that additional funds should and must be appropriated to enable our country to not only overtake but surpass the Soviet Union in the field of oceanic research. To do less can prove disastrous.

A nation's defense posture is only as good as its weakest link. Billions of dollars spent on research in the field of outer space may be completely wasted if we fail to adequately prepare ourselves with a defense against underseas attack. Only through increased concentration on oceanographic research activities can we hope to plug this highly vulnerable weakness in our country's defense.

As a means of documenting my contention, I would like to insert in the RECORD the first in a series of articles which originally appeared in the New Bedford Standard-Times in March of 1958. I also am including an article describing the views of one of our foremost naval leaders, Vice Adm. C. B. Momsen, retired, concerning the pressing necessity for additional oceanographic research.

[From the New Bedford Standard-Times]

SEA BATTLE 1958—KEY TO SURVIVAL, I—UNITED STATES IS LOSING TO RUSSIA IN VITAL RACE TO HARNESS OCEANS

(By Everett S. Allen)

The United States is losing to the Soviet Union the biggest and most important sea battle in mankind's history, the contest to unlock the ocean's secrets for use in peace or war. Principally by default, American oceanography is surrendering the lead in a half-dozen marine science fields to a Russia that is better equipped, spending more money, and able to put many more capable scientists on this particular assignment.

Further, since Russia is largely a landbound country, it has been suggested her primary interest in the sea might well be for aggressive purposes.

It is noteworthy in this respect that the Soviet Union's chief target in either a hot or cold war, the United States, has the largest coastline of any nation in the world.

REDS GAIN RAPIDLY

Soviet oceanography 10 years ago was provincial. Today, it is worldwide in scope and progressing rapidly. Russia has initiated a crash program in ocean study comparable to the rocket-outer-space effort that produced sputnik.

For it is increasingly accepted in scientific circles that whoever controls the seas and whoever knows most about them, not only from coast to coast, but from top to bottom, as well, could conceivably control the world, the effect of airpower notwithstanding.

These are the concerted views of America's leading oceanographers, qualitatively among the world's best, who have been interviewed exclusively by the Standard-Times to find out how the United States stands in a scientific race on which the world's survival could rest. For the future depends upon the sea, which covers three-fourths of the earth's surface, and contains the answers to most of its pressing problems.

By comparison, they say, rocketry, missiles, space transport and the like are essentially adventures in gadgetry. That is why most oceanographers, seriously concerned at the prospect of Russia establishing a long lead in the earth sciences, warn:

"Spend all of America's might and money on rockets, and you will still lose the war with Russia, whether it be cold or hot."

SEAS TO BE DECISIVE

To the degree to which the Soviets gain a lead in oceanography, the possibility of war increases. If there is war, there is sound reason to believe the seas—not the air or outer space—will be the decisive theater of military operations.

As weapon systems evolve the submarine-launched missile will prove to be the most effective, for it will be extremely difficult to tell where it came from, and it can be launched close to the target, allowing little time for defense tactics. By contrast, the intercontinental ballistics missile will allow defenders several thousand miles worth of reaction time before it arrives in the target area.

The ocean also is the medium over which America must carry supplies and support to its allies if the free world is to stand. Further, in the modern concept of atomic war, the seas' depths are the most effective hiding place for concealing both offensive and defensive action.

If there is cold war only, there still remains the present struggle for balance of power in the world. Of tantamount importance in this East-West contest for alliances are the underdeveloped have-not nations, which require such basics as food and fuel. Also torn between necessities and loyalties are many of the more developed countries, which are in pressing need of cheap power and new sources of minerals and metals when petering-out mines are exhausted.

OCEAN HOLDS KEY

In the ocean lies the answer to all of these things, fundamentally important in peace, critical in war. Either Russia or the United States will find the keys to these secrets, since no other nation is making anything like the deepwater scientific effort of these two—and the Soviet effort is several times that of America's.

The nation that does score an eventual breakthrough on any of these principal marine fronts will be in a greatly enhanced position, through prestige, politics, and persuasion to tip the worldwide balance of power.

As an example, which way would India's hungry millions look for leadership, East or West, if Russia first found a practical means of providing limitless quantities of fish protein for 1½ cents a pound or less to Nehru's money-poor country? Protein is a principal lack of the Indian diet, and this question will be answered one day.

FUNDAMENTAL PROBLEMS

Here are a few of the fundamental problems that oceanography and its allied sciences will help to solve, and it is the growing prospect of their solution that has caused the Soviet Union to place new emphasis on basic research in the earth sciences:

1. Dr. Edward Teller, prominent U.S. physicist, has suggested Russia might conceivably be able to halt rainfall in the United States for a 2-year period, or otherwise control its weather so that Americans possibly would be willing to surrender without a shot having been fired. An apparent major key to weather control lies in the circulation and surface action of the earth's oceans.

2. Prof. Harrison Brown, California Institute of Technology geophysicist, predicts oceans eventually will provide power in quantity because man will extract its hydrogen for fusion energy. Both British and United States Governments have announced initial step laboratory successes in this direction; the goal is electrical power virtually as inexhaustible as the seas themselves.

"HARNESSED" SUNLIGHT

3. Dr. Clifford C. Furnas, chancellor of the University of Buffalo, says the seas eventually will give up zinc, gold, vanadium, titanium, and unique liquid fuels, the latter formed by the photosynthesis of "harnessed" sunlight in the oceans. There is mounting interest in possible undersea oil deposits which one day might supplement diminishing petroleum supplies on land; southern California offshore wells are only "surface scratchers" compared with sources that might be developed.

4. Gigantic undersea mountain ranges, vast plains, submarine valleys hundreds of miles in extent, swift currents like rivers that flow across the ocean bottom at speeds up to 75 miles an hour, all of these phenomena, discovered relatively recently, point up the fact that the undersea world's contour has much in common with our own.

Militarily, there is an obvious advantage to being able to feel at home in this new world, to be able to cruise, fight, and hide at depths up to 2½ miles, over an extended period. The United States, and undoubtedly Russia as well, already has started making hydrographic charts of the undersea such as now are available for surface navigation.

5. Earth populations are soaring; millions already are chronically hungry. The sea will become the principal source of the additional foods mankind is going to need.

THREAT TO LIFE SEEN

6. Through industrial and domestic uses of fuel, principally coal, man has injected into the atmosphere increasing amounts of carbon dioxide since 1900. This may be jeopardizing his way of life, if not his existence, and the oceans apparently contain the first clue to this possibly grim riddle.

7. The shortest East-West distance in a hot war is over the pole, across the Arctic wastes. Adm. Donald B. MacMillan, and other Arctic and military experts long have predicted that if the Russians come, they will come that way. Successful Arctic offense or defense requires knowledge of this still little-known area, which is principally ice-filled ocean.

8. If it is proved that waters in the great ocean depressions do not rise to the surface in less than decades, or even hundreds of years, these depths may offer a partial solution to the problem of disposal of radioactive wastes. Europe, urgently seeking a new power source to replace diminishing coal and oil supplies, is face to face with this problem right now.

In the light of all this, America's top oceanographers watch the administration and Congress apprehensively, comparing last year's modest national budget of $6 million for basic ocean study with the billions now scheduled for missiles, rockets and outer space effort.

FUNDS UNCERTAIN

The Navy, which relies heavily on oceanography, and would be critically dependent upon its efforts in an undersea war, has to parcel out funds to ocean scientists from year to year, usually with "worry periods" in between. Just prior to each contract termination, the scientists do not know whether their jobs, plans and ideas will be perpetuated or dumped into the discard.

"Why on earth can't you guarantee financial support to us over a period of 5 years, or even 2?" a pleading geophysicist asked the Government. "Contractors, grocers, anybody in business has to be able to make long-range plans.

"Suppose we work a year to put together a competent team of specialists. Then the funds are cut off, the team scatters, because its people have to find other ways to earn a living. What the team learned in its brief study is largely lost. A few months later, the Government decides it wants the work continued, and you find you can't get the team together again.

"Right now," the scientist predicted, "if the Government wanted to double its effort in oceanography, which probably should be done—it would be virtually impossible to get the people to do it."

[From the New York Times, Mar. 15, 1959]

OCEAN, NOT SPACE, HELD MAN'S HOPE—ADMIRAL MOMSEN FORESEES VAST EXPLOITATION AND USE OF SUPER SUBMARINES

ARLINGTON, VA., March 14.—To Vice Adm. C. B. Momsen the emphasis on space is a bit ridiculous. Man's future, he insists, is on this planet, in and below the ocean.

The retired admiral, who has studied the sea for years, foresees the following:

Submarines carrying hundreds of passengers will speed from the United States to Europe at 225 miles an hour—quietly, cheaply and safely.

Cargo submarines will cross the top of the world under the North Pole at 70 miles an hour. Behind them will trail a mile-long chain of sausage-like rubber containers, filled with 12 million gallons of oil.

Fish farms in the ocean depths will supply most of the world's food.

The force of ocean tides, currents and waves will be converted into electricity in giant underwater power plants.

Submarine mining camps will sweep the ocean floor, harvesting a wealth of minerals. Extracting plants will process the limitless acres of sea water for gold, copper, magnesium and dozens of other essential elements.

Vast reservoirs of oil and natural gas beneath the ocean floor will be tapped.

Sea water will be converted to fresh water, pumped inland, and used to transform desert regions into garden spots.

THIRTY-EIGHT YEARS IN FIELD

Science fiction? All that is feasible, the admiral says, and will come about as soon as man is willing to put forth the time, money and effort.

The oceans, their power and resources have been Admiral Momsen's business for 48 years. He was graduated from the Naval Academy in 1919, and 2 years later went into the submarine service. He stayed there until his retirement in 1955. Since then he has served as a consultant to several companies interested in underwater travel or resources.

If his name sounds familiar, it is probably because he gave it to the Momsen lung, which he helped develop as an escape apparatus for men trapped in sunken submarines. The device is still used by navies all over the world.

He also had a hand in developing the diving bell that saved the lives of 33 men trapped in the submarine *Squalus* off Portsmouth, N.H., in 1939.

"We've all gone a little crazy about this outer space business just to keep up with the Joneses," he says. "The ocean is the place where we should be putting our efforts in order to provide for future generations.

"The population of the world is expanding at a tremendous rate. Within a few hundred years at the most, people will have to look elsewhere for the things they need. And they'll find them all in the sea, the world's last great unexplored frontier."

Submarines cannot go below 1,000 feet now, he notes, but one is being developed that should be able to go down 10,000. That would hit bottom 75 percent of the time, although the maximum depth of the ocean is known to be about 36,000 feet.

When the atomic *Nautilus* sailed under the North Pole last August, new vistas were opened in the field of underwater commerce. Here was a route that would cut nearly 5,000 miles off the 11,200-mile journey from London to Tokyo.

United States Rubber, a company for which Admiral Momsen is consultant, has been developing for more than 15 years rubber containers for transporting liquids. The company visualizes the day when cargoes will be hauled around the world by submarines towing a series of containers, 20 feet in diameter and 400 feet long. Each container would hold a million gallons, and each submarine could haul a chain of them 5,000 feet long.

About 75 liquids—acids, oils and alcohols—could be transported that way, plus a variety of such items as dry lime, grains and fertilizers.

Big oil tankers cannot get into shallow harbors to unload. However, a submarine cargo train could surface outside a small harbor, cut a container loose and let it be towed into the harbor.

AMENDMENT TO AGRICULTURAL ADJUSTMENT ACT OF 1938

Mr. CURTIS of Missouri. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. ALGER] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. ALGER. Mr. Speaker, on September 9, 1958, an eminent jurist, T. Whitfield Davidson, whose experience on a Federal bench is exceeded by few, if any, serving in the judiciary today, handed down a decision which simply confirmed and reasserted the right of an American to do what he pleases with his own property so long as he disturbs the rights of no one else in the process.

On February 24, 1959, the Supreme Court summarily reversed Judge Davidson in these words—and this is the sum total of these comments:

> The judgment is reversed. *Wickard* v. *Filburn* (317 U.S. 111).

What infraction of law was here involved? J. Evetts Haley, Jr., who operates a 1,600-acre cattle ranch in Oklahome and who has never applied for nor accepted any kind of Government subsidy, grew 43 acres of wheat which he fed to his own cattle on his own ranch. He asked for Government loans on none of it. He sold none. But he was assessed a fine of $506.11—for planting wheat during 1956 when he had no wheat acreage allotment from the Agricultural Stabilization Committee; for planting wheat, mind you; not selling it.

The learned Judge Davidson, in finding for the defendant, cited ample judicial precedent for excluding Haley's act of simply producing something—of itself quite legal from the jurisdiction of Congress in the first place. "He has marketed nothing; he has sold nothing; and he has entered nowhere into the marts of commerce." But as other Federal jurists have been wont to do, he took judicial notice of other authorities, not essentially judicial, but nonetheless authoritative, on this subject of men's basic rights.

I quote the judge:

> Nineteen hundred years ago, a man uttered these words: "I have a right to do as I will with mine own." * * * The 10th amendment says: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people."

On September 9, 1958, judgment was entered in favor of the defendant.

On February 24, 1959, without a hearing:

> The judgment is reversed. *Wickard* v. *Filburn* (317 U.S. 111).

The decision of Judge Davidson is thus repudiated. Are the authorities he cited repudiated as well? Since, as a nation, we have not yet repudiated one of those authorities and we cannot the other, I have today introduced a simple bill aimed at bringing the Agricultural Adjustment Act of 1938 in a little closer conformity with both. Whatever effect this little amendment might have on the grandiose schemes of the planners, however far it might set back the managerial revolution, this bill would simply permit an American to plant wheat on his own land to be consumed on his own farm, free of interference by anybody. Where Americans ever lost that right, I am not sure, but I urge your support in restoring it to them.

THE FUTURE OF THE ST. LOUIS GLOBE-DEMOCRAT NEWSPAPER

Mr. CURTIS of Missouri. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. CURTIS of Missouri. Mr. Speaker, the St. Louis Globe-Democrat, one of the two daily newspapers published in my home city of St. Louis, has been closed for almost 4 weeks as a result of a strike by the St. Louis Newspaper Guild.

One week after the strike started the Globe-Democrat management announced an agreement with St. Louis Post-Dispatch providing for sale of the Globe-Democrat's physical plant to the Post-Dispatch and for the printing of the Globe-Democrat by the Post-Dispatch in the future.

I have no wish to intrude upon the dispute between the Globe-Democrat and the Newspaper Guild, except to express the hope that the strike will be settled equitably in the near future and that the Globe-Democrat will be back in the business of printing the news.

I have found, however, both in St. Louis and in Washington, some confusion about the Globe-Democrat's situation as a result of its recent transaction with the Post-Dispatch, the other daily newspaper in St. Louis.

I am making this statement in response to the questions which have been put to me, and I am happy to do so because the facts of the situation will, I am sure, be most reassuring.

The basic fact is that the action represents simply a consolidation of the physical plant and equipment of the two newspapers. It represents nothing more than that.

I can state categorically in the strongest possible terms that the St. Louis Globe-Democrat will continue as an independent, competitive newspaper. Mr. Richard H. Amberg, publisher of the Globe-Democrat, has declared publicly and repeatedly that the Globe-Democrat "will continue as a completely independent newspaper in every sense of the word" and that it will do so "forever."

Mr. Amberg has also stated "the sale is of the physical property only. The editorial, advertising, circulation and business departments of the two newspapers will be entirely separate."

He has also pointed out that "consolidation of mechanical operations between competing newspapers finds great precedent in many cities throughout America," as a means of coping with a rising trend in the mechanical costs of publishing daily newspapers.

I should also point out that the St. Louis Post-Dispatch has also stated repeatedly in its columns that the transaction affects only the mechanical operations of the two newspapers and does not lessen in any way their independence with respect to editorial, advertising, circulation, and business matters.

As a matter of fact, I feel confident that the economies that will flow from the physical consolidation will tend to make possible an even higher degree of competition between two newspapers which in the past have always been vigorous rivals.

I am also happy to be able to state that I have received assurances that there is no chance whatever of any change in the present ownership of the Globe-Democrat.

Mr. Amberg has pointed out that Mr. S. I. Newhouse, owner of the Globe-Democrat, has purchased 13 newspapers throughout the United States over the years and has never sold or even entertained a proposal to sell any single one of them.

The present ownership is determined to retain the Globe-Democrat and, once the strike is settled, to bend every effort to regain the new heights of greatness the paper enjoyed during the past few years.

A metropolitan area of the size of St. Louis deserves two separate independent, competitive newspapers, and it is good news, indeed, for St. Louis and for the Nation that we will continue to be served by both the Globe-Democrat and the Post-Dispatch.

They often differ in their viewpoint, and this makes it all the more important that both newspapers continue as vigorous organs of news and information.

The Globe-Democrat, with an illustrious record of 107 years of public service, has gone forward to new levels of achievement during the past 4 years of its present ownership. It has been especially active in the field of public service, conducting numerous campaigns for special civil projects and improvements for the benefit of the general public in the area it serves.

A few months ago, for example, the Globe-Democrat was honored by receiving an award from the Inland Daily Press Association for distinguished community service. The Globe-Democrat was selected out of 510 newspapers located in 20 States. Only today it was announced that the Globe-Democrat has won the national headliners award for distinguished reporting for 1958. I am confident more such honors will come to the Globe-Democrat and its staff in the months and years ahead.

All of us who in normal times read the Globe-Democrat regularly have sorely missed our daily friend during the weeks of the strike. All of us look forward to the time when the Globe-Democrat will be back with us every morning.

AIRPORT MAIL FACILITIES

Mr. LESINSKI. Mr. Speaker, I ask unanimous consent to extend my remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

Mr. LESINSKI. Mr. Speaker, yesterday I had introduced H.R. 5749, a bill which would provide that postal employees who are assigned to airport mail facilities would be placed in postal field service level 5 in recognition of the specialized handling they give to a premium class of mail under frequently adverse conditions.

Everyone who has ever traveled by airplane knows the complexity of arranging connecting airline schedules. Each of us has seen airline ticket attendants pore over schedules to determine the best routing. Each letter is, in effect, an airline passenger when it bears airmail postage. It is quite amazing to see these skilled distributors flipping letters into cubicles as quickly as their eyes can read the destinations.

Mr. Speaker, I have a very deep respect for people who are able to master general schemes of the Post Office Department. My constituents tell me that recent changes made by the Post Office Department in its schemes have served to make those study assignments more difficult rather than more simple.

Most complex of all are the air schemes which are mastered perfectly by clerks of the postal transportation service functioning in airport mail facilities at the country's major airports. Because of that complexity, and because we expect our people handling the premium type of mail to have a better than average skill and speed in handling, my bill suggests that all clerks at airport mail facilities be placed in postal field service level 5.

Anyone who has made a connection between airlines at a major airport terminal knows the problem of effecting that connection. Arrivals are frequently late and departures are irregular. Because of this situation, airport mail facilities are established as close as possible to the ramps or loading platforms at the airports.

Because of these specialized conditions, airline employees keep in constant touch with airport mail facility people to insure that dispatches are not missed and that each dispatch is made at the last possible moment to insure a maximum payload.

It is because of this added stress of meeting moment-to-moment changes in airline schedules, because of the need to try and effect for mail matter the same type of first-class connection that would be available to a traveler who is able to think for himself and to seek guidance, that I feel a higher level of pay for these people is warranted.

Furthermore, airline travelers know that to an increasingly greater extent airline terminals are being moved away from the center of town. To cover this type of assignment, private industry frequently establishes isolation differentials to compensate more adequately the employees it inconveniences. This is still another reason why I feel airport mail facility clerks are entitled to level 5, and it is for this combination of reasons that I hope my bill will be brought up for speedy action in the Committee on Post Office and Civil Service, and that my colleagues in the House will support the bill when it reaches the House floor.

RESEARCH INTO INCIDENCE, CAUSES, AND POSSIBLE CURES FOR CYSTIC FIBROSIS

The SPEAKER. Under previous order of the House, the gentlewoman from New Jersey [Mrs. DWYER] is recognized for 10 minutes.

Mrs. DWYER. Mr. Speaker, on a recent trip home to my district I had three visitors—or perhaps I should say three very special visitors. They were children, all three of them—attractive, bright-eyed, well-behaved. But there was something about them that set them apart from other children I had seen. That something was cystic fibrosis.

I had heard about cystic fibrosis through some of my constituents. I had been told of its tragically serious nature. I knew that this disease ravages 7,000 of our American children each year, and that of those thousands only a few have a chance of living to adulthood. I had learned that cystic fibrosis—or CF, as it is often called—usually shows severe digestive and respiratory symptoms from the very early months of life. The child develops a tremendous appetite. He eats and eats, as if he could never get enough, yet he loses weight rather than gains it.

Because his pancreas fails to secrete certain enzymes necessary to the digestion of food, the child's body cannot utilize the food it receives. The unused food passes out as waste material, leaving the child debilitated and often badly dehydrated. Only prompt, expert therapy with a high protein diet, large doses of vitamins, and special dietary supplements to aid digestion can free the child from the hazards of severe malnutrition. With this proper care the digestive problem can usually be controlled, and the cystic fibrosis child may gain weight and appear to thrive.

Until the respiratory problem strikes, that is. In seeing a cystic fibrosis child, one is often conscious of labored breathing and a strange, unproductive, hacking cough. All of you know how the lungs are constructed, with air passages resembling the branches of a tree. For proper, easy breathing these passages must be free of obstruction. But in a cystic fibrosis child all the mucus secretions of the body are thick and sticky. This sticky mucus plugs up the air passages, one by one, until the child is left with a completely inadequate breathing mechanism. Not only does this make it difficult for him to breathe, but it greatly increases his susceptibility to pneumonias of all types.

Most cystic fibrosis children are kept constantly on large doses of antibiotics and some are given inhalation therapy which helps to clear some of the mucus from the lungs; but even with these precautions it is impossible to protect the child adequately from respiratory infections. Fifty percent of all cystic fibrosis children die before the age of five years. Thirty-five hundred small lives snuffed out each year.

That is a shocking statistic, but it ceases to be just a statistic when you stand as I did, laughing and talking with three beautiful children—three children who have cystic fibrosis; three who may within the next year or two become part of that awful fatality statistic.

What can we do to save the lives of my very special visitors and the thousands of youngsters like them? My deepest concern has always been for the welfare of the youth of our country. From the children and young people of today must come our leaders and our workers of tomorrow. Never has our country's need for clear-thinking leadership been so great. Never have we needed so urgently to strengthen our second great line of defense: a healthy citizenry. We simply cannot afford to lose 3,500 young citizens each year to a cruel, senseless disease like cystic fibrosis. We must take prompt, effective steps to halt the march of this child killer and substitute the march of life-saving research.

The picture is not entirely black, nor is it by any means hopeless. Tremendous amounts of research into the diagnosis, causes, and care of cystic fibrosis patients have been done in the past few years; and each year encouraging progress is made. Each year more of the known cystic fibrosis are shepherded through periods of severe crisis and given a chance to live a little longer. Each year new facts about the basic nature of this disease are learned, and each year more effective therapies are developed.

Much of this research has been done in the great medical centers which stand like beacon lights across our country from New England to California. Much of it, also, in the past 4 years has been done in the magnificent National Institutes of Health in Bethesda.

Many of our colleagues will remember that the Congress last year specifically directed the Institutes to devote a portion of their increased appropriation for expanded research into the incidence and treatment of cystic fibrosis. This directive was due to the enlightened attitude of the members of the Committee on Appropriations—especially its Subcommittee on the Departments of Labor and Health, Education, and Welfare, headed by our distinguished friend, the gentleman from Rhode Island—people who have recognized the urgent need to support on a steady and continuing basis every worthwhile effort to expand our understanding of the causes and treatment of disease.

As the committee reported last year, cystic fibrosis research has provided further evidence of the unity of disease studies. As studies in a variety of disease fields are pursued, the fundamental links between them become more evident.

In the case of cystic fibrosis, medical science has reason to believe it is in all probability a metabolic disease. Some kind of genetic, inherited defect prevents the production of enzymes necessary to the digestion of food and produces other pitiful symptoms. Even though cystic fibrosis is fundamentally metabolic, however, it can presently be treated only by very large doses of antibiotics.

For some time to come, as the committee has noted, it will be necessary to study the reactions of cystic fibrosis children to antibiotics. And there are other problems: why, for example, does cystic fibrosis rarely occur in Negroes and never in oriental races; why should there exist in cystic fibrosis such a wide array of symptoms that cannot be related to each other?

The importance of these questions was starkly underlined when the committee reported that, and I quote:

> It appears that this disease is more important than diabetes, poliomyelitis or rheumatic fever as a cause of death among children in this country.

As they indicated in their report, the committee expected that progress would be made during the past year in determining the facts on incidence of cystic fibrosis, and in developing firm plans for a research attack through a cooperative effort among the Institutes.

But 1 year—as I know our colleagues understand—is not enough. We in the Congress will not now shrug off our responsibility and feel we have done our duty toward the young ones, past, present, and future, who suffer from cystic fibrosis. We are painfully aware, as our committee stated last year, that progress and research breakthroughs come only with sustained effort.

As long as cystic fibrosis children continue to face a doubtful future, our obligation continues. We cannot pigeonhole them in our minds. This year and each succeeding year we must see to it that the National Institutes of Health have adequate funds to devote to cystic

fibrosis research, and we must keep ourselves actively interested in the progress the fine research people of NIH are able to report to us.

This is not a matter of interest to a few. Probably every Member of the House and the Senate has cystic fibrosis children in the area he represents: Cystic fibrosis children who will die at far too early an age unless a cure for this disease is found. We must all work together on this. We must all show the NIH that we believe in the value of what they are doing, and we must show our constituents that we are deeply concerned with the need for medical research on this problem.

I, for one, shall do all I can to encourage and support this research. I hope to see my very special visitors again. When I do, I want to be able to say to them and to their parents, "We believe in these children." We believe in our country's vital second line of defense, an alert, healthy citizenry—and we mean to see that these children, fighting now so bravely against the handicap of cystic fibrosis, will one day be free enough of illness that they may assume the full and splendid obligations of citizenship.

NEED FOR INCREASED APPROPRIATIONS FOR WATER RESOURCES DEVELOPMENT IN EASTERN KENTUCKY

The SPEAKER. Under previous order of the House, the gentleman from Kentucky [Mr. PERKINS] is recognized for 30 minutes.

Mr. PERKINS. Mr. Speaker, the situation with respect to economic conditions and unemployment in eastern Kentucky is one of the worst in the entire country. Employment in our coal mining industry has been falling off drastically over the years. We have suffered a considerable decline in population. Despite the efforts of the people of the area to help themselves, the obstacles are too great for individual solution. The development of the abundant water resources in this section of the country as a means of increasing our industrial diversification would provide a basis for the economic development so badly needed at this time.

In addition to our economic problems caused by unemployment many communities in eastern Kentucky are continually threatened with disastrous floods. Two years ago, tributaries of the Big Sandy River, which flows through the Seventh District, overflowed, causing one of the worst floods in history. Damage was widespread. At that time, I pointed out that flood control reservoirs which would have gone a long way toward controlling this flood were authorized in 1938, but that only one had been constructed and planning on the others had not even been started. Since then, some work has been accomplished on advance engineering and design of two additional reservoirs. These two projects, the Fishtrap and the Pound Reservoirs, will not only alleviate flood damages in the Big Sandy River Basin, but will help furnish additional water supplies for municipal and industrial use during periods of low flow.

Naturally, it is more than disappointing that the administration appears to be dragging its feet on these projects that are so urgently needed, and that the President has proposed a "no new starts" policy that, if followed, would postpone construction of any of the projects at least 1 or 2 years. Such an arbitrary budgetary policy, which totally disregards not only the urgent needs of distressed areas, but the entire Nation's ever-increasing needs for water resource development projects, cannot be accepted by the Congress if we are to carry out our responsibilities in this field.

Let me cite the Fish Trap Reservoir on the Levisa Fork of the Big Sandy River as an example of how the President's "no new starts" policy is holding back economic development in the district I represent. Although this project was authorized by the Flood Control Act of June 28, 1938, as a part of the comprehensive plan for flood control and other purposes in the Ohio River—and the floods early in 1957 demonstrated the urgent need for the project—the President's "no new starts" policy prevented the Corps of Engineers from asking for funds to initiate the planning. Finally, last year we were able to add $140,000 to the President's budget request to start the planning for this project during the current fiscal year. An additional $494,000 will be required after June 30, 1959, to complete the planning. However, the President's budget for next year fails to take account of the urgent need for action on this project and recommends only $200,000 for continuing the planning. At this rate, it would take several years before the planning could be completed and construction undertaken. The Corps of Engineers has advised that it could use considerably more funds than the budget recommends for next year. The need for action is so urgent that I believe the full amount required to complete the planning must be made available, and some construction money, so that construction can start at the earliest possible date.

Mr. Speaker, the areas which I represent are some of the worst labor surplus areas in the United States. The President's Economic Report shows unemployment in November 1958, of 5.6 percent of the Nation's total labor force. The areas of which I speak have unemployment ratios of 15 to 20 percent and higher. For example, in the Pikeville-Williamson area, 22.8 percent of the total labor force was unemployed in November. And the situation is not getting noticeably better. People are being forced to abandon their homes and move elsewhere to seek employment. Of the 20 counties of eastern Kentucky which comprise the district I represent, the population of all but 2 decreased from 1950 to 1956; in some counties the decrease is more than 20 percent. Overall, the decrease was from 487,180 to 432,685, or 11.19 percent. Hardest hit, of course, is the coal mining industry. From 18,000 in 1949, the number of coal miners in the 7th Kentucky district has decreased to about 8,000 today.

In the light of conditions such as my people face, we must reject the shortsighted inadequacies of the President's budget policies. Planning and construction on the water resources projects which will permit broadening our industrial base must be stepped up. Along with the flood control projects which, in addition to the alleviation of flood hardships, will provide an incidental benefit of great importance through making water supplies available during periods of low stream flow for municipal and industrial purposes, we need to continue to improve navigation facilities in the Big Sandy Basin.

Fortunately, we are well under way on the improvement of the Ohio River navigation structures, which serve the northern edge of my district. But here again the penny-pinching nature of the President's budget is exposed. Construction on four of these great new locks is well under way. And experience has shown that once construction on these major projects is started, it is best to continue at the orderly rate of construction scheduled by the engineers. To lengthen the construction period leads not only to costly delays and increased construction, supervision, and administrative costs, but postpones the time when the benefits from the projects can be realized. And yet, the President's budget proposes a reduction from the maximum amount which the Corps of Engineers could use on every one of these projects. The Corps of Engineers has informed me that it could use $12 million on lock and dam 41 at Louisville; the budget proposes only $10,300,000; on the Markland lock and dam, the corps could use $12,500,000; the budget provides only $11,627,000; on New Richmond, $12 million could be profitably used; the budget figure is only $9,300,000; and lastly, on Greenup lock and dam, which is on the edge of my district, the $10,500,000 which the corps states could be used has been reduced to $10,265,000.

	Amount which the Corps of Engineers states could be used	President's 1960 budget estimate	Reduction
Greenup lock and dam	$10, 500, 000	$10, 265, 000	$235, 000
New Richmond lock and dam	12, 000, 000	9, 300, 000	2, 700, 000
Markland lock and dam	12, 500, 000	11, 627, 000	873, 000
Lock and dam 41	12, 000, 000	10, 300, 000	1, 700, 000
Total	47, 000, 000	41, 492, 000	5, 508, 000

And now I come to the cut that shows the least foresight and the least understanding of the problems of my eastern district. This is in the amount for continuing work on the comprehensive report on the Big Sandy River. We have

an interim report on the flood control features only, which is completed and is under review by the States and will be transmitted to Congress very soon. Last year, the corps advised me that after completion of the interim report they would need $35,000 to resume work on the comprehensive report on the development of the Big Sandy, including the navigation features. The budget provides only $10,000 for work on this survey.

The Greenup lock and dam will provide a good navigation channel in the lower reaches of the Big Sandy, and with the low water flows that can be provided from the flood control reservoirs, it appears to me that improvement of navigation in the Big Sandy should show a high ratio of feasibility. Such a channel would permit some of the largest and best deposits of Pocahontas coal in the Nation to be economically moved by water to the coal-using industries along the Ohio River, and would provide just the impetus we need to get most of our unemployed off relief and on payrolls. And yet, it now appears that a further delay in this report is in prospect, just for the sake of a trifling $25,000 reduction in the budget.

Mr. Speaker, the Congress cannot afford to sit by and permit these short-sighted policies expressed in the budget to stifle our economic growth. Adequate amounts for water resources development must be added to the budget to aid areas such as my district to get back to normal and resume their growth.

Mrs. KEE. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the gentlewoman from West Virginia.

Mrs. KEE. Mr. Speaker, I fully associate myself with the sentiments so ably expressed by the distinguished gentleman from Kentucky [Mr. PERKINS].

Mr. Speaker, the conditions of unemployment, which have been gradually growing worse since 1953 in the Fifth Congressional District of West Virginia, are grave.

In areas of critical unemployment throughout the United States—where our citizens are anxiously seeking jobs in order to support their families—I strongly feel that it is economically sound and to the best interest of our Nation for the Congress to appropriate—at the earliest possible moment—funds for the fully justified flood control projects which have been authorized by the Congress.

Because of the urgent need for flood control protection, as well as job opportunities, and because the following flood control projects in the Fifth District of West Virginia have been fully justified and authorized, I respectfully plead for the necessary funds in order to avoid undue delay.

BRUSH CREEK FLOOD CONTROL PROJECT AT PRINCETON, W. VA.

Princeton is the county seat of Mercer County. In Mercer County more than 18 percent of its entire population is dependent in whole or in part upon the distribution of surplus commodities in order to avoid actual starvation. Princeton is located in a critically distressed section of Mercer County. Our citizens are desperately in need of productive employment.

In this connection, not only has the Congress of the United States authorized the Brush Creek flood control project in Princeton, but has, in addition, last year appropriated $55,000 for the pre-engineering and preconstruction of this vital flood-control project. As a matter of fact, the district engineer has nearly completed this work. Of the total cost of $1,277,000, the Federal expenditure is $917,000 and the non-Federal cost is $360,000—benefit-cost ratio 1.80. If we are fortunate enough to have the necessary Federal funds appropriated during this session of the Congress, the district engineer will be ready to let contracts by the 1st of September. It would provide productive employment for our unemployed. The local interests are fully prepared to assume the non-Federal cost. My late husband and I have diligently worked on this project since prior to June 1, 1948. In my opinion, the need for this project is amply sufficient to justify the appropriation.

MEADOW RIVER FLOOD CONTROL PROJECT AT EAST RAINELLE, W. VA.

East Rainelle is located in Greenbrier County. Sixteen percent of the entire population in Greenbrier County is dependent in whole or in part upon the distribution of surplus commodities for subsistence. As a matter of fact, unemployment in Greenbrier County is primarily concentrated in this area. The total estimated cost is $823,500, of which $708,000 is Federal expenditure and $115,500 is non-Federal cost. The unusually high benefit-cost ratio is 2.1. Our local people have done everything within the limits of their resources to fulfill their obligation. My late husband and I have labored hard on this project since prior to March 9, 1948.

Not only has the Congress authorized this fully justified flood-control project, but has, in addition, during the 85th Congress appropriated $40,000 for the pre-engineering and preconstruction work. The district engineer has nearly completed his work. If we are able to obtain the necessary appropriations during this session of the Congress, the district engineer will be ready to let contracts by the 1st of September, and it would provide productive employment for our unemployed.

WILLIAMSON FLOOD WALL PROJECT AT WILLIAMSON, W. VA.

Williamson is the county seat of Mingo County, where we have more than 41 percent of its entire population dependent upon surplus commodities. This entire area was also designated as a national disaster area by the President of the United States following the flood of record in January 1957. Last year the Congress authorized the construction of this fully justified project. The total estimated cost is $665,000, including Federal expenditure of $625,000 and non-Federal cost of $40,000. The benefit-cost ratio is 1.20.

Mr. Speaker, I am advised that an appropriation of $71,000 will be required for the preconstruction and preengineering work on this project. In view of the fact that Williamson is the trading center for this section of West Virginia and a part of Kentucky, it is important that we obtain this requested appropriation during the present session of Congress in order that we may be in position to request construction funds during the 2d session of the 86th Congress. Our unemployed in this extremely critical area do now and will next year desperately need the employment this construction will provide.

SURVEY OF BIG SANDY RIVER

For several years the U.S. Corps of Engineers has been conducting a resurvey of Big Sandy River and Tug and Levisa Forks, in Kentucky, West Virginia, and Virginia, with a view to determining the advisability at this time of providing improvements for navigation, flood control, water supply, and hydroelectric power, as authorized by section 103 of the Rivers and Harbors Act approved September 3, 1954, and two congressional resolutions adopted April 24, 1954, and July 29, 1954. While this entire area was also designated as a national disaster area by the President of the United States following our flood of record in January 1957, this same area is also an extremely acute distressed labor area.

In this connection, I understand that $75,000 and a period of 2 years will be required to complete this survey. In December 1958 I requested Maj. Gen. Emerson C. Itschner, Chief of Engineers, to request $37,500 to be used during the coming fiscal year, in order to complete half of the job that remains to be done. I am advised that the item of $9 million under "General Investigations, Civil Works Program," of the Army engineers, fiscal year 1960, included in the President's budget, provides only $10,000 to further this resurvey of the Big Sandy.

In view of the urgent need for job opportunities in this area, and since there is no foreseeable indication that the coal industry will be able to provide substantial additional employment, I most respectfully urge the Appropriations Committee to have this $10,000 item increased to $37,500 in order that this resurvey may be completed without undue further delay.

Thank you, Mr. Speaker.

Mr. PERKINS. I thank the gentlewoman. I wish to state that we will work together on the Williamson and Big Sandy projects.

Mr. BURKE of Kentucky. Mr. Speaker, will the gentleman yield?

Mr. PERKINS. I yield to the gentleman from Kentucky.

Mr. BURKE of Kentucky. Mr. Speaker, at the outset I wish to commend the gentleman from Kentucky [Mr. PERKINS] for his indefatigable efforts to aid the district he represents in the solution of its serious economic and social problems. We have during the past several weeks heard eliquent presentations by various of our colleagues delineating the need for action in the field of depressed area relief. It is perfectly natural that those gentlemen from whom we have heard have been those who represent the so-called depressed areas. My particular purpose in making these brief remarks is to emphasize that the solution of the

needs of these areas is essential to the well-being of the United States generally. I do not represent a depressed area. I have, however, from experience in State and local government, had some opportunity to observe the nature of the needs of some of these areas.

As a particular illustration of one aspect of needed action, I shall discuss briefly the need for flood control in eastern Kentucky. In principle, if not in detail, these remarks would be equally applicable to areas in West Virginia, Pennsylvania, Ohio, Indiana, and other States where we know that floods have demanded an awesome toll during this very year.

I make this point for the reason that it is self-evident upon mature consideration that many of these areas need to have the basic problems of flood control and highway construction solved before any other sort of legislative or administrative action will bear full fruit in economic relief.

For example, in the district of the gentleman from Kentucky [Mr. PERKINS], in the basins of three rivers—the Kentucky, the Big Sandy, and the Licking—flood damage calculated by the U.S. Army Engineers exceeded $50 million in the last 10 years, an average of over $5 million a year. This, of course, does not include the millions of dollars spent by other agencies, local governments, private firms, and individuals from all parts of the country; and, of course, there is nothing to prevent as much or more damage being done by floods during the next 10 years.

It is not surprising then to learn that in this geographical area, as well as in other flood-threatened places, businesses are unwilling to risk investment despite the presence of raw material and an adequate labor force and other inducements which might be offered when every year they are threatened with inundation and in some instances total destruction by flood.

There are short-sighted people who will say these flood-threatened areas cannot be saved, but the cold record of experience in other areas completely disproves this economic analysis.

For example, in the Ohio River Basin, the flood-control projects which have been completed largely since 1938 cost about $300 million. These projects have demonstratively and irrefutably prevented flood damage to this good date in excess of $640 million. In other words, these flood-control works—and they are not yet complete—have already prevented damage equal to more than twice the cost of the improvements. On the basis of accumulated costs in areas exposed to flood damage it is a provable fact that it is cheaper in terms of dollars and cents for government at all levels, State, Federal, and local, to prevent floods than it is to clean up after them.

We are playing upon ourselves a cruel joke when we delay flood-control work under the self-delusion that we are saving money and, of course, dollars are not all that are involved. In terms of hunger, sickness, poverty, and human misery, the heart-breaking results of this neglect to prevent floods are equal in horror to those resulting from the ravages of war.

Once the threat of flood has been removed from many of these areas, the provision of adequate highways can reasonably and economically follow. With these two keys, the economic and social future of many of the Nation's depressed areas can be opened. Without such basic improvements, these regions' economic outlook, I reluctantly conclude, must continue to be bleak. To those of my colleagues, who like myself, do not represent depressed areas, I call the attention of the great seal of Kentucky. On that seal there stands a frontiersman and a city man; they are clasping hands and each with his free hand on the other's shoulder; these men are encircled by the words and the sentiment, "United we stand, divided we fall." This spirit must underlie the solution of the problems in our depressed areas.

Mr. PERKINS. Mr. Speaker, I am delighted that my colleague has developed these pertinent facts, and I am glad he has mentioned the Licking River. Our people are entitled to have these rivers developed and to be protected by the construction of flood control reservoirs. At least we must do our part and I am hopeful that we will be able to overturn the arbitrary policy of the Budget Bureau.

Mr. Speaker, the election of my colleague to this body not only has been a great addition to the Kentucky delegation, but his contributions here will be great. The gentleman from Kentucky [Mr. BURKE] is a great lawyer, and was an outstanding member of the Kentucky General Assembly before coming here.

BUSINESS GROUP TAKES OVER FUNCTION OF CONGRESS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Texas [Mr. PATMAN] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. PATMAN. Mr. Speaker, the jurisdiction of Congress is being invaded.

One of the most important functions of Congress is being taken over by a group of businessmen, and I must say that this is by default of Congress itself.

This business group, the Committee for Economic Development, is having an investigation made which the House of Representatives has, within the past 5 years, twice specifically refused to make.

The CED is spending a million dollars for the privilege of doing what the House of Representatives voted down in 1955 and in 1957. The Republicans voted solidly each time against the resolution. A handful of Democrats joined them each time, resulting in the defeat of the resolution. In 1957 a change of 25 votes would have caused the resolution to pass the House. In the election of 1958, 49 Republicans who voted against it were defeated by Democrats who will likely vote for it.

The CED has set up a commission to investigate the Nation's money and credit system—a matter which has not been investigated for 50 years—yet this is a matter which is in the province of Congress. The Constitution of the United States assigns to Congress the duty of issuing money and regulating its value.

THE CED IS SPENDING $1 MILLION TO INVESTIGATE THE NATION'S MONETARY SYSTEM

When the CED announced that it was about to set up a commission to make this study, its chairman, Mr. Donald K. David, stated that $1 million had already been raised to make the investigation and more financing is expected to be required and is being sought. Of the original $1 million committed to this investigation, half was contributed by the Ford Foundation. The other half, according to Mr. David, was to be supplied by CED and other cooperating organizations.

Why would the conservative businessmen and bankers who run the CED spend such a large sum of money to investigate the Nation's money and credit system? Are these people in the habit of throwing away a million dollars on frivolous projects?

The answer in a nutshell is that they have set about to investigate and study a matter which is crucial to the functioning of the whole economic system. This is a matter which is raising the most pressing questions for all segments of our society. Yet an investigation or review of our money and credit system has not been made for 50 years.

But it is not my purpose to state my own reasons why such an investigation should be made. I wish merely to call the Members' attention to the reasons which have been stated by the chairman of the CED. These reasons, as Mr. David has stated them, are most persuasive. I do want to point out, however, that all of the reasons Mr. David has given as to why a private group should investigate the Nation's money and credit system are doubly strong reasons why Congress should also make its own investigation.

CED STARTED INVESTIGATION AFTER TWO HOUSE RESOLUTIONS FAILED

The CED undertook this investigation after the House in both the 84th and 85th Congresses had specifically refused to make such an investigation. In 1955, the House considered a resolution introduced by me which would have had the committee of the House make the investigation. The House voted down that resolution. The argument made against it at that time was that no investigation was needed and, in fact, such an investigation might upset the delicate balance of our economic system which was then, the opponents said, working so well. On that occasion our Republican colleagues who led the opposition compared the proposal to investigate to tampering with a delicate watch that is working well and keeping perfect time.

The House considered and voted down a similar resolution introduced by me in early 1957. By this time it was clear to the people back home, and practically everybody else, that such an investigation was needed, and needed badly.

The country had had then the experience of almost 2 years of the tight-money policy and an increasing credit squeeze. In December of the previous year, a Joint Economic Committee subcommittee, of which I was chairman, had held some preliminary hearings because of the vigorous demands then being made by people all over the country that have information about what was happening to them and why. Homebuilders, small business people of all kinds, and State and local authorities were up in arms.

Before my resolution came to the floor for debate, however, the administration adopted a new technique to defeat the resolution. The President suddenly came forward with a request to Congress that he be given authority to appoint a committee of private citizens to make the investigation. That request appears to have been thought up pretty hastily because obviously an investigation by private citizens, which the President already had authority to appoint, would not satisfy the responsibilities of Congress in this matter. After all, this is a field in which Congress has primary responsibility. The Constitution of the United States reserves to Congress the power and duties of creating money and regulating the value of money.

THE ADMINISTRATION STOPPED THE HOUSE FROM INVESTIGATING, BUT NOT THE CED

So the President's request was later amended with a proposal to put Members of Congress on the investigating commission. The amended proposal would, however, have permitted the President to stack the commission with members solidly committed to one point of view or solidly committed to a whitewash.

Nevertheless, the resolution to have a committee of the House investigate was voted down, on the argument that the investigation should be made by a body with broader representation. And, of course, after the resolution was defeated the administration promptly forgot about the need for any investigation. The President made no further request or suggestion on this subject. In fact, at the end of that legislative session he called in the press to announce that he was disappointed with the Congress, and the White House assistants handed out a prepared list of things which the President had requested and about which Congress had disappointed him. No monetary investigation was on the list; the White House had even forgotten it had asked for such an investigation.

I will not repeat here the record of the efforts put forth by the administration to prevent an investigation in the House in the 84th and 85th Congresses. That record is pretty well known and is reviewed at some length, for those who do not know it, in my statement in the CONGRESSIONAL RECORD, volume 103, part 12, page 16314.

My point is simply that the GOP high command set tremendous forces in motion to prevent a House investigation. It made no effort to prevent the CED investigation, yet it could have done so by merely a frown or a nod.

I do not suggest that it would be appropriate for the administration to interfere with the CED investigation. But then it was not appropriate for the administration to interfere in the Congress either.

BIG-BUSINESS CONSERVATIVE SAYS MONETARY INVESTIGATION MORE IMPORTANT THAN RESEARCH IN SCIENCE AND TECHNOLOGY

Now what are the purposes of this investigation by a CED commission?

First of all, it is to obtain information and understanding where ignorance now prevails, surrounding a social institution—money—which functions as the heart, arteries and veins of our economic system. Let Mr. David speak. He said:

I think it no exaggeration to say that such a study will have more impact for the good of us all in the next decade or two than the expected advances of knowledge in science and technology.

BUSINESS GROUP TO "EDUCATE" CONGRESS

In case anyone has doubts about Mr. David's conservative point of view, I might point out that he was for many years Dean of the Harvard Business School. You cannot find a more certain hallmark of big-business philosophy than that. Besides, Mr. David is a director of the General Electric Co., Ford Motor Co., Aluminium, Ltd., and R. H. Macy & Co., Inc., and has a number of other big-business connections including membership in the Union League, Brook Club, and the Somerset Club, and in the Blue Ribbon Business Advisory Council of the Department of Commerce.

But is the purpose of this study by a private group simply to inform the members of the CED? No, it is for the purpose of informing Congress and informing the general public. When Mr. David announced this study, he emphasized what he calls the educational activities and duties of the CED, saying: "We have set the dissemination of knowledge—education—on a par with research and policymaking."

And speaking of this particular study, he said it will "illuminate some dark corners for the Executive and for the Congress" and be part of "the educational proces which would create breadth of public understanding and acceptance which will be necessary." Finally, he has said, this monetary commisson will "face the facts and then so educate all of us that we will willingly go down the roads indicated, whatever they may be."

Here, then, we have a body of private citizens setting out to investigate matters of great public interest which are primarily the responsibility of Congress, and have a body of private citizens setting out to educate Congress and the public on what it is they think we ought to know. When the investigation is all done, we will be under tremendous pressures to accept and act on the findings of this commission. We will be the targets of an "educational campaign," much as we have been targets of campaigns on behalf of the Hoover Commission recommendations and those of other private groups.

CONGRESS MUST EDUCATE ITSELF ON MATTERS WHICH "INVADE THE LIFE OF EVERY CITIZEN"

Yet Congress will not itself have the facts. It will not have learned the facts for itself firsthand and will have no record of the hearings. It will only have the conclusions and recommendations of this body of private citizens, and we will not know whether we are being educated or led down the right road or the wrong road.

The CED investigation is a good thing. It steps into the province of Congress to try to do something where Congress has so far failed to do anything. The businessmen and bankers should do everything they can to develop new knowledge and educate themselves in this important field. And it is a good thing for the two labor representatives, the one farm organization representative, and the others appointed to this commission to educate themselves on these matters. After all, these are matters which are of proper concern to everybody. As Mr. David has said, the CED Commission study "invades somewhere the life of every citizen." And he has also said that human knowledge in these fields contains "vast areas of ignorance."

But I suggest that there is still room in this area for Congress to carry out its own responsibilities, and I suggest that the fact that the CED Commission is making an investigation does not make it less necessary for Congress to investigate. Rather, this makes it more imperative that Congress investigate.

Furthermore, the old argument that Congress is incompetent to perform its function is not made here. No claim is made that only the experts know the answers to questions about our money and credit system. On the contrary, it is admitted that the ignorance of this field is shared all around. Here then is a vital matter affecting the whole public interest which Congress can investigate and start on even terms with the self-made experts. I urge, as I have many times before, that Congress investigate without further delay.

CED CHAIRMAN STATES THE REASONS WHY INVESTIGATIONS MUST BE MADE

Coming now to Mr. David's address, which I hope the Members will read with great care, I will begin with the relevant portion. The opening part of this statement which I will omit deals with the history of the CED and is not especially pertinent to the arguments made on behalf of the money and credit commission.

Mr. David is here speaking of the lesson to be learned from the first Russian sputnik which had been launched only shortly before this address was made to the CED Board of Trustees, at their 15th annual meeting on November 21, 1957. He said:

MORE THAN SCIENCE

The true lesson is the importance of applying systematic thought and knowledge to the solution of major national problems. The hard sciences—physics, chemistry, etc.—are a major sector of this systematic thought and knowledge. But they are not all of it. And they alone cannot solve all our problems.

Behind sputnik we see a rocket and behind the rocket we see advanced science and technology. However, there is something more behind this. There is a social system of human institutions that, in this case, has made the correct decision about what was important to achieve and has motivated and organized efforts to achieve it.

But I do not intend to compare the scientific achievements or the social institutions of the United States and of the Soviets. In-

stead I want to direct your attention to one of the most fundamental and pervasive of social institutions and to the need for intensive research to make it serve us better. That institution is money.

It may seem a long way from money to the man-made moon. But surely that is a mistake, at least in the sense in which I am talking about money. I am talking about money not as an object to be made or saved as alternative to real things, but about money as an instrument that permits the real work of the world to be done.

The invention of money made modern life possible. But it could not be called into existence and left to run itself. It has to be managed.

We are all to some degree aware, for example, of the unstabilizing consequences—deflationary or inflationary consequences—of a defective monetary system and policy.

We are perhaps less aware than we should be. But at least since the end of World War II some of us have begun to ask sharp questions about how this system works, where it has gone wrong, what government and private citizens can do to make it work better. In order to find satisfactory answers we need to know more—much more—than we do right now.

Questioning our public and private monetary system is not new, nor is the search for answers. But, strangely enough, there has not been an overall review of this extremely complex and frighteningly involved subject since the Aldrich commission 50 years ago, in spite of the fact that there have been vast changes in the entire financial structure of the United States.

Out of that inquiry emerged the idea that eventually resulted in the creation of the Federal Reserve System in 1913. Since that historic event, there have been various congressional studies made. Some of them—I think of the Douglas and Patman committees' reports and studies, particularly—have added much badly needed data to our store of monetary knowledge.

GRAVE QUESTIONS RAISED

For almost all the 15 years of CED's existence these vast areas of our ignorance have been a subject of our deep concern. We played an important part in creating the climate in which the Employment Act of 1946 was created. Through that act the mandate to maintain high employment and economic stability was written indelibly into public policy and became the continuing concern of Government. But the part that monetary policy can and must play in the processes necessary to achieve these essential goals has never yet been clearly written out.

There have been other fundamental changes, some dating back to the legislation of 1934 and 1935, that have directly or indirectly affected our money and financial systems. All of them have raised grave questions. Only today has sufficient time elapsed so that we can begin to give them adequate appraisal.

The question is asked, for instance, if the legislation of the 1930's, which so enormously increased the central powers of the Federal Reserve System, went too far. Also, some suggest that a degree of autonomy should be restored to regional banks in order to make it easier for the authorities to meet regional and local situations.

These are not easy questions to answer in a manner that is objective and devoid of self-interest. Yet, sooner or later, they must be answered that way.

The time has come when we must acquire constructive knowledge about our financial institutions and their policies. An economy that has grown from a gross national product of $88 billion in 1911 to one of $440 billion cannot afford to postpone a basic restudy any longer. This would be true even if we did not face today's unprecedented challenge from the Soviet Union.

We have to look into the workings of our public institutions. But the private ones, too, will bear scrutiny. I think it no exaggeration to say that such a study will have more impact for the good of us all in the next decade or two than the expected advances of knowledge in science and technology.

These latter, with their bombs and satellites, will be more dramatic. But increased knowledge in the field of public and private finance may make available a greater source of humanly valuable energy than even potentially exists in atomic energy as such.

Those of you who know CED well must realize I am in effect saying nothing that CED has not been preaching for most of its brief existence. We have set the dissemination of knowledge—education—on a par with research and policymaking. Following this precept 9 years ago next month CED first urged the creation of a nonpartisan and nonpolitical monetary commission to do what still needs to be done. An amenable Senate passed a bill (S. 1559) which would have created such a body. But the House rejected the proposal.

Many asked then, and have continued to ask, why CED itself did not undertake such a study. The answer is that then CED was too limited an organization to undertake such a huge task, involving extensive fact-finding and long, continuous staff work and study. Many questions, it was felt, could better be studied by a commission with the prestige and authority of both congressional and Presidential backing.

Today the questions have grown more pressing. At the same time CED has grown in prestige as an organization devoted to objective and disinterested research. It is a nonpolitical organization, removed from the influence of politicians. But it still is an organization of businessmen. It must be apparent that any lastingly worth-while study of money and credit must have a broader base from which to operate than CED affords.

In discussing the need for a broad survey of the whole financial terrain, a distinguished student of our institutions not long ago put it well when he called for the creation of a board of "competent, objective citizens divorced from partisan public and special private interests, and shielded as far as possible from the pressures and noise of what may be current controversy." Such a group, he said, would not only be able to "illuminate some dark corners for the Executive and for the Congress, it would also be part of the educational process which would create the breadth of public understanding and acceptance which will be necessary if changes of magnitude and range in our financial institutions and practices prove to be desirable."

I am happy to announce that the board of trustees of CED, by a special ballot, has authorized the creation of just such an independent board of competent and objective citizens to explore the whole financial terrain. I am happy also to announce that the Ford Foundation has set aside half a million dollars for the use of this independent, national Commission on Money and Credit. In addition, another half million dollars will be supplied to the commission by CED and other cooperating organizations. More financing is expected to be required and is being sought.

I stress the word "independent." This commission will not be a strictly CED, and certainly not a Ford Foundation project. The latter has merely supplied funds necessary to launch so momentous an undertaking and will have no further say about how it operates. The Committee for Economic Development will organize the commission to assure its independence. It will perform necessary administrative functions and make other contributions in service. It will go no further than that.

Working independently of CED or the Ford Foundation, the Commission will consist of from 9 to 18 members selected from the ranks of business, labor, agriculture, and education, and from the fields of research and administration. A special selection committee, comprising the chief executives of educational and research organizations, all with some knowledge of the Commission's broad mandate for study, will advise me in the selection of the Commission. They are: Arthur F. Burns, president, National Bureau of Economic Research; Robert D. Calkins, president, the Brookings Institution; Everett Needham Case, president, Colgate University; Charles W. Cole, president, Amherst College; Morris A. Copeland, professor of economics, Cornell University; August Heckcher, director, the Twentieth Century Fund; Pendleton Herring, president, Social Science Research Council; J. E. Wallace Sterling, president, Stanford University; H. Christian Sonne, chairman, National Planning Association; and Herman B. Wells, president, Indiana University.

The CED trustees have adopted bylaws for the Commission. Like those under which CED has functioned for 15 years, they are firmly designed to assure that the Commission's research will be thoroughly objective in character and that all work done by the Commission will be approached from the standpoint of the general welfare and not from that of any special political or economic interest.

A FULLY FREE COMMISSION

This Commission will be given full freedom to choose its own lines of examination of our monetary and credit institutions. But its members will, if they follow the rules, have this as its main directive: To provide a broad, factual and analytical basis to assist the Congress and such other committees and agencies as may have, under our form of government, the responsibility for monetary policy and legislation. They will be free, if I may quote CED's 1948 statement, to pursue the problem of Federal financial policy wherever it may lead.

I need not say that this broad directive may lead—indeed should lead—in many directions. But before I venture into those dangerous and unexplored (or only partly explored) territories, may I touch briefly upon some history? As we all know the last full-scale monetary investigation was that of the Aldrich Commission between 1908 and 1911. But there is a better precedent for a private inquiry of the type which the Commission will undertake.

Away back in 1897 there was a monetary commission created by a convention of businessmen and industrialists called by the Indianapolis Board of Trade. This, too, was without legislative or executive sanction. But many of its private recommendations were later embodied in the 1900 Currency (Gold Standard) Act. And this, in its day and generation, did much to change and even reform our monetary system.

Today this new private enterprise commission has many fields in which it can conduct presumably salutary inquiries. I will attempt to summarize only a few of those which have in the past been mentioned in CED policy statements, well aware that there are many others of equal importance.

This Commission can ask, for example, whether the growth of nonbank financial intermediaries, both private (such as savings and loan associations, finance companies, and insurance companies) and public (such as the Federal National Mortgage Association), have impaired the effectiveness of Federal Reserve action to promote economic stability.

It can ask how the impact of general monetary restriction is distributed among different classes of borrowers and lenders: Is this distribution discriminatory, unfair, or bad for the economy, especially in comparison to the alternatives—inflation, higher

taxes, selective controls? How could the distribution of the burden of inflation control be improved?

Or, we may ask, what criteria should be followed by the Federal Reserve in deciding when to tighten or relax credit? This question alone opens up a huge volume of related questions, crying for answers. Or again—take the question of consumer credit. Should authority be delegated to a Federal agency to control the terms of consumer credit—and should similar authority be extended to other types of credit? If so—when and how?

CED did not enter lightly into this decision to establish this Commission on Money and Credit. Its trustees have talked with scores of leaders in all walks of life, in the administration, in Congress, in business, among consumers, everywhere. During the course of these talks many other questions have been asked—with the hopeful idea that the Commission might find the answers.

Some have asked whether the supply of savings is adequate to meet the needs of our growing economy. Some have suggested that perhaps Federal policies with respect to financial institutions, taxation, and other fiscal and monetary matters, be modified to increase the supply of savings.

I could continue asking these questions for almost the 3 years that the Commission is expected to be seeking the answers. In the long run, for example, just what reliance should be placed upon fiscal and monetary policies to achieve economic stability? Are the existing arrangements for coordinating monetary and credit policies, and for assuring consistency of these policies with other economic policies of the Government, satisfactory?

TOUCHES EVERY CITIZEN

I have only touched upon the surface. The study which this Commission should undertake is so broad in its scope that it invades somewhere the life of every citizen. It should not be—and under the terms under which it will operate will not be—just another study by businessmen to develop a business point of view. It will be a commission, separate from CED but inspired by CED's standards, that is representative of the widest available variety of talents and experience and background. It will be national in scope. It will not be confined by any geographical representation. It will be broad in its approach, but—and this is of utmost importance—it will not be encumbered with delegates from particular and self-interested groups. It will be forward in its outlook, but not lacking in experience and knowledge of the past history of our financial institutions and their economic environment.

To its councils will come, I hope, all shades of opinion from all parts of the country; and from the information thus gathered will emerge—again, I hope—studies and findings that will have been shaped solely in the public interest.

This is an undertaking of vast magnitude. It could, I venture to suggest, make history. But CED offers it in all humility—as an experiment in private enterprise, as an experiment in education, as a guide to the future of our private-enterprise system.

I think it would only be fitting to close these remarks with a paraphrase from a statement by Paul Hoffman, CED's first chairman, and to say that the trustees of CED hope that this newly created Commission on Money and Credit will think of itself as neither right nor left, conservative nor radical, but as responsible. That it will, under its broad and free charter of independence, get at the facts about the way our monetary and credit policies function, and face the facts, and then so educate all of us that we will willingly go down the roads indicated, whatever they may be.

AN EPISCOPAL LAYMAN WRITES TO HIS PRESIDING BISHOP CONCERNING THE MISUNDERSTANDING OF THE FRIENDLY RELATIONS BETWEEN THE RACES IN THE SOUTH

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Alabama [Mr. BOYKIN] may extend his remarks at this point in the RECORD and include extraneous matter.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. BOYKIN. Mr. Speaker, I regret immeasurably the persistent and widespread misunderstanding of the friendly relations between the races in the South and the preference of an overwhelming majority of the members of both races of good will in that area for continuance of those relations free from the unwarranted and unwanted pressures and conflicts which have been set in motion, and if successful, would make that relationship wholly impossible.

I do not believe that there can be any informed doubt that splendid progress has been made in educational facilities and in economic opportunity for Negro pupils and adults; and to me it is a matter of personal and common knowledge that there has existed between the white families in the South and Negroes of like good will the most cordial sympathy and understanding where that relationship has not been imperiled by synthetic pressure for integration.

Every adult of average intelligence understands the political motives underlying this pressure in its civil aspects but it is a tragic thing that practically all of the churches have by their national organizations joined in the misguided propaganda as if it were a Christian duty, totally overlooking this friendly relationship which has existed and can exist only in the atmosphere of friendly social segregation so characteristic and universal in the South.

A recent letter to an eminent churchman, presiding bishop of his church, has pointed out this grave misunderstanding of the facts and the disservice, both to civil good will and to the church, from the bishop's announced program for church participation and leadership in a program for total integration.

The author of that letter, long a member of the church and a prominent member of the bar of Alabama, forcibly presents the tragic consequences both to interracial relations and to the work of the church if the bishop's objective should succeed.

Since substantially all of the national church organizations have committed themselves to similar uninformed and ill-considered policies, the writer of this stern and solemn warning does not believe that by its publication his church would be unduly singled out for this grave and tragic mistake. He advises that since the assured disaster has become a direct threat to the church itself that he has submitted the letter and a summary of the replies to the Diocese of Alabama as a function and responsibility of the church and states that he cannot devote the time which would be necessary in the event of further responses to the letter.

For that reason he requests that in giving it publicity his name be omitted.

The letter follows:

LETTER TO THE PRESIDING BISHOP OF THE EPISCOPAL CHURCH PROTESTING HIS ANNOUNCED PROGRAM FOR CHURCH PARTICIPATION AND LEADERSHIP IN PRESSURE FOR TOTAL INTEGRATION, CIVIL, CHURCH AND SOCIAL

BIRMINGHAM, ALA., *January 17, 1959.*

THE MOST REVEREND ARTHUR K. LICHTENBERGER,
New York, N.Y.

DEAR SIR: As a member of the Episcopal Church for more than 70 years and with warm recollections of bishops and rectors who have served in my parish or the diocese, the writer of this protest was inexpressibly shocked on reading your recent interview, immediately prior to your induction as presiding bishop. That interview committed you and undertook to commit the Episcopal Church to active leadership in a program for total racial amalgamation, with all its implications and its assurances of disaster. It also acknowledged your advocacy, at one of the most sensitive periods in southern history, of punitive and summary process designed for mass action and prosecution of civil rights proceedings by the Attorney General.

The Associated Press quoted you on January 15 as making a series of declarations to the ends stated, each of which is authoritarian, desperately ill advised, contrary to church and public interest and to interracial good will; and is beyond any authority vested in any executive officer of the church.

You would not only commit the church to active participation in this bitterly controversial political issue and to sponsorship of these punitive judicial procedures, in clear violation of the principle of separation of church and state. You would array the church in support of an objective which would be revolting to the parents of every white family in the South free from cant, hypocrisy, and psychosis; and you would compel regionwide discord in every southern church in which the program you advocate would find any support whatever.

The program would not only make certain interracial ill will and disorder. It would assure bitter personal intraracial resentment and rigid ostracism of those acquiescing or attempting to practice your proposal for social amalgamation.

As an individual you would be justified in ignoring these grim conclusions as a voluntary communication from a single layman, involving a matter of difference of opinion as to which you are entitled to your own; but I feel sure that as presiding bishop you will recognize that you are under an express as well as a moral obligation to give consideration to pertinent facts and warnings presented to you before you commit the church or its council to a program of such assured consequences.

Permit me to say at the outset that it is a tragic thing that on your way to the cathedral to be consecrated for an 11-year term your sole message to the world should ignore the vast domain of human and spiritual needs urgently ahead and should single out and emphasize an intended program which, if processed by the church a single step beyond its initial expression by you as a totally misconceived formula of religion, would not only contribute to the infinite civil disaster which I here point out but might well, and should, assure a major and permanent disunion among the 75 dioceses of the church.

Because of these ominous factors there must be no misunderstanding as to what you announced or soft-pedaling of the grim reasons for this protest.

You were quoted as advocating not only as a personal conviction but as an obligatory function and duty of the church, this program:

First. That the church should be among the leaders in establishing an integrated society and taking steps toward elimination of all racial barriers. I repeat: "all racial barriers," a term which, of course, necessarily includes the home and marriage.

Second. You stated that this program for total desegregation is basically a moral issue and is, therefore, we must assume, not only intrinsically sound but is a function and obligation of the church and that you intend as presiding bishop to process that obligation.

Third. You made it clear that you would favor legislation by Congress to permit the Attorney General to make use of the process of blanket injunction in civil rights prosecutions; a procedure which, of course, is summary, punitive, authoritarian, invites mass action, and would be administered by one of the most blatant and belligerent officials ever to hold the office.

(As you should well know before plunging the church into legislative and judicial functions, if you do not know, every individual citizen under existing law has full recourse to judicial process to protect his own civil rights, including recourse to injunction, but you advocate legislation granting to the Attorney General the right, which he eagerly seeks, to demand and make use of the mass as well as the individual injunction.)

Aside from the monumental misuse of church function to sponsor these political and judicial processes, it is unbelievable that any one who may be assumed to have specialized in the sensitive domain of religious and spiritual values could be so indifferent to the imperatives and Christian principle, to be stated below, underlying social segregation in the South among all people of the utmost good will toward the Negro; and it is amazing that any clergyman could so expand and distort the Christian obligation of sympathy, understanding, and good will toward all people into a mandate for the removal, to use your words, of "all social barriers"; in short, for interracial access to the home and its every implication and relation, including courtship and marriage, notwithstanding the grim genetics and statistics which I shall summarize.

It is tragic that you do not distinguish the misused term "discrimination" from "brotherhood," as if discrimination were practiced or brotherhood violated by insistence on segregation where it is necessary (1) to avoid a lowering of social, moral, and educational standards; (2) to the enjoyment in the church of religious service and expression on a level above the primitive excitement of the Negro; and (3) at the same time and as its fundamental purpose is indispensable to protect a family's genetic capacity for spiritual concepts and for human progress from mongrelization.

Any bishop or priest who would argue that they advocate just a little amalgamation in the South for a beginning in that benighted area, on the march toward the total ultimate goal, as your interview suggests, wholly underestimates the resentment, ill-will and disaster which will be as fatally triggered by a little rift in the social barrier, as a confessed part of the total formula, as would be an atomic bomb by its little trigger. What you are proposing for the South is to fasten the bomb in the foundation of every vestry and every white home, light a longer fuse and forbid its removal unless the objective is accepted.

You know little of the grim determination of the anti-South junta and the jungle response of the genuine Negro to their incitations to mass action now filling every issue of the daily press if you think that both your mild and grossly underestimated apprehension of regional discord and your pious ultimate objective can both be soothed and salvaged by a "little integration" along Tobacco Road.

Lest it be contended that a program for integration and the removal of all barriers in church and school might not necessarily involve social access into the home and its relations, let it be said bluntly that anyone pressing for integration in church and school must know that these relations are not the contacts of the streets, stores and buses, or even segregated seats in a church gallery, ending there; and that without unqualified social contact among pupils and parishioners both school and church and every service and activity of those institutions would be a dry and barren formula. Any priest, bishop or parishioner who would piously profess and practice social inclusiveness in the church and school and would then bolt the door of the home would, I am sure you will agree, be a sanctimonious hypocrite.

For these reasons and before I state the South's imperative for segregation, and as a member of an Episcopal Church from a time before you were born, may I be permitted respectfully but bluntly to protest your assumption of authority to commit that church to the program you propose, and to assure you of the mass exodus from any church in the South maintained by white families which might, as a church, respond to or tolerate your proposal.

If that response should result in control and ownership of the church property, that result would be repudiation analogous to legal fraud as to a vital understanding under which that church was established. You may be assured of determined controversy to avoid that result.

In stating our imperatives, let me mention at the outset a certain background fact which is wholly discounted or unsuspected in the North; namely, that until synthetic, organized, and relentless propaganda and fomented litigation began to impair the relationship between the races, there has existed the most extraordinary sympathy, understanding, and good will on part of the white people of the South toward the Negro. They have responded increasingly and in recent years magnificently to the provision and support of Negro schools of modern capacity and design, although the Negro's contribution to tax revenue is everywhere negligible and his normal response to competent facilities and curriculum is nominal or limited. And I have no doubt whatever that if the incitations of Negro preachers now basking in national publicity and acclaim would leave them alone, a decisive majority of Negroes in the South would welcome a continuation of the old and friendly relationship and the continued patronage of their own schools and churches.

(To me personally, this crisis in race relations is a matter of deep regret. My friendly understanding and relation to Negroes, in time and scope doubtless beyond that of any bishop of the church (probably greater than that of all bishops north of the Ohio) began with my nurse and my father's Civil War body servant, who visited us regularly. Some of these old contacts still write us after 30 years; and I cannot recall ever having spoken unkindly to or intentionally wounded the dignity of a Negro.)

As for the possible salvage from impending disaster of this relationship of sympathy, understanding, good will, and helpfulness I cannot too often say to you from intimate knowledge of conditions in the South that social segregation is the only atmosphere in the South in which that relationship can possibly survive.

Because of this friendly sympathy and understanding the southerner, mistakenly it now appears, has been reluctant to give expression to the organic reasons for the South's immutable opposition to your formula for total social integration.

In order, in this crisis, that you and those who see nothing but mean prejudice in the South's mandate for segregation may understand its unalterable basis, it becomes necessary to state the organic reasons for that mandate. Those reasons are final and indisputable.

There is a dominant principle in ethics underlying every religion consistent with human progress, which compels essential social segregation in the South under existing and foreseeable conditions.

That principle can be stated in these words: The most exalted impulse of man, implicit in any worthwhile survival of the human species, is to assure the dignity, the integrity and the progress of his family and descendants, consistently with the general welfare. No religious, political, or ethical formula could possibly stand the test of the divine plan and its intent and design for human progress which might challenge or oppose or tend to impair that basic and primary mandate.

In addition to exposure of the family to the genetic aptitude of the Negro and his normal lack of self-discipline, summarized below, responsive to primitive and rural conditions, there is constantly increasing exposure in modern areas of Negro congestion resulting from the genetic incapacity of the Negro to cope with modern tensions. This is further emphasized by his reaction to the current mass incitations for total social integration; all of which is reflected in the sharply increasing statistics of Negro crime and disorder. In the face of this exposure, not only existing but assured for the foreseeable future, any acquiescence whatever in the pressure for total social amalgamation which you propose would be a shocking betrayal by white parents, not only of this primary mandate for human progress, inherent in the privilege of parenthood and in the very process of life itself and indispensable to the dignity of the family, but obligatory as a matter of the most rudimentary as well as the most exalted personal affection and concern.

With this statement of the inflexible principle of family responsibility, I pass to the indisputable facts which confront that principle, in view of which it can be stated, without any exception known to me, that I do not believe that there is one white father native to the South who would not prefer that a daughter, however devoted and blessed their relationship, had not survived rather than have her married to any Negro.

In proceeding to the compelling facts underlying an adamant social barrier against integration as a race, a statement of the ingrained, homogeneous, racewide characteristics of the Negro race and their reflection in the life, economy and morality of today are indispensable.

As to the genetic and all inclusive characteristics of the Negro these facts are beyond question.

1. Until the Negro's incredibly sluggish and indifferent response to 3 centuries of contact with the races which have contributed to human progress, during which imitation alone might have had better results but for the dominant apathy of the Negro toward all progress, this genetic development of the Negro left him, on his own and in his native habitat, even in a rich and vast continent with every diversity of climate and raw material to encourage response, with such a total aptitude for content with the most primitive barbarism that no single member of any Negro race ever discovered a letter or a written word, ever refined a metal, invented a plow or wheel, ever discovered a principle of science, ever imagined a system of philosophy or religion or gave evidence of any aspiration beyond the current satisfaction of his

primary physical senses on the level of the adjacent jungle.

2. Although possessed of normal physical tonal capacity, the Negro in his native habitat never invented a chord or a scale or composed a song above the bark of the hyena, nor ever invented a musical instrument above the jungle drum. When Mozart and Haydn were thrilling the souls of men with their symphonies, the Negro, in his native habitat and on his own, was still without spiritual reaction to harmony, restricting his emotion to the beating of his drum and yelps of excitement or fear in the forest or in the presence of his human sacrifices to voodoo.

3. Until his contact with other races he never used a stone to build a communal habitation or fabricated that primary distinction between the human and the animal, the home, except from the leaves and logs of the forest.

4. After the Negro's three centuries of contact with the current flow of white civilization, no person competent to serve in any executive capacity with any public organization in America can be ignorant of the Negro's basic lack of inherent aptitude for self-discipline or instinctive morals, with the net result reflected in his inevitable and frightfully increasing criminal statistics and in his nominal economic and tax response—as to the latter so astonishingly below and as to crimes so increasingly above all relation to his population ratio everywhere.

5. As a brief cross-section of conditions which are so obviously genetic, you are advised that within a recent (December) period of just 10 days the daily press of this city (clippings enclosed) announced the following local items:

(a) The removal of two young Negroes to the death row, pending appeals, convicted of unprintable rapes of white women, along with a third convicted of nothing more than conventional murder.

(b) The escape of a third rapist of a white expectant mother.

(c) The desperate but successful escape of a fourth married white woman from a similar attempt.

This chilling sample is sufficient to make clear that the continuous incitation of Negroes to demand and assert rights on all fronts rather than that they be encouraged to recognize and exercise discipline over their genetic aptitudes, and justify citizenship, is having its desperate effect.

6. This nauseating and continuous formula of incitation had its counterpart and springboard in the discovery by the Supreme Court that in order to avoid embarrassment to Negro psychology and impairment of his id, or whatever Freud might call the current urge or result of his genetics, the Negro must be given access not merely to comparable school facilities and curricula, as had been held by that Court for three generations sufficient to satisfy the 14th amendment, but is entitled to attend the same schools in order that he may have access to the daughters and other children of the white families. That formula for the schools was fathered before the Court by NAACP which is now (press, January 8) through a headquarters lawyer litigating an effort to extend the doctrine to include immunity for a Negro gang of juveniles which seized and forced a humiliating gesture on a little 6-year-old white girl.[1]

7. Other blunt aspects of this problem include the fact that in a number of Southern States interracial concubinage and intermarriage is and has been for generations a felony, now punishable in Alabama, on conviction, by imprisonment up to 7 years (Code of 1940, title 14(360)).

This statute, which stands in massive and punitive repudiation of your program, is of vast accrued significance in view of the domination of racial agitation by NAACP and its domination, in turn, in the South and elsewhere by mulattoes ashamed of their Negro origin and determined to have race consciousness not only parroted as a sin but have its practice or even its statistical expression or consideration in employment made a crime in broad areas.

Lest it be hastily assumed that the parentage of mulattoes has, to the extent of their ratio to the entire Negro race, diluted to that extent the genetic aptitude for primitive content of the genuine Negro and might point the way through degenerating genocide of the white race toward the ultimate beneficiation of the Negro, let this blunt fact be remembered, viz: that every interracial conception in any State having the prohibitory statute above mentioned has been a felony in which both participants were not only guilty of the felony but were selectively degenerate in morals. That certainly affords no discernible amelioration of the objection of white families to amalgamation with the resulting offspring.

In the light of these blunt and basic facts as to the Negro's genetic aptitude and its reflection in current expression and statistics, could any father having an atomic trace of self-respect whose family is surrounded by this potential inundation be expected to abandon the imperative of essential social segregation?

Perhaps the boundaries of your own attitude and your proposed policy as presiding bishop can be more clearly understood by this down-to-earth premise and this question which your public interview justifies:

Life itself and evolution and the privilege of parenthood remain a divine mystery in primal aspects; but God in His plan for human progress has permitted us to understand the basic genetic process for all creatures and it is incredible that any exponent of religion could dare to blaspheme that infinite privilege by insisting that it is accompanied by a divine injunction to mongrelize it. No breeder of stock on the millions of farms in civilized areas would intentionally downbreed to a defective or uneconomic type. That is his response to intelligent understanding of the processes of life under the divine plan. The bald question facing your program is whether it is any more a sin for the white families in the South to be as concerned to avoid downbreeding for their grandchildren as would be a farmer for his cattle.

8. The question of your authority to commit the church to your program or the propriety of your action in assuming the authority are minor aspects of the potential consequences of this desperate proposal. Genocide, alas, too soon because of its horror fading into the distance, was no less frightful because technically mandated by current civil authority; but these comments as to authority are plainly pertinent as having a practical bearing on the future course of the church and the reaction and procedure of the dioceses which will not accept the program if activated.

First. I find nothing in canon 4 to authorize anyone to commit the church or spend its funds or use its organization in aid of any political or judicial function or procedure involved in your program.

Second. While church membership of all denominations has been confused by the misuse of the terms "discrimination" and "brotherhood," as meaning more than the acceptance of the ethical and truly religious duty of sympathy, understanding, goodwill, and helpfulness, neither that clear duty nor those misused terms require total social integration and it is viciously misleading to refer to protective segregation as a sin wherever the danger, in the honest and rational judgment of those exposed to it, is clear or potential.

Third. Nor is there anything in the effective terms of the Convention resolution to authorize any policy except "to work together, in charity and forbearance, toward the establishment without racial discrimination of full opportunities in fields such as education, housing, employment, and public accommodations."

While, as is to be expected whenever sin and piety are suggested, however irrelevantly, there is always compromise to avoid finger pointing and controversy, there is nothing in the quoted resolution to justify your undertaking to lead an effort to declare protection of the family a sin, to abolish "all racial barriers" or to sponsor a move to arm with extraordinary and unprecedented punitive power the Attorney General of the United States.

I have searched in vain for technical justification in the minutes of the convention. I have definitely noted the text and express rejection of the resolution of the House of Bishops advocating but expressly limited to advocating compliance with the school decision, and have noted the protests from the floor of the convention against broad implications which resulted in the Virginia resolution above quoted. As a result, I find no molecular justifications for your announced program, even if the convention had been willing to invite disunion.

So much for the question of authority. Attitude is another matter.

May I, in closing, refer with affectionate memory to another bishop in another time of crisis in the South. When Federal troops and hordes of carpetbaggers were sent into Alabama after the Civil War, including a nonresident Tammany henchman placed on the Federal bench, Bishop Richard H. Wilmer staunchly omitted from the ritual the prayer for the President of the United States who, as such, was also Commander in Chief of the Federal troops punitively hectoring the public in the occupied area. Their commanding officer, incensed at this reaction to flagrant abuse of military power (the bishop's pastoral letter pointed out that there was no civil government in Alabama and that there was no religious obligation to pray God to grant health, prosperity, and long life to a military commander) issued General Order No. 38 on September 20, 1865, ordering Episcopal churches closed until this attitude of contumacy should be abandoned. On being curtly admonished that military force would be used to enforce the order, religious services were held in private homes wherever troops were stationed until the order was rescinded, in insulting terms, on January 10, 1866. During this period services in a home (Hamner Hall), typical of the procedure in military areas, there and elsewhere, "was preemptorily forbidden by a military official bringing verbal orders to that effect from headquarters and the little private assembly, broken up on the ground alleged that it was an evasion of the aforesaid military edict, was dispersed by soldiers at the point of the bayonet."

Through it all, then and always, Richard Hooker Wilmer continued on his dedicated way and remains forever a magnificent memory.

With that precedent in the diocese of Alabama before us may I, without offense, respectfully ask you to advise when it became a function of any bishop or group of bishops in America to declare the protection of the family and of a regional civilization to be a sin and to advocate legislation for summary process of blanket injunctions for Federal

[1] And known to every person who reads the daily press is the social miasma overhanging the schools of the District of Columbia, in which you made public your program.

executive agencies, supplementing troops, to process that dogma.[2]

That proposed program would be fully reminiscent of another crisis which once contributed to certain misunderstandings with George the Third because of his parliamentary and executive despotism, denounced by Edmond Burke:

The people remain quiet, said Burke in 1771, when they are assured "that the sacred fire of an eternal constitutional jealousy, which is the guardian of liberty, law, and justice, is alive night and day and burning in this House" (Works, vi, 158).

As I recall history the protests of the colonists were satisfactorily resolved without authoritarian condemnation from the clergy of the colonists as sinners or propaganda in support of the royal procedure or insistence that the pronouncements of a king and his ministers is God's law.

SUPPLEMENT TO LETTER DATED JANUARY 17, 1959, TO THE MOST REVEREND ARTHUR K. LICHTENBERGER, AS PRESIDING BISHOP, AND REFERENCE OF THAT LETTER (AND SUMMARY OF CERTAIN RESPONSES RECEIVED) TO THE DIOCESE OF ALABAMA, ITS STANDING AND EXECUTIVE COUNCILS AND ITS PARISHES

FEBRUARY 16, 1959.

The responses received make it clear that the church authorities proposing to crusade against social segregation in the South are, on the whole, vitally unaware of the imperative reasons for segregation, wholly unrelated to prejudice, and of the sympathy and friendly understanding heretofore existing and possible only in an atmosphere of protective segregation.

The responses, except one frank enough to concede but nevertheless willing to advocate it, indicate a mental block against admission of the assured disaster not merely to the entire range of culture and ethical standards in the South but against recognition of the resentment within and against the church itself if sponsoring any such program and result.

This memorandum acknowledges the courtesy of responses not only from the presiding bishop to whom the above-mentioned letter was addressed, but from other bishops who were good enough to acknowledge receipt of a copy sent them and to express their views although not requested to go to that trouble.

The responses indicate sufficient general accord with the presiding bishop's press interview (as to his advocacy of active church leadership in the pressure for total integration) to require that the result be laid before the Diocese as evidence of intent not only to sanction the pressure of the Federal authorities in the civil domain but as clear evidence of a threatened crisis for the church so grave as to become no longer a matter of individual remonstrances however numerous. The crisis and the implications of the procedure for processing the program, in the absence of any vestige of authority to bind any church or diocese, as publicly asserted become a function of the diocese, its responsible councils, its vestries, and its general membership, not only parish by parish but in convention for final action if the pressure should be continued in the name of the church.

1. The grim intent of certain of the advocates of the program, notwithstanding admitted realization of the disaster to be expected from the proposed inundation in the South of 10 million Negroes into every social contact and aspect of life, may be weighed by the admission of disaster and the grim counterpart of that admission by one of its advocates. His letter stated that as a matter of principle he was 1,000 percent for the bishop's program and that "only a total commitment, despite its desperate sacrifice, can suffice."

Another bishop, as justifying his position refers approvingly to the October resolution of the House of Bishops, although that resolution was affirmatively rejected as a basis for action by the convention, which adopted the Virginia resolution. The effective part of that resolution was quoted in the abovementioned letter of January 17 and did not invite the proposed program either for church or total integration. The resolution of the bishops primarily advocated acceptance of the school decision and called for "church and civil" leaders to direct their people away from what the resolution, plainly pointing a finger at the South, contemptuously referred to as the "easy standard of local expediency."

In short, however admittedly desperate the sacrifice, involving as it would the culture of the region, exposure of family and social life to the intolerable prospect stated in the letter of January 17 and making interracial good will impossible, that result must be pressured upon us by the church as a matter of principle not only directly but indirectly by sanctioning political and civil action, as was urged or implied in the bishop's resolution. Although rejected for action by the convention, it disclosed the attitude of indifference of the concurring bishops as to the desperate problem of the South.

The bishop referred to above, who is 1,000 percent for the presiding bishop's program, did express some doubt as to the immediate tactics in certain areas facing that assured invitation to disaster. In short, a principle to which he is so anomalously committed (10 times the mathematical maximum of 100 percent) might be compromised with his conscience by some tactical delay in benighted areas where, it may be assumed, judicial blackmail by the Supreme Court and fiscal blackmail by the Government's proposal to withhold Federal aid from all segregated schools and housing projects (with old age homes and every other charity in the line of fire) and mass prosecutions by the Attorney General, are all active in the good work of genocide of southern moral and family standards and any possibility of interracial good will.

As for this reluctant indulgence, the South wants no compromise of principle, even when a bishop is willing to give to the South a limited time to confess sin. The South totally repudiates the theory that protective segregation, maintained as a matter of desperate necessity and heretofore in an atmosphere of sympathy, understanding, and helpfulness, is nevertheless sin.

Nor does the South want this continuing lecture on its easy standard of local expediency even if that distortion of its attitude is piously sanctioned by vote of a majority of bishops whose cultural standards, whose children and whose social and family relations would have only token and remote exposure to Negro inundation and its consequences.

It is significant (1) that not a single reply challenged the genetic facts or the economic and criminal statistics underlying the necessity for protective segregation nor the existence of sympathy, understanding and good will toward Negroes made possible only by segregation; and it is significant (2) that all those who replied defended their position as being justified by the bishop's rejected resolution or the action of the general convention. That unique sidestepping of the dogma of synthetic sin and the justification for the program were based not on its inherent ethics but on these so-called doctrinal resolutions, wholly without any authority in the church constitution. That position of evasion calls for analysis.

First, no monitory mandate whatever to abandon protective social segregation appeared in the resolution proper adopted in October. As if reliance were placed upon the preamble the presiding bishop's reply quoted the "whereas" clauses in the preamble, which disclose the usual effort to induce concurrence by conciliatory recitals, one of which repeated the ancient and most nebulous myth of an anthropomorphic God creating man in His own image; hence any distinction as between races as they confront us in 1959 is a reflection on the God-form man or man-form God and is therefore sacrilege and sin.

Resisting the temptation to comment on the literal emphasis on the hypothesis, it nevertheless stands out that the 15 million years of barbarian genetics which have elapsed since Adam and Eve and the grim statistics of 1959 are ignored in applying the hypothesis to the problem of today. It did not occur to the writer of the letter of January 17 that bishops functioning under a church constitution substantially as adopted in October 1789 would, like the Supreme Court of the United States, discover a social mandate that Negro psychology and the God-form principle require total amalgamation regardless of consequences.

But giving full scope to the image of God hypothesis the imperative distinction is not made in the South because of the Negro's God-image form but his 15-million-year genetic and spiritual characteristics, or the lack of them; not his arms, legs, head, brain or tonal capacity or any visible or audible attribute or image. That distinction in the South is, of course, based on horizontal, homogeneous, and unanimous content with barbarism at the end of 15 million years of his possession of the God-image, by every living member of every Negro race.

For this reason, however dangerous the literal application of that morphology of the God-man is to the conception of a spiritual God, it would be totally inapplicable here as as basis for a charge of sin. That is, unless the manufacturers of this synthetic sin insist that God gave the original Negro or his aboriginal progenitor not only the similitude of God's form and image but included also God's own spiritual attributes.[3]

If any rational mind could suggest any such hypothesis it would seem to be not only a sacrilegious burlesque or travesty of the divinity of creation, but totally inconsistent with the basic concept of free will and individual responsibility underlying every worthwhile system of religion or ethics.

The sublime wonder which makes life worth living is, of course, the certainty that under the divine plan, ordained in the process or in the result of creation and innate in every human is the individual power, by sincere and individual response to a sound system of ethics, completed and sanctified and made understandable for all time by the Nazarene, to assure not only the maximum serenity of the individual and his maximum contribution to his own and to his family's and to human welfare of which his mental energy and self-control is capable, but also to meet the desperate need for strength to face the inevitable and unavoidable adversities and tragedies of human life, including the approach or potential of death itself.

Crises of human life are not found in its hardships, its misfortunes and its external tragedies but in the failure of individuals, magnified by mass multiples, to respond with

---

[2] The plan of the politician and South hater in the North is, of course, to condemn any racial distinction in employment, housing, and in any unity of policy as to any relation whatever, public or private.

[3] And perpetuated them for all time against genetic erosion.

self-control and endless analysis and determination to this basic challenge.

It was not the purpose of the original letter or this final memorandum to engage in a teleological controversy with bishops, in full cry to discover and denounce sin. But for the sin aimed at here the discovery of sin cannot possibly rest on disrespect for the human morphology of God or the God-like morphology of man, however little or literally the ancient notion may be sponsored by bishops and accepted by laity.

There is, however, one evidential aspect, having no relation to the genetic aptitudes or the 1959 statistics of the Negro, which symbolizes the problem and dictates the field for application of the imperative for social segregation. Its reluctant expression here, as in the case of the blunt but indispensable statement in the letter of the reasons for segregation, is compelled by those who force the issue and the crisis. This aspect refers to the bearing on social relations of the startling physiognomy of the genuine Negro.

Pathetically homely and distinctive, that characteristic of the millions of genuine Negroes in the South has never, in the atmosphere of basic social segregation, impeded, on the contrary that characteristic physiognomy has furthered, friendliness, sympathy and understanding accompanied by an extraordinary minimum of offense and ill will from normal contacts in that atmosphere. But let it be understood as inevitable that if and wherever social integration is pressured or forced by law beyond token bounds (temporarily endured) or asserted as a matter of right or compulsion by any Negro, then the crudeness and pathos of genuine Negro physiognomy will lose its appeal for friendly acceptance. It will become a symbol not only of the Negro's ever-present potential response to his genetic aptitudes but of judicial and legislative coercion, and of church authoritarianism if this program of lectures and taunts continues.

Any bishop who can fail to visualize, in a family or other social or intimate gathering in the South, the effect of Negro faces in hilarious commune with white friends, family and daughters—but why finish a sentence that completes itself?

While understandable in the Lambeth Conference as a political gesture in the ominous problem of colonialism and vital trade, so tragic is the emphasis by American Bishops on God's human-like form as the main basis for their charge as to the sin of segregation that it seems in order and germane to point out the infinitive damage to Christian ethics and to this church involved in the shockingly literal and nonspiritual emphasis on the human-form God, since likeness must be reciprocal. This intimate physical morphology, and doctrine of external intervention has been recently advanced to an all time high by one of the most tireless and aggressive exponents of total integration—of course with total lack of understanding of the facts and statistics or sympathy for the South's opposition to that turmoil and disaster.

That bishop's formula for transfer of man's primary individual responsibility from himself to God is defined in an article entitled "How To Pray," to which attention was called by a churchman shocked both by its text and its proximity. No reflection is here intended as to the author of the article nor any criticism except as to its literal overemphasis on the sort of misleading morphology now challenging the concern of southern families for the protection of the culture, their standards and serenity and their families. The articles appeared in a sex emphasis pocket size magazine between (a) a series containing fully nude photographs of African women in their traditional state of culture and nature, with thatched huts in the background, (b) another article entitled a "Preview of the New Kinsey Report," and (c) a fully illustrated article on "Literature's Sexiest Young Heroine" on one side of the article on how to pray and, on the other (a) French etchings of totally nude female torsos with uninhibited details and (b) a spirited defense of alcohol entitled "Drink Up. It's Good For You," extolling alcohol as a blessing.

As was to be expected from this proximity in a magazine whose readers were apparently not expected to be searching for spiritual substance, the article of the learned dean, now bishop, necessarily emphasized the anthropomorphic notion of access to and response of divinity and asserted that if framed according to the author's formula the prayer "will always be answered" (the emphasis on "always" being the learned dean's). This guaranty was illustrated by account of his interview with a man who asked if it was all right to pray for a particular job. Assured that it was if he should pray for it in the right way the learned dean gave the aspirant a formula of prayer for the new job. This procedure was also stated as applicable to prayer for specific things: "Just as in the case of an earthly parent, it is the father's pleasure to give you good things."

If this were an appropriate time for irony it might be added that the article did not advise whether the job thus prayed for was obtained or what would happen if there were two applicants and the present incumbent also prayed to retain the job, all using the guaranteed formula.

Irony aside, it is tragic that the basic threat to cultural and to social welfare and interracial good will should be threatened not merely in civil life by coercion of Federal authority but that the same disservice should be extended into the church itself and distort the sublime appeal of Christian ethics by a program taunting church members in the South with the synthetic sin of segregation, predicated on resentment of a man-imaged God pictured on the spiritual level of a grantor of jobs and things.

LEGALITIES

The Episcopal Church in the United States was organized as an unincorporated association by the adoption of a constitution in Philadelphia in 1789. The present articles of religion approved in 1801 affirmed the propriety and acceptance of diversity of traditions and ceremonies, adapted to the diversity of countries, times and men's manners.

In providing for certain changes in the liturgy of the Church of England the American general convention of 1789 referred with approval (continued in the preface of today) to the assertion by the English church, in its preface in 1689 to the Book of Common Prayer, that changes by the church from time to time would be proper which according to her best understanding might most tend to peace and unity in the church.

If there is pressure to ignore those ancient standards of unity and tradition by proposing to legislate a finding of sin in a tradition in effect since 1689 confirmed by the American church in 1789, and essential in the South to prevent atomic social disaster, there is nothing in the constitution or canons or any possible valid amendment of either which would be binding upon any diocese or any parish or which could interfere with the ownership and use of the church property or prevent severance of further affiliation, if that action should become necessary.

MR. ROBERT C. VANCE

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from Connecticut [Mr. DADDARIO] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. DADDARIO. Mr. Speaker, in New Britain, Conn., this afternoon, the Department of the Army will award a citation and medal to Mr. Robert C. Vance, editor and publisher of the New Britain Herald.

Mr. Vance is one of Connecticut's outstanding citizens. Some years ago, in the establishment of antiaircraft defenses in the Northeast sector, a Nike unit was located in the New Britain area. Connecticut is not accustomed to having many regular military units within its borders. Aside from the Coast Guard Academy and the New London Submarine Base, there are few installations of any size. My colleagues who have many such years of experience with posts, camps, or stations within their districts will know that it often requires a sizable adjustment in the thinking of both civilian and military when they find mutual problems that demand sympathetic understanding.

In such circumstances, the work of one man who knows the problems of the military and who knows his community can be most valuable. Mr. Vance, who served with both the French and American forces in World War I and has always maintained strong ties with the American Legion, made it a point to see that the public relations of the military group were given every consideration. The award that is being made today is in recognition of his efforts and the way in which he has contributed to the successful carrying out of a military mission.

PAKISTAN

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the gentleman from New York [Mr. POWELL] may extend his remarks at this point in the RECORD.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. POWELL. Mr. Speaker, today I wish to salute the country of Pakistan of its independence on this 12th anniversary and its leaders, President Mohammed Ayub Khan, Aziz Ahmed, the Ambassador to the United States. Five months since President Ayub took over the reigns of Government is too early to assess the worth, the direction and true meaning of the revolution which occurred on October 7, 1958. However, we in the United States have hopes that the new regime will succeed in establishing law and order, in raising the standards of living, and in stabilizing relations in that part of the world thus adding the country's strength to universal peace.

Present leaders of the Pakistan Government are eager that we of the United States understand the problems which handicapped progress and advancement in their country prior to the revolution of last fall. They explain that the ineffectiveness of democracy was attributable in a large measure to the feudalistic

pattern of the economy where large land holdings in the hands of the few rendered political rights to the people null and void. Thus power in the hands of a few landlords let to Government corruption and further oppression of the masses. Such deterioration placed Pakistan under the old regime, leaders report that it was necessary for a new government and different leaders with sufficient power to overrule the feudal lords and restrain political corruption for under President Ayub, we are informed, land is now being redistributed.

The matter of land redistribution was urgent, for West Pakistan, about the size of Texas and Okahoma with most stretches of desert, must support a population estimated at 39 million and East Pakistan, about the size of Louisiana, with so many rivers and marshes that only about 25 million acres are cultivatable, must accommodate 47 million. Moreover, the population is increasing by about 1.2 million persons a year while food production over the past 10 years has remained static.

Although Pakistan received 800,000 tons of wheat and rice as part of American aid for the year ending in 1956, the country still had to spend its own scarce foreign exchange to import an additional 465,000 tons.

The first challenge to the new government in this regard is to retrieve those lands which have gone out of cultivation as a result of salinity and waterlogging and prevent the 70,000 to 80,000 acres, in addition, from annually going out of cultivation. The second challenge is the removal of the obstructive force of absentee landlords whose holdings are so large and their incomes so enormous that they do not have to worry about low yields. The third problem facing the Pakistan administration is how to keep food prices from soaring further and how to offset the drift toward economic bankruptcy. A fourth challenge was the establishing of civil government to replace the vanishing law and order, that people might move about in peace.

President Ayub, we are informed, has directed that undistributed irrigated land in West Pakistan be settled within 3 months and has ordered that all cultivatable fallow land in East Pakistan be brought under the plow within a similar period. In the economic sphere the present government appears to be tearing down sagging, outdated, exploitative elements. Blackmarketing has disappeared, prices have been stabilized, and the value of foreign exchange and the rupee is improving. It is believed that the improvement in the economy of the country should contribute very directly to a decreasing of dependence upon outside help and thus relieve the friends of the country from endless demands for assistance.

However, Pakistan, like other undeveloped countries, must have outside help for a time to speed the urgent development that the bursting population now demands. American industrial know-how and investment capital are invited for establishing industries in steel, in diversified jute production and other industries. The Government, in return, offers incentives such as reparation of profits and capital at any time investors might wish to withdraw from the Pakistan economy. The leaders add, America is faced with tremendous competition from the Communist countries and can become economically barricaded in the very near future unless she begins to think along different lines. Of note here is the importance of facing the dilemma of overpriced American-made goods ultimately clashing with the lower priced Communist market and being squeezed out in the process. To offset this dilemma the United States can invest capital on the spot where labor is sufficiently cheap to compete successfully with the market of the Communists whose economic influence is becoming an increasing threat. To offset Communist gains through trade and assistance, it is very important that American capital set out now for Pakistan.

Although under the previous regime there was the framework of representative government it was ineffective for the reason that mass participation was limited by the poverty and ignorance of the people. As pointed out earlier, the landholdings were in the hands of the few and only about 15 percent of the Pakistanis were educated. The leaders of the country explained that democracy in their country as elsewhere cannot be developed in ignorance where the potential voters are lacking in a developed civic sense. Voting undertaken in the social and economic conditions of the present nature of things they maintain would be but a sham. Therefore, they report the need of undertaking some necessary preliminaries as precaution for advancement, for representative government, for democracy, that justice and equality may be extended to all.

Under the previous administration, the Pakistan leaders report, there was in force a confused judiciary system which represented a poor copy of the English law. This system, they insist, made justice and civil rights so expensive that the poor were unprotected and their rights unsure its application. Justice, they add further, must not only be cheap but in a shape that has meaning for the masses of people. Thus the immediate objective of the present government is not representative government but the establishment of the conditions for representative government.

Work on a Constitution in preparation for election will begin later this year. It is expected that representative government will take the form that it did in the early United States—probably a limited franchise with an electoral college consisting of persons with minimum educational requirements. If plans for representative government move according to expectation a representative form of government may be in operation in about 2 years. As to external relations, President Ayub has expressed his grave concern for the settlement of disputes with India and has already received a general from that country. The Pakistanis are eager to promote understanding and establish peaceful relations with its immediate neighbors and in the world at large. They have no hostility to America, we are told, and regard us as friends. Moreover, the leaders assert, "with malice toward none," they will go with the West as far as possible. The above rather long explanation of the aspirations and techniques of a new government of the Afro-Asian family has been submitted as officially reported without editing, for few there are among us who can capably pass judgment and assess the problems or offer the intangible materials needed to fill social and political and economic vacuums which occur and recur in the wake of retreating Western occupation. Certainly sound thinking on social and political evolution, which must of necessity pertain, if these countries' development is to approximate that of the more advanced in the very near future. Therefore, we must sympathetically examine the facts of life in the nations that are emerging on the basis of facts presented by them from all sides and points of view rather than through a telescope of western origin fashioned according to our degree of stabilization and standards. To do so deepens the misunderstanding of our country and besides, it is unfair to them.

I have read in Foreign Affairs a scholarly article by Charles Burton Marshall, visiting research scholar at the Carnegie endowment for international peace, and though I bitterly disagree with his expressions of Western superiority and right of final determination of the world's political direction, I do support his conclusions our country's foreign policy as regards Pakistan and wish to include them in the RECORD for future reference.

As for U.S. policy toward Pakistan, developments give new point to some old questions. They supply another demonstration of the folly—at least the perils—inherent in contracting with ingroups in politically underdeveloped states on the assumption that we are dealing with national governments really endowed with contractive capabilities. They supply new data on the fallibility of the strong-man myth underlying some of our undertakings and expectations regarding the fledgling states. They supply a new occasion of inquiring into the relationship of a military buildup to stability in underdeveloped areas. It is time to find out more about the implications of building up a military establishment hugely beyond the level of developments of its country—especially, as in the case of Pakistan, a military establishment not national provincial in its roots. It is time for a new perspective on our alliances and military strength, we are not giving too little regard to deeper political requirements.

The concern of the United States for the underdeveloped countries should at all times concentrate on the direction of government and the dedication of leaders throughout to raising the standards of its people in as peaceful and orderly fashion as possible rather than whether the techniques applied are copies of our system or are capable of advancing our interest. For it may come to be that

imposing or introducing our interest may conflict with theirs, on securing ourselves may make them insecure. Therein lies potential and ultimate rupture of relationships which may be weakened when they should be strengthened.

REREFERRAL OF H.R. 4147 AND H.R. 5746

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the bills (H.R. 4147) to establish the Rural Electrification Administration as an independent agency, and for other purposes, and H.R. 5746 to amend Reorganization Plan No. 2 of 1953, which were referred to the Committee on Agriculture be referred to the Committee on Government Operations.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

COMMITTEE ON GOVERNMENT OPERATIONS

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the Committee on Government Operations may have until midnight tonight to file a report of its Subcommittee on Government Information relating to the availability of information from Federal departments and agencies, including additional views.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

NATIONAL SECURITY AND POWER EQUIPMENT IMPORTS

Mr. SHELLEY. Mr. Speaker, I ask unanimous consent to address the House for 20 minutes.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. SHELLEY. Mr. Speaker, for the 10 years that I have had the honor and privilege of serving my district in the Congress of the United States, I have vigorously and constantly supported the reciprocal trade agreements program and the promotion of two-way trade between ourselves and others. These broad general programs are needed as important means for strengthening our allies and for increasing standards of living throughout the free world. They also serve to eliminate suspicion and distrust among nations. I will continue to support these programs and these efforts.

The Trade Agreements Act, as passed and amended by the Congress, contains important exceptions which must be safeguarded and protected. Just as a majority is not permitted to override the rights of a minority, broad principles must not be permitted to ride roughshod over fundamental and essential exceptions. The Trade Agreements Act and most other laws are made possible because of the exceptions they contain. The national security amendment to the Trade Agreements Act is a critical exception set forth in the act. It first appeared in the Trade Agreements Extension Act of 1955. It has been expanded and strengthened for good and sufficient reasons under the Trade Agreements Extension Act of 1958, the present law under which we operate. I rise this morning to defend this important exception to the Trade Agreements Act.

On January 1, 1959, our Federal Government decided that a contract to supply two hydraulic turbines for the Greers Ferry Dam, under construction by the U.S. Corps of Engineers, should be awarded under the Buy American Act to an American manufacturer, the Baldwin-Lima-Hamilton Corp., even though a lower bid had been received by a British manufacturer, the English Electric Co. Our Government has made this decision in order to protect essential national security interests. The furor that has been raised in protest against this award and the assertions that it abuses the trade agreements programs is out of all reason. Facts have been misused, bruised, and abused. I do not presume to know all the facts which have entered into the Government's decision in this case. Undoubtedly, considerable of this data is contained in secret documents. However, I do have a number of facts that do shed light on this important problem and will, I hope, serve to bring this matter into proper focus.

A basic responsibility of government is to protect and safeguard the people it serves. This fundamental principle must be ever present in everything that our Federal Government does, legislative, executive, or judicial branch. Perhaps it is redundant to observe then that the administration of our trade agreements program must give first consideration to our Nation and its people. The Trade Agreements Act need contain no clause to this effect. However, the Trade Agreements Extension Act of 1955 authorizes the President to "take such action as he deems necessary to adjust the imports of such articles—an article imported into the United States in such quantities as to threaten to impair the national security—to a level that would not threaten to impair the national security."

As noted above, the Congress expanded and strengthened this authority in the Trade Agreements Extension Act of 1958. For 4 years, the exception has authorized the President to take any action whatsoever, even to the exclusion of all imports of a commodity, if he considered such action necessary to protect the national security. He can take this action for such period of time, indefinitely if necessary, as he considers appropriate. Thus the authority is complete and permits the most drastic action. However, we are called to account by the British Ambassador and the British press for protecting our national security on the Greers Ferry contract award, which is made in the first place under the Buy American Act, which requires the purchase of domestic articles, and in conformity with the Trade Agreements Act, which permits the President to exclude all imports if he considers that national security is threatened.

In answer to this sharp criticism that has been raised on this matter, the Secretary of State has stated the following in part:

> There is the fact that the general principles about liberalizing trade are in every country subject to certain exceptions and qualifications. That applies to the United Kingdom and it applies to almost every country in the world. You cannot take a generality and apply it literally clear across the board. We do also have a requirement that certain types of activity which are determined to be essential to the vital security of the United States shall be kept alive and given a certain measure of protection. Now, in this case there was a finding to that effect in relation to these turbines by the Office of Civil Defense Mobilization, which has the responsibility to do that under the law.

This is the way in which the New York Times of January 28, 1959, reported the statement to the press which the Secretary made on January 27, 1959.

This is by no means the first time that a Federal contract for hydraulic turbines has been awarded to an American manufacturer over a much lower bid of a foreign producer in order to protect essential national security interests. More to the point, this is not the first time that the Federal Government has recognized the important contributions made to national security by the American hydraulic turbine manufacturing industry.

As the industry has stated in a letter to the Director of the Office of Civil and Defense Mobilization, dated February 9, 1959:

> During periods of war or emergency, the large machine tools in the American hydraulic turbine industry have been at a premium and at no time operated less than 7 days per week, 24 hours per day, on critical items required during such periods. In this case, it was not necessarily anticipated how the Government would use these machine tools. However, the Federal Government completely controlled and directed the use of these tools under high priority.

In 1953, as part of the tax amortization program designed to increase defense production facilities, the Federal Government established expansion goal 73 to increase facilities for the manufacture of hydraulic turbines. Expansion goals were also established for facilities to generate electricity and for the manufacture of various types of prime mover and electric power equipment.

The domestic hydraulic turbine manufacturing industry appealed to the President of the United States on March 21, 1956, for a careful review of the problem which the industry faces and the relationship of this problem to national security and defense.

The President did arrange for the establishment of an Interagency Committee on Hydraulic Turbines. An official of the Office of Defense Mobilization served as Chairman of the Committee. Representatives from the Departments of State, Defense, Army, Interior, and Commerce, and from the Federal Power Commission served on the Committee.

The Interagency Committee studied this problem for nearly a year and then made its recommendations to the Director of ODM.

On March 8, 1957, the Director of ODM came to the following conclusion:

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF DEFENSE MOBILIZATION,
Washington, D.C., March 8, 1957.

Mr. WILLIAM J. RHEINGANS,
Chairman, Hydraulic Turbine Section, National Electrical Manufacturers Association, New York, N.Y.

DEAR MR. RHEINGANS: Thank you very much for your many letters and oral information submitted to me and to the Inter-Agency Hydraulic Turbine Committee in the course of the consideration of your request for a ruling under section 3(d) of Executive Order 10582, that Federal purchases of hydraulic turbines should be limited to American manufacturers.

As you know, Executive Order 10582 was issued by President Eisenhower to establish uniform standards and procedures to be applied by all Federal agencies in administering the Buy American Act. Section 3(d) of that order permits the head of a Federal agency "to reject any bid or offer for materials of foreign origin if such rejection is necessary to protect essential national security interests after receiving advice with respect thereto from the President or from any officer of the Government designated by the President to furnish needed advice." In the memorandum in which President Eisenhower designated me to furnish advice to executive agencies pursuant to section 3(d), he stated that it was his conviction that exceptions under this provision of the Executive order should be made "only upon a clear showing that the payment of a greater differential than the order provides is justified by considerations of national security." To insure that all aspects of the U.S. essential security interests pertinent to your request would receive appropriate consideration, an interagency committee was established to study all available information and to submit a report to me.

On the basis of the Committee's findings and my own study, I do not believe the present situation justifies a ruling that would recommend to Federal procurement agencies that all contracts for hydraulic turbines should be limited to U.S. suppliers.

In reaching this conclusion I have been influenced strongly by the fact that section 3(d) of Executive Order 10582 clearly envisages that exceptions under that section will be made on a case-by-case basis. Therefore, I recommend that decisions regarding procurement of hydraulic turbines continue to be made on a case-by-case basis. However, in view of the importance of the engineering, skills, and tools in the hydraulic turbine industry, I have instructed the Office of Defense Mobilization staff and the Interagency Committee to keep future developments in the industry under close study.

I appreciate the opportunity of meeting with you and other representatives of the industry and want to assure you that each future case referred to this Office for advice under section 3(d) of the order will receive our most careful and objective consideration.

Sincerely yours,
ARTHUR S. FLEMMING,
Director.

Since that time, three cases involving lower bids by foreign manufacturers have been referred to ODM and its successor, the Office of Civil and Defense Mobilization—OCDM. It should be noted that the Federal Government awards only a very few hydraulic turbine contracts each year. The annual average over the last 10 years has been 11. Not all of these contracts involve bids by foreign manufacturers. On all three contracts the Federal Government decided that the contract should be awarded to the lowest domestic bidder in order to protect essential national security interests, even though a foreign manufacturer had submitted a substantially lower bid in each case. The third case was the Greers Ferry award.

It is quite apparent that the engineering and skilled manpower, tools, and facilities of the hydraulic turbine industry must be preserved to protect our national security. They are important, as stated in official rulings, because of the important defense items which this industry produces during national emergencies. The manpower and the tools in this industry are unique and rare even in our highly industrialized economy. The industry must be preserved, by drastic action if necessary, because national security is directly and critically involved.

There is yet another aspect to the defense essentiality of the American hydraulic turbine industry and of the manufacturers of various other types of power equipment. Hydroelectric energy, produced by hydraulic turbines and the various types of electric power equipment, is essential to our defense mobilization base and is essential to our national security and defense. The Joint Congressional Committee on Defense Production has repeatedly pointed to this fact. For example, in its fifth annual report, the Joint Committee stated:

Your committee has repeatedly emphasized that industrial production must be backed by an adequate and unfailing supply of electric power, one of the vital resources of the country for which there is no present substitute.

The British themselves have taken necessary precautions to protect their national electricity supply. Since its establishment in 1947, the Central Electricity Authority of Great Britain—CEA—an agency of the British Government, has limited its procurement of prime mover and power equipment to domestic suppliers because as the CEA has stated to the Parliamentary Committee of Inquiry into the Electricity Supply Industry of Great Britain:

It would be unwise for the electricity supply industry (of England and Wales) to be dependent upon foreign manufacturers for spares and maintenance.

British officials, British manufacturers, and the British-American Chamber of Commerce have sought to bury all references to this policy under a rug of subterfuge. The American hydraulic turbine builders have brought to light on this side of the Atlantic Ocean the following pertinent facts and observations on this matter in their brief to OCDM on "National Security and Defense Production and American Hydraulic Turbine Manufacturing."

This is not a new problem on our horizon. I would like to refer briefly to a portion of the remarks which I made to the House on this subject on June 28, 1954:

Electric power is the basis for our whole industrial economy. It is also absolutely necessary to the national defense and to national security. Without unlimited and uninterrupted supplies of power, we cannot build and keep our atomic installations going; we cannot produce airplanes, guns, tanks, and all the other defense weapons we need; communications and transportation depend on it—in a word, without our electric-power supply we are powerless. The quickest way for a potential enemy to put us out of action would be for him to put our powerplants out of action. Further, our power-producing potential is hard put to it to keep pace with the growing peacetime demand for new power sources. In the event of a national emergency there would be a tremendous new demand. The powerplants the Government is now building, and the dams and plants for which the Federal Power Commission is now issuing licenses to public and private utilities must be ready to meet this demand without unnecessary delay. Turbines, generators, governors, and similar equipment to be installed in these powerplants are as essential to the peacetime or wartime production effort as the atomic weapons, planes, and tanks for which they provide production power are to actual military operations. We would not for one minute consider letting contracts to build munitions to any foreign firm. And yet we are now buying power-producing equipment from foreign countries with the most careless disregard for the same security considerations which prevent us from placing reliance on any foreign manufacturer for our weapons of war.

Construction and delivery of heavy electrical equipment is not an overnight proposition. They are not mass production items. Each separate machine must be designed and built from scratch to meet special requirements. The process is a matter of months and years. Any interruption in production or delivery could mean an irreparable time loss in getting these powerplants into operation. With world conditions as critical as they are, we certainly can have no assurance that foreign suppliers, either in Europe or in Japan, can deliver on contracts calling for deliveries during the next several years, as is the case on contracts now being awarded. Yet because of pressures from the State Department we are awarding such foreign contracts in increasing numbers to the extent that during 1953 foreign firms received contracts with a dollar value of almost 65 percent of those awarded to American firms. And the trend is increasing so that, if the policy is continued, it will not be long until foreign manufacturers are supplying our Government with more of this type of equipment than we buy at home. It is time we put a stop to the practice if we value our lives. (CONGRESSIONAL RECORD, volume 100, part 7, page 9090.)

At that time, I introduced legislation designed to correct this problem. Shortly thereafter the situation seemed to improve somewhat, temporarily making legislation unnecessary. Recent developments, however, indicate a substantial worsening of this problem. An increasing number of Federal contracts for power equipment are being awarded to foreign producers. American equipment manufacturers and their employees are being critically affected.

I am keenly aware of this problem as it affects American hydraulic turbine builders, companies and employees together. This is an American industry of over 100 years standing. During the

past year, some 682,000 man-hours were expended in this particular industry in San Francisco and 79 percent of these man-hours were directly connected with the production of hydraulic turbines. My own personal background in the American labor movement naturally inclines me to fight vigorously for the protection of hard-won rights and benefits enjoyed by the laboring men in this country. This urge is triple strength when the threat is aimed at both the industry and its employees and at the security of our Nation. Employees in this American industry earn wages which are double, and in a number of instances considerably more than double, wages paid to employees in the same industries overseas. Even a casual study of International Labor Office data, as published in the United Nations Statistical Yearbook, gives full support to this fact. But hydraulic turbines are highly engineered products.

Earnings of labor are a critical factor in the design and manufacture of hydraulic turbines. Many man-hours of skilled and technical personnel go into the design and building of this equipment. American labor and American industry in this type of situation cannot possibly compete on a dollar for dollar basis with foreign workers and foreign industry. Our National Government has long recognized this fact as it relates to shipbuilding. Our Government long since took appropriate action in a number of statutes beginning with the Merchant Marine Act of 1936 to protect our Nation's security and American labor and business in the shipbuilding industry from the ravages of low-wage competition. Thanks to this farsighted legislation, we still have today shipbuilders and a shipbuilding industry. Without such action, we would not have this essential industry today. Just witness what is happening in the American watch industry. American manufacturers are becoming importers. American skills are being lost so that now we find the electronic industry is importing skilled labor from overseas, persons with the type of skills once available in our own American watch industry.

Now we must act before we lose our hydraulic turbine industry—trained manpower, engineering, know-how, specialized production facilities, and elephant machine tools. This small industry must be safeguarded against destruction. Only four companies in the entire United States have the necessary trained manpower and facilities to manufacture hydraulic turbines. Average annual sales of the industry are less than $27 million.

Our Federal Government has a direct and major share of the responsibility for its preservation. Right today, under a policy designed to encourage private power development, the Federal Government is still purchasing approximately 60 percent of the industry's domestic sales of hydraulic turbines. In previous periods, the Government's share amounted to more than 72 percent. Furthermore, policies and procedures which our Government follows in its procurement of hydraulic turbines influence all other domestic buyers.

I would like to expand on this a little more fully. It is hard for me to understand how some well-meaning people can possibly propose that our own Federal Government should grant to overseas organizations work that is not only essential to national defense but is essential for the bread and buttter of our economic prosperity. This is done in the face of unemployment that has remained stable at 5 million and could conceivably continued upward. Many areas in our country have been officially cited by the Department of Labor as distressed areas. Right now too many skilled craftsmen who will be needed in times of national emergencies are out on the street or working in another job that will in no way keep them up to date and experienced in their particular trade. It is these thoughts that go through my mind when I think about the protests and objections that have been raised against the OCDM recommendation and our Government's decision to award the Greers Ferry hydraulic turbine contract to an American manufacturer. This should be standard, normal, day-to-day, routine operating procedure for the Federal Government to award hydrauiic turbine contracts to American producers. Actually the Buy American Act requires it. Yet, because of the outbursts by British officialdom against a practice which they follow for themselves, we find ourselves in a position of commending and supporting the Director of OCDM for taking action to protect his own Nation.

There is now before the OCDM a request submitted by the hydraulic turbine industry which would protect this industry and the workers in these plants from seeing their hard-won gains and highly skilled production efforts go flying out the window when overseas companies are awarded these contracts. I am hopeful the Director of the Office of Civil and Defense Mobilization will act with wisdom and, thinking of our own depressed areas, grant this request.

I am sure, knowing the feeling of those workers in my district in San Francisco, this act would be hailed as farsighted and an act of vision that would save us from being kicked in the teeth by overseas competition and would preserve a vital industry so necessary in these days of tension and cold wars. I am hopeful this will be done, under the authority provided by act of Congress in the Trade Agreements Extension Act of 1958.

EPICURE OF THE HIGHWAYS

Mr. NATCHER. Mr. Speaker, with the death on March 15 of Duncan Hines in my home town of Bowling Green, Ky., the world lost one of its great authorities on good eating. So eagerly sought after by proprietors of restaurants and inns and so widely followed by the public were his recommendations on good places to eat that the statement "Recommended by Duncan Hines" has passed into the language and is synonymous with the highest degree of epicurean pleasure.

Mr. Hines, who came from a prominent southern family and was accustomed to gracious living and excellent cooking, began his hobby of seeking out superior restaurants in the 1930's when he and his wife were living in Chicago and traveling extensively about the United States. They decided to share their experiences with their friends, and at Christmas in 1935 sent out a list of their favorite eating places. The response was so enthusiastic and the demand for lists so tremendous, both from friends and strangers who had heard of the list, that Mr. Hines published his first book, "Adventures in Good Eating." It went into 40 editions. This was followed by "Lodging for a Night," "Adventures in Good Cooking and the Art of Carving in the Home," and "Duncan Hines' Vacation Guide." Three of these guidebooks have sales totaling 500,000 copies a year and are devoted to recommendations of restaurants, hotels, and motels. What had started as a pleasant avocation soon burgeoned forth into a full-time business, and in 1938 Mr. Hines left his job as a printing salesman and devoted all his time to traveling, investigating, and eating.

In 1949, Mr. Hines together with Roy H. Park of Ithaca, N.Y., formed Hines-Park Foods. Later they established the Duncan Hines Institute. These organizations publish Mr. Hines' books and also carry on food research. Although the institute and Hines-Park Foods were later acquired by Procter & Gamble Co. both Hines and Park continued to work with the organizations.

In 1943, Mr. Hines set up the Duncan Hines Foundation which awards scholarships annually to college students in hotel and restaurant management. The foundation also has supported sanitation research.

Mr. Hines was more of a gourmet than a gourmand and although he frequently tasted six meals a day he kept his trim figure. Early in life he acquired a love of fine food from his grandmother who reared him and whom he considered the first of thousands of good cooks he was to know. Duncan Hines had a unique method for trying out a new restaurant. First he would go around to the back to see what the garbage situation looked like. If that was bad, he would go to the kitchen, and if he smelled rancid grease he backed out. However, if the kitchen met with his approval, he would then go into the dining room and order perhaps six of the eight entrees listed on the menu. If these dishes pleased him, he listed the restaurant as "recommended" in his book.

Until quite recently, Mr. Hines traveled 55,000 miles a year to do his own testing and investigating. He was aided by some 400 volunteers who regularly sent him tips on new places and checked the standing of places already listed.

Mr. Hines returned to his native town of Bowling Green, Ky., where he lived with his wife in a plantation-style home. Here they amassed one of the largest cookbook collections in the United States.

All America has benefited from Duncan Hines hobby and every time a diner feels the satisfaction and glow that results from an excellent repast he can be grateful to Mr. Hines for recom-

mending the restaurant that prepared the meal. Duncan Hines was truly an epicure of the highways.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. O'HARA of Illinois, for 60 minutes, on Tuesday, April 7, and Wednesday, April 8.

Mr. POWELL (at the request of Mr. MCCORMACK), for 60 minutes, on tomorrow.

EXTENSION OF REMARKS

By unanimous consent, permission to extend remarks in the CONGRESSIONAL RECORD, or to revise and extend remarks, was granted to:

Mr. RIVERS of Alaska.

Mr. MADDEN to include an editorial and also a speech.

Mr. KEARNS in two instances and in one paying tribute to the late Honorable Joe Farrington, Delegate from Hawaii, and also a report of the Air Force Symphony Orchestra on its recent tour to South America.

Mr. BENTLEY and to include extraneous matter.

Mr. HOFFMAN of Michigan (at the request of Mr. BENTLEY) and to include extraneous material.

(At the request of Mr. CURTIS of Missouri, and to include extraneous matter, the following:)

Mr. OSTERTAG.

Mr. LANE.

Mr. WAMPLER.

(At the request of Mr. MCCORMACK, and to include extraneous matter, the following:)

Mr. POWELL.

Mr. ROOSEVELT in two instances.

Mr. CELLER in two instances.

Mr. ROGERS of Colorado.

Mr. ZABLOCKI.

Mr. GATHINGS.

Mr. BURKE of Massachusetts.

Mr. METCALF.

Mr. SHELLEY.

SENATE BILLS AND JOINT RESOLUTION REFERRED

Bills and a joint resolution of the Senate of the following titles were taken from the Speaker's table and, under the rule, referred as follows:

S. 46. An act for the relief of Ben Chassin; to the Committee on the Judiciary.

S. 102. An act for the relief of Stanislawa Wojczul; to the Committee on the Judiciary.

S. 110. An act for the relief of Yaeko Inouye; to the Committee on the Judiciary.

S. 175. An act to provide transportation on Canadian vessels between ports in southeastern Alaska, and between Hyder, Alaska, and other points in southeastern Alaska, and between Hyder, Alaska, and other points in the United States outside Alaska, either directly or via a foreign port, or for any part of the transportation; to the Committee on Merchant Marine and Fisheries.

S. 191. An act for the relief of Marie Silk; to the Committee on the Judiciary.

S. 192. An act for the relief of Clarinda da Veiga; to the Committee on the Judiciary.

S. 210. An act for the relief of Pantaleon Ibarra, also known as Elmo Gomes Arcibal; to the Committee on the Judiciary.

S. 244. An act for the relief of Alexander Antoniou; to the Committee on the Judiciary.

S. 319. An act for the relief of Theodore Burtzos; to the Committee on the Judiciary.

S. 320. An act for the relief of Sofija Laica; to the Committee on the Judiciary.

S. 322. An act for the relief of Dr. Stasys Sereika; to the Committee on the Judiciary.

S. 323. An act for the relief of David Forbes; to the Committee on the Judiciary.

S. 324. An act for the relief of Johann Kalatschan; to the Committee on the Judiciary.

S. 327. An act for the relief of Cwy Pinkusiewicz; to the Committee on the Judiciary.

S. 328. An act for the relief of Ellen B. Mueller; to the Committee on the Judiciary.

S. 330. An act for the relief of Erminio Neglia; to the Committee on the Judiciary.

S. 331. An act for the relief of Jakob Liblang, Jr.; to the Committee on the Judiciary.

S. 332. An act for the relief of Martin Albert; to the Committee on the Judiciary.

S. 333. An act for the relief of Ethel Auth; to the Committee on the Judiciary.

S. 355. An act to amend title 18 of the United States Code so as to prohibit the misuse by collecting agencies or private detective agencies of names, emblems, and insignia to indicate Federal agency; to the Committee on the Judiciary.

S. 381. An act for the relief of Peter E. Dietrich; to the Committee on the Judiciary.

S. 425. An act for the relief of Klarchen Huebner and her minor children, Carl Johann and Marie Claire; to the Committee on the Judiciary.

S. 458. An act for the relief of Maria Bogatkin Manea; to the Committee on the Judiciary.

S. 459. An act for the relief of Penelope Carnavas Kafos; to the Committee on the Judiciary.

S. 460. An act for the relief of Gorjana Grdjic; to the Committee on the Judiciary.

S. 501. An act for the relief of Balbina Borenstein; to the Committee on the Judiciary.

S. 537. An act for the relief of Benedict Eremenko (Ben Zuke), Victor Tartarnikov (Victor Kalin), Mikhail Ivankov-Nikolov (Michael Nikolas), and Victor Solovyev; to the Committee on the Judiciary.

S. 607. An act for the relief of the estate of Sinclair G. Stanley; to the Committee on the Judiciary.

S. 624. An act for the relief of Girolamo Naselli; to the Committee on the Judiciary.

S. 633. An act for the relief of Yasuko Kitano; to the Committee on the Judiciary.

S. 667. An act for the relief of Pauline D. Kimbrough; to the Committee on the Judiciary.

S. 726. An act to amend section 11 of the Clayton Act to provide for the more expeditious enforcement of cease and desist orders issued thereunder, and for other purposes; to the Committee on the Judiciary.

S. 758. An act for the relief of Viktors Neimanis; to the Committee on the Judiciary.

S. 869. An act for the relief of Konstantinos A. Kostalas; to the Committee on the Judiciary.

S. 947. An act for the relief of the estate of Verentes Bent, deceased; to the Committee on the Judiciary.

S. 1207. An act for the relief of Rosette Sorge Savorgnan; to the Committee on the Judiciary.

S.J. Res. 19. Joint resolution authorizing the Architect of the Capitol to present to the Senators and Representatives in Congress from the State of Alaska the official flag of the United States bearing 49 stars, which is the first flown over the west front of the U.S. Capitol; to the Committee on House Administration.

ENROLLED BILL AND JOINT RESOLUTION SIGNED

Mr. BURLESON, from the Committee on House Administration, reported that that committee had examined and found truly enrolled a bill and a joint resolution of the House of the following titles, which were thereupon signed by the Speaker:

H.R. 2294. An act for the relief of the Ellis Timber Co.; and

H.J. Res. 198. Joint resolution to provide for the reappointment of Robert V. Fleming as citizen regent of the Board of Regents of the Smithsonian Institution.

ADJOURNMENT

Mr. McCORMACK. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 47 minutes p.m.) the House adjourned until tomorrow, Friday, March 20, 1959, at 12 oclock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

743. A letter from the Administrator, Foreign Agricultural Service, U.S. Department of Agriculture, transmitting a report concerning agreements concluded during February 1959, under Public Law 480, 83d Congress, submitted pursuant to Public Law 128, 85th Congress; to the Committee on Agriculture.

744. A letter from the Assistant Secretary of Defense (Properties and Installations), relative to the Department of the Navy requesting approval to proceed with a project for the restoration and development of a pier facility at South Portland, Maine, at an estimated total cost of $50,000, pursuant to Public Law 85–685; to the Committee on Armed Services.

745. A communication from the President of the United States, transmitting amendments to the budget for the fiscal year 1960 involving an increase in the amount of $45,500 for the legislative branch and reductions in the amount of $6,150,000 for the U.S. Information Agency (H. Doc. No. 100); to the Committee on Appropriations and ordered to be printed.

746. A letter from the Comptroller General of the United States, transmitting a report on the review of selected supply and related disposal and procurement activities of the 8th U.S. Army (EUSA), Korea; to the Committee on Government Operations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. BARDEN: Committee on Education and Labor. H.R. 451. A bill to amend the Longshoremen's and Harbor Workers' Compensation Act, with respect to the payment of compensation in cases where third persons are liable; with amendment (Rept. No. 229). Referred to the Committee of the Whole House on the State of the Union.

Mrs. GRANAHAN: Committee on Post Office and Civil Service. H.R. 4597. A bill to provide for the training of postmasters under the Government Employees Training Act; without amendment (Rept. No. 230). Referred to the Committee of the Whole House on the State of the Union.

Mr. DAVIS of Georgia: Committee on Post Office and Civil Service. H.R. 4599. A bill to provide certain administrative authorities for the National Agency, and for other purposes; with amendment (Rept. No. 231). Referred to the Committee of the Whole House on the State of the Union.

Mr. COOLEY: Committee on Agriculture. H.R. 5247. A bill to increase the authorized maximum expenditure for the fiscal year 1959 under the special milk program; with amendment (Rept. No. 232). Referred to the Committee of the Whole House on the State of the Union.

Mr. O'NEILL: Committee on Rules. House Resolution 217. Resolution for consideration of H.R. 4452, a bill to amend the Bretton Woods Agreements Act; without amendment (Rept. No. 233). Referred to the House Calendar.

Mr. DAWSON: Committee on Government Operations. Second report pertaining to availability of information from Federal departments and agencies (Air Force, refusal to the General Accounting Office) (Rept. No. 234). Referred to the Committee of the Whole House on the State of the Union.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ADDONIZIO:

H.R. 5839. A bill to amend section 313 of the Veterans' Benefits Act of 1957 to extend the presumptive period with respect to service connection of multiple sclerosis for an additional 5 years; to the Committee on Veterans' Affairs.

By Mr. ALGER:

H.R. 5840. A bill to amend the Agricultural Adjustment Act of 1938 to provide that wheat fed on the farm shall not be included in computing marketing penalties; to the Committee on Agriculture.

By Mr. BONNER:

H.R. 5841. A bill to repeal and amend certain statutes fixing or prohibiting the collection of fees for certain services under the navigation and vessel inspection laws; to the Committee on Merchant Marine and Fisheries.

By Mr. BYRNE of Pennsylvania:

H.R. 5842. A bill to amend the Fair Labor Standards Act of 1938 to establish a $1.25 minimum hourly wage, and for other purposes; to the Committee on Education and Labor.

By Mr. DULSKI:

H.R. 5843. A bill to afford an additional opportunity to those World War II veterans who did not pursue education or training under the Servicemen's Readjustment Act of 1944 because they were in the active military, naval, or air service on the applicable delimiting date for commencing a course under that act; to the Committee on Veterans' Affairs.

By Mr. FORAND:

H.R. 5844. A bill to amend the Internal Revenue Code of 1954 to provide the same treatment for prepaid dues income received by a nonprofit motor club as is provided for prepaid subscription income; to the Committee on Ways and Means.

By Mr. GIAIMO:

H.R. 5845. A bill to amend section 12 of the act of September 11, 1957; to the Committee on the Judiciary.

By Mr. HOLIFIELD:

H.R. 5846. A bill to amend the Atomic Energy Act of 1954, as amended; to the Joint Committee on Atomic Energy.

By Mr. IKARD:

H.R. 5847. A bill to amend the Internal Revenue Code of 1954 so as to provide accounting procedures whereby dealers in personal property may exclude from gross income amounts withheld by banks and finance companies on notes purchased from such dealers employing the accrual method of accounting; to the Committee on Ways and Means.

By Mr. OSMERS:

H.R. 5848. A bill to provide for the granting of a nonquota immigrant status to certain immigrants who are the brothers, sisters, sons, or daughters of citizens of the United States; to the Committee on the Judiciary.

By Mr. RIVERS of Alaska:

H.R. 5849. A bill to amend the act of July 7, 1958, providing for the admission of the State of Alaska into the Union, relating to selection by the State of Alaska of certain lands made subject to lease, permit, license, or contract; to the Committee on Interior and Insular Affairs.

By Mr. SAYLOR:

H.R. 5850. A bill for the relief of the Borough of Ford City, Pa.; to the Committee on the Judiciary.

By Mr. SHIPLEY:

H.R. 5851. A bill to amend chapter 113 of title 18, United States Code, so as to make it a crime to transport stolen farm animals in interstate or foreign commerce, and for other purposes; to the Committee on the Judiciary.

By Mr. TEAGUE of Texas:

H.R. 5852. A bill to facilitate the recruitment of trained and experienced employees in Departments of Government; to retain trained employees in Government, and to correct inequities under the Civil Service Retirement Act through crediting service under Federal-State cooperative programs or certain Federal programs financed directly or indirectly, in whole or in part, by Federal funds; to the Committee on Post Office and Civil Service.

By Mr. WAMPLER:

H.R. 5853. A bill to modify Reorganization Plan No. II of 1939 and Reorganization Plan No. 2 of 1953; to the Committee on Government Operations.

By Mr. BONNER:

H.R. 5854. A bill to clarify a provision in the Black Bass Act relating to the interstate transportation of fish, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. BOYLE:

H.R. 5855. A bill to provide for the conveyance of certain lands known as the Des Plaines Public Hunting and Refuge Area to the State of Illinois; to the Committee on Armed Services.

H.R. 5856. A bill to authorize the establishment of a Youth Conservation Corps to provide healthful outdoor training and employment for young men and to advance the conservation, development, and management of national resources of timber, soil, and range, and of recreational areas; to the Committee on Education and Labor.

By Mr. DINGELL:

H.R. 5857. A bill to establish a National Wilderness Preservation System for the permanent good of the whole people, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. GLENN:

H.R. 5858. A bill to facilitate administration of the act authorizing cooperative research in education; to the Committee on Education and Labor.

By Mrs. GRANAHAN:

H.R. 5859. A bill to provide compensation for extra duties assigned to postal employees; to the Committee on Post Office and Civil Service.

By Mr. JOHNSON of Colorado:

H.R. 5860. A bill to repeal section 1001(f) of the National Defense Education Act of 1958; to the Committee on Education and Labor.

By Mr. JOHNSON of California:

H.R. 5861. A bill to amend the Tariff Act of 1930 with respect to the dutiable status of wood moldings; to the Committee on Ways and Means.

By Mr. JUDD:

H.R. 5862. A bill to amend the Internal Revenue Code of 1954 to allow a taxpayer under certain circumstances a personal exemption for a foreign student who resides in his home while in the United States attending high school; to the Committee on Ways and Means.

By Mr. KEARNS:

H.R. 5863. A bill to provide for the establishment of a Federal Advisory Council on the Arts to assist in the growth and development of the fine arts in the United States; to the Committee on Education and Labor.

By Mr. MACDONALD:

H.R. 5864. A bill to amend section 204(d) of the Postal Rate Revision and Federal Employees Salary Act of 1948 to limit, with respect to recordings, the applicability of the special postage rates under such section to recordings having educational or cultural value; to the Committee on Post Office and Civil Service.

By Mr. MOULDER:

H.R. 5865. A bill to amend the Public Health Service Act to protect the public from unsanitary milk and milk products shipped in interstate commerce, without unduly burdening such commerce; to the Committee on Interstate and Foreign Commerce.

By Mr. OSMERS:

H.R. 5866. A bill to amend section 13a(1) of the Interstate Commerce Act, as amended, relative to the discontinuance or change of the operation of certain trains or ferries; to the Committee on Interstate and Foreign Commerce.

By Mr. WAINWRIGHT:

H.R. 5867. A bill to amend the National Defense Education Act of 1958 to provide that the English language, for certain purposes of that act, shall be considered a modern foreign language; to the Committee on Education and Labor.

By Mr. BARRETT:

H.R. 5868. A bill to amend the Fair Labor Standards Act of 1938 so as to increase the minimum hourly wage from $1 to $1.50; to the Committee on Education and Labor.

By Mr. GEORGE P. MILLER:

H.R. 5869. A bill to extend the provisions of the so-called Davis-Bacon Act to certain contracts to provide services; to the Committee on Education and Labor.

By Mr. THOMSON of Wyoming:

H.R. 5870. A bill to place in trust status certain lands on the Wind River Indian Reservation in Wyoming; to the Committee on Interior and Insular Affairs.

By Mr. FOGARTY:

H.J. Res. 316. Joint resolution encouraging the expansion of teaching in the fields of speech and hearing through grants to certain institutions of higher education for the training of persons to equip them with special skills in such fields and for the acquisition of special equipment necessary for such training, and for other purposes; to the Committee on Education and Labor.

By Mr. CARNAHAN:

H. Con. Res. 107. Concurrent resolution calling for a convention of delegates from the NATO countries to explore methods of achieving more effective and democratic unity in advancing their common interest; to the Committee on Foreign Affairs.

By Mr. ZABLOCKI:

H. Con. Res. 108. Concurrent resolution calling for a convention of delegates from the NATO countries to explore methods of achieving more effective and democratic unity in advancing their common interest; to the Committee on Foreign Affairs.

MEMORIALS

Under clause 3 of rule XXII, memorials were presented and referred as follows:

By the SPEAKER: Memorial of the Legislature of the State of Idaho, memorializing the President and the Congress of the United States that our great new State of Alaska be "welcomed with warmth, interest and sincere cooperation as a sister State of Idaho and as the 49th State of these United States of America, with all the glory, honor and acclaim which she so rightly and richly deserves as a great State"; to the Committee on Interior and Insular Affairs.

Also, memorial of the Legislature of the State of Montana, memorializing the President and the Congress of the United States relative to requesting the reaffirmation of national policy of Federal financial support for education; to the Committee on Education and Labor.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BARR:

H.R. 5871. A bill to provide for the extension of design patent No. 133,870 issued September 22, 1942, to Mrs. Beulah Hill, relating to a bootlette; to the Committee on the Judiciary.

By Mr. BOYLE:

H.R. 5872. A bill for the relief of Mirhan Gazarian; to the Committee on the Judiciary.

By Mr. BROOKS of Louisiana:

H.R. 5873. A bill for the relief of Clara H. Hall; to the Committee on the Judiciary.

By Mr. DELANEY:

H.R. 5874. A bill for the relief of Angella Zuccarello; to the Committee on the Judiciary.

By Mr. JACKSON:

H.R. 5875. A bill providing for the extension of patent No. 2,307,396, issued January 5, 1943, relating to a sliding tabletop construction; to the Committee on the Judiciary.

H.R. 5876. A bill for the relief of Eugen Joseph Weber; to the Committee on the Judiciary.

By Mr. JUDD:

H.R. 5877. A bill for the relief of Hugo Robert Baversjo; to the Committee on the Judiciary.

By Mr. KARTH:

H.R. 5878. A bill for the relief of Song Song Tai; to the Committee on the Judiciary.

By Mr. CLEMENT W. MILLER:

H.R. 5879. A bill for the relief of Mrs. Yukiko Pluard; to the Committee on the Judiciary.

By Mr. SMITH of Iowa:

H.R. 5880. A bill for the relief of Nels Lund; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

118. By Mr. ADAIR: Petition of 125 citizens of American Legion Post No. 47, Fort Wayne, Ind.; Berne American Legion Post No. 468, Berne, Ind.; Albion American Legion Post No. 246, Albion, Ind.; and Angola American Legion Post No. 31, Angola, Ind., expressing their support for the continuation of the House Un-American Activities Committee; to the Committee on Rules.

119. By Mr. CARNAHAN: Petition of the Board of Administration, Missouri Department, Veterans of World War I, United States of America, Inc., at its regular meeting, held in Jefferson City, Mo., March 7 and 8, 1959, requesting the Congress to grant an age pension to veterans of World War I; to the Committee on Veterans' Affairs.

120. By the SPEAKER: Petition of the city clerk, Portsmouth, N.H., requesting that consideration be given to an equalization of salaries of employees at the Portsmouth Naval Shipyard to that paid employees at the Boston Shipyard; to the Committee on Armed Services.

121. Also, petition of the county clerk, Wailuku, Maui, T.H., expressing sincere appreciation to the Congress of the United States for admitting Hawaii as the 50th State; to the Committee on Interior and Insular Affairs.

EXTENSIONS OF REMARKS

Unfinished Business Outdoors

EXTENSION OF REMARKS
OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 19, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a very fine article by the distinguished junior Senator from Oregon [Mr. NEUBERGER] entitled "Unfinished Business Outdoors," from the New Republic of March 9, 1959, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNFINISHED BUSINESS OUTDOORS

(By RICHARD L. NEUBERGER)

Jefferson may have ruminated on the incredible outdoors as he rode his stallion Eagle through the Virginia woods, but there was then time for such contemplation. Franklin D. Roosevelt could identify each tree in his green arboretum at Hyde Park. When he was in the outdoors he said he felt exactly like Antaeus, the mythical giant of old, who gained strength just by touching the earth again. Yet would F.D.R. have felt this way had he not been bound to a wheelchair?

Today, a public personage must worry about headlines and press releases, about TV shows and shaking the right hands, about banquet speeches and political rallies, about using every moment at cocktail parties for a contact which will further his career. Who can think of robin redbreasts or pronghorned antelope? Teddy Roosevelt might have been a man who liked to ride his favorite mustang counting the few remaining bison of the plains; he even could make a lonely bivouac in the Yosemite with bearded John Muir—while his Secret Service guards had been banished to the inn, far away. But there were sophisticates who insisted that Teddy Roosevelt never really grew up.

True, President Eisenhower likes to cast a dry fly and flush a covey of quail, but not under the circumstances required of most of those who put him in the White House. The private hunting preserves and exclusive ranches of his wealthy friends have been the locale of most of Mr. Eisenhower's forays into the outdoors. The average fellow would be a poacher if he invaded these precincts. The President, for all his love of the open sky, likes to be back at a candle-lit manor house by nightfall. His is not the language of the man who must share a crowded public campground, stake to stake with the other fellow's pyramidal tent.

For some inscrutable reason, the question of conservation lacks glamor. It may be that protecting birds and bees is too unsophisticated for the editors, columnists and VIP's by whom most politicians set great store. The fate of a salmon pilgrimage, waterfowl flock or spruce forest looms as pallid fare to people who think they carry the fate of nuclear testing or a balanced budget on their shoulders. One rarely can cause a ripple at a Washington reception by expressing concern over the destiny of moose grubbing for algae in an upland lake. Indeed, I rather fear that a political leader who talked about such things might be written off as a backwoods yokel by those who have custody over who gets banner headlines or billings on the TV panel shows.

Yet the issues in the outdoors mean a great deal to many less exalted citizens. Last year 59 million people visited the national parks and 68 million migrated to the more numerous national forests. Some 20 million Americans hold fishing licenses; 15 million having hunting licenses. Despite the inevitable duplication in such compilations, the totals are impressive. And to these must be added the millions active in the Audubon Society, garden clubs, Boy and Girl Scouting and similar projects. Izaak Walton League chapters in my State often have more sustained attendance at meetings than either chambers of commerce or trade unions.

I remember the grizzled Idaho frontiersmen in the Lochsa River country who told me how they had killed off the mountain lions that were devouring their herds and flocks. With the lions gone, deer multiplied astronomically. When the forage ran out, the multitude of deer was driven to eating bushes and young saplings. Flash floods surged off the denuded hillsides, destroying infinitely more livestock than ever the mountain lions had taken. Nature's delicate balance had been upset.

The issues are of far greater complexity today than on the old frontier. Can we safeguard crops from insects without eliminating birdlife? If adequate financing is not assured for dams and reservoirs, will we make effective use of our cheapest and most perpetual source of energy—plumes of tumbling water? If we sacrifice the outdoors to subdivisions and supermarkets, where will 200 million Americans take their leisure in 1975? Are television sets and concrete stadiums to be our sole recreation?

And always there is the specter of the Soviet Union—with forests and mines that have never been tapped, with four dams under construction to surpass our own Grand Coulee, with its trunkline railroads being electrified in order to save precious petroleum, with fisheries and waterfowl marshes beyond measurement.

If I were one of the politicians who aspired to lead the United States during the next 8 years (which I am not), these are a few of the issues in the realm of conservation which I would be thinking about very intently:

Some 68 million Americans camp, fish, or hike each year in our national forests. Yet, when private lands surround these public preserves, people have been assessed entrance

fees as high as $25 to enter their own domain. The Government has authority to prevent this, and it should be used. More than 1.5 million acres in Colorado alone are dominated by private interests, and similar situations exist in other Western States.

Such pesticides as dieldrin have been effective in destroying plant pests like fire ants, but often all birds and small game animals perish in the process. Doves, bobwhites, rabbits, and even deer are dying with the gypsy moths. Dieldrin is said to be five times as deadly as DDT, which already had caused concern over its lethal impact on geese, ducks, quail, and similar birdlife. A lot of research by Federal agricultural scientists is required because some rural counties are literally being saturated with pesticides sprinkled from planes and helicopters. The Boston Herald has warned that these poisons may do more harm than good.

President Eisenhower's famous $77 billion budget is bad news for the American outdoors. Funds are cut for grants to clean up stream pollution, although pure water supplies are an ever-increasing national need. Forest Service funds for recreation and public use have been reduced 15 percent, despite more extensive pressure than ever on campgrounds, roads, and trails. Cooperative tree-planting funds, between Federal and State agencies, are trimmed in the President's budget by approximately 33 percent. Fisheries research is given only a lick and a promise, although migratory salmon runs are in constant peril.

The wilderness preservation bill, which would give statutory protection to the relatively few scenic acres still as primitive as when Lewis and Clark went west, deserves earnest consideration by the Senate and House. Senator MURRAY and I held hearings in the Western States on this legislation last November. Its support came mainly from recreationists, the opposition from those who would fell the trees or mine the land within wilderness solitudes. The bill needs modifying amendments but its purpose is right. Why not spare a few museum pieces of the original America? Central Park might bring a lot of money to city hall's coffers if sold for real-estate promotion, but what New Yorker sound of mind would trade Central Park for such a quid pro quo?

After a terrific battle with the outdoor-advertising lobby, Senator KUCHEL, of California, and I were successful last year in having adopted a bill to provide a bonus for any State which would accept Federal standards for safeguarding scenery along the 42,000-mile Interstate Highway System. This struggle has now shifted to State legislatures, where the signboard owners and their trade-union associates continue high-pressure tactics. Despite our victory in Congress, this will be meaningless unless legislatures take the carrot of the one-half of 1 percent bonus offered for keeping Federal-aid roads free of the clutter of billboards.

The great river-valley experiment along the Tennessee is in danger of stagnation because the administration has been loathe to recommend the appropriations necessary to build steamplants to keep pace with load needs. A self-financing bill sponsored principally by Senators HILL and GORE passed the Senate last year but was held up in the House Rules Committee. Renewal of this legislation is essential to survival of the Tennessee Valley Authority.

In the Pacific Northwest, where the mighty Columbia River contains 40 percent of the country's latent hydroelectricity, a somewhat similar program is urgent. This would be a Columbia River Regional Power Corporation bill, permitting the system of Federal dams like Grand Coulee and Bonneville to use their own revenues for the purpose of adding new and desperately needed powerplants. In spite of the fact that existing dams on the Columbia have collected gross revenues to date of more than $500 million, they still must go hat-in-hand to the Budget Bureau for funds. This has retarded development, and has caused the country's highest rate of unemployment in a region which should have unlimited quantities of low-cost power for new industrial payrolls.

Senator HUBERT HUMPHREY'S Youth Conservation Corps bill, creating a revival of the CCC, would furnish a contingent of young Americans to help restore the facilities which furnish recreation in the outdoors. Our National Parks and Forests received their greatest rehabilitation a quarter of a century ago when F. D. R. organized the Civilian Conservation Corps and sent them into the western fastnesses with trail-building equipment and mobile kitchens.

The agenda of unfinished business is long, but I believe these few items are illustrative. Even a bus driver in Brooklyn, who may never see the Yosemite or Mount Hood, does not want such places defiled or exploited. He feels better about his country when he knows that these places exist and are protected. Both in 1952 and 1956, some of my friends and I tried to get a major role for conservation speeches on the agenda of the Democratic National Convention. Obviously, we failed. Yet, I think it would have been good for the country, and it might even have been good politics.

Dr. Flemming's Famous Formula

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 19, 1959

Mr. METCALF. Mr. Speaker, as you know, the Secretary of Health, Education, and Welfare, Dr. Flemming, has developed what he claims is a formula for solving the nationwide classroom shortage. In order for the Flemming formula to work, however, some States would have to amend their constitutions; some would be forced to raise their statutory debt ceilings; some would have to change basic tax concepts.

Daily, for several weeks, I have been calling to the attention of my colleagues that Dr. Flemming was wasting his talents operating in only a single field—that his famous formula, which would work if only we change the rules, has a much wider application.

I applied the Flemming formula to the Agriculture Department, and developed a square egg that would be easy to store in the refrigerator and would not roll off the table when the children were coloring it for Easter. We developed a cow that only required milking once a day, 5 days a week, so our dairy farmers could have their weekends off. And we applied the Flemming formula to our lagging space program—and showed how, by announcing a new ratio of translation between Soviet kilograms and American pounds, which by a simple shift of two decimal points would make the U.S. payloads heavier than the Soviet performance.

All these wonders, and many more, could be accomplished by changing rules, and constitutions. These changes Dr. Flemming says are minor obstacles when he seeks to apply his formula to the States in connection with classroom construction.

Yesterday I got a close look at the new penny—and I was gratified to note that Dr. Flemming also realizes that his formula has a much broader application. That he has been down at the mint is evident from the inscription on the back of the new penny. It reads "UNITED STATES oF AMERICA." With application of the Flemming formula to the rules of capitalization, we capitalize the last letter of a word instead of the first.

North Atlantic Treaty Organization Convention

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 19, 1959

Mr. ZABLOCKI. Mr. Speaker, I am today joining with several other Members in introducing a resolution proposing the calling of a convention of delegates from the North Atlantic Treaty Nations to explore how the NATO nations may, acting within the framework of the United Nations and in accordance with the basic principles of the Constitution of the United States, achieve more effective and democratic unity in advancing their common interests.

The governments of the NATO nations have been seeking greater unity since NATO was founded 10 years ago.

The communiques of the North Atlantic Council have shown the importance which our governments have given to this vital objective.

The legislators of the NATO nations have likewise sought to bring about greater unity since 1955, meeting each year for this purpose in the NATO Parliamentarians' Conference.

Meanwhile the need for closer unity has grown, not diminished. The Communist threat to the United States and to NATO has become political and economic as well as military with accelerating speed ever since the death of Stalin.

This resolution would extend the quest for greater unity among NATO nations to a third level, the level of their peoples. It would bring about a comprehensive survey of this overriding problem conducted by the best minds among our peoples. It can be expected to produce some constructive recommendations, and even chart a fresh approach to the solution of this problem.

This exhaustive survey by a body of leading citizens from the NATO countries would complement the efforts which our governments and our legislators are making; it would neither conflict with them nor interfere with them. The convention proposed in this resolution could in no way commit our governments to any action; its function would be solely to study and report.

Mr. Speaker, in our own country we often turn to a body of distinguished citizens when we have a complex problem to solve, appointing a commission to study the problem and report its recommendations. The convention proposed in this resolution may be likened to such a commission on an international scale, on a NATO scale, which takes account of the disparity in size of the NATO countries.

The Berlin crisis and the periodic crises which have preceded it in recent years have demonstrated that our unity within NATO needs to be preserved and strengthened if we are going to successfully meet, and properly deal with, Communist pressures.

It is high time that we enlist leading citizens among our nations in this crucial search for greater unity, realizing, as we do, that effective unity among democratic nations must be based on their peoples.

Kennedy-Roosevelt Bill "Ambushed" by a Western Editor

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1959

Mr. ROOSEVELT. Mr. Speaker, I believe my colleagues will agree with me that the many lengthy, detailed and technical proposals that are introduced in Congress offer problems of interpretation and understanding by our fellow citizens, although many of them are indeed proficient in analyzing measures. But, in any event, I would venture to say that none of us becomes annoyed or disturbed by letters from individuals accusing us of legislative intent quite apart from the real intent or purpose of a given proposal. Personally, I am more than pleased to have the opportunity to clarify the issue and gratified to see public interest in a given matter.

However, I do not think I am alone in this body when I say I am duly concerned about and disturbed by misrepresentation of proposed legislation by a person, group or organization that has the responsibility to know better, and, to compound the dilemma, is in a position to foster misconceived conclusions or misrepresentations through the means of public media.

I make this point because on March 12 a community paper in Los Angeles County, the Whittier News, carried an editorial in which it presented erroneous information about the Kennedy-Roosevelt bill to increase the minimum wage and expand coverage under the Fair Labor Standards Act.

The editorial claims that our proposal would make it impossible for a lad of less than 16 years to be gainfully employed in many businesses. Of particular concern to the editor, based no doubt on his own hasty conclusion, was that this meant no newspaper carrier boys could be less than 16 years old.

As I explained in a letter to the editor, this bill in no way precludes ambitious youngsters under 16 years of age from engaging in the proud American tradition of helping to distribute the words of the free press. Unfortunately in this instance the words were not true. Nor does the bill prevent a lad less than 16 years old from mowing lawns or from engaging in other activities in which young boys have long excelled.

I am bringing this matter to the attention of my colleagues who may be receiving inquiries on this or similar points made about the bill and to allay any future misinterpretation that may possibly be generated through the mass media.

Mr. Speaker, I hereby submit for insertion in the RECORD the complete text of the editorial and my reply to the editor:

[From the Whittier News, Mar. 12, 1959]

GIVE THE BOY A CHANCE

For a long time it's been a firm conviction with a lot of people that a busy boy is not likely to end up among the delinquents. Keep a young fellow busy doing something he likes to do and, even though he has only limited parental guidance, or possibly none, his chances of getting in with the wrong crowd are considerably lessened.

This is the principle upon which many of the youth organizations and welfare groups base their programs. They keep boys and girls busy doing things and thus curb delinquency.

Furthermore, under the American system by which we've been living for a long time, it has been proven wise to introduce youngsters to the free enterprise system as early as is practicable. This means getting jobs and earning money. Once the thrill of such achievement stirs a youngster, he often has no time left for dillydallying.

Such facts are what make the current efforts of a couple of famous Americans despicable, in our opinion.

The famous Americans are Senator KENNEDY, of Massachusetts, who aspires to be President of this country, and Congressman ROOSEVELT, of California, who owns a fairly well-known name.

They have introduced identical bills in Congress to expand the coverage of the Fair Labor Standards Act. Such extension would, in many instances, be helpful.

But one of their proposals would make it impossible for a lad of less than 16 years to be gainfully employed in many businesses. We happen to know about it because, among others, no newspaper carrier boys could be less than 16 years old. The principle is the same whether it's carrier boys or grocery boys or errand runners or lads ambitious enough to mow lawns.

This business of saying that no person less than 16 years of age may be gainfully employed is a bunch of rot.

The movement has already gone so far that many youngsters even now seek employment in vain until they pass the magic mark of 16. Ask the parents of 12- to 15-years-olds what they think of such legislation.

Misguided do-gooders who think they are still saving children from sweatshops need to reevaluate their crusade. Thousands of communities throughout the country could be aided in their campaigns against juvenile delinquency by a repeal of the laws that make work impossible for many under 16, rather than an extension of this foolishness.

Many of today's business leaders weren't hampered by such rules and they have done fairly well.

MARCH 18, 1959.

Mr. MYNATT SMITH,
Editor and associate publisher, the Whittier News, Whittier, Calif.

DEAR MR. SMITH: One of your readers was good enough to send me your editorial of Thursday, March 12, 1959, which attacks certain portions of my proposal, and that of Senator JOHN KENNEDY, to increase the minimum wage and extend coverage under the Fair Labor Standards Act.

I am gratified to note that regarding the extension of coverage, you state that "such extension would, in many instances, be helpful."

However, I am dismayed by the fact that you apparently have not carefully read the proposal because you come to the following conclusion, and I quote from your editorial:

"But one of their proposals would make it impossible for a lad of less than 16 years to be gainfully employed in many businesses, We happen to know about it because, among others, no newspaper carrier boys could be less than 16 years old. The principle is the same whether it's carrier boys or grocery boys or errand runners or lads ambitious enough to mow lawns."

I am enclosing a copy of the proposed minimum wage bill, and I direct your attention to section 9 (c) and (d), page 12, which you may have read but inadvertently misinterpreted. One line 5 you will observe that reference is made to provisions of section 12 of the present act (Fair Labor Standards Act of 1938, as amended), which attempts to prevent oppressive child labor practices.

Reading further, you will note that the child-labor provisions, as set forth in section 12, shall not apply to children employed in agriculture "outside of school hours for the school district where such employee is living while so employed, or to any employee employed as an actor or performer in motion pictures or theatrical productions, or in radio or television productions." Certainly this does not in any way preclude a youngster under 16 years of age from engaging in such activities.

I think the real confusion lies in the fact that the language regarding newspaper delivery employees was not carefully read and analyzed. It was never my intention to preclude youngsters under 16 from participating in the proud American tradition of helping to distribute the words of the free press.

Starting on line 15, page 12, of the bill, you will note that provisions of certain sections of the present act shall not apply to those engaged in the delivery of newspapers to consumers at their residences. These provisions of the present act cover minimum wage, maximum hours, and child labor, respectively. I call your attention to the fact that section 12 (the child labor provisions of the present act), according to the language of the bill, shall not apply (1) to any employee engaged in the delivery of newspapers to consumers when such an employee is employed outside of school hours, and (2) to such employee if he is 16 years old or older.

This language is important because it in no way states that a child under 16 cannot deliver newspapers. It merely states that a person over 16 would not come under the child-labor provisions of the present act, and those under 16 would come under the said provisions of the act and thus would be protected from oppressive child-labor practices.

Since your editorial was a complete misinterpretation of certain sections of the measure, which certainly would not prohibit an ambitious youngster under 16 from delivering newspapers, mowing lawns, delivering groceries, or running errands, I felt it necessary to write to you so the public record will be set straight in this matter.

I realize that this letter is somewhat lengthy, but I am hopeful that it may be printed in your newspaper in its entirety.

Sincerely yours,

JAMES ROOSEVELT.

The U.S. Air Force Band Good-Will Tour to Latin America

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 19, 1959

Mr. KEARNS. Mr. Speaker, I wish to congratulate the U.S. Air Force Band for making what is probably the most effective goodwill contribution ever made in the history of United States-Latin America relationships. Having recently completed a 3-week, 18,000 mile tour of Latin America, this visit proved to be the best example of the worthiness of President Eisenhower's people-to-people program for creating better international understanding. The overwhelming success with which this great musical organization has met in terms of strengthening the ties of friendship between the people of the Americas must be recorded as being a most positive, lasting, and vital one.

Although the record books show that the U.S. Air Force Band has previously made 8 preeminently successful tours of 44 different countries on 4 continents, its most recent one stands in a class by itself and is unquestionably the most triumphant one it has ever made. The fact that it took place at a crucial time when renewed or reawakened friendship with our Latin American neighbors is of utmost importance, its tremendous impact is doubly valuable.

Commencing in Rio de Janeiro, Brazil, on January 31, and continuing through Ascuncion, Paraguay; Montevideo, Uruguay; Santiago, Chile; Lima, Peru; Quito, Ecuador; Bogota, Colombia; Managua, Nicaragua; San Salvador, El Salvador; and Panama City, Panama, the tour was an unvarying series of cultural triumphs and friendship-winning manifestations. Playing to a total of 243,500 people of divergent racial, economic, and political backgrounds, the tour was made conspicuous by the absence of jeers or reference to "gringos." Instead, America's musical ambassadors of good will were referred to as the "band of friendship" and were received with a sincere and unprecedented enthusiasm at each point on their itinerary.

A typical example of the prevailing enthusiasm was demonstrated at Santiago, Chile. Col. George S. Howard, the band's eminent conductor, and his airmen-ambassadors-musicians arrived in that most delightful city at a most inopportune time. Pro-U.S. sentiment was at a low ebb due to a most unfortunate circumstance which had occurred the previous week. An inferior basketball team representing the United States had suffered an ignominious defeat at the hands of a superior Russian team. Since the game of basketball was invented and first played in the United States, the sight of a U.S. team taking such a humiliating beating from the Russians was more than some Santiagoans could bear. Accordingly, they booed the North American team. To make matters worse, a leftist Santiago newspaper editorialized:

Whether it comes to shooting baskets or sputniks, the United States just cannot keep up with Russia.

Such was the atmosphere in Santiago at the time of the band's arrival. That condition notwithstanding, the Air Force Band drew a total of 105,000 people during its 3 performances. However, that only tells part of the story because the important issues were how was the band received and what did Santiagoans think of its performances? As for the former, I have been assured by both officers and enlisted men alike that the organization has never played before a more wildly enthusiastic audience. Not only were its ovations tumultuous but their regard for the individual bandmembers bordered on hero worship. Upon the conclusion of its concert before 50,000 people at the National Stadium, a huge throng swarmed on the field to get a closer look at the players. Some of them sought autographs. Some of them just wanted to touch the North Americans. But most of them wanted some souvenir or memento of the occasion.

In most cases this amounted to a fragment of paper torn from the program but they would not depart until they had received it. One of the string bass players told me that it took him 1 hour to get his string bass case which was some 50 feet away. As for their opinions of the performances, here is what their music experts said:

Our people which is authentic, uncontaminated, spontaneous, virile, and cultured, applauded with enthusiasm the interpretations of the "Band of Friendship." They left a mark of pleasant sentiment and memories. Chile and the United States are joined by a new tie, the soft emotions of the spirit.—El Diario Ilustrado. The beautiful spiritual success of the USAF Band has forged delicate but strong threads of union.—La Nacion. We all come out ahead and the friendly ties which has always united us with the United States has been greatly strengthened.—Ultimas Noticias.

These well-deserved plaudits are not peculiar to Santiago alone. In Asuncion, according to our official State Department report, the U.S. Air Force Band's appearance is generally regarded here as the most successful cultural event ever presented by the United States in Paraguay. Of their Managua performance, the official report says:

Embassy personnel have been told by many Nicaraguans that this was the finest entertainment they had seen on the part of touring U.S. talent.

In Montevideo, where 5,000 people tried to break down the doors of the concert hall in an attempt to gain entry, a high-ranking government official told a large radio audience upon the conclusion of the program that the U.S. Air Force Band was the best of goodwill ambassadors.

As our Air Force ambassadors continued to play themselves into the hearts and minds of country after country, the results of their efforts were from time to time observed by highly qualified U.S. citizens. One of these, an American businessman with financial interests in Latin America had this to say in Lima:

I've been coming down here at least three times a year for the past 10 years. In that time I have seen many efforts on the part of the United States to assist our southern neighbors and to win their respect, admiration, and friendship. I can truthfully say that in my opinion, none mean as much to them as what they had seen and heard tonight.

In Santiago, a visiting American newspaper editor from Pittsburgh expressed himself this way:

This is the greatest thing I have ever witnessed. We should do more of it. If I could be certain the money would be spent for efforts like this, I would pay my taxes much more happily.

In the final analysis, though, it is the impression that these efforts make on foreign nationals is what counts. That this impression never fails to be an ideal one is best exemplified by an editorial in the same Santiago leftist paper which 1 week earlier made the United States-Russian, basketball-sputnik rejoinder. Only this time it had this to say:

We hope that the change over from arms to violins, clarinets, and so forth, continues to grow and that the men of the world, and a French poet once called for, form a circle around the earth hand in hand united by music, and that luck accompany these aviator-musicians who travel around the world with melody and good will.

Michigan's Eighth District Opinions

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 19, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks, I would like to insert the results of my annual questionnaire which was mailed to 30,000 of my constituents. I was very pleased to have a return of about 30 percent—9,314 replies—which I feel speaks very well for the interest my constituents have in national affairs. I believe all Members of the House will find these results of considerable interest:

Out of some 30,000 questionnaires which were sent out in January, 9,314 were returned for a gratifying percentage of 30 percent. Here is the way the Eighth District voted:

1. Do you believe that continued prosperity requires continued inflation? Yes, 6.8 percent. No, 88.7 percent. No answer, 4.5 percent.

2. To combat inflation, would you favor price, wage and rent controls? Yes, 51.1 percent. No, 40.3 percent. No answer, 8.6 percent.

3. Do you think the Federal Government should spend more for welfare pensions?

Yes, 22.6 percent. Schools? Yes, 38.6 percent; housing, 13.7 percent; hospitals, 22.9 percent; agriculture, 8.7 percent; veterans, 17.6 percent. No answer, 25.7 percent.

4. If tax reduction becomes possible where should it come first? More liberal treatment for small business? Yes, 41.5 percent. Cut individual rates? Yes, 43.8 percent. Cut corporate rates? Yes, 6.2 percent. Cut excises? Yes, 20.7 percent. Do you believe any present rates should be increased? Yes, 6.3 percent. No answer, 23.7 percent.

5. Would you favor a national sales tax collected at the manufacturer's level (except food, clothing and medicine) if additional revenue is needed? Yes, 44.8 percent. No, 37.8 percent. No answer, 17.4 percent.

6. Do you agree with those people who say that organized labor is becoming too powerful? Yes, 81.2 percent. No, 13.1 percent. No answer, 5.7 percent.

7. Do you favor extension of coverage and increase in the minimum wage? Yes, 38 percent. No, 48.4 percent. No answer, 13.6 percent.

8. Do you favor hospital and surgical care for social security beneficiaries with an increase in the wage basis for social security taxes to $6,000? Yes, 42.6 percent. No, 46.4 percent. No answer, 11 percent.

9. Do you favor Federal aid to education in school construction grants and teacher pay? Yes, 39.8 percent. No, 51.8 percent. No answer, 8.4 percent.

10. Instead of a Federal aid to education program, would you prefer permitting taxpayers to take a credit against their Federal income tax for new or additional school taxes paid? Yes, 51.6 percent. No, 32 percent. No answer, 16.4 percent.

11. Do you feel that the small businessman needs more and bigger loan programs, protection and benefits to aid him to compete? Yes, 59.3 percent. No, 26.9 percent. No answer, 13.8 percent.

12. Do you feel that Federal action is needed in these fields? More guarantees of larger mortgages at lower interest rates? Yes, 30.6 percent. Public housing for middle as well as low income families? Yes, 24.7 percent. Problems of social delinquents in slum areas? Yes, 38.4 percent. Aid to the elderly? Yes, 47.4 percent. Aid to the handicapped? Yes, 54.3 percent. No answer, 30.5 percent.

13. Do you think that support prices on farm commodities should be tied more closely to market prices? Yes, 60.6 percent. No, 17.7 percent. No answer, 21.8 percent.

14. In foreign aid would you favor more emphasis on economic and less on military assistance? Yes, 64.3 percent. No, 17.9 percent. No answer, 17.8 percent. Do you favor gifts and sales of surplus farm commodities to underdeveloped countries? Yes, 73.6 percent. No, 15.9 percent. No answer, 10.5 percent.

15. In the field of public versus private power would you favor expansion of TVA? Yes, 16.4 percent. Large-scale Federal construction of power projects? Yes, 16.9 percent. More public projects in the development of atomic energy? Yes, 41.7 percent. Would you favor legislation to relax Federal controls over independent natural gas producers? Yes, 24.3 percent. No answer, 40.4 percent.

16. Do you think that more federally administered programs should be turned back to State control? Yes, 62.6 percent. No, 19.7 percent. No answer, 17.7 percent. Do you favor more Federal grants-in-aid? Yes, 16.6 percent. No, 52.3 percent. No answer, 31.1 percent. Do you believe that the State and local governments should have more powers? Yes, 49.2 percent. No, 24.3 percent. No answer, 26.5 percent.

17. Do you favor repeal of section 14–B of the Taft-Hartley Act which permits the States to enact right-to-work laws? Yes, 36.5 percent. No, 50 percent. No answer, 13.5 percent.

18. Do you favor Federal spending programs such as long-term, low-interest Federal loans for local public works or Federal aid to centers of chronic unemployment for plants and public works to attract new industry? Yes, 61.9 percent. No, 25 percent. No answer, 13.1 percent.

Fair Trade

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the statement I made before the Committee on Interstate and Foreign Commerce in the House of Representatives on H.R. 1253 and related fair trade bills, on March 18, 1959. The statement follows:

I want to thank the committee for this opportunity to testify on H.R. 1253 and the related bills which would have Congress enact a Federal fair trade law. Since these bills will have a direct effect on the distribution of virtually every commodity purchased by the consuming public, your hearings are very important. Before Congress takes any action, it is essential that there be a thoroughgoing study of the impact of fair trade legislation on the public welfare.

In my view these bills contain a complete reversal of congressional policy on resale price maintenance. They will have the effect of an atomic bomb on long established principles that support a competitive free enterprise system.

As you know, I have long been an opponent of the system of price fixing that is permitted by the so-called fair trade laws. The present collapse of fair trade, its repudiation by many States and its rejection by manufacturers that formerly supported it, vindicate the position I have taken.

Notwithstanding our experience with fair trade, however, its advocates persist in their efforts to have the Federal Government assure their private profits at the expense of the consumers and efficient economic progress. Their persistence is all the more amazing in the face of the fact that fair trade, because it shackles wholesalers and retailers to prices that have been established by manufacturers for their own purposes, has been demonstrated in the long run to be detrimental to the best interests of the very groups that support it.

The history of fair trade in the American economy has been a history of failure. Before World War I and for more than 20 years associations of brand-goods manufacturers, led by the American Fair Trade League, unsuccessfully sought a Federal fair trade law. Although Federal price maintenance bills were introduced in every session of Congress from 1914 to 1930, none were passed.

In the panic of the depression years, leadership of the fair trade movement was taken over by wholesale and retail merchant associations, primarily the National Association of Retail Druggists, who concentrated their effort at the State, rather than the Federal, level. By organizing a powerful lobby of druggists under captains in each district, in the 10 years following 1931, the NARD was able to pressure 45 States into accepting its draft of a fair trade bill. Only three States out of the first 32 that passed the druggists fair trade act had held public hearings.

In 1937, however, the NARD lobby contended to Congress that the States had carefully considered the issues and had adopted fair trade to support the public welfare. Congress nonetheless refused to exempt fair trade practices from the antitrust laws in a separate bill. The NARD was only able to secure enactment of the Miller-Tydings amendment to the Sherman Act through the device of attaching it as a rider to the appropriations bill for the District of Columbia.

After World War II the proponents of resale price maintenance received one setback after another. In 1951, the U.S. Supreme Court in the Schwegmann case ruled that Congress in the Miller-Tydings amendment had exempted only those price fixing arrangements which had been agreed upon by the parties. The coercive provisions in the state laws to control the prices of sellers who refused to sign fair trade contracts could not be enforced. Although Congress in 1952, in the McGuire Act, expressly exempted the nonsigner clause, fair trade since has been repudiated in an increasing number of States and abandoned by the manufacturers that were its strongest adherents. At the present time, the Supreme Courts of 16 States have stricken down all or part of their fair trade laws on the ground that they contravened fundamental principles guaranteed by their State constitutions.[1] When you add the States that never did accept fair trade (Vermont, Missouri, and Texas), there is a total of 19 States opposed to this type of subsidy, which is exacted from the general consuming public.

The principal evil that results from fair trade—the maintenance of artificially high consumer prices—has been exposed in State after State. After the Supreme Court of Ohio ruled the nonsigner clause unconstitutional, for example, prices on automatic coffee-makers quickly dropped from the $39.95 fair trade price to a $29.97 competitive price. Electric frying pans, which had a list price of $19.95 were reduced to $13.87. After an initial flurry of reduced price sales, in Ohio as in the case of other states that outlawed fair trade, the market soon became stable. The dire consequences that had been predicted by the fair traders—widespread business failures, increased concentration, and predatory excesses by monopolists—did not occur. The only result was that the consuming public received the benefit of having prices settle in the competitive market at about 20 percent lower than the former fair trade list prices.

During the debate in the House on the McGuire Act in 1952, I compared prices of identical articles purchased in Peoples Drug Stores in the District of Columbia, a nonfair trade area, and Arlington, Va., and Montgomery County, Md., fair trade areas. This statement shows prices are 20 to 50 percent higher in fair trade stores and is appended to my statement.

Legal rulings, however, have not been the primary causes that have led to the abandonment of fair trade. Consumer resistance to high prices, mounting unemployment, warehouses stocked with unsold merchandise, and the relentless pressure of substitute merchandise from competitive distribution channels were equally important. Fair trade simply doesn't work. The enormous costs involved in comparison shopping, legal fees and policing fair trade enforcement, alone, have been major causes for its abandonment by the manufacturers.

---

[1] Arkansas, Colorado, Florida, Georgia, Indiana, Louisiana, Michigan, New Mexico, Oregon, South Carolina, Utah, Kansas, Kentucky, Ohio, West Virginia, and Nebraska.

Fair trade essentially is a system of price-fixing at the retail level which is directly contrary to Federal antitrust principles. As the Supreme Court said in the Schwegmann case, unless expressly exempted by Congress, all fixing of retail prices, whether by agreement or by coercion through the nonsigner clause, is inherently an unreasonable restraint of trade. For this reason the Congress has never permitted fair trade to operate in the District of Columbia.

All that Congress has ever done in the past for fair trade is to enact enabling legislation to suspend the Federal antitrust laws in those instances where the States have permitted fair trade. To overcome the manifest failure of fair trade at the State level, now its supporters, again led by the National Association of Retail Druggists, seek to override the States and have the Federal Government proscribe fair trade on a nationwide basis. In this effort they are resurrecting attempts at Federal legislation for resale price maintenance which were abandoned in 1930 after nearly 20 unsuccessful years. This new effort would have Congress enact for the first time, a substantive Federal fair trade law.

H.R. 1253, for example, would amend section 5 of the Federal Trade Commission Act by adding express authority for a manufacturer "* * * to establish and control, by notice to his distributors, stipulated or minimum resale prices. * * *" In addition, H.R. 1253 makes it unlawful "* * * for any distributor with notice * * * to sell, offer to sell, or advertise * * *" at a different price from the stipulated price or at a lower price than the minimum resale price. In this bill an inherently unreasonable restraint on trade, complete foreclosure of price competition at the retail level, would become an integral part of substantive Federal law. It would repeal the basic antitrust policy that has been embodied in more than half a century of Sherman Act enforcement. It would overturn and sweep away a multitude of court decisions. Even more significant, departures from prices fixed at the whim of manufacturers would constitute a positive violation of Federal law. We cannot scuttle the antitrust laws and abandon the very source of this country's economic well-being to gratify the misguided yearnings of the retail druggists.

Another consequence of H.R. 1253 is that it subjects the Federal Trade Commission to an untenable position. This bill makes the FTC responsible for preventing both unfair methods of competition and deceptive trade practices and, at the same time, for maintaining the prices fixed by all the manufacturers subject to its jurisdiction. H.R. 1253 makes unfair methods of competition and departures from the manufacturers' stipulated or minimum resale price equally unlawful under section 5 of the Federal Trade Commission Act. Despite the averments of the NARD to the contrary, how can there be any doubt that the FTC would be obliged to enforce and police the fair trade prices authorized in this bill?

It is indeed anomalous that an agency created by Congress to protect and preserve competition should, after a life of 45 years, be converted to an instrument to police and perpetuate unreasonable restraints on trade. And what of the cost? How much is Congress expected to appropriate to enable the FTC to maintain manufacturers' fair trade prices?

It is no answer to say that the FTC would have discretion as to the extent of its activities under the provisions of H.R. 1253. Can there be any doubt that the supporters of fair trade and this bill would severely criticize the FTC in the event it did not discharge its responsibilities as to all of the business conduct the bill makes unlawful?

H.R. 1253 also contains confusing contradictions that will require many lawsuits to resolve. In the bill, section 5 of the FTC Act, as amended, contains the enabling provisions of the McGuire Act, carried forward in subsections 5(a)(2), (3) and (4). At the same time, subsections 5(a)(5), (6), (7), (8) and (9), superimpose the provisions that make it a violation of Federal law for a retailer to vary the price charged to the consumer from the price fixed by the manufacturer. There is no indication in the bill as to whether the State law or Federal law is to prevail. If the State law has been held to violate the State constitution, will the Federal law be operative? Can a manufacturer select some States in which he will fix prices and select others in which he will not fix prices? Must the price he fixes be the same in every State, or can he vary it State by State, or even fix differing prices within one State?

The bill authorizes the manufacturer to "* * * establish schedules of resale prices differentiated with reference to any criteria not otherwise unlawful." Does this permit a manufacturer to discriminate between different types of stores in the same State or city on the basis of size, volume of purchases from his competitors, location, or for a host of other reasons?

It is clear that enactment of H.R. 1253, in addition to its price-fixing evils, will open a Pandora's box for litigation. Years would be required to define the commercial and governmental relationships that are affected by this bill.

In addition to the incorporation of resale price maintenance into Federal law for the first time, H.R. 1253 has another innovation that is even more dangerous. The bill delegates to private parties the determination of the content of Federal law as well as the determination of the acts that constitute a violation of Federal law.

H.R. 1253 is tantamount to making the breach of a private commercial contract a Federal offense. The bill would punish those who sell beneath prices established by private individuals.

Under H.R. 1523, the manufacturer is delegated the power to make illegal today what was legal yesterday. Since he can impose or remove fair trade on his goods at his sole discretion by the mere giving of notice, the manufacturer can determine when the retailers' actions are lawful or unlawful. Federal law is made a matter of the will and whim of any manufacturer who makes branded merchandise. The manufacturer can determine whether this particular retailer is to be bound by Federal law, but that another is not to be bound. Moreover, the FTC, an agency of the Federal Government, will have its jurisdiction dependent upon the uncontrolled discretion of mere private parties, the manufacturers.

Surely such a sweeping delegation of the commerce powers of the Congress will never be permitted. Its mere proposal is shocking.

Although the power of Congress under the Constitution to regulate interstate commerce is plenary, I do not think we have the power to abandon its regulation to the extent permitted by H.R. 1253. I believe the factual situation in this instance is comparable to that presented to the Supreme Court when it considered the constitutionality of the National Industrial Recovery Act. Under NRA, legislative power had been delegated "* * * not to a public official responsible to Congress or the Executive, but to private individuals in the industries to be regulated."[2] The Supreme Court ruled: "Such a delegation of legislative power is unknown to our law, and is utterly inconsistent with the constitutional prerogatives and duties of Congress."[3]

When Congress was considering the McGuire Act in 1952, the Judiciary Committee conducted extensive hearings on the effects of fair trade. In this investigation I found that resale price maintenance has the following results:

"1. Concentration of economic power is promoted. The small merchant, with his prices rigidly fixed by fair trade, cannot meet the competition offered by his powerful competitors, the chains, the department stores, and the mail-order houses. Fair trade aids big business at the expense of small business, promotes the growth of monopoly power, and relegates the independent merchant to a subservient position in the economy.

"2. Violations of the antitrust laws, particularly boycotts, intimidation, and discrimination are fostered. Manufacturers have been coerced to maintain fair trade by campaigns to put the offender's merchandise under the counter. Price-cutting outlets have been persuaded by organized pressure to revise their policies. Wholesalers have been exhorted in trade publications to boycott retailers who refuse to conform. Even its stanchest advocates admitted that resale price maintenance programs cannot work effectively in the absence of collective action among retailers, and between retailers and manufacturers.

"3. The consumer is treated unfairly and is required to submit to the artificially high price umbrella that protects the inefficient retailer."

In the face of all these facts, why do the advocates of fair trade want this legislation? They claim they want it to prevent loss-leader sales. Just how extensive are loss-leader sales? The District of Columbia has no fair trade law, but I have heard no complaints that retail business here is jeopardized by sales below costs. Small business failures in the District of Columbia are no higher than in the States that have fair trade.

There have been no serious studies of the extent of loss-leader selling in the United States in recent years. In 1955 the Canadian Restrictive Trade Practices Commission, however, conducted an extensive investigation of this problem in markets which are comparable to those of the United States. The Canadian Commission found:

"That the practice of selling articles at prices below net purchase cost is not prevalent in any of the lines of trade for which information was obtained in the inquiry. In fact, it appears that sales on such a basis are made infrequently and the evidence does not suggest in any way that selling of this sort is a practice in any line of trade, even among a minority of the dealers."[4]

The cry of "loss-leader" is no more than an epithet applied to a person who sells below the high fair trade markup. There is no evidence that sales below actual cost of acquisition are frequent in either fair trade or nonfair trade States. The high markups of 40 percent to 50 percent on some fair trade goods, however, are notorious. Protection of these high markups from the competition of efficient retailers who are willing to do a profitable business on a lesser margin, is the real objective of fair trade, not the eradication of the loss-leader sellers.

In any event, it is not necessary to impose the fair trade straitjacket on all business to meet this problem. It would be sufficient to pass a law that restricted price cuts on goods to some minimum markup over invoice cost if the real objective was to solve the loss-leader problem.

In conclusion, I want to emphasize my opposition to fair trade and to the enact-

[2] *Yakus* v. *United States*, 321 U.S. 414, 424 (1944).

ment of these bills that would include it in Federal law. I believe fair trade is bad for the consumer, and for the small retailer. A Federal fair trade law would negate the most fundamental principles that have sustained our economy under the free enterprise system.

Mr. CELLER. Mr. Chairman, I am going to read from remarks I have made which were the basis of a minority report on fair trade submitted by certain members of the Committee on the Judiciary. I am going to read in part from that minority report.

"While resale price maintenance injures competition and promotes the concentration of economic power, its most immediate impact is felt by the consumer. Any comparison shopping tour will readily disclose the large savings which can be had on purchases made in the District of Columbia, as against those made across the District line in the fair trade jurisdictions of Virginia or Maryland. Numerous studies have been made which bear these conclusions out. The consumer will no doubt be surprised to discover that Congress intends to prohibit efficient retail establishments from reducing prices on his wares. It will also certainly appear anomalous to the voters of the United States for Congress, during a severe inflationary period, which has necessitated rigid governmental controls to prevent prices from going up, seriously to consider legislation which, under the penalties of Federal law, prohibits the prices of many important commodities from coming down."

I went on one of those shopping tours referred to, and I want to give you the results, in terms of the prices of certain ordinary articles that are purchased at a drugstore, and indicate to you how the public is getting a rooking from so-called fair trade.

I purchased 10 cubic centimeters of U. 40 protamine zinc Lilly insulin, used by diabetics. The price in the District of Columbia was 98 cents. The price in Maryland was $1.29. The Maryland price was 32 percent above the District price. In Virginia, in Richmond, for example, the same article, Lilly's insulin, was sold at $1.48. If you can tell me that the public is protected by fair trade, I would like to know why those differences in prices.

I purchased a BD Yale 26-gage, one-half-inch hyponeedle, used to inject insulin into a sick person's body. In the District of Columbia the price was 15 cents. In Virginia the price was 20 cents—33 percent higher in Virginia. In Maryland the price was 23 cents—53 percent more in Maryland.

I purchased 100 Bayer aspirin tablets in Virginia, Maryland, and the District of Columbia. In the District of Columbia, the price is 46 cents. What was the price in Virginia? The price was 59 cents. I paid 28 percent more for the same article in Virginia. What was the price in Maryland? Fifty-nine cents. Again, I paid 28 percent more for the same article in Maryland.

I purchased some 12-ounce bottles of Phillips milk of magnesia. Here are the bottles. In the District of Columbia, the price was 34 cents. In Virginia, it was 14 percent higher, or 39 cents. Similarly, in Maryland it was 14 percent higher, or 39 cents.

I purchased some large tubes of Ipana toothpaste. See the difference in these purchases. I paid 27 percent more for the Ipana toothpaste in Virginia than I did in the District of Columbia. In the District of Columbia, the price was 37 cents. In Virginia, the price was 47 cents; and likewise in Maryland, it was 47 cents.

I purchased packages of 20 Gillette blueblades. In the District of Columbia, the price was 87 cents, whereas in Virginia I paid 11 percent more, or 98 cents, and also 11 percent more in Maryland, namely, 98 cents.

I purchased 50 cubic centimeters of Mead's Oleum Percomorphum. These are baby vitamins which are very essential to the health of infants and growing children. It is a very, very important product. I paid in the District of Columbia $2.63. When I went to Virginia I had to pay not $2.63 but $3.29, or 25 percent more. In Maryland I had to pay 32 percent more, or $3.49.

Take a laxative like Ex-Lax. In Virginia the price was 25 cents, and in the District of Columbia the price was 19 cents. In Maryland, the price was 28 cents. To take a laxative costs you 47 percent more in the State of Maryland than it does in the District of Columbia. And it costs you 32 percent more in the State of Virginia.

Here are some Dr. West toothbrushes. They were the same price in all three States, an indication that I am not guilty of any particular selectivity to indicate deliberately that the prices are more in one place than in another. When it came to Dr. West's toothbrushes, the price in all three locations was 59 cents.

Now, take the large-size Mennen baby powder. Here they are. In the District of Columbia, the price was 47 cents. In Virginia it was 49 cents, and in Maryland 49 cents.

Mr. Chairman, these are 10 ordinary articles that are everyday needs for housewives, diabetics, and others. The total price in Virginia is $8.23. The total price in the District of Columbia is $7.05; and the total price in Maryland is $8.80. On these 10 articles in Maryland, I paid 25 percent more than I did for the 10 articles when purchased in the District of Columbia. When I went into Virginia I paid 17 percent more for these very same articles that I had purchased in the District of Columbia.

Here is a recapitulation:

Item	Virginia price	Virginia percent increase over District of Columbia price	District of Columbia price	Maryland price	Maryland percent increase over District of Columbia price
10 cubic centimeters U. 40 protamine zinc	$0.98	0	$0.98	$1.29	32
Lilly insulin	[1] 1.48	51

[1] Richmond, Va.

Now I hesitate to place in the well of the House two whisky bottles that I purchased, but I did purchase the whisky, and I have the bottles in this basket.

Mr. GROSS. Mr. Chairman. will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Iowa.

Mr. GROSS. On the items you have just mentioned, did that include tax, or was that the price without the tax?

Mr. CELLER. That, I understand, is without tax.

Mr. KLEIN. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from New York.

Mr. KLEIN. Did the gentleman ever hear of the expression "loss leaders"? I might call the gentleman's attention to the fact that it is the practice in many, many stores, not only in the District of Columbia but throughout the country, in order to induce people to come in and purchase in that store, to have articles on which they obviously lose money. I would like to call the gentleman's attention to the fact that on many other articles in the same store the purchaser pays a great deal more.

Mr. CELLER. I am going to offer a substitute which gets at the evil of loss leaders, but let us not burn down the house to roast a pig. Let us not indulge in price fixing, which in contrary to the very concept of our antitrust and antimonopoly laws, just to get at loss leaders. In these bills you have a cure worse than the disease. To get at loss leaders you usher in all the evils of price fixing, an evil for worse than loss leaders. In other words, make a direct attack on loss leaders. Do not seek to protect those who want to garner in these huge profits by virtue of vertical as well as horizontal price fixing. Horizonal price fixing is permitted indirectly under the provisions of this bill.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Arkansas.

Mr. HARRIS. I do not want to interrupt the gentleman, but on that particular point the gentleman has for the first time just advised the House that he proposes to offer a substitute in which he will get at loss leaders. Now, the gentleman is chairman of the Judiciary Committee. Has he at any time proposed any such bill to get at loss leaders?

Mr. CELLER. Of course. The bill has been in the hopper for a long, long time. Certainly I have offered it, and it has been considered. The bill is H.R. 6986, and was introduced on March 11, 1952, some 2 months ago.

As to the whisky, I will not exhibit it. The bottles may disappear too rapidly. But, in any event I purchased a fifth of Black Label Schenley whisky in the District of Columbia at $3.23. What did I pay in Maryland, just across the border, for the same identical bottle? I paid $4.32, a difference of $1.09. So that where fair trade prevails for that particular article, the public has to pay $1.09 more. If you can tell me there is anything fair in that kind of practice, I fail to see it. If you can call that fair trade, then I do not know what the meaning of fair trade is nor does anyone else.

Mr. PRIEST. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Tennessee.

Mr. PRIEST. Does the gentleman have any information indicating whether a part of that difference was due to the State tax in the State of Maryland?

Mr. CELLER. No. That has nothing to do with that tax. This was on a straight retail. I am not saying there is no license tax. Naturally, you cannot buy without paying the Federal tax. The Federal taxes are uniform. The Federal and State taxes are involved, but the State tax in those States is of no consequence. Actually the tax in the District of Columbia is 15 cents a fifth,

in Maryland the tax is 19 cents a fifth—just 4 cents difference—the total retail price difference due to fair trade is $1.09.

Mr. PRIEST. But the gentleman knows there is a difference in the State taxes.

Mr. CELLER. A very trifling difference, only 4 cents a fifth.

Mr. CRAWFORD. Mr. Chairman, will the gentleman yield?

Mr. CELLER. I yield to the gentleman from Michigan.

Mr. CRAWFORD. Would the gentleman mind yielding to let the gentleman from Arkansas tell what the difference is?

Mr. CELLER. I am agreeable to having him tell it.

Mr. HARRIS. I will get that and give it to the gentleman.

Mr. CELLER. I will put the information in the RECORD; namely, that the Maryland tax is only 4 cents higher.

I do not care what the tax is; the difference is so inconsequential as to nullify any argument that we are helping the general public by this kind of legislation.

Who Does a Congressman's Work?

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 19, 1959

Mr. HOFFMAN of Michigan. Mr. Speaker, certainly the Congressman does not do all of it. The workload varies with the district, depending not only upon the number of people in the district—from 159,099 to 806,701—but upon the characteristics of those who live within the district—their nationality, the kind of activities in which they are interested and engaged, the varied interests in local and national affairs, upon many, many things.

Every congressional office must have at least one—sometimes several—expert stenographers and typists. There must be assistants who can keep up with the news, determine, digest and classify that which is worth while. There must be someone who can file not only correspondence but the result of the research, and file it where it can be instantly located when wanted. There must be someone to meet lobbyists, casual visitors, and friends, someone whose temper cannot be ruffled, who always has a smile and a kind word. There must be someone who keeps track of proposed legislation, probable amendments, and its possible effect. if enacted. Contact must be maintained with other Members, both those favorable and those who are opposed to the thinking of the Congressman. In one way or another, someone must maintain contact not only with the desires but with the economic and political philosophy of constituents. Someone must watch the Committee and House Calendars, know when hearings will be held, legislation discussed or acted upon.

Do I hear your query, "If all these things are competently done for the Congressman, what in the world does he do, if anything?" Well, he does some of everything. With two thoughts ever in his mind, first, "What do his people want?" and second, "What is the right thing to do?"—having in mind the welfare of the country as a whole he tries to evaluate all that comes to his attention, then do the things which he believes will best serve his people and their interests.

Now for the question as to how your Representative—I prefer the term "hired man"—can get a worthwhile job done. Here is one answer. He is given a stated sum each year to hire assistants, limited at present to eight.

I have been able for a little over 24 years to get along without—except in 2 or 3 instances—spending all the money available for clerk hire, and then only for 2 or 3 months when the necessity arose because of illness in the office. Never have I had eight.

In all that period, there have been just 5 months when there were on my payroll two in-laws—one was on for a longer period. For their employment I have no apologies, for they have been competent.

It would be difficult to find anyone employed by me either now or during the past 40 years I have maintained an office who did not earn every dollar paid. Probably, there have always been legislators and executives who have employed relatives and overpaid them.

Relatives employed by Congressmen have usually rendered competent service, earned what they were paid. Two conspicuous examples are Jack Garner, former Congressman and Speaker of the House, later Vice President, whose wife was his assistant before he was elected and until he refused to longer accept office.

A present example is the Democratic leader of the Senate, LYNDON JOHNSON, whose brother is on the payroll and who earns all he receives.

The long and the short of it is that no one, for either moral or legal reasons, is required to discriminate because of relationship. If a Congressman cannot be trusted to properly and efficiently use the sums provided for the carrying out of his official duties, do a good job, he should be defeated.

Joe Farrington, Pioneer for Hawaiian Statehood

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 19, 1959

Mr. KEARNS. Mr. Speaker, last Thursday, March 12, 1959, I voted for statehood for Hawaii. I did so partly because of my marvelous memories of one of the finest Members ever to sit on the floor of the House of Representatives—the Honorable Joseph Rider Farrington, Jr.

The vote last week culminated the groundwork that had been laid over the years by one whom I consider the real pioneer of statehood for Hawaii, Joe Farrington, assisted by his lovely wife, Betty, who also served as a Delegate in Congress from Hawaii.

Fortieth Anniversary of the Founding of the American Legion

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 19, 1959

Mr. OSTERTAG. Mr. Speaker, one of the Nation's outstanding organizations is celebrating its 40th birthday this week. I am speaking of the American Legion which was organized in Paris in March 1919, by men from all ranks and from all services in the AEF of World War I. They dedicated their organization to God and country, and the American Legion has honored this dedication ever since that day.

From this little group in 1919 the American Legion has grown to be the largest veterans' group in the world with more than 17,000 community posts throughout the world. In many of these communities the American Legion post is the center of patriotic, civil and social activities. Its members are in all walks of life: educators, lawyers, laborers, scientists, industrialists, farmers, athletes, clerks, clergymen, and, yes, Congressmen. Along with a number of my colleagues in the Congress, I have had the privilege and honor of being a Legion member since the time it was founded.

In its relatively short history, the American Legion has served admirably as the champion of the veterans of our wars, and has served just as admirably the best interests of the Nation as a whole. It pioneered in obtaining deserved rehabilitation assistance for those who suffered physical disabilities in military service. It led the fight for deserved assistance to widows, orphans, and dependents of those who gave their lives in military service. It obtained increased educational and training opportunities for veterans with its sponsorship of the GI bill of rights for World War II veterans and the Korean GI bill. And, of course, the American Legion played a prominent role in the creation of the Veterans' Administration in 1930.

Very well known, too, are the American Legion efforts to maintain adequate national preparedness for our Nation, and its efforts in opposition to communism. Though these are perhaps the best known of the Legion programs, it has promoted many other activities, too, in the interest of better America. The Legion is in the fore of programs of child welfare, the training of youth for good citizenship and leadership, and the support of national medical programs. The American Legion spends about $8 million a year for its child welfare programs alone. Its youth training program is one of the Nation's largest, including junior baseball, sponsorship of Boy Scout troops, Boys State and Boys National government, and oratorical and essay contests on patriotic themes.

The American Legion has established an outstanding record of service to God and country during its 40 years of existence and looks forward to many more years of leadership and service. Though its founders knew the destructiveness of war, the American Legion is a vital force for building and strengthening the human resources of our country.

Importation of Crude Oil and Residual Oil

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 19, 1959

Mr. BURKE of Massachusetts. Mr. Speaker, the effect of the President's action a week ago on imposing drastic curbs on the importation of crude oil and residual oils has resulted in widespread criticism throughout New England. The unsympathetic attitude of the present administration toward my own State of Massachusetts has been evident for many months. The administration is engaged in a policy of creating unemployment on one hand and now we find the President making a decision that will result in increased fuel costs to industry in my area.

The pleas made by Massachusetts Congressmen including myself have fell on deaf ears. Responsible businessmen have made their feelings known to the administration. The leading newspapers in the Greater Boston area have written sound editorials pointing out the fact that this act of the President will do more harm to the New England area than any other by the administration.

It is my firm belief that the President should reconsider his action on this matter. Certainly, decisions of this kind which have such a far-reaching effect on the economy of the entire New England area should be given full consideration.

My responsibility is to the people of my district. I strongly object to the action of the President. If he were a member of my political party I would be sitting on the steps of the White House waiting to inform him in no uncertain terms of my strong feelings on the matter.

The time has come for the present administration to take a look at New England and readjust its views toward its economy.

Under leave to extend my remarks in the RECORD, I include the following editorials, telegrams, and letters:

[From the Quincy (Mass.) Patriot-Ledger, Mar. 9, 1959]

POOR REPRESENTATION

New England Members of Congress have failed miserably to protect the welfare of their region.

From all indications, President Eisenhower is going to extend restrictions on oil imports—this time by making voluntary ones permanent.

To be sure, New England Members of Congress have protested. They have even begged. But still they have failed.

Few, if any other, measures undertaken by the Eisenhower administration have done as much harm to the northeastern United States as the imposition of oil import quotas.

And the tragedy is they cannot be justified on any grounds.

Disregard, for the moment, any arguments about the need to preserve domestic oil for national defense and to trade with other countries.

If oil import restrictions could create more jobs in Texas and Oklahoma than they jeopardize in New England, the Eisenhower administration would have a case.

But this is not the situation at all. Texas and Oklahoma oil producers simply want to market all the petroleum they can find.

They claim that it is necessary for the United States to have a large oil producing capacity in case of war.

This is merely propaganda to conceal their desire for bigger and bigger profits.

The United States has sufficient oil producing capacity right now for a big war. For if a big war were started, it would be over quickly.

In case of a limited war, the United States would not be cut off from all foreign oil sources. In fact, in the case of oil from Canada, it is piped in and therefore free from enemy action on the high seas.

As long as foreign oil is available, the United States should burn as much of it as possible in order to conserve the domestic supply.

Defense purposes aside, the existence of a large supply of domestic oil prevents foreign suppliers from raising their prices unnecessarily.

The relatively few jobs oil import quotas may provide in Texas and Oklahoma are being far outweighed by the penalty forced upon New England.

New England has few natural resources. Its only indigenous source of energy is waterpower and this is not sufficient when converted to electricity to run all its factories.

If New England is to avoid decay, it must have another inexpensive source of power. Fuel oil meets this requirement better than coal. And energy from atomic power at competitive prices is still a long way off.

Oil import restrictions force New Englanders to pay higher prices for fuel to heat homes and run factories.

We do not know if New England Members of Congress could have persuaded Mr. Eisenhower to change his mind on this matter.

But we believe that they could have tried harder.

Little attention appeared to be given by New England Congressmen until Mr. Eisenhower extended the temporary restrictions briefly until permanent ones were ready.

Various explanations have been given for Mr. Eisenhower's stand. Cynics say that he is still paying off his election debts to Texas oil interests.

It is true that Texas does wield a great deal of influence in Washington. Both Houses of Congress are controlled by Texans.

President Eisenhower must deal with Senator LYNDON JOHNSON and Speaker SAM RAYBURN in order to get his legislative program through Congress.

But we believe that if New England had an impressive spokesman, particularly in Republican ranks, the administration would have had a difficult time maintaining its position.

Granted there would be fewer jobs in the oil industry in Texas and Oklahoma if there were no restrictions on petroleum imports.

But this is more than counterbalanced by any one of the number of elements in the picture.

The United States must trade with other nations if it wants to check the spread of Russian influence and to raise its own standard of living. We know of no better commodity to import than oil.

In order to appease Texas oil interests and their representatives in Congress, the Eisenhower administration hurts relations with friendly foreign nations, permits the depletion of U.S. reserves, and harms the economies of densely populated seaboard States.

Ineffective as they have been to date in this field, New England Members of Congress must continue to fight oil import restrictions.

Their region's very economic health depends upon their removal.

[From the Quincy (Mass.) Patriot Ledger, Mar. 17, 1959]

FIGHT MUST CONTINUE

It is probably belaboring a point to continue to protest the oil import restrictions that the Eisenhower administration has seen fit to perpetuate.

Spring is around the corner and soon New Englanders who use fuel oil to heat their homes will forget about the price of petroleum.

Nevertheless, the long-range effect of these oil import restrictions upon New England is so serious that every member of this region's congressional delegation should be working to get rid of them.

Congressman SILVIO O. CONTE, Republican, of Massachusetts, is not exaggerating when he says that New England could become the Nation's No. 1 economic problem if the Federal Government's economic policy continues to work to the disadvantage of this region.

No realistic person can expect the speech Mr. CONTE prepared for House delivery this week will change the situation.

The Congressman from the westernmost district in Massachusetts, is only a freshman lawmaker.

Moreover, he has spoken after the Eisenhower administration has made up its mind to continue these oil import restrictions.

His speech will take its place in the CONGRESSIONAL RECORD next to hundreds of other offerings from Members of Congress that are presented on any given day when Congress is in session.

It is significant, however, that a Republican Congressman has attacked a decision of a Republican President. This shows that the issue transcends party lines.

As far as Massachusetts is concerned, the persons who should be in the forefront against this outrageous action of the Eisenhower administration are Senators SALTONSTALL and KENNEDY.

Of the two, SALTONSTALL should be in the stronger position since he is not only a Republican but also a Republican up for reelection next year.

At one time or another every section of the United States has asked Congress to pass legislation that is detrimental to the welfare of the Nation as a whole.

New England has been as guilty of this practice as Texas and Oklahoma have been in the case of oil import restrictions.

New England, for example, has sought Federal action to protect the textile industry from foreign competition when such protection could not be justified.

Members of Congress from New England have intervened on the behalf of New England shipyards that were being underbid by more enterprising shipyards in other parts of the country.

But in the case of oil imports, New Englanders have no apologies to make.

As we pointed out in an editorial March 9, a day before the Eisenhower announcement, oil import restrictions cannot even be defended on the grounds they protect more jobs in Texas and Oklahoma than they imperil in New England.

In the long run, New England will only prosper if there is freer trade among nations. New England does not have many natural resources. It does not produce a basic farm

crop, with the possible exception of potatoes in northern Maine.

If it is to support large numbers of people, New England must import raw materials and engage in manufacturing that requires relatively high degrees of skills.

The New England textile industry, for example, cannot even compete with other sections of the country much less the Japanese because it is not a skilled manufacturing process.

New England does have a great asset in its seacoast. This enables it to import raw materials from all over the world cheaply.

New England should be allowed to import oil without restrictions as long as the domestic oil producers are not suffering.

And, rest assured, the domestic oil producers are not suffering. They merely want to increase their profits at the expense of the rest of the country and to the detriment of American foreign relations.

We congratulate Congressman CONTE for placing himself on record against the Eisenhower oil import restrictions.

We hope that other Members of Congress from New England will show signs of waking up.

They will get nowhere if they limit their efforts to roundrobin letters sent to the White House at the last, futile minute.

FEBRUARY 26, 1959.

ADMINISTRATOR,
Office of Civil and Defense Mobilization,
Washington, D.C.

DEAR SIR: Enclosed is a copy of a telegram received from the vice president of the New England Council with reference to the proposed action of including residual oil in import quota restrictions.

I would like to go on record as being strongly opposed to this proposed action.

Would you keep me advised as to the developments on this matter.

With kindest regards, I am,

Sincerely yours,

JAMES A. BURKE, *Member of Congress.*

[Enclosure.]

BOSTON MASS.,
February 19, 1959.

Hon. JAMES A. BURKE,
House of Representatives,
Washington, D.C.:

Rumored that Office of Civil and Defense Mobilization and Gerald Morgan, White House staff, now planning inclusion of residual oil in import quota restrictions. New England Council opposes such inclusion and urges your help.

GARDNER A. CAVERLY,
Executive Vice President,
New England Council.

WELLESLEY, MASS.,
March 4, 1959.

Hon. JAMES A. BURKE,
House of Representatives,
Washington, D.C.:

Understand White House presently considering mandatory restrictions on imports of residual fuel oil. At the least this will be an economic blow to New England due to increased fuel costs. One percent shortage in winter of 1947–48 drove New England fuel costs up at rate of at least $100 million annually. In addition with domestic oil industry incapable of making up artificially created shortages and oil burning equipment unable to use substitute fuels parts of New England may be completely without suitable fuel. Urge your intervention to prevent this action which could seriously damage New England economy.

JOHN P. BIRMINGHAM,
President, White Fuel Corp.,
Boston, Mass.

THE NEW ENGLAND COUNCIL,
FOR ECONOMIC DEVELOPMENT,
Boston, Mass., February 11, 1959.

To: New England delegation.
From: Gardner A. Caverly, executive vice president.
Subject: Residual fuel oil importation.

I am enclosing for your interest and information a copy of a recent letter to Mr. Leo A. Hoegh, Director of the Office of Civil and Defense Mobilization, concerning residual fuel oil importation.

As you will note from the letter, the membership of the New England Council is deeply concerned about this matter and vigorously opposed any restrictions on the importation of residual oils.

If we at the council may be of any help to you in this matter, please do not hesitate to contact us.

[Enclosure.]

THE NEW ENGLAND COUNCIL,
FOR ECONOMIC DEVELOPMENT,
Boston, Mass., February 10, 1959.

Re: Residual fuel oil importation.
Mr. LEO A. HOEGH,
Director, Office of Civil and Defense Mobilization, Washington, D.C.

DEAR MR. HOEGH: We are advised that your office is once again conducting an investigation of imports of crude oil and products and their impact on national security. We would appreciate your including this statement in the RECORD.

The New England Council, a nonpolitical, privately sponsored economic development organization for the six-State area, and composed of approximately 3,000 members, has been historically opposed to any restrictions curbing the importation of residual fuel oils. Our area is one of the most heavily industrialized sections of this country and one of the largest users of residual oils.

The following statistics on the consumption of residual oil in New England are taken from U.S. Bureau of Mines:

State	Barrels	Percent of New England
Connecticut	12,712,000	21.0
Maine	5,063,000	8.0
Massachusetts	28,744,000	48.0
New Hampshire	2,096,000	3.5
Rhode Island	11,114,000	18.5
Vermont	380,000	1.0
Total, New England	60,109,000	100.0

District 1, the east coast, consumes approximately 289,324,000 barrels of residual oil annually. Of this amount, New England alone consumes almost 30 percent. Total U.S. sales of residual oils amount to 540,460,000 barrels and district 1 consumes roughly 54 percent of the U.S. total. It is obvious, therefore, that the economy of the six New England States is extremely sensitive to any price fluctuations or differentials of residual oil.

Because of the multiplicity of our small industrial concerns and our great distance from fuel sources, the cost of fuels are a real factor in our economy.

We would like to quote for the record, the following policy statement concerning residual fuel oils, adopted by the board of directors of the New England Council on September 12, 1957.

"The economy of New England is heavily dependent upon an ample supply of fairly priced fuels. These fuels are vital to the healthy condition of this area, which has long suffered a substantial rail and freight disadvantage for its raw materials and manufactured goods.

"Therefore, the New England Council vigorously opposes artificial controls which tend to increase the price of fuels or curtail the amount of fuels entering New England. The council specifically opposes any restrictions curbing the importation of residual oils."

Sincerely yours,

GARDNER A. CAVERLY,
Executive Vice President.

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF CIVIL AND
DEFENSE MOBILIZATION,
Washington, D.C., March 5, 1959.

Hon. JAMES A. BURKE,
House of Representatives,
Washington, D.C.

DEAR MR. BURKE: This will acknowledge your letter of February 26 with enclosure, expressing your interest in the oil imports matter. Your views have been made a part of the record.

Careful consideration has been given to the problems of the citizens and of industry in the New England area during the course of our investigation.

My findings and recommendations have been presented to the President. He has directed a continuation of the voluntary oil import program so that he may study the report. Any information must emanate from the White House.

Sincerely,

LEO A. HOEGH.

Limitation on Advancement of PTS Substitutes

EXTENSION OF REMARKS
OF

HON. KATHRYN E. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1959

Mrs. GRANAHAN. Mr. Speaker, on March 5, 1959, I introduced H.R. 5337 which would remove from the Postal Classification Act a serious inequity affecting only a very small group of postal employees. That group is the Postal Transportation Service substitute, whose position is allocated to salary level PFS–5 as a distribution clerk in a railway or highway post office.

When the Postal Classification Act became law in 1955, all Postal Transportation Service substitutes were limited to step 4 of level 5. In November 1957, the Post Office Department placed some Postal Transportation Service substitutes in postal field service level 4, and gave them dual appointments.

A few weeks ago, the Post Office Department again found that the limitation on advancement would not apply to Postal Transportation Service substitutes performing service as transfer clerks under key position 15.

The opposition by the Post Office Department to amending Public Law 68 by striking out this limitation has centered upon a fear that if Postal Transportation Service substitutes were able to advance to the top step of level 5, they would be reluctant to accept regular positions, and that this would be particularly true if the position to be accepted was assigned to postal field service level 4.

In view of the fact that the Post Office Department by its own actions has now very notably moved away from its

original conclusion about the problems that would be developed, the restrictions are not now appropriate. Further, in view of the fact that by giving dual appointments to the top step of level 5 in some cases, and to the top step of level 4 in other cases, there is no longer any sound reason for withholding advancement to the top step from substitutes in railway and highway post offices.

I hope that my bill can be brought up for speedy action in the Committee on Post Office and Civil Service, and that my colleagues in the House will support the legislation when it comes to the floor.

Closure of Bristol Bay Salmon Fishery

EXTENSION OF REMARKS
OF
HON. RALPH J. RIVERS
OF ALASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 19, 1959

Mr. RIVERS of Alaska. Mr. Speaker, the recent announced intention of the Department of the Interior to close the Bristol Bay Salmon Fishery is a severe blow to the residents of the Bristol Bay area in southwestern Alaska. This is so because fishing is the principal means of livelihood for the people of that area. They are in deep economic trouble and understandably indignant and angry. They have helplessly watched the fine resource of the Bristol Bay red salmon runs decline through the years because of Federal mismanagement and resultant overfishing. They have watched the situation get progressively worse since the Japanese started their high-seas fishery for salmon in the north Pacific, in 1952. Although only 2 million fish were taken by the Japanese in that year, their activity grew rapidly until they took 64 million salmon in 1955, and the catch has fluctuated between this figure and about 40 million since then. Although only a portion of the salmon caught by the Japanese are spawned in American streams, the area in which the Japanese fishing is conducted is an area in which there is intermingling of Alaska spawned salmon and Asian spawned salmon. This has been ascertained through scientific research by Canada, Japan, and the United States under the terms of the North Pacific Convention entered into between those countries 5 years ago. This is the treaty wherein the Japanese agreed not to fish east of 175° west longitude and which treaty will not expire for another 5 years. Although this dividing line is admittedly provisional and subject to modification by mutual agreement of said three countries on the basis of knowledge obtained through research, there is nothing in the treaty which would compel the Japanese to agree to any change. Thus, by staying on their own side of the line they are living up to the letter of the treaty, but not the spirit thereof. Furthermore, their miles of seines with mesh too small for conservation purposes are catching over 1 million immature salmon every year which were spawned in the streams flowing into Bristol Bay. Accordingly, the treaty also needs changing to avoid the destructive effect of catching immature salmon.

As a result of these events, including the bumper catch by the Japanese in 1955, the U.S. Fish and Wildlife Service estimates a low-cycle return of salmon into Bristol Bay during the coming 1959 fishing season, so small, in fact, as to not allow the catching of any salmon by American fishermen in Bristol Bay this summer. Unless estimates change, all of the salmon which reach Bristol Bay during the pending season must be allowed to go up the streams to spawn in order to perpetuate and improve this great American resource.

From what I have said, it is apparent that unless the Japanese relent and cooperate in negotiating a new abstention line at least 5° farther west than the present line, along with improved conservation standards, the United States will be in the position of doing all the conserving while the Japanese catch all the fish.

The only alternative, if the present arrangements persist, would be for the United States to decide to let the tail go with the hide, so to speak, and let our American fishermen participate in the virtual liquidation of this otherwise great replenishable resource. In that event the Japanese would be in the position of having improvidently forced the destruction of a vitally valuable asset, as important to them, if properly conserved, as it is to us.

This statement would not be complete without my saying that a research program still in its infancy shows that salmon from our west coast other than those spawned in Bristol Bay, and other than red salmon, also mingle in the same north Pacific feeding grounds about which I am speaking and it might well be that the entire west coast salmon fishery all the way from Oregon to Alaska's Seward Peninsula on the Bering Sea is being adversely affected.

In view of the fact that this untenable situation is of national importance, Congressman THOMAS M. PELLY from the State of Washington, and others have joined with me in the introduction of bills which would ban the import into the United States of Japanese-caught salmon until such time as the Japanese cooperate with our State Department in renegotiating the North Pacific Fishery Convention for the long range mutual benefit of all concerned. As the situation now stands, and unless there is an early change for the better, it is going to be necessary in the national interest to enact such legislation.

In closing, I wish to say that I am not of the school of thought which advances the idea of terminating the treaty with Japan and Canada either by mutual consent or unilaterally, for to do so would remove the abstention line now existing and open the way for the Japanese to fish all the way to our 3-mile limit. We must vigorously press for adjustment of that line and better conservation restrictions in accordance with existing knowledge on the subject, which knowledge was not available at the time the treaty with Japan and Canada was consummated.

Indian Economic Development and U.S. Aid

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 19, 1959

Mr. HUMPHREY. Mr. President, in connection with the current efforts of the Government of India to secure from $650 to $800 million in loans from the United States, the World Bank, the United Kingdom, West Germany, Canada, and Japan, to underwrite the hard currency requirements of its second 5-year development plan, I ask unanimous consent that my article, "Indian Economic Development and U.S. Aid," which appeared in a special India supplement of the New York Times, January 25, 1959, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INDIAN ECONOMIC DEVELOPMENT AND U.S. AID
(By the Honorable HUBERT H. HUMPHREY)

India is a land of great economic and industrial potential. Her vast natural resources fairly cry out for development. Her people are willing and able to work. And her Government recognizes the economic and political necessity of raising living standards through greatly increased production.

In November 1957, Prime Minister Nehru said that India's second 5-year plan would help her to move out of the cow dung age into the sputnik age. When Mr. Nehru speaks of the urgent need for basic economic development he is expressing the authentic aspirations of his 380 million fellow countrymen.

India is at the crossroads. She has chosen democratic institutions to govern her life and her leaders have twice taken their policies to the people in the largest free elections in the world. But if her current 5-year plan fails, one of history's greatest experiments in government by consent may fail. This would be a disaster for India, for Asia, and for the entire free world.

PIVOTAL POSITION

Mainland China has cast her lot with the Soviet Union. Japan has cast her lot with the West. India is in a pivotal position as the most powerful and influential Asian nation unalined in the cold war. This does not mean that India is neutral in the struggle between totalitarianism and democracy, because a strong, democratic and genuinely independent India is an asset to the free world, to international peace and security and to the United States.

If India is to remain free and become economically strong, her second 5-year plan, now in its third year, must suceed just as her first plan succeeded. India's first 5-year plan proved that she was capable of steady economic growth by establishing a sound economic base in which the private sector plays a large and expanding role and by avoiding an excess of governmental regimentation and controls. She succeeded in creating a healthy environment for economic development without employing the totalitarian controls. In India's drive for development she placed primary emphasis on moving toward agricultural self-sufficiency and she made substantial progress in that direction. In contrast, China emphasized heavy industry. China put steel before rice, machines before men.

Placing men and machines in proper balance, India was able to increase her national income by 18 percent, 5 percent beyond the target, by 1956 when the 5-year period ended. In the same period her per capita income rose in spite of a continuing rise in population. Educational opportunities were also extended.

During the first 5-year plan the United States provided about $300 million in aid to India in addition to the special wheat loan of $190 million and World Bank loans totaling about $30 million.

SECOND 5-YEAR PLAN

Today the second 5-year plan is in great peril. It cannot succeed without substantial help from the United States. This presents the American people with a challenge and an opportunity. In the face of India's great need our compassion and our national self-interest impel us to respond with generosity and realism.

In March 1958 the Department of State announced that the United States had agreed to lend to the Republic of India $225 million to help finance its second 5-year plan. Of this amount $150 million was to be made available by the Export-Import Bank and the remaining $75 million was to come from the Development Loan Fund established by Congress.

This is good as far as it goes, but it does not go far enough. The second 5-year plan will breathe a little easier because of it, but it does not guarantee success. Late in 1957 when the Indian Finance Minister visited Europe and the United States he was seeking $600 million in immediate foreign credit to save the plan. The practical alternative to such credit was and is the abandonment of much of India's projected development, with all of the tragic consequences which might follow. Our $225 million loan falls far short of the demonstrated need.

India launched her present 5-year plan in April 1956, at an estimated cost of $15 billion. Of this amount, $12 to $13 billion was to be raised within India in local currency. The remaining $2.5 billion was to be in hard foreign currency which is needed to purchase machinery and supplies from abroad. In the remaining 3 years of the plan $1.4 billion is the absolute minimum required from foreign sources if the plan is to meet its 1961 goals. Not all of this, of course, would have to come from the United States, but much of it will.

In May 1958 the Government of India announced that the second 5-year plan would have to be substantially cut back, perhaps as much as 15 percent, for lack of funds. One of the projects that will suffer in the cutback is the quietly revolutionary community development program which is raising the standards of farming, health, and education in the villages. Since the goals for agriculture—by far the most important sector of the economy—had not been reached in the first 2 years of the present plan, it was announced that food production for 1957–58 would be 2 million tons less than in 1956–57.

ISSUES AT STAKE

The issues at stake are so crucial that an effort on the scale of the Marshall plan is required over and above the aid provided by the mutual security program, the Development Loan Fund, and the Export-Import Bank. The task is beyond these agencies, separately or together.

There are two problems confronting the second 5-year plan. The first and most important problem is the critical need for the foreign exchange necessary for basic industrial development. This will be necessary until India can reduce substantially her present balance of trade deficiency. The second problem is to find a solution for the continuing food crisis in India. Fortunately the United States has the resources and the instruments for helping to solve both of these problems.

Using the rockbottom estimate of a $1.4 billion gap in foreign credits over the next 3 years, it is clear that much remains to be done. After allowing for the $225 million loan announced in March, the possible conversion to rupees of the 1952 wheat loan, additional aid which can be granted through existing U.S. channels and possible funds from non-American sources, there still remains a gap of $900 million.

The U.S. Senate on June 6, 1958, acknowledged the problem when it added to the Mutual Security Act of 1958 a statement of policy declaring that the "Congress recognizes the importance of the economic development of the Republic of India to its people, to democratic values and institutions, and to peace and stability in the world. Consequently it is the sense of the Congress that it is in the interest of the United States to join with other nations in providing support of the type, magnitude, and duration, adequate to assist India to complete successfully its current program for economic development."

This bipartisan Senate declaration is to be commended, but it will become as a sounding brass if it is not translated into bold action by the administration and Congress. I have proposed on the floor of the Senate that the United States attempt to help meet this $900 million deficit by a judicious mixture of direct economic loans and grants. It is clear that if these funds are to be utilized effectively they must be allocated sooner rather than later. In this connection it is encouraging that the Government of India itself seems to prefer working on the basis of long-term low-interest loans than on the basis of grants. Whatever method is used, however, must involve amounts larger than any assistance currently contemplated. I hope that the administration will come up with appropriate proposals and the necesssary leadership to insure their careful consideration.

INVESTMENT ATMOSPHERE

Supplementing all types of aid provided by The U.S. Government, everything possible should be done to build an investment atmosphere in India that will attract private capital from abroad. The Government of India should be commended for the recent steps it has taken to deal with this problem. Modern investors should know by now that they cannot and should not make a killing by putting their money in less developed areas. But any investor has the right to expect a reasonable return for the risks he takes. I believe India has the stability which will make private investment increasingly attractive, especially in certain heavy industries, although friendly governments will need to provide direct loans for some time to come.

Industrial expansion in India depends upon the expansion of basic transportation and communication facilities. These things cannot be accomplished by private enterprise alone any more than the Erie Canal could have been built by American private capital, or our transcontinental railroads built without heavy Government subsidy in the form of land grants. Further, much American industrial development depended upon substantial private investment from abroad.

FOOD SURPLUSES

The United States is also uniquely endowed to help meet India's food crisis. Blessed with a surplus of food and fiber, we can use our surpluses to help fill the need for food and thus contribute to the economic stability necessary for the most effective utilization of the aid we provide.

Many times I have suggested that we transform our domestic surplus problem into a constructive foreign policy asset. Some time ago the Senate passed a bill, which I sponsored, to extend and broaden our agricultural export program under Public Law 480. Unfortunately the House has not yet acted because many of its Members want to make their decision in the context of overall domestic farm legislation.

DOUBLE OPPORTUNITY

The double crisis facing India's 5-year plan presents us with a double opportunity. What we need is a dramatic new Marshall plan of funds and food for India. This plan will contribute both to agricultural and industrial recovery in the United States at a time when our own economy needs a shot in the arm. A substantial portion of any credit extended to India will return to the United States to purchase the tools of economic development. Today a Marshall plan for India will benefit the United States as much as India, just as the European recovery program helped us and our allies. Enlightened self-interest bids us to accept the challenge before us.

Statement by Hon. Fred Wampler, of Indiana

EXTENSION OF REMARKS

OF

HON. FRED WAMPLER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1959

Mr. WAMPLER. Mr. Speaker, under leave to extend my remarks, I am including a statement which I made today before the House Committee on Banking and Currency in support of my own area redevelopment measure and all similar measures.

The statement follows:

STATEMENT BY THE HONORABLE FRED WAMPLER BEFORE THE HOUSE COMMITTEE ON BANKING AND CURRENCY IN SUPPORT OF THE BILL H.R. 4048 AND SIMILAR MEASURES, TO ESTABLISH AN EFFECTIVE PROGRAM TO ALLEVIATE CONDITIONS OF SUBSTANTIAL AND PERSISTENT UNEMPLOYMENT AND UNDEREMPLOYMENT IN CERTAIN ECONOMICALLY DEPRESSED AREAS

Mr. Chairman, I am appearing before your distinguished committee today in support of my bill, H.R. 4048, and all identical measures, which would establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in the economically depressed areas of the United States.

The bill, H.R. 4048, Mr. Chairman, is identical to the bill, S. 722, authored by Senator DOUGLAS of Illinois, which was approved by the Senate Banking and Currency Committee, March 11, 1959, and ordered reported to the Senate with certain amendments which I understand do not affect the essential features of the program.

The program proposed in both measures is, I'm sure, quite familiar to all. However, in the interest of a complete record, the program, in brief, contemplates the establishment of three revolving loan funds of $100 million each to assist private firms and public agencies in their industrial redevelopment activities, both in urban and rural areas. In addition, a $75 million fund would be set up to make Federal grants to areas which are so underfinanced that they cannot contribute their share to the loan program. The measure also authorizes $10 million for subsistence payments for vocational retraining, and $4.5 million for providing technical assistance, that is, technical information,

market research, etc., to economically depressed areas.

Under the terms of the bill, the Federal Government would provide up to 65 percent of the cost of each area project—land, buildings, equipment, and machinery, etc.—and the State or locality would contribute 10 percent; private sources would make available 25 percent of the costs; at least 5 percent must come from non-Government sources.

Loans made from two of the $100 million revolving funds—one for industrial projects in industrial redevelopment areas and the other for industrial projects in rural redevelopment areas—are to be made for 30-year periods. Loans made from the third $100 million revolving fund, to be established to improve and develop depressed area community facilities so as to enhance the opportunities in the area for the attraction or expansion of industrial or commercial plants and facilities, will run for 40 years.

Loans made will bear interest at the rate of one-half of 1 percent above the Treasury's borrowing cost.

I have been informed by the Department of Labor, Mr. Chairman, that in the State of Indiana there are 12 labor market surplus areas which, as of March 18, 1959, based on January 1959 ratings, suffer from a 6-percent-plus ratio of unemployment to the total labor force.

These 12 areas, which I feel would surely benefit extensively from the proposed area-redevelopment program, are at the moment areas classified in Department of Labor categories D, E, and F, and are, therefore, sufficiently depressed to meet the requirements for designation as areas of substantial labor surplus, or areas of substantial unemployment for purposes of Defense Manpower Policy No. 4, the policy on accelerated tax amortization for labor surplus areas, and Executive Order 10582, implementing the Buy American Act.

Labor Department area classification criteria places a surplus labor market area in class D when the ratio of unemployment to the total labor force stands at 6 percent or more, when jobseekers are in excess of job openings and that situation is expected to continue during the succeeding 4 months. Class E areas fall in the 9 to 12 percent unemployment ratio category, and class F in the 12 percent or more ratio group.

Major and smaller labor surplus areas in the State of Indiana include Evansville, with 9.7 percent of the total labor force unemployed; Fort Wayne, where 7.4 percent are unemployed; South Bend, where 7.4 percent are unemployed; and, Terre Haute, where 10.5 percent of the total labor force is unemployed. In Anderson, the unemployment ratio stands at 8.9 percent; in Columbus, at 7.0 percent; in Connersville, at 8.9 percent; in the Michigan City-La Porte area, at 10.9 percent; in Muncie, at 10.3 percent; in New Castle, at 13.3 percent; in Richmond, at 7.6 percent; and, in Vincennes, at 9.6 percent.

I think the extreme economic seriousness of the Nation's unemployment problem and the necessity for effective, farsighted remedial action can be graphically illustrated and understood when one reduces to bread and butter terms the daily privation and distress faced by America's 4,724,000 jobless, but potential breadwinners who comprise 7 percent of the Nation's total labor force of 67,430,000.

By comparison, of Indiana's total labor force of 1,725,900 7.3 percent or 126,400 are unemployed.

To take the illustration a step farther, Mr. Chairman, in 1950 the Census Bureau estimated that the median annual income in the Nation was $1,917, and the median annual income in the State of Indiana was $2,116. The Bureau informs me that the national annual median income for 1957, of persons who had income, was $2,452. By arithmetically projecting these figures, the annual median income in Indiana for 1957, of persons with income, is computed to be $2,706. Now assuming that the State of Indiana's total labor force was active, or that the 126,400 Hoosiers currently jobless were gainfully employed, Indiana payrolls would be expanded by the sum of $341,938,400, or, in other words, practically the entire cost of the proposed area-redevelopment program, estimated to be $389.5 million.

Granted, Mr. Chairman, that full employment represents the ideal labor picture, that full employment is perhaps a bit utopian; it is nonetheless exactly what we are striving for. And, when the above formula is applied on a nationwide scale, the total loss in gross national income and economic strength, is absolutely staggering.

The Department of Commerce has announced that personal income, which is a measure of the dollars people receive, jumped $1.5 billion in February, to a yearly rate of $364.5 billion. However, it is reported that there are strong indications that that one-half of 1 percent gain is due largely to fatter dividend checks and more overtime pay. Thus, leading many economists to the conclusion that merely regaining old output levels won't have much effect on current unemployment levels.

As I've stated before, Mr. Chairman, I wish to express my unqualified support for this and all similar measures introduced by Members of both bodies, from both sides of the aisle.

These distressed communities in Indiana, and elsewhere in the country, are in dire need of assistance if they are to regain their economic health and thereby be in a position to contribute materially to our national industrial strength.

Thank you, Mr. Chairman, for this opportunity to be heard.

James S. Hunter, Legislative and Civic Leader

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 19, 1959

Mr. MADDEN. Mr. Speaker, on Monday evening of this week, I attended a testimonial dinner in the city of East Chicago, Ind., for Hon. James S. Hunter, one of Indiana's outstanding legislators. Representative Hunter has served the Calumet industrial area of Indiana for over 20 years and during this period of time he has been recognized by State legislators of both parties from districts throughout the State as an honest, conscientious, and sincere public servant.

At the mammoth testimonial banquet in East Chicago last Monday evening, leaders of both political parties, businessmen, labor officials, and other citizens paid much deserved tribute to his record as a public official. Mayor Walter Jeorse of East Chicago was toastmaster of the banquet and he joined with others in reviewing Jim Hunter's record as a public servant and recalled the great debt that the citizens of East Chicago and Indiana owed to Representative Hunter for his service, not only as a State representative but as a member and director of the Public Welfare Board of Lake County for a great number of years.

Governor Handley of Indiana in his message stated: "It can truly be said that James S. Hunter loves his fellow man."

Other tributes to the guest of honor were paid by Mr. Fred Steininger, director of public welfare, State Senator William Christie, Mr. Lester Thornton, director of AFL–CIO, State Representative Howard Steele of La Porte, Ind., and Mrs. Jessie Jacobs of Indianapolis, Ind. East Chicago Councilman James L. Dent introduced the Honorable Mercer Mance, superior court judge of Indianapolis. Other guests were introduced by Mr. Henry Walker, prominent East Chicago lawyer. Mr. Benjamin J. Wilson, lawyer and Gary City councilman introduced the main speaker of the evening Mr. Robert C. Weaver, educator, lecturer, and author, and also a resent member of New York's Governor Harriman's cabinet. Congressman J. EDWARD ROUSH of Indiana's Fifth District, who served with Representative Hunter in Indiana State Legislature, paid the following tribute to the guest of honor:

I learned with great interest that the folks of Lake County are giving a testimonial dinner for my good personal friend Jim Hunter. I have known Jim for over 10 years, having first met him during my term in the Indiana Legislature in 1949.

He was one of the finest legislators of that session, commanding the respect of people from both sides of the aisle. We all respect his intelligence, common sense, his great knowledge and humble spirit. Certainly the honor which Lake County is bestowing upon Jim Hunter could not come to a finer man.

In honoring this man I have the feeling that you are honoring the things which he stands for, namely good government, integrity in government and political honesty. I join with his many friends in wishing him well in the years to come feeling that his contributions have not yet ceased and that we will all benefit, as we have in the past, by his future services.

Hon. George Chacharis, mayor of the city of Gary, Ind., in presenting a plaque of appreciation to Representative Hunter, made the following remarks during his presentation address:

This is a great occasion.

It represents a tribute to a great man.

But it is not greatness alone that we acknowledge tonight.

Present with us tonight, as suggested by the character of our honored guest, are other qualities also—wisdom, compassion, and self-sacrifice.

Here in America, we stress service as the principal purpose of government. That is why we are here tonight. We have come to honor service as embodied by a man.

We are saying to him that you served with dedication, that you served the highest purposes of democracy.

And that the people of Lake County and Indiana rise tonight to express their heartfelt and their immeasurable gratitude.

Not infrequently and often erroneously, it is said that a membership in the State legislature is a minor political office, that it is of no consequence, that it is unimportant.

That evaluation has been rejected by James S. Hunter.

He feels, as I do, that there is no such thing as an unimportant office—that any public honor conferred by the votes of the people is a solemn one, a sacred one, one

which at all times calls for devotion and understanding.

Because he gave it the strength of his character, because he invested it with his heart and soul, because of his unsparing sacrifice of energy in the fulfillment of his duties, James S. Hunter brought meaning and dignity to the tasks he performed.

Working for the people was the most important job in the world for him.

Ours is a profound, and irredeemable debt to him. His achievements in economic, social, and educational legislation brought assurance of greater security and the promise of a brighter future to 4 million people in Indiana.

To speak of James S. Hunter, we need to rely, with some variation, on the superb language of Winston Churchill:

Never has one done so much for so many.

And now, godspeed, Jim. May your future abound in the blessings you labored to bring to others in the past.

Now, may I present you with this plaque, which will give permanence to the words in our hearts here tonight.

We present it as a token of our esteem and appreciation for statesmanship and eminent public service.

Inscribed on this plaque are these words:

"To James S. Hunter, dean of Lake County's State representatives. In grateful appreciation of 20 years outstanding service to his county and State.

"Presented by Mayor George Chacharis on behalf of the citizens of Gary, Ind. Dated: March 16, 1959."

H.R. 3505: The Area Redevelopment Act

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Banking and Currency Committee in favor of H.R. 3505:

STATEMENT OF HON. THOMAS J. LANE, OF MASSACHUSETTS, BEFORE THE HOUSE BANKING AND CURRENCY COMMITTEE IN FAVOR OF H.R. 3505, THE AREA REDEVELOPMENT ACT, MARCH 19, 1959

Mr. Chairman, seasonal unemployment in the rural areas, and brief layoffs in the industries that are usually located in cities and towns, have gone hand-in-hand with the development of the American economy. We adjusted ourselves to these variables, and took it for granted that there would always be a low level of unemployment due to shifting changes within the labor market.

In fact, unemployment compensation was conceived and put into operation for the purpose of providing some income for people who were inbetween jobs. Since the end of World War II, however, we have been confronted with a new economic problem; namely that of areas where unemployment has far exceeded the normal level, and has persisted for a long time.

These are not temporary, local recessions. They *indicate* serious weaknesses in the basic economies of these areas. New economic problems require new remedies.

Communities where people live and work, were never intended to be unchanging clusters of factories and stores and homes and public buildings and utilities and services. They are living organisms, responding to change and challenge, or failing to adjust themselves to economic realities because of reasons beyond their control.

Buildings and factories grow old and die. Industries come and go. Through its slum clearance and urban renewal programs, the Federal Government has recognized its responsibilities. Communities are being encouraged and assisted in tearing down and rebuilding the deteriorated areas that are no longer fit for human habitation or for retail enterprise.

It owes a similar responsibility to help in the reconstruction of those ancient, rundown, and abandoned industrial areas of those communities where there is a chronic labor surplus, in order to revitalize their economies.

The decline of some local industrial economies followed by the tragic inertia of heavy unemployment, is a postwar problem that cannot cure itself. It continues, in spite of national prosperity, and this fact alone should convince us that the problem is not transient, and that time alone will not solve it.

Some of the affected communities, based upon an older industry that is steadily contracting, or has moved away, or has simply died, have been bogged down in the labor surplus category for the past 7 years. Meanwhile, the empty and obsolete multistoried factory buildings are a drag upon the life of the whole community. Modern industry will have no part of these ancient plants. The small and struggling enterprises that sometimes avail themselves of this space, usually pay substandard wages.

Our experience with this problem has proved that local groups and local initiative, despite valiant and partially successful efforts, cannot complete the heroic task of redevelopment without help from outside. Show me just one community, suffering from prolonged labor surplus, that has managed to lick this problem entirely by itself. Neither municipal government, nor private groups, are equipped to do this job.

The danger of industrial blight is one that, sooner or later, could affect the economic health of any community. That is the fundamental reason why we must have a national policy and national legislation, providing adequate remedies, to help the distressed areas of tomorrow as well as those in need of immediate assistance.

The older textile, coal mining, and railroad centers, have been in the doldrums for some time. Statistics from the Bureau of Employment Security reveal unemployment in these communities considerably in excess of 6 percent for year after year. And these figures do not reflect the unknown thousands who have exhausted their unemployment benefits, and have had little or no opportunity to build up reentitlement, because there are no work opportunities for them.

The depressing effect on business is a natural consequence. Check along the main streets of these communities and you will find a number of empty stores. Check with the local governments and their shrinking tax base. Observe that some recovery has been made, through local effort alone, but that it has not been enough, because local resources, unaided, cannot cope with the whole problem.

Look at the middle-aged displaced workers in these communities who have given most of their lives to an industry that has gone. It is inhuman and unrealistic to suggest that they should move to another community where the invisible barrier of age-discrimination would stand in the way of reemployment. These people need new and growing industries in their own communities, and a program of retraining to fit them for new occupations.

If there is a fault in the proposed legislation, it is the failure to recognize and to eliminate the prejudice that will operate against the employment of middle-aged or older workers, in the new plants that will be built in labor-surplus areas, as a result of a redevelopment bill.

These people are the chief victims of the economic-readjustment problem. Due to the intricacies of insurance and pension plans, they will be politely discriminated against when they seek employment in the industries that are encouraged to locate in the areas we intend to help. The occupations to which they have given two-thirds or more of their lives have vanished. Some of these people in their late forties or early fifties, will be artificially considered as unemployable by replacement industries, and will have to wait out the years until they become eligible for social-security benefits—a burden to their families and crushed by the loss of their own self-respect—unless, through this bill we make provisions that will give them a fair share of the jobs that become available.

Social scientists are aware that we must reduce the hours of the workweek in order to spread employment opportunities because of our increasing population and the development of automation which is ever reducing the number of workers required by industry.

This is a longer range problem on the national level, but I bring it to your attention because it is affecting—right now—the middle-aged displaced workers who must be our primary concern in this area redevelopment problem. As long as they cannot get work, we shall achieve only partial success in our efforts to put these areas and their people, back on their feet again.

You see, gentlemen, why local resources do not have the capacity to meet all angles of this problem. Any political or economic system that neglects this problem, or fails to solve it, is suffering from a basic weakness that could hurt larger areas of our economy. As slums spread the cancer of deterioration, so too can rundown and obsolete industrial areas affect other enterprises in their neighborhood.

When I first introduced an industrial redevelopment bill in 1953, due to the collapse of the textile economy in my home city, the suggestion for remedial action was slow to win support. There was the understandable hope that so-called natural economic forces would bring about a short and painless transition to the replacement industries that would move in and take up the slack.

Within a few years, however, as the problem continued to plague a number of other communities, public opinion has awakened to the fact that energetic measures are required to restore these areas to economic health.

A pledge to enact legislation along these lines was written into the Democratic and Republican Party platforms. In 1958 the House and the Senate passed an area redevelopment bill that was vetoed by the President. Events since then have but reinforced the need for this pioneering type of legislation. The only question is: "How soon and to what extent?"

This is not a bill to help communities suffering from seasonal or temporary unemployment. That is a separate and far less critical issue. The yardsticks determining eligibility under this bill are clear and definite. Its purpose is to help only those communities where unemployment is a nagging and chronic problem. It calls for a gradual but major shift in the economic base of these areas so that they will have the diversification necessary for programs. In the past, they were built around one industry and were completely dependent upon its ups and downs. We have learned that communities

cannot afford to put all of their eggs in one basket, and through the proposed legislation we intend to help them toward a new economic life that will be productive and prosperous in its variety.

The administration proposes a $53 million program which is hardly better than no program at all. The target of $389 million is far more realistic.

The latest available information indicates 23 major areas, and 110 smaller areas with substantial and persistent unemployment, that would be helped by S. 722 and H.R. 3505. In Massachusetts alone, we have four major areas that have been in this category for a number of years. More than half the States have one or more areas with substantial and prolonged unemployment.

The Area Redevelopment Act faces this problem squarely and realistically. It limits eligibility to those areas that cannot find any other way out of their predicament. When its mission has been accomplished, and economic recovery has been achieved, there will be no need of further Federal participation. Bear in mind also, that the major emphasis is on loans, which, as they are repaid, will revolve to assist other affected communities in the future.

This is the type of legislation that proves the values of cooperation.

I am convinced that the Area Redevelopment Act, H.R. 3505, will assist depressed communities so that they will share as equals in our national progress.

The Need To Do Something About Our Classroom and Teacher Shortages

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1959

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I wish to include in the CONGRESSIONAL RECORD the text of my statement, "In Support of the School Support Act of 1959," presented to the General Education Subcommittee of the House Committee on Education and Labor, March 6, 1959:

STATEMENT OF HON. JAMES ROOSEVELT BEFORE THE GENERAL EDUCATION SUBCOMMITTEE OF THE HOUSE COMMITTEE ON EDUCATION AND LABOR FRIDAY, MARCH 6, 1959

Mr. Chairman and members of the General Education Subcommittee, I am pleased to have the opportunity to join with my other colleagues who have appeared before you to ask for a realistic approach to offset national educational deficiencies in the richest Nation in the world.

The need to do something about our classroom and teacher shortages existed before Sputnik I beeped overhead, but it is apparent that this scientific achievement spotlighted the need. Last year, the United States Commissioner of Education undertook an on-the-spot study of the Soviet Union. He offered this telling observation:

"We are today in competition with a nation of vast resources, a people of seemingly unbounded enthusiasm for self-development, and fired with conviction that future supremacy belongs to those with the best-trained minds, those who will work hard and sacrifice."

Yet, notwithstanding the views or observations of one of its own top officials, the administration has failed to offer leadership in meeting this challenge on the education front. Thus, the conclusion is obvious: This Congress must alone carry the full responsibility to fill an unfortunate void created by the administration's inaction and failure to present a workable program—the plan offered by the administration and made public February 9 of this year is not a workable, realistic program and in my mind is a means to go on record that the administration is concerned, while at the same time offering a program that is destined for defeat. It is a program aimed not at helping financially destitute States and communities, but rather one aimed at helping moneylenders. Its features would require constitutional amendments by many States that have constitutional limitations on bonded indebtedness. State action to overcome this would be most difficult; thus the administration's proposal to underwrite bond issues would be of no help to such States.

It is unfortunate, to put it mildly, that the state of the Union message does not contain a solitary word on the critical classroom shortage; a shortage that States and communities have not been able to alleviate properly, not because of a lack of concern and effort, but because of a lack of adequate public finances. As a matter of fact, the President evaded the whole issue in his message by the less than concrete remark that the Nation's schools "conform to no recognizable standards."

Equally disturbing is the intent of the administration, as expressed in the budget message, to work toward eliminating or cutting Federal funds to education in fields where Federal participation is well established. The message calls for ending in fiscal 1961 the Federal grants for vocational education, although a $63 million grant is proposed to continue Federal participation in this and other areas through fiscal 1960. If the vocational education program is worth keeping in fiscal 1960, why not in fiscal 1961 and thereafter? I think it is worth keeping and improving. With automation forging a new technological revolution, it seems imperative that workers learn new skills in order to be gainfully employed. Presently, vocational education programs in most local communities are inadequate in intent and scope, but even these inadequate programs will suffer materially if present limited Federal funds are denied.

And a most alarming suggestion of the President, contained in the budget message, is to cut off aid to impacted areas. This would be a grave mistake. Many cities are plagued by the increase in school enrollment resulting from Federal employees coming in to work on Federal projects. The problem of increased school enrollment is compounded by the fact that Federal property is tax exempt, so the city is forced to stretch its tax income not only to take care of the additional burden on its schools but to expand its city facilities to serve the new residents.

In view of these proposals, it really should come as no surprise that the administration has offered no budget item for Federal aid to education.

With its fixation on classical economics, the administration has retrogressed on its approach to education, at least as the approach appeared to be some 2 years ago. It will be recalled that at that time the President's White House Conference on Education called for Federal aid in the field of education, and when Sputnik I made known its presence in the ether, the administration noted the need for Federal action; congressional programs were advanced by members of both parties.

And 2 years ago, the administration's Department of Health, Education, and Welfare highlighted the crisis proportions of our educational plant deficiencies when it noted the Nation was short some 159,000 classrooms. At this time the need to do something was further accented by the assertion of the National School Boards Association that a new classroom was needed every 10 minutes to meet the Nation's growing population requirements.

Now 2 years later—1959—despite record building at the local level, the problem is still with us and crying out for solution. The January 28 report of the U.S. Office of Education gives factual testimony that this is the case. The States reported they needed 140,500 more instruction rooms; of these, 65,300 are needed to take care of enrollments in excess of normal capacity to handle, and 75,200 to replace unsatisfactory or obsolete school facilities.

Because this committee is well apprised of further data in this regard, I shall not press the point, but I do wish to stress that the teacher shortage has reflected itself in all too many instructors teaching on substandard credentials. The reason is that we have failed to offer financial incentive and security and due recognition to the teacher in the community.

The fact that the Metcalf bill covers both the school plant and teacher shortages makes it the most comprehensive approach offered to date. Parenthetically, I wish to point out that another school construction measure which I have also introduced in no way conflicts with the Metcalf proposal which I cosponsored—rather, it supplements the Metcalf bill by providing for a general authorization for Federal financial assistance to build schools, with no amount specified.

If the issue is going to be joined on monetary considerations, I think then that it is important to point out that the present position of the administration is based on false economy. To economize at the Nation's expense—at the expense of both parents and their children—is a classic example of sophistry. Federal expenditures for assistance to education would be the soundest, safest investment the Government of the United States could make, for it would bring in dividends from the Nation's economic, cultural, and social progress that would ensue. Not to invest in an adequate school program is a dangerous risk.

The "economy" brigade—and I use the term "economy" advisedly—in the administration has its supporters, of course. Prominent among these is the U.S. Chamber of Commerce. I only wish that this organization would declare that it objects to Federal aid to education because it doesn't want to see the money expended, rather than using the old bromide that Federal aid means Federal control of education at the local level. Neither the intent of the supporters of the Metcalf proposal nor the intent of the measure itself is to bring Federal policy into school administration, curriculum, etc. And I have an idea the chamber of commerce really knows this.

I think the chamber of commerce ought to have the courage of its convictions to tell the American people and schoolchildren now attending half-day sessions or crowded into classrooms like sardines that Federal funds should not be spent to help them because it would upset the economy, create inflation, ad infinitum. At least the education bill now before the committee could be argued on its merits, its real effect on the economy and fiscal policy, rather than becoming the means to evade the central issue by using it as an example of Federal usurpation of local education.

Since this perennial argument is still with us, I think it might be well to note, in brief fashion, that Federal aid is not a new or startling concept. A check into history will prove this. Such a check would show, for example, that Federal aid has existed in one form or another since the year 1785, 2 years

before the adoption of our Constitution. Other facts to note:

1. In the 1930's the Federal Government aided in the building of many needed schools under the PWA and WPA programs.

2. In the 1940's more aid was given under the Lanham Act.

3. In the 1950's Public Laws 815 and 874 continued the principles of the Lanham Act under which aid is given for the construction, maintenance and operation of schools in federally impacted areas.

Can the opponents lay claim, much less prove, that any of these measures resulted in Federal control of education? I think not.

Mr. Chairman, in addition to the need to meet the Communist challenge by educating our young people in adequately constructed, well-spaced facilities with a sufficient number of well-qualified teachers, I think there is another compelling reason for enactment of Federal legislation that will permit this objective to become a reality. And this reason is a positive one; I say "positive" because it is not based on our reacting to another nation's actions, but rather the reason stems from our concept that a free, well-informed citizenry is the prerequisite for the survival of democratic institutions. This is part of our thinking; this is part of our proud heritage. This whole concept was set forth with clarity in 1830 in "A Plea for Public Education," prepared by the Philadelphia Working Men's Committee:

"The original element of despotism is a monopoly of talent, which consigns the multitude to comparative ignorance and secures the balance of knowledge on the side of the rich and the rulers. If then the healthy existence of free government be * * * rooted in the will of the American people, it follows as a necessary consequence, of a government based upon that will, that this monopoly should be broken up and that the means of equal knowledge (the only security for equal liberty) should be rendered, by legal provision, the common property of all classes."

It is my hope that our concept of the importance of public education will be implemented by the passage of legislation based on this concept: the Metcalf proposal.

India

EXTENSION OF REMARKS
OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1959

Mr. POWELL. Mr. Speaker, I wish today to salute the people of India, their Prime Minister, Jawaharlal Nehru, and His Excellency the Ambassador to the United States, as that country moves into its 12th year of independence.

Though only half the size of the United States, India is the home of every sixth person in the world, ranking it as the second most populous nation. Its people present a colorful mosaic of races, religions, and cultures. Centuries before the birth of Christ, India gave to the world the first discoveries in science, mathematics, and metaphysics; the first classics in literature, art, and law. Five thousand years ago a highly developed civilization flourished in India, and there is evidence today of once well-planned cities, sanitary underground drainage, baths, wide roads, and houses made of burnt brick. Moreover, findings reveal that the Indian people even then were skilled in many arts and crafts and had developed a form of writing.

If modern India is viewed today against this historical background rather than its past independence, development, and maturity the richness of her philosophy and the significance of her tradition will offer greater meaning to a disordered world.

India has never embarked on a war of conquests, her leaders maintain. Moreover, they add, through all the centuries of her life, India has usually lived at peace with her neighbors, and her only relationship with them has been one involving an exchange of culture through pilgrims and peaceful delegations. This is not to imply invaders have not come to India and effected conquests, but the Indians remind they have been absorbed by her and have become Indians.

So when India came face to face with the community of nations for the first time in 1947, she presented a curious blend of the old and young: old because of the traditional values which direct successfully her destiny through the ages and young because she was free of a background of aggressive conquest or any other such inherited legacy of behavior. Thus, Nayantara Sahgal, the daughter of Madame Pandit, wrote in 1953:

> Hers was the unique and happy position of launching into international affairs with a blank slate, of regarding the whole world with friendship, and announcing that her own moral sense and no other consideration would be her future guide in matters of policy.

Madam Sahgal admits, however, the handicap that is India's, having so recently awakened in a highly industrialized world climate and finding herself so far behind her Western neighbors in many important respects. She is concerned with immediate survival—food, housing, health, and education of her people with which she must cope while attempting at the same time to pull her weight around with the politically mature and highly industrialized nations while attempting to adjust herself to the international scene.

In response to Western demand for India's abandonment of neutralism that the countries of its hemisphere may successfully grapple with "the resulting disturbance in that carefully contrived centuries-old balance of power, the author gave the following response:

> When a European or an American friend asks me, "Where does your country stand?" I can only reply, "Just where your country stood at the dawn of her nationhood, with perhaps many similar problems." I would say to America, for example, "In 1776 you became a sovereign, independent nation. Yet it was 1917, and three-quarters of a war involving the entire world was over, before you allowed yourself to be drawn into it. Up to that time you were occupied in consolidating your frontiers and your independence. Are you not better equipped than any country to understand India's position?"

India, with her reverence for her own traditions and culture, has at the same time a tremendous admiration for the scientific acumen of the Western nations. She sends her young people abroad to study medicine, science, and technology. She employs foreign experts and seeks foreign advice for her irrigation and other large-scale projects. She invites foreign investment and welcomes foreign aid. The self-sufficient attitude is not hers. She is an active member of the United Nations, and her helping hand has been outstretched wherever it could be of service. Her good neighbor policy extends around the globe, for in this atomic age every country is a neighbor.

But the spirit of satyagraha which accomplished a unique revolution is a justly proud spirit. It seeks friendship rather than favor, it wishes to learn but not to imitate; it will take advice but not dictation. It will continue to work out its salvation in its own serene way, and by its example, perhaps, accomplish an even greater revolution—that of making nonviolence as real and workable a creed on the international plane as it has proved in India's national life. Only if this comes to pass, will the world have taken its first step toward making peace an abiding reality.

If the above quotation of this, the brilliant young Indian woman, becomes a part of our thinking when discussing policies and devising programs for not only India but all other members of the Afro-Asian bloc nations, we will become increasingly enlightened and the world may know peace everlasting.

One can hardly touch any aspects of India without absorbing particles of the noble ideals of Mohandis K. Gandhi and the aspiration for peace which motivates the Prime Minister. For today we have chosen two such reminders:

From Gandhi:

> Hatred ever kills, love never dies. Such is the vast difference between the two. What is obtained by love is retained for all time. What is obtained by hatred proves a burden in reality, for it increases hatred. The duty of a human being is to diminish hatred and to promote love.

From Nehru:

> We have seen in the last year or two that it is not easy for even great powers to reintroduce colonial control over territories which have recently become independent.

Whatever we may think about it, we have arrived at a stage in the world when an attempt of forcible imposition of ideas on any large section of people is bound ultimately to fail. In present circumstances, this will lead to war and tremendous destruction. There will be no victory, only defeat for everyone.

Prime Minister Nehru's remarks before the British House of Commons January 22, 1947, grow in meaning with the years—we want to be friendly to all. We want to be friendly with the British people and the British Commonwealth of Nations. What I would like this House to consider is this: when these words and these labels are fast changing their meaning—and in the world today there is no isolation—you cannot live apart from the others. You must cooperate or you must fight. There is no middle way. We wish for peace. We do not want to fight any nation if we can help it. The only possible real objective that we, in common with other nations, can have is the objective of cooperating in building up some kind of world structure, call it

One World, call it what you like. The beginnings of this world structure have been laid in the United Nations Organization. It is still feeble; it has many defects; nevertheless, it is the beginning of the world structure. And India has pledged herself to cooperate in its work.

India can add meaning, give directions to a world adrift—maybe not in things, but ideas. After all, "Man cannot live by bread alone."

DAV Services in Colorado

EXTENSION OF REMARKS
OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1959

Mr. ROGERS of Colorado. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Colorado citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly and indirectly.

Among the several congressionally chartered veteran organizations, which have State departments and local chapters in Colorado, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it, during time of war. Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. Its national legislative director is Elmer M. Freudenberger, its national director of claims, Cicero F. Hogan, and its national director of employment relations, John W. Burris, all located at its national service headquarters at 1701 18th Street NW., Washington, D.C.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veteran organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters, located in Cincinnati, Ohio, has maintained the largest staff, of any veteran organization, of fulltime trained national service officers, 138 of them, who are located in the 63 regional and three district offices of the U.S. Veterans' Administration, and in its central office in Washington, D.C. They have ready access to the official claim records of those claimants who have given them their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

The DAV national service officers in Colorado are Mr. Frank M. Cain and Mr. Lowell McGowan, located in the VA Center, Denver Federal Center, Denver, Colo. VA hospitals coming under the jurisdiction of this office are: A 530-bed GM hospital at Denver, a 681-bed NP hospital at Fort Lyon, and a 152-bed GM hospital at Grand Junction.

The offices of the Department of Colorado, Disabled American Veterans, are located in room 116, State Office Building, Denver, Colo.

During the last fiscal year, the VA paid out $60,101,000 for its veteran program in Colorado, including disability compensation to its 20,440 service disabled veterans. These Federal expenditures in Colorado furnish substantial purchasing power in all communities.

Only about 29 percent—6,002—are members of the 26 DAV chapters in Colorado.

This 29-percent record is the best among all States but, nevertheless, not good enough in view of the very outstanding record of personalized service activities and accomplishments of the DAV national service officers in behalf of Colorado veterans and dependents during the last 10 fiscal years, as revealed by the following statistics:

Claimants contacted (estimate)	56,243
Claims folders reviewed	46,869
Appearances before rating boards	22,166
Compensation increases obtained	4,982
Service connections obtained	1,558
Nonservice pensions	899
Death benefits obtained	385
Total monetary benefits obtained	$2,950,547.20

These above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of $20,850,335.32, and in the central office, they handled 58,282 reviews and appeals, resulting in monetary benefits of $5,337,389.05. Proportionate additional benefits were thereby obtained for Colorado veterans, their dependents and their survivors.

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans—only about 10 percent of whom were DAV members—their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guaranteed loans for homes, farms, and businesses and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veterans—not given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service connection of a disability becomes extremely difficult, too many times impossible. A claims and rating board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under certain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others at an aggregate loss to them of more than $28 million per year. About 1 percent—.0099—of such discontinuances and reductions have probably occurred as to disabled veterans in Colorado with a consequent loss of about $2,677,200 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veteran organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed.

I urge every disabled veteran in Colorado to give his power of attorney to the national service officer of the DAV, or of some other veteran organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

Measured by the DAV's overall costs of about $12,197,600 during a 10-year period, one would find that it has expended about $3.50 for each claim folder reviewed, or about $8.80 for each rating board appearance, or again, about $22.70 for each favorable award obtained, or about $123 for each service connection obtained, or about $54 for each compensation increase obtained, and has obtained about $14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nation-wide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag (miniature automobile license tags) project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in a donation, more than 1 million owners of sets of lost keys have received them back from the DAV's Idento-Tag Department, 6,029 of whom, during the last 8 years, were Colorado residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to fellow citizens, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nation-wide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans, if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

During the last 10 years, the DAV has also relied on appropriations from its separately incorporated trustee, the DAV Service Foundation, aggregating $3,300,000, exclusively for salaries to its national service officers. Its reserves having been thus nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all "serviced" claimants, DAV members and other social-minded Americans—by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first perpetual rehabilitation fund of $1,000 with the DAV Service Foundation. Recently it added another $100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund ranging from $100 to $1,000, equivalent to about $4 per DAV member.

As a DAV life member, I am pleased to enroll as one of the benefactors on the memorial honor roll of the DAV Service Foundation, with the realization that only the interest earnings therefrom will be available for appropriation to the DAV for its use in continuing to maintain its national service officer setup in my State of Colorado.

Each claimant who has received any such rehabilitation service can help to make it possible for the DAV to continue such excellent rehabilitation services in Colorado by sending in donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every such "serviced" claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is $100—$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints—labor unions, trade associations, and various religious, fraternal, and civic associations. All of America's veterans ought to be members of one or more of the patriotic, service-giving veteran organizations. All of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice, the DAV.

Bank Merger Legislation

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 19, 1959

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement I made before the Committee on Banking and Currency, U.S. Senate, on S. 1062, Thursday, March 19, 1959. The statement follows:

STATEMENT BY HON. EMANUEL CELLER, OF NEW YORK, BEFORE THE SENATE COMMITTEE ON BANKING AND CURRENCY, ON S. 1062, MARCH 19, 1959

INTRODUCTION

I appreciate the opportunity to present to this distinguished committee my views concerning S. 1062 which would provide safeguards against mergers and consolidations of banks which might lessen competition unduly or tend unduly to create a monopoly in the field of banking. I would point out that the views I express are based in considerable part on extensive studies, hearings, and reports of the House Judiciary Antitrust Subcommittee, dealing with the competitive aspects of bank mergers. To summarize my position, I recommend favorable consideration of S. 1062 provided it is amended in the following respects:

First, by prohibiting the appropriate Federal bank supervisory agency from approving any bank merger or consolidation where, in any section of the country, the effect may be substantially to lessen competition or tend to create a monopoly;

Second, by requiring the appropriate Federal bank supervisory agency to give notice to the Attorney General of a proposed merger and to enable him to intervene or offer his views respecting the competitive phases of the transaction;

Third, by requiring notice with opportunity to be heard to the appropriate supervisory authority of the interested State in the event the transaction involves State banks;

Fourth, by adoption of a so-called antitrust savings clause for a merger between banks similar to that governing a merger between a holding company and a bank under section 11 of the Bank Holding Company Act of 1956, thus making it clear that applicable provisions of the antitrust laws pertaining to banks are not to be superseded;

Fifth, by adoption of provisions for a hearing on the record.

As background for these legislative recommendations, I propose to discuss first the trend of bank merger activity and the resulting concentration in banking facilities; second, the present provisions of Federal law dealing with bank mergers; and finally, the reasons why the recommended changes in the bill are necessary.

CONCENTRATION OF BANKING FACILITIES

At the outset I would emphasize that enactment of S. 1062 with the recommended amendments is the minimum necessary to maintain a sound, vigorously competitive unit banking system in this country and to arrest a trend which is concentrating control of the Nation's banking business into the hands of fewer and larger financial institutions. At the present time, while there are approximately 13,500 commercial banks in this country, the 100 largest control approximately 46 percent of the Nation's total bank assets, and more than 48 percent of the bank deposits. In 10 of the Nation's 16 leading financial centers, 4 banks own more than 80 percent of all commercial assets. Furthermore, in nine of these financial centers, two banks own more than 60 percent of all commercial bank assets. Again in each of the 16 leading financial centers, as indicated by the following table, the first 2 banks own more than 40 percent of all the commercial assets, the first 4 banks 60 percent.

Percentage of total assets owned by largest banks in principal financial centers

	4 largest	2 largest	Largest
New York	60	41.6	22.0
Providence	98	93.3	57.7
Pittsburgh	87	79.2	61.0
Minneapolis	87	76.0	39.7
Cleveland	97	72.3	74.7
Boston	83	71.6	52.2
Chicago	84	66.9	34.1
Detroit	90	65.9	46.5
Dallas	84	64.9	32.8
Atlanta	92	63.9	33.2
Richmond	84	55.9	33.2
Kansas City	75	53.7	34.3
St. Louis	68	53.5	28.0
Baltimore	77	44.9	24.0
Philadelphia	69	44.6	24.7
Washington	60	43.0	26.3

Source: Office of the Comptroller of the Currency.

The increase in banking concentration has been coupled with a comparative contraction in the credit extended to borrowers by the banking system. As banks have grown larger, they have tended to have fewer dealings with smaller businesses. A study conducted by the Federal Reserve Board demonstrated that the very large banks with deposits of $500 million or more had the least number of loans with small business of all classes of banks, the next to lowest dollar volume of loans with small business, and the smallest percentage of dollar volume of all loans will small business.[1] Considering the decrease in the proportion of small banks in the financial community, the overall drop in credit extended, and the frequent resort to Government agencies for funds, it seems likely that the increasing trend toward concentration has at times entailed credit shortages especially for smaller enterprises.[2]

[1] See Bank Mergers and Concentration of Banking Facilities, a Staff Report to Subcommittee No. 5 of the House Committee on the Judiciary, p. 48 (1952).

[2] Ibid.

Moreover, the present degree of concentration is contrary, I think, to the fundamental premise that the banking system of the United States should rely for its vitality on vigorous competition by a multitude of independent banks, locally organized, locally financed, and locally managed. Unlike other countries, such as Great Britain and France, where a few mammoth institutions control nearly all the banking facilities, the American system is based on unit banking—that is, strong, growing community banks which provide a wide range of financial services to the people in the area. It is the unit banking system which has played a key role in the economic development of this country. And it is this kind of system, premised on independent banks effectively competing with each other that must be perpetuated and preserved. For independent banks not only act as a necessary balance wheel to offset the power of big business, they tend to provide a much healthier basis for effective community organization than does the absentee ownership of giant banking institutions. In fact, the independent bank—not the mammoth financial house—provides in many cases the new ideas from which widespread innovations originate.

I am constrained to conclude that unless additional legislative precautions are taken of the kind here recommended to preserve the competition that still exists, there is the very real possibility that banking credit will be dominated to an ever-increasing extent by a small, tightly knit group.

BANK MERGER ACTIVITY

Largely responsible, in my judgment, for the concentration that now characterizes the banking system, has been a rapidly accelerating trend toward bank mergers which has been a major development in banking over the past 8 years. As chown by the following table, in the period 1950 through 1958, some 1,330 of the Nation's commercial banks have disappeared by way of mergers and consolidations:

Decreases in number of commercial banks because of consolidations and absorptions

Source: Federal Reserve Board.

Of these 1,330 mergers and consolidations, 731 or over one-half involved national bank transactions approved by the Comptroller of the Currency. Total resources of the banks absorbed in these national bank mergers amounted to $11,303,146,733.

Another matter that I know is of interest to this committee is the gradual decline in the total number of banks in the Nation. During the last 35 years the banking population of the Nation has been reduced by more than half; in 1921 there were more than 30,000 banks serving the Nation's creditors and depositors as compared to approximately 13,500 at the present time. True, a large share of the Nation's losses occurred prior to 1933 because of the depression when approximately 9,000 banks were forced to suspend operations during the 4-year period between 1930 and the end of 1933. However, as Chairman Martin of the Federal Reserve Board testified "since 1933 the merger movement has been the major factor in the gradual decline in the total number of banks." [3]

The fact is that the banking population of our country is at a 35-year low despite the postwar boom, despite the 286 percent growth in bank assets, despite the new high level of loans and deposits, despite the greatly increased use of banking services, and despite the enormous growth in the number of depositors.

The continued downtrend in the number of the Nation's banks is even more striking when examined on a regional basis. In New York State, for example, where New York City is widely recognized as the financial capital of the world, there were 611 State-chartered banks in 1926. The State's banking structure weathered the depression with the loss of less than 100 banks between 1929 and 1933, and by 1935 New York State had 471 chartered banks in operation. Yet the number of banks kept decreasing until there are now less than 380, a loss almost as severe as that suffered in the depression years.

Let me make it clear that I would not quarrel with the reduction in the number of independent banks, if thereby only weak banks were eliminated. The fact is, however, that the banks that have been absorbed in merger activity during the past number of years have not been for the most part the financially weak. Nor have they been, in the main, the specialized, the poorly organized, or the inefficiently managed. On the contrary, most of the banks that have been absorbed have been growing, efficient, profitable, vigorously competitive banks taken over at peak earning capacity. In short, the merger pattern is not predominantly a situation where twc or more small, inadequately financed or managed banks, falling behind in the competitive race, seek by merging to form a big integrated institution, able to compete on equal terms. Indeed, a large percentage of mergers involved one or more giant banks having assets of $100 million or more. And a large percentage of the absorbed banks had assets in excess of over $50 million.[4] Furthermore, many of these mergers have been primarily

[3] Hearings before Antitrust Subcommittee, House Committee on the Judiciary on Current Antitrust Problems, p. 2177 (84th Cong., 1st sess.).

[4] For a list showing the resources of each bank absorbed in a merger transaction approved by the Comptroller of the Currency in the period 1950–56, see hearings before Antitrust Subcommittee, House Committee on the Judiciary on H.R. 264 and H.R. 2143 (Premerger Notification), pp. 146–171 (85th Cong., 1st sess.). See also hearings before House Banking and Currency Committee on S. 1451 and H.R. 7026 (Proposed Financial Institutions Act of 1957), pp. 581–614 (85th Cong., 1st sess.).

the outgrowth of a deliberate effort on the part of certain banks to expand their banking facilities, add to their capital and depositors, and, in general, increase their overall financial strength in the economy.

Take New York City, for instance, where there occurred in 1955 the three largest mergers in the history of the country in terms of total deposits. In March of that year the Chase National Bank with total assets of $5,669 million merged with the Bank of Manhattan Co. with assets of $1,629 million, and the Bronx County Trust Co. with assets of $76 million. This merger provided the new entity, the Chase Manhattan Bank, with total assets of $7,374 million or 21.7 percent of the total assets of all banks in New York City and jumped it to first place in New York City and second place in the Nation.

Also in March 1955 the National City Bank of New York, previously the second largest bank in the United States, with assets of $5,767 million, took over the First National Bank of New York, which had total assets of $713 million. The new combination, the First National City Bank, then ranked second in the area, with assets of $6,480 million, or 19.1 percent of the total.

Less than a month later the Bankers Trust Co., with assets of $2,207 million, acquired the Public National Bank & Trust Co. of New York, which controlled assets comprising some $562 million. This was only the last of a series of acquisitions by Bankers Trust Co., which has been taking over other banks at a rapid rate for the last several years. Thus, since 1950 Bankers Trust has absorbed such substantial banking institutions as the Title Guarantee & Trust Co., Lawyers Trust Co., Flushing National Bank, the Commercial National Bank & Trust Co., and the Bayside National Bank.

In December 1954 the Chemical Bank & Trust Co., with assets of $2,081 million, combined with the Corn Exchange Bank & Trust Co., which had assets of $821 million, to form the Chemical Corn Exchange Bank, which now has total assets of $2,902 million.

In part, because of this merger activity, New York City now has only 56 commercial banks, whereas at the opening of the century it had 127. Further, the city's 4 largest banks control 61 percent of all deposits, whereas in 1900 the 4 largest had only 21 percent of the total deposits.

Nor is merger activity in New York City at an end. Of great competitive significance is the proposed merger between the Guaranty Trust Co. of New York and J. P. Morgan & Co., both of which are engaged in commercial banking in the city of New York, primarily as wholesale banks. Guaranty Trust is the 9th largest bank in the Nation, while J. P. Morgan is the 22d largest. This merger not only would result in the new entity becoming the fourth largest bank in the Nation; it would accelerate the merger trend among other city banks. As reported in Business Week of January 10, 1959, "New York bankers predict that if and when [this] merger goes through, a series of competitive realinements will result that won't end until a new 'balance of power' is established among New York banks."

I would emphasize that the New York situation is by no means a local phenomenon. Other leading financial centers have likewise experienced a similar rash of bank-merger activity. In Philadelphia, Pa., for example, the Pennsylvania Co. for Trusts & Banking, the second largest bank in the area, with total assets of $805 million, merged with the First National Bank, which was fifth in size, with total assets of $218 million. The consolidated bank had total assets of about $1,023 million, making it the largest banking institution in the area, with control of 25.3 percent of total banking assets. Prior to that, in 1953, the Tradesman's National Bank & Trust Co., with total assets of $139 million, merged with the Land Title Bank & Trust Co., which had assets of $96 million. Also in 1953 the Girard Trust Corn Exchange Bank, with assets of $579 million, acquired the National Bank of Germantown, with assets of $39 million. The Girard Trust Corn Exchange Bank itself resulted from a merger in 1951 between the Girard Trust Co., one of the hundred largest banks in the United States, and the Corn Exchange National Bank & Trust Co., another leading bank.

In Pittsburgh, Pa., the Mellon National Bank & Trust Co. has risen after a long series of mergers to a point where it has assets of $1,861 million representing 61 percent of the total assets in that area. Between January 1950 and the end of 1954, Mellon National had absorbed at least 13 other banks, many of them small, independent banks which had previously served depositors and borrowers in the suburban communities in the Pittsburgh area. In 1948, eight banks had merged or consolidated by Mellon National and in 1947 it had absorbed two large banks in Pittsburgh and seven banks in the adjacent suburbs.

In Providence, R.I., the Industrial Trust Co., with assets of $312 million, merged in 1954 with the Providence Union National Bank, with assets of $168 million, which gave the resultant Providence Industrial National Bank control of some 57.7 percent of all banking assets in that city.

In California the First Western Bank & Trust Co., of San Francisco, a subsidiary of Transamerica Corp., absorbed 14 other California banks in 1954 and increased its assets in the process from $333 million to $798 million.

Many other cities have also experienced analagous bank-merger activity in the last several years; for example, Boston, Cleveland, Dallas, Kansas City, Mo., Cincinnati, Baltimore, Washington, D.C., Houston, Indianapolis, Hartford, Portland, Oreg., and Wilmington, Del.[5]

As a result of the depletion in the ranks of the country's banks through mergers, competition among banks has been lessened in communities throughout the Nation. What is more, over 76 counties in the United States have no commercial banking facilities whatsoever, while more than half the counties in the United States have only three or fewer banks serving the needs of the community. Hundreds of small, rural American communities have become bankless towns and many others are served by only one bank in place of two or three which existed in the 1920's.

The conclusion is inescapable, as the Federal Reserve Board testified before our Antitrust Subcommittee, that the bank merger trend is a matter of deep concern. This is particularly true since competition is one of the strongest factors safeguarding a sound banking system. To quote from the testimony of the Chairman of the Reserve Board in June 1955: [6]

"The CHAIRMAN. And would you say, as a very distinguished and very efficient head of the Federal Reserve Board that this merger movement is a matter of deep concern to you and your colleagues on the Board?

"Mr. MARTIN. It is, indeed, Mr. Chairman. As we note in a later paragraph, it is a matter that we have given a great deal of thought to."

Mr. Martin added:

"I would like to reiterate, Mr. Chairman, that this is a trend which has given us very serious concern. * * *" [7]

In March 1957, Mr. Martin of the Reserve Board again emphasized that the bank merger trend was a matter that gave the Board very serious concern.[8]

PRESENT PROVISIONS OF FEDERAL LAW DEALING WITH BANK MERGERS ARE INADEQUATE

Under the National Banking Act, approval of the Comptroller of the Currency is required for any merger between national banks, or between a national bank and a State bank, where the resultant institution is a national bank.[9] In addition, the Federal Deposit Insurance Act[10] requires that approval of certain mergers must be obtained from the Federal Deposit Insurance Corporation, the Comptroller of the Currency or the Federal Reserve Board, as the case may be, but only where the capital stock or surplus of the resulting bank will be less than the aggregate stock of the two institutions combined. Also, approval of the Federal Deposit Insurance Corporation is required for mergers between insured and noninsured banks.[11] None of these Federal banking statutes applicable to mergers, deals substantively with competition in the field of banking, and in no case is the competitive impact of the merger a necessary element to be considered by Federal banking officials in deciding whether or not to grant approval.

Bank mergers are also circumscribed by the provisions of the Sherman Act of 1890 which prohibits combinations in restraint of trade, attempts to monopolize, or monopolization of trade or commerce. Illegality is established by proof that the merger has actually resulted in an unreasonable lessening of competition; it is immaterial whether the merger was accomplished by stock or asset acquisitions.

Section 7 of the Clayton Act of 1914, on the other hand, deals specifically with corporate and bank mergers and bans those achieved by stock purchases where there is a reasonable probability of a substantial lessening of competition or a tendency to monopoly. Responsibility for enforcing the section insofar as banks are concerned is vested concurrently in the Attorney General and the Federal Reserve Board.

Section 7 was designed to stop mergers beyond the reach of the Sherman Act, but its failure to include mergers accomplished by asset acquisitions resulted in a loophole which so far as nonbanking corporations are concerned was closed by passage of the Celler-Kefauver Act of 1950. However, because of revisions made in subsequent versions of various antimerger bills, it became impracticable to include within the scope of the Celler-Kefauver Act corporations other than those subject to the jurisdiction of the Federal Trade Commission. This left asset acquisitions by banks unaffected by the new law, since authority to enforce the provisions of section 7 dealing with banks is vested in

the Federal Reserve Board and not in the Federal Trade Commission.

Beyond this, virtually all bank mergers are accomplished by asset acquisitions by virtue not only of provisions of Federal law prohibiting member banks of the Federal Reserve System, with a few exceptions, from purchasing corporate stocks, but also of various State statutes prescribing similar limitations. For these reasons, section 7 of the Clayton Act has little value in coping with the mounting trend of bank merger activity. In fact, since section 7 was adopted in 1914, only one proceeding has been instituted—that a case brought by the Federal Reserve Board against the so-called Giannini group controlling Transamerica.

To close this loophole in section 7 and provide Federal enforcement agencies with the same authority to move against bank mergers accomplished by asset acquisitions, I introduced H.R. 5948 in the 84th Congress. This bill was adopted by the House without dissent on February 6, 1956, but was not brought up on the Senate floor for vote.[12] I might add that the measure was in accordance with the President's recommendations submitted to the Congress in 1956 and repeated in 1957, 1958, and 1959, calling for revision of antitrust legislation to cover bank mergers accomplished by asset acquisitions.[13]

One month after House passage of H.R. 5948, the Acting Secretary of the Treasury transmitted to the Senate and House proposed legislation to amend the banking statutes (specifically sec. 18(c) of the Federal Deposit Insurance Corporation Act) so as to give Federal banking agencies sole jurisdiction to approve or disapprove bank mergers. This Treasury Department recommendation was designed, I believe, to head off Senate passage of H.R. 5948. Moreover, it was contrary to the President's recommendation seeking revision via antitrust legislation to cover bank mergers accomplished by asset acquisitions as envisaged by H.R. 5948. In any event, a Senate bill embodying the Treasury proposal was adopted by the Senate in the 84th Congress and again in the 85th Congress as section 23, chapter 5, title III of the proposed Financial Institutions Act of 1957. S. 1062, the subject of the present hearings, is identical with these earlier proposals.

Let me make it clear that despite the foregoing considerations, amendment of the banking laws in this area would not be inconsistent with amendment of the antitrust laws to cover bank mergers accomplished by asset acquisitions provided that changes as here recommended are made in S. 1062. Indeed, to assure against the Judiciary and the Banking Committees working at cross-purposes with each other in respect to this problem, the Antitrust Subcommittee of the House Judiciary Committee is deferring temporarily consideration of H.R. 4152, a bill I introduced last month which would plug the banking loophole in section 7 of the Clayton Act.

SUMMARY OF S. 1062

It is against this background that I turn to S. 1062. That bill would, first, expand provisions of existing law so as to require prior approval by the appropriate Federal bank supervisory agency for every merger or consolidation involving insured banks. Second, in granting or withholding consent, the Comptroller of the Currency, the Federal Reserve Board, or the Federal Deposit Insurance Corporation, as the case may be, would be required to consider not only the usual banking factors, but also to "take into consideration whether the effect (of the proposed transaction) may be to lessen competition unduly or to tend unduly to create a monopoly." Finally, the appropriate supervisory agency would be required to consult the other two Federal banking agencies on the question of competition and "may also request the opinion of the Attorney General with respect to such question," although there would be no requirement to do so.

COMPETITIVE CONSIDERATIONS ARE VIRTUALLY IGNORED

Under the bill, competitive considerations would be only one of the various factors that would have to be taken into account by the appropriate Federal banking agency in scrutinizing a proposed bank merger. Beyond this, an entirely novel test is proposed, namely, whether the acquisition "may lessen competition unduly or tend unduly to create a monopoly." Indisputably this proposed standard is far weaker than that of section 7 of the Clayton Act which applies to other businesses and prohibits any merger where the effect of the acquisition may be substantially to lessen competition, or to tend to create a monopoly. Moreover, in the 69 years since passage of the Sherman Antitrust Act no suggestion has been made that its provisions designed to prevent clogs on competition did not apply equally to banking and nonbanking corporations. Nor are the characteristics of the banking industry so unique as to justify such departure. As the Comptroller of the Currency has testified, "It is no less important to have competition in banking, when this can be done soundly, as it is in other fields of commerce and industry." [14] In these circumstances, I must view with the utmost gravity a proposed standard that would provide for the banking industry a preferred and favored position.

It will be recalled that the term "substantially lessen competition" has been imbedded in Federal jurisprudence for 45 years in the course of which it has received judicial content via numerous court interpretations. If we discard this standard for the vague [15] and novel standard of "unduly," we would find ourselves in a sea of trouble. It took years and years to determine through court interpretations what the term "substantially to lessen competition" means. Should S. 1062 be adopted in its present form, not only would the courts have to start all over again in interpreting a vague and untested term, there would be created—and without justification—a dual standard, one for banks, another for nonbanking corporations. The force of these considerations was noted by the Chairman of the Federal Reserve Board. He testified:

"We recognize * * * that you have a legal groundwork for substantial lessening competition already in the framework of the law and that it may not be possible to use unduly lessening competition."[16]

Indeed the present Comptroller of the Currency testified before our Antitrust Subcommittee as follows:

"We have no objection to the principle that the acquisition of one bank by another through purchase, merger, or consolidation should not be permitted if the effect of the acquisition may be substantially to lessen competition. It is no less important to have competition in banking, when this can be done soundly, as it is in other fields of commerce and industry." [17]

Beyond that, it must be recognized that if the Congress should adopt the standard here proposed and proscribe only bank mergers which tend unduly to monopoly, then the Congress in effect, would, be placing its imprimatur of approval on mergers which tend to monopoly. Stated otherwise, adoption of the unduly standard would mean that it is the policy of Congress that a bank merger which tends to monopoly is in the public interest; that only if it tends unduly to monopoly should it be banned. Apt in this connection is the comment of Judge Barnes, former head of the Antitrust Division: "I think that when we talk about 'tendency unduly to create a monopoly' it seems akin to speaking of a man that is not 'unduly dishonest.' I think that we have to pause a little bit to consider if that is exactly what we mean." [18]

Pertinent in this regard also is testimony by the Comptroller of the Currency before our subcommittee:

"The CHAIRMAN. Mr. Comptroller, as I get it, you would proscribe a merger which tends unduly to monopoly.

"Mr. GIDNEY. Yes.

"The CHAIRMAN. Is that right?

"Mr. GIDNEY. Yes.

"The CHAIRMAN. Then, the converse, it strikes me, would be true: that in your judgment, then a bank merger that tends to monopoly only, is in the public interest.

"Mr. GIDNEY. I don't——

"Mr. KEATING. Watch out.

"Mr. GIDNEY. I hear something I don't understand too well.

"The CHAIRMAN. I want you to watch out and listen very carefully. You would proscribe or prevent a merger that tends unduly to monopoly——

"Mr. GIDNEY. Yes.

---

[12] During the 84th Congress, I sponsored a subsequent bill dealing with premerger notification (H.R. 9424) which incorporated the provisions of H.R. 5948. H.R. 9424 was passed by the House without dissent on April 16, 1956, and was reported favorably by the Senate Judiciary Committee on July 27, 1956, too late for final Senate action.

[13] See Economic Report of President, January 23, 1956, pp. 78–9; Economic Report of President, January 23, 1957, p. 51; Economic Report of President, January 20, 1958, p. 64; Economic Report of President, January 20, 1959, p. 53.

[14] Hearings before Antitrust Subcommittee, House Committee on the Judiciary on H.R. 5948 (bank mergers), p. 71 (84th Cong., 1st sess.). Similarly, in radio and television broadcasting, while licensing by the Federal Communications Commission is required as a condition of entry and while the Commission has detailed statutory power of regulation over broadcast stations, the antitrust laws are fully applicable. See *U.S.* v. *Radio Corporation of America* (U.S. Supreme Court, Feb. 24, 1958) holding that approval by the Commission of a station exchange does not bar the transaction from attack by the Attorney General under the antitrust laws.

[15] The following illustrates the vagueness of the proposed standard: The Comptroller of the Currency was requested to supply the Antitrust Subcommittee with a list of the types of bank merger situations his Office would approve under a test based on a statutory provision requiring that consideration be given to whether the effect thereof may be "to lessen competition unduly or to tend unduly to create a monopoly" but would not approve under a test based on a provision reading "substantially to lessen competition or to tend to create a monopoly." In reply the Comptroller advised the subcommittee that after having studied the matter carefully, "it was not feasible to supply such a list in the form suggested." Hearings before the Antitrust Subcommittee, House Committee on the Judiciary on H.R. 264 and H.R. 2143 (Premerger Notification), p. 194 (85th Cong., 1st sess.).

[16] Hearings before Antitrust Subcommittee, Senate Committee on the Judiciary on S. 3341 et al. (Premerger Notification, p. 52) (84th Cong., 2d sess.).

[17] Hearings before Antitrust Subcommittee, House Committee on the Judiciary on H.R. 5948 (Bank Mergers), p. 71 (84th Cong., 1st sess.).

[18] Hearings before Antitrust Subcommittee, Senate Judiciary Committee on S. 3341 (Premerger Notification), p. 157 (84th Cong., 2d sess.).

"The CHAIRMAN. Then it strikes me if that is sound, then the converse must be true: that in your judgment a bank merger that only tends to a monopoly is in the public interest?

"Mr. GIDNEY. Well, we merely have to find it is not contrary to the public interest, don't we?

"The CHAIRMAN. Yes, you have got to find it; but when you say it is 'unduly,' then it is against the public interest——

"Mr. GIDNEY. Yes; that is right.

"The CHAIRMAN. If it is not 'unduly,' then it is in the public interest and you let it go on.

"Mr. GIDNEY. Well, do we have a neutral position somewhere there? Are we——

"The CHAIRMAN. At least you do not take any action then.

"Mr. GIDNEY. That is right. We have a certain amount of free enterprise, even in the banking system, and if it is not against the public interest, why should we——

"The CHAIRMAN. In other words, you figure that in the interests of free enterprise, you would allow the thing to go along, even if it tends to monopoly so long as it does not 'unduly'——

"Mr. GIDNEY. I won't accept that, because my difficulty is this 'tends' business.

"Mr. CHAIRMAN. Is that not what you really say? You say you only prevent it when it 'unduly' tends to monopoly.

"Mr. GIDNEY. That is to give us——

"The CHAIRMAN. Therefore, if it does not 'unduly' tend to a monopoly, then in the interests of free enterprise you let it go on without taking any action, even if it only tends to a monopoly and does not tend unduly to a monopoly.

"Mr. GIDNEY. Well, things are a matter of degree. I think we want the word 'unduly' in there so that this 'tends' word is something that we can live with and understand. In other words, we can have——

"The CHAIRMAN. Then your answer is 'Yes,' is that it?

"Mr. GIDNEY. I don't think I want to say 'Yes' on that, sir. I don't understand it well enough." [19]

In these circumstances, I am constrained to agree with the Attorney General who testified on a previous bill identical with S. 1062:

"First, the proposed banking legislation prescribed for bank mergers would weaken section 7 standards. The factor of competition would be only one of numerous considerations to be taken into account by a banking agency in scanning a merger. Beyond that, the competitive considerations of section 23 specified, whether the acquisition may 'lessen competition unduly or tend unduly to create a monopoly' are completely novel and are intended simply to be less stringent than those specified by the Clayton Act, section 7 for other American business. As the result, not only does that proposal prescribe pale antitrust standards, but even that lesser standard is only one of many factors banking agencies must consider. All told, then, that proposal does little more than give 'lip service' to insure competitive enterprise in banking. Banking agencies themselves recognize inherent difficulties in construing this jerry-built standard. While relevant language of the Clayton Act, section 7, has been on the books for almost a half century, proposed section 23's 'unduly' phrasing is completely novel." [20]

The short of the matter is that as former Assistant Attorney General Barnes testified the "proposal does little, if anything, to insure competitive enterprise in banking. Any pretense that it does seems to me hardly more than sham." [21]

The contention has been made that a test of "undue lessening of competition" would provide greater flexibility by permitting the approval of mergers and consolidations which for particular reasons would not be contrary to the public interest. It must be recognized, however, that in some circumstances a transaction may not be contrary to the policy of the antitrust laws even though it may lessen competition. Thus, in the *International Shoe Co.* case (280 U.S. 291), the Supreme Court held that where the concern acquired is: "a corporation with resources so depleted and the prospect of rehabilitation so remote that it faced the grave probability of business failure * * * the purchase of its capital stock by a competitor (there being no other prospective purchaser), not with a purpose to lessen competition, but to facilitate the accumulated business of the purchaser and with the effect of mitigating seriously injurious consequences otherwise probable * * * does not substantially lessen competition or restrain commerce within the intent of the Clayton Act."

On the same principle, the acquisition by a bank of the assets of another bank would not be precluded under the "substantially" test where otherwise there would be a reasonable probability of the ultimate failure of the acquired bank or where, because of inadequate management, the acquired bank's prospects for survival seem dim.[22]

In addition to the acquisition of a bank which otherwise would be faced with a possibility of failure, there are other circumstances in which, from a banking standpoint, the acquisition of a bank by another bank may be in the public interest. For example, where the acquisition is the most practicable means of dealing with a problem bank having inadequate capital or unsound assets or where the acquired bank has not adequate provision for management succession. Also, where several banks in a small town are compelled by an overbanked situation to resort to unsound competitive practices which may eventually have an adverse effect upon the condition of the banks, the merger of two or more of the banks may well be in the public interest. The same principle applies where there are not adequate banking facilities. These various situations are illustrative of the circumstances where the consummation of the transaction would not be contrary to the public interest and not be banned under the "substantially" test.

However, should there be any doubt in this respect, I would recommend that the report of this committee on the proposed legislation make this crystal clear.[23]

Manifestly, therefore, these banking factors do not make necessary abandonment of the "substantially" test. In addition to that, adoption of "unduly" would mean that there would be one standard for bank acquisitions by other banks, another for bank acquisitions by holding companies even though there is no real distinction between the two kinds of transactions. It will be recalled that under the Bank Holding Company Act, section 3,[24] the applicable standard for bank acquisitions is whether in any line of commerce in any section of the country the effect of such acquisition may be substantially to lessen competition or to tend to create a monopoly. This is indicated by the following extract from a letter which the Vice Chairman of the Federal Reserve Board sent to me on January 18, 1957:

"Section 11 of the Bank Holding Company Act of 1956 provides that nothing therein shall be interpreted as approving any action which may be in violation of existing law, nor is anything herein to constitute a defense to any action or proceeding on account of any prohibited antitrust action or conduct. Also, as you indicate, under the Celler-Kefauver amendment to section 7 of the Clayton Act the test is whether the effect of the acquisition may be substantially to lessen competition or to tend to create a monopoly in any section of the country.

"Section 3(c) of the Bank Holding Company Act requires the Board, in passing upon each application by a bank holding company for approval of its acquisition of bank stock, to consider certain specific factors, including whether or not the effect of the proposed acquisition would be to expand the size or extent of the holding company system beyond limits consistent with the public interest and the preservation of competition in the field of banking. The concept involved in this factor is a broad one, and in the Board's opinion adequate consideration of the facts in this regard necessarily involves consideration of the standards mentioned in section 7 of the Clayton Act; that is, whether in any line of commerce in any section of the country the effect of such acquisition might be substantially to lessen competition or to tend to create a monopoly." [25]

On the other hand, the test for an acquisition of one bank by another would be whether the effect of the transaction may be to lessen competition unduly or to tend unduly to create a monopoly. Beyond the fact that there is no basis for such distinction, the Federal Reserve Board would be faced with the grotesque task of having to administer dual standards involving similar types of transactions. Thus, in the case of a merger where the resulting institution is a State member bank, the Board, as the appropriate Federal supervisory agency, would be obliged to follow the "unduly" test. But in the case of a merger involving a bank holding company, the Board would be obliged to follow the "substantially" test. The short of the matter is that confusion would be compounded on confusion.

There is yet another consideration, namely, that the proposal would weaken the

competitive standards which the Comptroller of the Currency now professes to follow with respect to bank mergers. As previously indicated, approval of the Comptroller of the Currency is required in all cases of mergers between national banks, or between a national bank and a State bank where the resultant institution is to be operated under a national charter. I point out that the Comptroller of the Currency has stated on numerous occasions that before granting merger approval, he will determine whether its effect in any section of the country may be substantially to lessen competition or tend to create a monopoly; that he will determine, in short, whether the transaction is violative of the policy of the Celler-Kefauver Act. Moreover, the Comptroller has stressed that he would not approve any bank merger or consolidation which he thinks would be a violation of the principles of this act. Thus, in a letter to me dated March 14, 1955, the Comptroller of the Currency stated in part:

"In determining whether the approval of this Office will be given to any merger or consolidation, the Comptroller considers, among other things, how the proposed merger will affect the particular banks involved, the soundness of the national banking system, and the convenience and needs of the community concerned. There may be a technical question as to the specific application of section 7 of the Clayton Act to these mergers. However, it has been the practice of the Comptroller before giving his approval to determine whether the effect of the merger, 'in any section of the country * * * may be substantially to lessen competition, or to tend to create a monopoly.'" [26]

Again in March 1957, the Comptroller testified as follows:

"Mr. MALETZ. Is it your practice * * * not to approve any bank merger where the effect may be substantially to lessen competition or tend to create a monopoly?

"Mr. GIDNEY. I say, that has been our practice. We have not approved any where it could be.

"Mr. MALETZ. That is your practice?

"Mr. GIDNEY. We have not approved where it could be shown." [27]

The fact is, however, that from 1950 through 1958, the Office of the Comptroller approved 731 bank mergers and consolidations involving in respect to banks absorbed total resources of approximately $11 billion.[28] During the period from 1950 to May 1955, that Office did not disapprove a single merger application on the basis of competitive considerations. The report of our Subcommittee on Corporate and Bank Mergers issued in December 1955, made the following comment in this connection:

"Comptroller of the Currency Ray M. Gidney has indicated that before giving his approval to any bank merger or consolidation coming within his jurisdiction, he will determine whether its effect in any section of the country may be substantially to lessen competition or tend to create a monopoly; in short, he will determine whether the merger is violative of the policy of the Celler-Kefauver Antimerger Act. Mr. Gidney has stressed that he would not approve any bank merger or consolidation which he considers to be in violation of the principles of this act. But what does the record show? It shows that from 1950 to May 1, 1955, the Comptroller and his predecessors have approved 376 bank mergers and consolidations involving total resources of $7,464 million. It also shows that since 1950 the Comptroller's Office has not disapproved a single merger application on the basis of a possible substantial lessening of competition. This is not surprising since the Comptroller's Office has 'not issued anything specific to the examiners' in regard to considering anticompetitive factors; it has never notified national bank examiners or 'given them any specific admonition' that it is the Comptroller's policy to disapprove any bank merger violative of the Celler-Kefauver Act. Nor has it required examiners to make findings of fact with regard to competitive considerations in recommending approval or disapproval of proposed bank mergers." [29]

It should be added that within a few weeks after issuance of this report in December 1955, the Comptroller's Office promulgated standards for considering the competitive consequences of bank mergers.[30] Furthermore, after the subcommittee hearings, the Comptroller's Office in June 1955, for the first time, informally disapproved a merger application because of competitive considerations and followed that up in November 1955 by refusing, for similar reason, to approve certain proposed mergers in cases involving 11 banks. However, in 1955 the Office approved 126 bank mergers involving, in respect of banks absorbed, resources of $2,015,225,452. In 1956 it approved 105 bank mergers involving banks absorbed having total resources of $2,380,816,965 and informally disapproved 8 applications for competitive reasons.[31] In 1957 it approved 83 mergers involving banks absorbed having resources of $1,142,000,000, without disapproving any application for competitive reasons. In 1958 it approved 83 mergers involving banks absorbed having resources of $1,704,000,000 while disapproving 2 mergers for competitive reasons.

In sum, during the period from 1950 through 1958, the Comptroller of the Currency approved 731 mergers and disapproved 22 for competitive reasons. This is indicated in greater detail in the following table:

Year	Mergers approved by the Comptroller of the Currency [1]		Mergers disapproved by Comptroller of the Currency on basis of competitive considerations	
	Number of absorbed banks	Total resources of absorbed banks	Number of cases	Total resources of banks which would have been absorbed
1950	52	$576,464,143	0	0
1951	30	384,389,647	0	0
1952	59	517,662,108	0	0
1953	67	523,680,925	0	0
1954	126	2,058,262,234	0	0
1955	126	2,015,225,452	12	$182,712,000
1956	105	2,380,816,965	8	355,018,675
1957	83	1,142,000,000	0	0
1958	83	1,704,645,259	2	198,985,000
Total	731	11,303,146,733	22	736,715,675

[1] See hearings before Antitrust Subcommittee, House Committee on the Judiciary on H.R 264 and H.R. 2143 (Premerger Notification), pp. 146–171, 171 (85th Cong., 1st sess.). Data for 1958 was supplied to the Antitrust Subcommittee by letter from the Comptroller of the Currency, dated Mar. 16, 1959.

Source: Comptroller of the Currency.

Without in any way singling out the present incumbent—my remarks are applicable to his predecessors as well—it would appear, as the Attorney General has testified, that the office of the Comptroller of the Currency has tended to give little or no consideration to the question as to whether or not competition would be substantially lessened.[32]

THE APPROPRIATE FEDERAL BANK SUPERVISORY AGENCY MUST BE REQUIRED TO GIVE NOTICE TO THE ATTORNEY GENERAL

The obvious reason for failure to take competitive considerations adequately into account is lack of expertise in the antitrust field on the part of Federal bank supervisory agencies. The Comptroller of the Currency has stated and I quote him: "I have no competency in that (the antitrust) field. I do not know what the courts have done." [33]

Similarly, the Chairman of the Federal Reserve Board pointed out that administration of the banking laws was in an entirely different sphere than enforcement of the antitrust laws. He testified:

"The principal functions of the Federal Reserve System lie in the field of monetary and credit policy and bank supervision. The prosecuting and adjudicatory functions involved in the enforcement of the antitrust laws are only indirectly related to the Board's principal responsibilities. They are of a character quite different from the functions normally exercised by the Board in passing upon particular transactions in the bank supervisory field. In other words, enforcement of the antitrust laws and the function of bank supervision represent, we

[31] Id., pp. 171–172. Attorney General Brownell testified on this point as follows:

"Senator DOUGLAS. Mr. Brownell, when the same proposal was up before us last year I gathered some figures from the records of the Comptroller of the Currency on approving and disapproving mergers since 1950. My figure showed that there were 6 years, from 1950 to 1955, inclusive, in which he had approved 460 mergers, had formally disapproved 9, had informally disapproved 13; therefore, he had approved between 96 and 98 percent of all mergers during those 6 years.

"Could you tell me if these figures which I collected are approximately accurate, according to your knowledge?

"Mr. BROWNELL. Yes; they are. And I am not so sure that the 22 that were turned down were turned down on the ground of competitive factors."

Hearings before subcommittee, Senate Committee on Banking and Currency on Banking Laws, Financial Institutions Act of 1957, p. 1027 (85th Cong., 1st sess.).

[32] The Attorney General testified in part as follows:

"Senator DOUGLAS. In other words, up to date the Comptroller of the Currency has tended to give little or no weight to the question as to whether or not competition would be substantially less?

"Mr. BROWNELL. I believe that is a fact. And I think his own testimony indicates that."

Hearings before Antitrust Subcommittee, House Committee on the Judiciary on H.R. 264 and H.R. 2143 (Premerger Notification), p. 177 (85th Cong., 1st sess.).

[33] Hearings before Antitrust Subcommittee, Senate Committee on the Judiciary on S. 3341 et al. (Premerger Notification), p. 80 (84th Cong., 2d sess.).

believe, different spheres of governmental operation." [34]

As the Department of Justice has observed, failure to insure informed advice on competitive factors could have effects far beyond the banking field. Without (the Department's) right to intervene in bank mergers there might be as many different views of section 7 standards and scope as there were agencies charged with this enforcement. The result could well be disparities in view, which in turn, spell real enforcement inequities. Enforcement effectiveness as well requires some procedure for (the) Department's intervention. Otherwise in its overall responsibility for section 7's enforcement—outside of the banking area—(the) Department would be bound by bank merger precedents (it) had no voice in picking or shaping." [35]

In these circumstances, it would be little short of folly to require the appropriate Federal bank supervisory agency to obtain the views of the other two banking agencies, but not impose the same requirement in respect to seeking the informed advice of the Department of Justice—the agency specifically charged by Congress with responsibility for examining into competitive implications of proposed mergers. Actually, the Comptroller of the Currency testified before our subcommittee that he didn't really object to a provision requiring him to obtain the opinion of the Attorney General as to the antitrust implications of a proposed merger, provided it was submitted promptly or within a designated period.[36]

Furthermore, on the basis of past experience, unless a requirement of mandatory consultation with the Department is written into law, there is little, if any, likelihood that the Federal banking agencies will seek the informed advice of the Attorney General. Consider, for example, that although the Office of the Comptroller of the Currency approved some 731 mergers in the period from 1950 to 1958, many involving acute competitive problems, in only one instance did the Comptroller seek the Department's advice on the competitive effect of a particular bank merger problem. This was made clear in a letter from Assistant Attorney General Hansen to me, dated March 20, 1957, which reads as follows:

"In Attorney General Herbert Brownell's appearance before your subcommittee on March 6, 1957, it was requested that the Department furnish you with instances in which Comptroller of the Currency Ray M. Gidney sought advice from the Antitrust Division as to whether the effect of a given merger may be substantially to lessen competition or tend to create a monopoly. We have reviewed our records and find that in only one instance was the Department's advice sought on the competitive effect of a particular bank merger problem. In that instance, members of the Comptroller's staff conferred informally with the Division around the end of September 1956 on the proposed acquisition of the Peoples Saving Bank of Port Huron (Mich.) by the Michigan National Bank. This proposed acquisition has been subject to a rather thorough investigation because of Sherman Act as well as Clayton Act problems.

"In two other instances, the Comptroller's Office has forwarded information to the Division on bank mergers. On August 8, 1956, the proposed merger of Farmers & Merchants National Bank of Los Angeles and Security First National Bank of Los Angeles was brought to the Division's attention before the Comptroller had given his approval. It was with respect to this merger that I personally talked to Mr. Gidney on the telephone. Lack of section 7 jurisdiction because this transaction was consummated by an acquisition of assets precluded the Department from considering this matter under section 7. On August 17, 1956, the Comptroller called the Division's attention to his approval of the merger of the Delaware Valley Bank & Trust Co. of Bristol (Pa.) and the Philadelphia National Bank of Philadelphia.

"In three other instances, our records show that the Comptroller's office was notified of our interest in certain bank merger problems. Notice was given on January 5, 1955, on the Chase-Manhattan Bank merger; March 7, 1955, on the National City-First National Bank merger, and around the 1st of December 1956, on the pending New York bank holding company formation which is now before the Federal Reserve Board for approval. In the Chase-Manhattan and National City-First National Bank mergers, this Department specifically requested from the Comptroller's Office information or data relating to competitive aspects of these mergers. In the pending holding company problems, our requests for information have been mainly channeled through the Federal Reserve Board, the agency with primary jurisdiction over this matter under the Bank Holding Company Act of 1956. However, a recent information request has been made directly to the Comptroller's Office." [37]

As the Comptroller himself stated in a letter to me dated March 16, 1959:

"We have no established procedure with respect to obtaining the views of the Antitrust Division of the Department of Justice concerning the competitive consequences of bank mergers, but have on occasion, written to the Department. Should a situation arise in which we deemed it necessary to consult the Antitrust Division we would address a letter to it setting forth the facts. This Office would seek the views of the Department of Justice in respect of competitive considerations in cases in which it appeared that there might be involved a violation of the antitrust laws. During the years 1957 and 1958, we had no liaison with the Department of Justice with respect to competitive consequences of a proposed transaction."

WHERE THE CONTINUING INSTITUTION IS TO BE A STATE BANK, NOTICE TO THE STATE BANK SUPERVISOR SHOULD BE REQUIRED

The foregoing considerations are equally applicable in respect to obtaining the views of the appropriate State banking supervisor when the continuing institution is to be a State bank. In such cases it is as necessary to obtain the views of the appropriate local official as it is to obtain the views of the other two Federal banking agencies since the State supervisor usually will have special knowledge of local banking and other matters—factors which are of the highest degree of relevance to a determination as to whether final approval should be granted or withheld. Consequently, I deem it important that the bill be amended to require notification to the appropriate State bank supervisors where the proposed merger will result in creation of a State bank.

NEED FOR ADOPTION OF AN ANTITRUST SAVINGS CLAUSE

Section 11 of the Bank Holding Company Act provides that:

"Nothing herein contained shall be interpreted or construed as approving any act, action, or conduct which is or has been or may be in violation of existing law, nor shall anything herein contained constitute a defense to any action, suit, or proceeding pending or hereafter instituted on account of any prohibited antitrust or monopolistic act, action, or conduct."

Purpose of this section is to insure that no provision of the Bank Holding Company Act is to supersede any provision of any other Federal law, particularly those "designed to control monopoly or break up trusts." To quote from the Senate report on the bank holding bill:

"The bill provides that none of its provisions are to be construed as approving any act, action or conduct in violation of existing law. It also provides that nothing in the bill shall constitute a defense to any action, suit, or proceeding pending or later instituted on account of any prohibited antitrust or monopolistic act, action or conduct. In the opinion of your committee, approvals granted and action permitted under the provisions of this bill are not to supersede the provisions of other Federal laws, particularly those designed to control monopoly or break up trusts. For example, the Clayton Act has been judicially determined to apply to banks. Under the provisions of that act, the Federal Reserve Board has an administrative role to play in determining whether banks comply with the requirements of the Clayton Act. Under the provisions of this bill, any action taken by the Federal Reserve Board in accordance with its terms is not to interfere in any manner with the performance by the Board of such functions as may be assigned to it under the Clayton Act." [38]

Unless this same antitrust savings provision is made applicable to bank mergers, the contention would be advanced that S. 1062 has nullified the strictures of the Sherman Act forbidding any bank merger which results in an unreasonable restraint of trade or monopoly.

What is more, absence of such provision might perhaps render nugatory action that might be taken by the House Judiciary Committee in recommending legislation to plug the loophole in Clayton Act, section 7 so as to cover bank mergers accomplished by asset as well as stock acquisitions. This would necessarily follow if failure to include a savings clause was construed to mean that section 7's provisions dealing with bank mergers had been superseded by the present legislation.[39]

THE BILL SHOULD CONTAIN PROVISIONS FOR PUBLIC HEARINGS

In its present form, the bill, S. 1062, makes no provision for public hearings upon applications which may be filed. I am strongly of the opinion that the bill should be amended to include such a provision, at least in cases of disagreement between interested governmental bodies.

[38] Senate Banking and Currency Rept. No. 1095, p. 10 (84th Cong., 1st sess.).

[39] See hearings, House Committee on Banking and Currency on S. 1451 and H.R. 7026 (proposed Financial Institutions Act of 1957), p. 134 (85th Cong., 1st sess.). See also hearings before subcommittee, Senate Committee on Banking and Currency on proposed Financial Institutions Act of 1957, p. 1034 (85th Cong., 1st sess.).

The role of the public hearing in modern regulatory procedure is so fundamental as to require a little exposition or defense. A public hearing serves as a safeguard against arbitrary action; it assures interested parties of an opportunity to present their views, consonant with the dictates of due process; it provides a basis for evaluating the manner in which an agency applies the statutory standards under which it acts; it tends—especially in the circumstances envisaged by this bill, in which three different agencies will simultaneously carry out the objectives of the act—to encourage the development of uniformity in decisions. Most important, a public hearing provides the only adequate basis for judicial review—a testimonial record. In these respects, a public hearing both protects applicants against discriminatory denial of meritorious applications and safeguards the public interest against erosion of vital national principles.

Without provision for hearings, the public is deprived of its only practical opportunity for appraising the quality of regulation; interested parties may or may not be adequately heard; uniformity of regulatory policy is most difficult to achieve, and effective judicial supervision of agency action is greatly hampered. Arbitrary decisions could flourish virtually unchecked. Congress could have no assurance that the standards it promulgates would be administered in accordance with the congressional intent.

Presumably for all these reasons, the Bank Holding Company Act of 1956 does provide for public hearings in cases in which a governmental body expresses disapproval of a proposed acquisition of bank shares or assets. The provision for public hearings of the Bank Holding Company Act of 1956 should, I believe, be adapted to and included in S. 1062. As so amended, S. 1062 would provide that the Federal banking agency with which the application has been filed shall notify both of the other Federal banking agencies, the appropriate supervisory authority of the interested State, and the Attorney General, and that if any of these bodies or officials within 30 days disapproves the application in writing, the agency before which the application is pending shall schedule a hearing, at the conclusion of which it shall by order grant or deny the application in writing, the agency before which the application is pending shall schedule a hearing, at the conclusion of which it shall by order grant or deny the application upon the hearing record.

In conclusion, I am enclosing as an appendix to my testimony an amendment which contains the changes which I have recommended.

APPENDIX—RECOMMENDED AMENDMENT OF S. 1062

On page 2 strike out the entire sentence beginning with the words "In the case of a merger," on line 11 and insert in lieu thereof the following: "; and for that purpose shall give notice to the other two banking agencies referred to herein and to the appropriate supervisory authority of the interested State if the resulting bank is to be a State member bank (except a District bank) or a State nonmember insured bank (except a District bank) and shall allow thirty days within which the views and recommendations of such supervisory authorities may be submitted. The Comptroller, the Board of Governors of the Federal Reserve System, or the Corporation, as the case may be, shall not grant consent under this section to any merger, consolidation, acquisition of assets, or assumption of liabilities, where in any section of the country the effect thereof may be substantially to lessen competition, or to tend to create a monopoly, and shall not approve any merger, consolidation, acquisition of assets, or assumption of liabilities without first obtaining the views of the Attorney General with respect to such question. In each case the Attorney General shall submit his views and recommendations to the appropriate agency within thirty days.

"If either or both of the other banking agencies or the appropriate supervisory authority of the interested State or the Attorney General disapproves the application in writing within thirty days, the Comptroller, the Board of Governors of the Federal Reserve System, or the Corporation, as the case may be, shall notify in writing the applicant and the disapproving agency or agencies, or authority, or Attorney General of the date for commencement of a hearing by it on such application. Any such hearing shall be commenced not less than ten nor more than thirty days after the Comptroller, the Board of Governors of the Federal Reserve System, or the Corporation, as the case may be, has given written notice to the applicant of the action of the disapproving agency or agencies, authority, or Attorney General. The length of any such hearing shall be determined by the Comptroller, the Board of Governors of the Federal Reserve System, or the Corporation, as the case may be, but it shall afford all interested parties a reasonable opportunity to testify at such hearing. At the conclusion thereof, the Comptroller, the Board of Governors of the Federal Reserve System, or the Corporation, as the case may be, shall by order grant or deny the application on the basis of the record made at such hearing.

"Nothing herein contained shall be interpreted or construed as approving any act, action, or conduct which is or has been or may be in violation of existing law, nor shall anything herein contained constitute a defense to any action, suit, or proceeding pending or hereafter instituted on account of any prohibited antitrust or monopolistic act, action, or conduct."

Address by the Honorable John F. Kennedy, of Massachusetts, Before the National Association of County Officals

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 19, 1959

Mr. SHELLEY. Mr. Speaker, on Wednesday morning of this week, the National Association of County Officials was privileged to have Senator JOHN F. KENNEDY, of Massachusetts, address them on the very vital subject of urban problems and the place of the county in helping to solve these problems. I would like to call the attention of the Members to this address and urge them to give serious consideration to the proposals contained in the talk.

Under leave to extend my remarks in the RECORD, I am very happy to include this distinguished address by the Honorable JOHN F. KENNEDY, of Massachusetts:

REMARKS OF SENATOR JOHN F. KENNEDY, DEMOCRAT, OF MASSACHUSETTS, BEFORE THE NATIONAL ASSOCIATION OF COUNTY OFFICIALS, WASHINGTON, D.C., MARCH 18, 1959

It is a real privilege and a great honor to have this opportunity to participate in the Nation's first urban county congress. I know that this historic meeting will be of tremendous benefit to our Nation, its county government, and its urban citizens—and I am grateful that your executive director, Bernard Hillenbrand has asked me to participate in this meeting with you. I particularly appreciate your hospitality at this hour of the morning—in Massachusetts such a gathering would not be possible on the morning after St. Patrick's Day. But I will do my best to turn my attention from the old days in County Cork to the new problems of county government.

I do not, however, pose here today as an expert on the intricacies and organization of county government. In my own State of Massachusets, local government is more prominent at the town and city level than in the county. And much of my life is spent here in the District of Columbia—which is not only countyless but voteless. In short, there is much I want to learn from you, in my visits with you today, about the problems and needs of county government.

But the entire Congress is particularly concerned this year with the problems of our metropolitan regions. No more difficult challenge confronts us on the domestic scene. The need for new legislative programs—to meet the growing problems of our growing cities—is becoming increasingly pressing. Already, 60 percent of all Americans live in urban counties—more than 100 million people. By the year 2000, it is predicted that this figure will rise to more than 300 million. The problems created by this tremendous population explosion, with literally hundreds of thousands of people spilling over from the cities into the counties, constitute a formidable challenge for the 86th Congress.

Thirteen million housing units occupied today by American families—living mostly in urban areas—are judged by objective census criteria to be substandard, unsafe, or unsanitary. In city after city, traffic is strangled—public transportation offers less service for higher cost—schools, hospitals and public health clinics are dangerously overcrowded—the air we breathe and the water we drink are dangerously polluted—and so on down a long list already familiar to you.

The growth of urban areas, spreading into the counties—and the growth of urban problems, also spreading into the counties—are both reflected in the dull, dry but revealing statistics of county government in this country. We see it in the tremendous increase in your payrolls with the great bulk of employees engaged in such activities as health and hospitals, highways, public welfare, police and correction, parks and recreation, libraries and education. Many county governments have for the first time been forced to borrow money—learning to their sorrow that it now costs more to obtain such funds while the money doesn't go as far when it is spent.

This means many services are cut back and others denied at a time they should be expanding. It also means long hours and low pay for yourselves and your associates and your employees.

The Congress is aware of these problems, though not always sufficiently aware of their magnitude. And those of us in the Congress who come from urban areas have worked on programs to aid our cities in the solution of these problems. But the point I want to make today is that these are no longer strictly city problems. The Congress should no longer think in terms of city needs alone. We must look also to the county and to combined city-county cooperation.

For the stream that pollutes the city's health pollutes the county as well. The airport that serves the city also serves the surrounding area. The deadly blight we call slum housing spreads slowly but inexorably to the city limits and then to the suburbs. The decline of public transit harasses commuters from the country as well as shoppers

in the city. The highway clogged in the city is soon clogged out in the county. Hospitals, libraries, parks, schools, clinics, and civil defense programs—these and other important governmental services concern needs which extend beyond outmoded city limits.

In short, it is only on the TV western that a city can solve its problems by ordering a gunman to be outside the city limits by sundown. Pushing a problem outside the city limits is no longer a solution. For today the city and the county are inextricably linked—they face the same problems and the same pressures. We can no longer collect garbage in the city and dump it in the county. We can no longer use tax gimmicks in the county to bring industries out from the city. Neither our cities nor our counties can avoid their problems by shifting them upon the other—the problems must be faced together or not at all.

Certainly the primary responsibility cannot rest upon our State legislatures, which have proved themselves to be too frequently unresponsive to the needs of our urban areas; for in the absence of real and effective reapportionment our gerrymandered State legislatures will continue to reflect the rural dominance of the 19th century. Nor can complete responsibility be placed upon the Federal Government, which will never be as effective as local government in meeting your needs or even in being alert to them.

In short, it is clear that our city governments cannot always assume the sole responsibility for the solution of these pressing urban problems. I repeat, they cannot, our State governments will not, the Federal Government should not, and, therefore, you on the county level must. It is up to the counties and similar area governments to play a more important role in the solution of these urban problems.

The exact nature and design of those solutions have already been thoroughly discussed in your earlier meetings. The question remaining is: what will be the role of the Federal Government in helping you on the local level meet these pressing needs? You are already familiar with the restrictions placed on your efforts by State governments.

Similar problems are encountered on the Federal level. Federal aid funds, which are largely raised by taxes in these very urban areas, are not always distributed fairly to such areas on the basis of need and numbers. Federal and State governments combined have preempted the best sources of tax revenue—our counties are still largely dependent upon the property tax, with all its limitations—and, to add insult to injury, the continuing growth of Federal installations at the same time removes the property from your tax rolls while as yet no equitable method of payments in lieu of taxes has been devised. I hope this Congress will come up with an equitable payment in lieu of taxes proposed, and end this constant confusion and inequitable hardship for once and for all.

But how large a role should the Federal Government play? I recognize the complaints among local government officials against centralization in Washington. I myself am not a believer in the omnipotence of Federal bureaucracy. I see no magic attaching to tax money which has flowed to Washington and then back again. But whatever current political arguments may rage about spenders versus savers, about balanced budgets versus deficits, I believe any objective student would agree with this one basic premise—a premise which has been true through the years regardless of which party is in control—and that is that Congress assumes responsibility for only those problems which State and local governments have been unable or unwilling to handle themselves.

In short, if we are to obtain a greater degree of responsibility for local government, then it is up to you on the local level to demonstrate that you are able and willing to assume that responsibility. It is not enough to say that you are willing to take on new assignments. The Congress will not yield vital public functions affecting our Nation's strength to uninterested State legislatures—they will not yield them to ineffective, hamstrung city governments—and neither will they yield them to inefficient county governments.

For I know that you will be the first to agree that there are too many county governments in this country that were designed by their legislatures for a simpler rural atmosphere. There are too many counties in this country which are organized in an almost headless and formless fashion, with no single executive responsibility for effective coordinated administration. There are too many counties in this country where—just as 50 years ago—the spoils system is still rampant, the voters are still indifferent and the public business is still neglected.

I realize that the fault lies more with our State legislatures than with the county governments themselves. And I realize that it is up to the voters of each State to demand for themselves the kind of efficient, well-organized government they deserve. But I am addressing this appeal to you—because your attendance here demonstrates your enlightened leadership in the solution of these problems. You are demonstrating that county governments can be alert to the needs of its citizens—that it can plan for the future growth of this Nation—that it can emphasize cooperation, instead of duplication, with other counties and other levels of government. If this same kind of spirit can prevail throughout the more than 3,000 counties of this Nation, then we will be well on the road to achieving a larger role for local American Government.

In short, it is not enough to complain on the State and the local level about the growth of Washington bureaucracy—about the size of the Federal deficit—or about the number of hands through which each tax dollar must pass. For the answer to these problems to a large extent rests with our State and local governments, themselves, and their ability to adapt themselves to the challenge of the mid-20th century. I know that those of you who are here today will do your utmost to live up to your trust and meet this challenge.

Let me conclude by emphasizing one point. These problems of streamlining our Government, making the most of our potential growth, strengthening the core of our Nation and building a better, wiser, stronger America—these are not merely questions of party politics or even governmental philosophy. Today they affect the very question of survival itself.

That, after all, is the real question of our time. The hard, tough question for the next decade—for this or any other group of Americans—is whether any free society—with its freedom of choice—its breadth of opportunity—its range of alternatives—can meet the singleminded advance of the Communists.

Can a nation organized and governed such as ours endure? That is the real question. Have we the nerve and the will? Can we carry through in an age where we will witness not only new breakthroughs in weapons of destruction—but also a race for mastery of the sky and the rain, the ocean and the tides, the far side of space and the inside of men's minds?

We travel today along a knife-edged path which requires leadership better equipped than any since Lincoln's day to make clear to our people the vast spectrum of our challenges.

In the words of Woodrow Wilson: "We must neither run with the crowd nor deride it—but seek sober counsel for it—and for ourselves."

SENATE

FRIDAY, MARCH 20, 1959

Rev. Father Joseph F. Thorning, D.D., pastor of St. Joseph's Church, Carrollton Manor, Md., offered the following prayer:

Heavenly Father, author of life and of love, let the light of Thy countenance shine brightly upon the Presiding Officer of the Senate and all the Members of the U.S. Congress.

Impart, we beseech Thee, Thy best blessings to the President of our beloved country, and to all the peoples and governments united to uphold freedom, genuine social progress, and the precious values of our Judaeo-Christian heritage.

In an hour of peril, grant that Thy inspiration and the example of the Founding Fathers of this Republic may strengthen us to endure the gravest hardships, rather than to abandon our friends to a slavery that, if we quail, will be our own destiny.

In our devotion to these ideals, dear Saviour, we implore new gifts of wisdom, courage, resourcefulness, and imagination, characteristic of men and women of prayer, that we may grow in Thy friendship and in our love for one another.

We humbly seek Thy daily graces, in the name of our Lord and Saviour, Jesus Christ. Amen.

THE JOURNAL

On request of Mr. MANSFIELD, and by unanimous consent, the reading of the Journal of the proceedings of Thursday, March 19, 1959, was dispensed with.

TRIBUTE TO THE REVEREND FATHER JOSEPH F. THORNING, D.D.

Mr. MANSFIELD. Mr. President, I wish to express my personal appreciation that the Reverend Joseph F. Thorning, one of America's greatest experts in the field of Latin American affairs, gave the invocation in the Senate today. He is a man of widespread reputation throughout the Americas. He has made many contributions to better understanding between the states which comprise the hemisphere; and I believe we are indeed fortunate that this distinguished scholar and world-famous priest has delivered the invocation in the Senate today.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its

clerks, announced that the House had passed the bill (S. 1) to amend the Federal Airport Act in order to extend the time for making grants under the provisions of such act, and for other purposes, with an amendment, in which it requested the concurrence of the Senate.

COMMITTEE MEETINGS DURING SENATE SESSION

On request of Mr. MANSFIELD, and by unanimous consent, the Constitutional Rights Subcommittee of the Committee on the Judiciary, the Antitrust and Monopoly Subcommittee of the Committee on the Judiciary, and the Committee on Government Operations were authorized to meet during the session of the Senate today.

LIMITATION OF DEBATE DURING MORNING HOUR

Mr. MANSFIELD. Mr. President, under the rule, there will be the usual morning hour for the introduction of bills and the transaction of other routine business. I ask unanimous consent that statements in connection therewith be limited to 3 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The VICE PRESIDENT laid before the Senate the following letters, which were referred as indicated:

REPORT ON REVIEW OF SUPPLY AND PROCUREMENT ACTIVITIES OF THE EIGHTH UNITED STATES ARMY, KOREA

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the review of selected supply and related disposal and procurement activities of the 8th United States Army, Korea, dated March 1959 (with an accompanying report); to the Committee on Government Operations.

REPORT ON ACTIVITIES OF, EXPENDITURES BY, AND DONATIONS TO LIGNITE RESEARCH LABORATORY, GRAND FORKS, N. DAK.

A letter from the Assistant Secretary of the Interior, reporting, pursuant to law, on the activities of, expenditures by, and donations to the Lignite Research Laboratory, Grand Forks, N. Dak., for the calendar year 1958; to the Committee on Interior and Insular Affairs.

REPEAL OF HONORARIUM PROVISION OF SECTION 4 OF COMMUNICATIONS ACT OF 1934

A letter from the Chairman, Federal Communications Commission, Washington, D.C., transmitting a draft of proposed legislation to repeal the honorarium provision in subsection (b) of section 4 of the Communications Act of 1934, as amended (with accompanying papers); to the Committee on Interstate and Foreign Commerce.

AMENDMENT OF COMMUNICATIONS ACT OF 1934, RELATING TO PRESENTATION IN CERTAIN CASES

A letter from the Chairman, Federal Communications Commission, Washington, D.C., transmitting a draft of proposed legislation to amend section 409(c) of the Communications Act of 1934, as amended, with respect to presentations in any case of adjudication which has been designated for a hearing by the Federal Communications Commission (with accompanying papers); to the Committee on Interstate and Foreign Commerce.

PETITIONS AND MEMORIALS

Petitions, etc., were laid before the Senate, and referred as indicated:

By the VICE PRESIDENT:

A resolution of the Senate of the State of Utah; to the Committee on Interior and Insular Affairs:

"S. R. 5

"Resolution objecting to limitation of public lands

"Whereas under the Recreation Act of June 14, 1926, as now amended and in effect, the Secretary of the Interior is limited to not more than 640 acres of the public lands of the United States which may be conveyed to any one grantee in any one calendar year; and

"Whereas this limitation is a severe handicap to the State of Utah and to the Utah State Park and Recreation Commission in the development of its planned State park system, and in the acquisition, preservation, and protection of areas which should be incorporated into and protected by said State park system: Now, therefore, be it

"Resolved by the Senate of the 33d Legislature of the State of Utah, That the President of the United States and the Congress of the United States be memorialized to amend the Recreation Act of June 14, 1926, as amended, to authorize the Secretary of the Interior to convey to a State, without acreage or other limitation, any public lands within such State for State park and recreation purposes; be it further

"Resolved, That certified copies of this resolution be transmitted by the secretary of state to the President of the United States, to the Presiding Officer of the United States Senate, to the Speaker of the House of Representatives, and to the Senators and Representatives from the State of Utah."

A resolution of the House of Representatives of the State of Utah; to the Committee on Interior and Insular Affairs:

"H.R. 5

"Resolution memorializing Congress and the President to remove the limitation on the number of acres of public lands which the State may acquire

"Whereas under the Recreation Act of June 14, 1926, as now amended and in effect, the Secretary of the Interior is limited to not more than 640 acres of the public lands of the United States which may be conveyed to any one grantee in any one calendar year; and

"Whereas this limitation is a severe handicap to the State of Utah and to the Utah State Park and Recreation Commission in the development of its planned State park system, and in the acquisition, preservation and protection of areas which should be incorporated into and protected by said State park system: Now, therefore, be it

"Resolved by the House of Representatives of the State of Utah, That the President of the United States and the Congress of the United States be memorialized to amend the Recreation Act of June 14, 1926, as amended, to authorize the Secretary of the Interior to convey to a State, without acreage or other limitation, any public lands within such State for State park and recreation purposes; be it further

"Resolved, That certified copies of this resolution be transmitted by the secretary of state to the President of the United States, to the Presiding Officer of the United States Senate, to the Speaker of the House of Representatives, and to the Senators and Representatives from the State of Utah."

EXECUTIVE REPORT OF A COMMITTEE

As in executive session,

The following favorable report of a nomination was submitted:

By Mr. BYRD of Virginia, from the Committee on Finance:

J. Allen Overton, Jr., of West Virginia, to be a member of the United States Tariff Commission.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. STENNIS:

S. 1477. A bill to authorize the improvement of Natchez Harbor, Miss.; to the Committee on Public Works.

By Mr. EASTLAND:

S. 1478. A bill to amend the Federal Crop Insurance Act; to the Committee on Agriculture and Forestry.

S. 1479. A bill to amend title 38 of the United States Code so as to permit payment of pension to the widow of a Civil War veteran who remarried if such remarriage has terminated; to the Committee on Finance.

S. 1480. A bill to amend section 7 of the War Claims Act of 1948; to the Committee on the Judiciary.

By Mrs. SMITH:

S. 1481. A bill to authorize certain improvement of the Stonington Harbor, Maine; to the Committee on Public Works.

By Mr. CARLSON:

S. 1482. A bill relating to rates of postage on third-class matter mailed by certain nonprofit organizations; to the Committee on Post Office and Civil Service.

By Mr. HUMPHREY:

S. 1483. A bill for the relief of John C. Matlon; to the Committee on the Judiciary.

By Mr. CARLSON (for himself, Mr. MORSE, Mr. MAGNUSON, Mr. NEUBERGER, Mr. CURTIS, Mr. CASE of South Dakota, Mr. JACKSON, and Mr. CHAVEZ):

S. 1484. A bill to amend the Agricultural Adjustment Act of 1938, as amended; to the Committee on Agriculture and Forestry.

(See the remarks of Mr. CARLSON when he introduced the above bill, which appear under a separate heading.)

By Mr. CASE of South Dakota:

S. 1485. A bill to place in trust status certain lands on the Crow Creek Indian Reservation in South Dakota; to the Committee on Interior and Insular Affairs.

By Mr. MARTIN:

S. 1486. A bill to modify the project for the Coralville Reservoir on Iowa River in Iowa in order to provide for a highway bridge across Coralville Reservoir; to the Committee on Public Works.

By Mr. COOPER:

S. 1487. A bill to amend section 9 and 40 of the United States Employees' Compensation Act, as amended; to the Committee on Labor and Public Welfare.

By Mr. MANSFIELD (for himself and Mr. MURRAY):

S. 1488. A bill providing for payments as incentives for the production of manganese; to the Committee on Interior and Insular Affairs.

By Mr. KEATING:

S. 1489. A bill to amend title 28 of the United States Code to provide for certain judicial review of administrative removals and suspensions of Federal employees; and

S. 1490. A bill to permit judicial review of decisions of the Administrator of Veterans' Affairs; to the Committee on the Judiciary.

(See the remarks of Mr. KEATING when he introduced the above bills, which appear under separate headings.)

PRINTING AS A SENATE DOCUMENT THE PROCEEDINGS AT ACCEPTANCE OF STATUE OF JOSEPH WARD

Mr. CASE of South Dakota submitted the following concurrent resolution (S. Con. Res. 18), which was referred to the Committee on Rules and Administration:

Resolved by the Senate (the House of Representatives concurring), That the proceedings at the presentation, dedication, and acceptance of the statue of Joseph Ward, to be presented by the State of South Dakota in the rotunda of the Capitol, together with appropriate illustrations and other pertinent matter, shall be printed as a Senate document. The copy for such Senate document shall be prepared under the supervision of the Joint Committee on Printing.

SEC. 2. There shall be printed three thousand additional copies of such Senate document, which shall be bound in such style as the Joint Committee on Printing shall direct, and of which 100 copies shall be for the use of the Senate and 1,200 copies shall be for the use of the Members of the Senate from the State of South Dakota, and 500 copies shall be for the use of the House of Representatives and 1,200 copies shall be for the use of the Members of the House of Representatives from the State of South Dakota.

THANKS OF CONGRESS TO STATE OF SOUTH DAKOTA FOR STATUE OF JOSEPH WARD

Mr. CASE of South Dakota submitted the following concurrent resolution (S. Con. Res. 19), which was referred to the Committee on Rules and Administration:

Resolved by the Senate (the House of Representatives concurring), That the statue of Joseph Ward, presented by the State of South Dakota, to be placed in the Statuary Hall collection, is accepted in the name of the United States, and that the thanks of the Congress be tendered said State for the contribution of the statue of one of its most eminent citizens, illustrious for his leadership as author of the State's motto, framer of the Territorial School Law, founder of the first college, and outstanding churchman in the founding of Christian churches among whites and Indians; and be it further

Resolved, That a copy of these resolutions, suitably engrossed and duly authenticated, be transmitted to the Governor of South Dakota.

WHEAT STABILIZATION ACT OF 1959

Mr. CARLSON. Mr. President, on February 19, 1959, I introduced Senate bill 1140, which might be cited as the Wheat Stabilization Act of 1959. The bill was cosponsored by Senators MORSE, MAGNUSON, NEUBERGER, CURTIS, CASE of South Dakota, JACKSON, and CHAVEZ.

Some changes and corrections should be made in this bill, in order to conform to a similar bill which was introduced in the House of Representatives. Therefore, on behalf of the same cosponsors, and myself, I introduce a new bill in lieu of the bill heretofore introduced, and ask for its appropriate reference. I also ask that consideration of the previously introduced bill be postponed indefinitely.

The PRESIDING OFFICER (Mr. WILLIAMS of New Jersey in the chair). The bill will be received and appropriately referred; and, without objection, Senate bill 1140 will be indefinitely postponed.

The bill (S. 1484) to amend the Agricultural Adjustment Act of 1938, as amended, introduced by Mr. CARLSON (for himself, Mr. MORSE, Mr. MAGNUSON, Mr. NEUBERGER, Mr. CURTIS, Mr. CASE of South Dakota, Mr. JACKSON, and Mr. CHAVEZ), was received, read twice by its title, and referred to the Committee on Agriculture and Forestry.

JUDICIAL REVIEW OF EMPLOYEE DISCHARGE CASES

Mr. KEATING. Mr. President, I introduce for appropriate reference a bill to provide procedures for judicial review of administrative removals and suspensions of Federal employees.

Under the law today all Government employees must go to the district court in the District of Columbia for review of decisions affecting their employment. In my opinion, these people, who are scattered all over the country, should not be forced to travel all the way to Washington to appeal their cases. My bill would give all Federal district courts jurisdiction to review decisions involving employees residing in that particular district.

The bill is designed to correct another glaring defect in the procedure for reviewing discharges of Government employees. At present, a discharged employee, who has reason to believe his discharge was arbitrary, must go to the district court for a determination of whether he should be reinstated, but that court cannot award him back pay even if it holds in his favor. The employee must bring a separate suit for back pay in the Court of Claims. That has meant duplication of effort and expense not only to the employee but to the Government. And since neither court is bound by the decision of the other, inconsistent results have been reached in the identical case.

My bill would remedy this situation by giving the Federal district court jurisdiction to consider both reinstatement and the claim for back pay all in one action.

The bill would in no way encourage the courts to sit as a sort of super Civil Service Commission. It is not the function of the Federal courts to determine the suitability or competency of an employee for a particular position. These have always been regarded as administrative matters and nothing in the bill would alter this concept.

This bill is simply designed to implement procedural rights already granted Federal employees by many congressional enactments. Certainly such statutory rights should be safeguarded by the courts when necessary. Enactment of this measure would remove the obstacles which now render difficult the effective judicial review of employee discharges.

Mr. President, I request that the text of the bill be printed following my remarks in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1489) to amend title 28 of the United States Code to provide for certain judicial review of administrative removals and suspensions of Federal employees, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 85 of title 28 of the United States Code is amended by adding at the end thereof the following:

"§ 1361. Removal and suspensions of Federal employees

"The district courts of the United States, the District Court for the Territory of Alaska, the United States District Court for the District of the Canal Zone, the District Court of Guam, and the District Court of the Virgin Islands shall have jurisdiction of appeals of civilian employees in the executive branch of the Federal Government (1) for reinstatement or restoration to duty following final action by the appropriate administrative authority for the removal or suspension without pay from the service or (2), concurrently with the Court of Claims, for compensation as provided by law for the period of such removal or suspension, or (3) for both such reinstatement or restoration and compensation.

"Any such appeal shall be filed within sixty days after the date of the final administrative action in that court within the jurisdiction of which the employee is employed or in the District Court for the District of Columbia.

"Action for such appeal may be brought against the appropriate officer or agency of the United States and service of process upon such officer or agency may be made at any place in the United States.

"The administrative record of the case, except for matters which are privileged or confidential, shall be filed with the court by the officer or agency concerned.

"The decision of any such court shall be subject to review as provided for such court in this title.

"Nothing contained in this section shall affect the scope of review of any court in actions under this section."

JUDICIAL REVIEW OF DECISIONS OF VETERANS' ADMINISTRATION

Mr. KEATING. Mr. President, I introduce, for appropriate reference, a bill to permit judicial review of decisions of the Administrator of Veterans' Affairs.

Under the present law, judicial review of such decisions is denied on the ground that the benefits accorded to veterans under various Federal laws are mere bounties or gifts. I do not accept that theory. The benefits accorded veterans, many of whom have placed their lives in jeopardy in the service of their country, should not be regarded as a matter of munificence. It is true, of course, that the granting or withholding of such benefits is a matter within the discretion of Congress itself, but it does not follow from this that the administration of these benefits should be left to the un-

challengeable discretion of any Government bureau.

The proceedings for judicial review under this bill parallel those applicable to the review of other administrative agency determinations. They are designed to afford expeditious judicial consideration of decisions of the Veterans' Administration without overburdening the courts with the necessity for rehearing the evidence presented.

The very least we can do for our veterans is to give them a day in court when they become involved in controversies with Government agencies.

This bill should receive early consideration in the Senate.

Mr. President, I ask unanimous consent that the text of the bill be printed following my remarks in the RECORD.

The PRESIDING OFFICER. The bill will be received and appropriately referred; and, without objection, the bill will be printed in the RECORD.

The bill (S. 1490) to permit judicial review of decisions of the Administrator of Veterans' Affairs, introduced by Mr. KEATING, was received, read twice by its title, referred to the Committee on the Judiciary, and ordered to be printed in the RECORD, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding any other provision of law, any person aggrieved by any final decision of the Administrator of Veterans' Affairs (hereinafter referred to as the "Administrator") which has been rendered by the Board of Veterans Appeals, may obtain a review thereof by filing a petition for review in the court of appeals for the circuit in which the petitioner resides or in the Court of Appeals for the District of Columbia within ninety days after the mailing of notice of the decision to the aggrieved party. A copy of such petition shall forthwith be served upon the Administrator. Within fifteen days after the receipt of service, or within such additional time as the court may allow, the Administrator shall certify and file with the court a transcript of the record upon which the decision complained of was based. Upon the filing of such transcript the court shall have exclusive jurisdiction to review the decision, and to affirm, modify, or reverse it in whole or in part. The findings of the Administrator as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Administrator, the court may order such additional evidence to be taken before the Administrator upon such terms and conditions as the court may deem proper. The Administrator may modify his findings as to the facts, or make new findings, by reason of the additional evidence so taken. He shall file with the court a transcript of the additional record, with his modified or new findings, which, if supported by substantial evidence. shall be conclusive, and his recommendation for the affirmance, modification, or reversal of the original decision. The judgment and decree of the court affirming, modifying, or reversing, in whole or in part, any decision of the Administrator shall be final, except that it shall be subject to review by the Supreme Court of the United States as provided by title 28, United States Code, section 1254.

SEC. 2. Notwithstanding any other provision of law, the court may determine and allow such reasonable fees as it may deem proper for services rendered by an attorney for any private party to the proceeding. Any person who charges or receives any compensation for such services, except such compensation as may be allowed by the court, shall be punished by a fine of not more than $500 or imprisonment for not more than one year, or both.

COMPETITIVE BIDDING IN PROCUREMENT OF PROPERTY AND SERVICES BY ARMED FORCES—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of March 12, 1959, the names of Senators BUSH, SCHOEPPEL, BUTLER, WILEY, AIKEN, FREAR, CASE of New Jersey, CARLSON, JAVITS, and KEATING were added as additional cosponsors of the bill (S. 1383) to require the use of competitive bidding to the greatest practicable extent in the procurement of property and services by the Armed Forces through the establishment by the Secretary of Defense of specific standards governing the use of negotiated contracts for such procurement, and for other purposes, introduced by Mr. WILLIAMS of Delaware (for himself and Senators BRIDGES, ALLOT, MANSFIELD, and DWORSHAK), on March 12, 1959.

AUTHORITY OF STATES TO CONTROL WATER WITHIN THEIR BOUNDARIES—ADDITIONAL COSPONSORS OF BILL

Under authority of the order of the Senate of March 16, 1959, the names of Senators BENNETT, CASE of South Dakota, MUNDT, DWORSHAK, and HRUSKA were added as additional cosponsors of the bill (S. 1416) to recognize the authority of the States relating to the control, appropriation, use, or distribution of water within their boundaries, and for other purposes, introduced by Mr. MOSS on March 16, 1959.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the RECORD, as follows:

By Mr. DODD:

Address delivered by Senator JOHNSON of Texas at Jefferson-Jackson dinner, Hartford, Conn.

By Mr. HUMPHREY:

Address entitled "The Works of Peace," delivered by him before the National Council of Jewish Women in Washington on March 10, 1959.

DISPOSAL OF PERSONAL PROPERTY OF GOVERNMENT EMPLOYEES IN FOREIGN COUNTRIES

Mr. MANSFIELD. Mr. President, in June of 1958, I made public a letter to the Honorable William B. Macomber, Jr., Assistant Secretary of State for Congressional Relations. In that letter I called attention to certain press reports from Pakistan. Those reports indicated that MAAG, ICA, and State Department personnel and others directly or indirectly employed by the Government had engaged in the disposal of their personal property on the markets of Pakistan at prices vastly exceeding the value of the articles. At that time I asked for a detailed report covering the nature and extent of oversea disposal of personal property.

Since June, the Department of State has, from time to time, made available to me such reports. I ask unanimous consent that my entire correspondence with the Department of State concerning this practice be printed in the CONGRESSIONAL RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. MANSFIELD. Mr. President, this correspondence shows that during the 12-month period from January 1 to December 31, 1957, 186 U.S. Government employees sold a total of almost $678,000 worth of personal property in Pakistan—an average of $3,644 per employee. Similar data for the 11-month period from January 1 to November 30, 1958, reveal that a total of 275 employees, leaving Pakistan during that time, sold personal property in the amount of $565,000—or an average of $2,054 per employee. Recently, I received the figures for December 1958, which indicate that 30 employees departing Karachi converted rupees totaling $15,185, for an average of $506 per employee.

When dubious practices regarding personal property disposal were brought to its attention, the Department of State showed a commendable initiative in recognizing the considerations of foreign relations which are involved in this matter. The Department established an interdepartmental committee to study the subject, and this study has resulted in a report entitled "Guide for Use in Developing Uniform Regulations for a Particular Country Relative to the Importation and Disposal of Personal Property, the Acquisition and Conversion of Local Currency and the Importation, Operation, and Disposal of Motor Vehicles." The report points the way to a sensible procedure for official employees to follow regarding disposal of personal property which they do not desire to take with them when they leave a post abroad. I hope it will result in worldwide improvement of the dubious practices of personal property disposal which, as I pointed out in my initial letter, have heretofore existed in many countries.

Mr. President, for my part I consider this matter closed. I express the hope that the Department of State will continue to maintain a watchful eye on this situation, not only as it involves employees of that Department, but also as it involves military and all other official U.S. personnel abroad, as well as employees of contractors engaged by this Government for work abroad.

Mr. President, on this occasion I wish to commend the Honorable William B. Macomber, Jr., Assistant Secretary of State for Congressional Relations, and the Department of State for their attitude in regard to this matter, and for their efforts and endeavors to bring about a rectification of a situation which could do nothing but bring harm to our country.

EXHIBIT 1

JUNE 13, 1958.

Hon. WILLIAM B. MACOMBER, JR.
Assistant Secretary for Congressional Relations, Department of State, Washington, D.C.

DEAR MR. SECRETARY: Recent press reports have suggested that U.S. Government employees serving abroad and U.S. citizens employed abroad under contracts financed by the U.S. Government have from time to time been able to reap windfall profits by the expedient of selling on the local markets goods which they have imported from the United States. Apparently this practice is indulged in especially when such persons terminate their tours of duty, or, in some instances when they import duty-free items in excess of their personal needs.

I have in mind in particular press reports from Pakistan to the effect that MAAG, ICA, and State Department personnel and contractors' employees have from time to time disposed of personal property on the markets of Pakistan at prices vastly exceeding the value of the articles sold and that the foreign currencies received from these articles have then been converted into dollars for deposit in the United States. I know from personal observation, however, that similar practices exist in many countries.

It seems to me that trading of this kind detracts from the dignity with which Americans abroad should conduct themselves and therefore has an adverse effect on the conduct of our foreign policy. Furthermore, in many countries the local demand and resultant high prices for American goods is attributable in part to import controls which the United States has encouraged so that scarce foreign currencies in those countries can be utilized to promote much needed economic development. Thus, Americans who dispose of their personal American goods on local markets at inflated prices in effect are circumventing the very controls which the United States as a matter of official policy wishes to encourage.

As you know, outbreaks of anti-American sentiment in foreign countries have become increasingly common in recent years. Although some of these outbreaks are attributable to Communist inspiration, I have little doubt that some of this anti-Americanism can be traced to such factors as the number of Americans serving abroad, the ostentation with which some of our citizens live, and practices of the kind reported from Pakistan and elsewhere.

I would appreciate it if the Department of State, because of our Ambassadors' overall responsibility at missions abroad, would take the initiative in preparing for me a report covering the nature and extent of the overseas disposal of personal property by all officially employed Americans and a separate such report with respect to contractors' employees. Such report should include, post by post, figures or estimates, if precise figures are not available, of the U.S. dollar value of personal property sold during the past calendar year, broken down to show the reasonable resale value in the United States of such items in contrast with the prices received for sale abroad.

I should also be interested in receiving the Department's comments on whether profits of the type covered in this activity are taxable, whether the Department believes these practices are of such a nature and extent as to require remedial action or legislation, and, if so, what remedial action the Department proposes to take or what legislation the Department would recommend.

Sincerely yours,

MIKE MANSFIELD,
Chairman, Subcommittee on State Department, Organization and Public Affairs.

DEPARTMENT OF STATE,
Washington, July 1, 1958.

Hon. MIKE MANSFIELD,
Chairman, Subcommittee on State Department Organization and Public Affairs, Committee on Foreign Relations, U.S. Senate.

DEAR SENATOR MANSFIELD: Your letter of June 13, 1958, in which you refer to recent press reports suggesting that certain U.S. Government employees and contract personnel serving abroad have profited unduly from the sale of personal property, has been received and noted.

At most posts abroad no record is kept of sales of personal property of Foreign Service or other U.S. agency personnel. However, in countries where the currency is controlled and export is forbidden, as in Pakistan, records are necessarily maintained as exchanges of local currency for dollars are made through the Embassy disbursing officers. Therefore, it would be possible to obtain records from such posts.

If problems exist along the lines suggested by the press, the Department of State in its role of coordinator for all foreign affairs activities, will indeed be most anxious to ascertain evidences of any questionable practices, regardless of which agency is represented, and will endeavor to take steps to stop such practices. It is believed, at this point, that any malpractices which may exist can be controlled by administrative procedures.

In this connection I am attaching for your information the following regulations which are designed to control practices such as those you question: 1 FSM IV, section 626; 1 FSM V, section 370. Our Embassy in Karachi has already taken steps to reinforce the application of these regulations and add such additional restrictions as may be required by the local situation. There is also attached a set of pertinent regulations issued by the American Embassy in Karachi. Also, the Embassy has been asked for complete records on all exchanges of rupeees for dollars resulting from sale of personal property by U.S. Government employees and contract personnel serving in the Karachi area.

A report will be forwarded to you as soon as it can be prepared.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

(Enclosures: (1) Foreign Service Regulations (omitted); (2) Embassy Karachi Regulations (omitted).)

JULY 9, 1958.

Hon. WILLIAM B. MACOMBER, Jr.,
Assistant Secretary for Congressional Relations, Department of State, Washington, D.C.

DEAR MR. SECRETARY: Thank you for your letter of July 1, 1958, telling me of the Department's activities in connection with reports of questionable practices regarding the acquisition and disposal of personal property by U.S. employees serving overseas. I appreciate very much the vigor with which the Department seems to be pursuing this matter.

I had contemplated bringing this matter to the attention of the Secretary of Defense with the thought that he might wish to have the Inspector General examine the situation with respect to activities of military personnel overseas. I have not done so as yet. If you think a request of this kind might be helpful, I would be glad to do so.

Sincerely yours,

MIKE MANSFIELD,
Chairman, Subcommittee on State Department, Organization and Public Affairs.

DEPARTMENT OF STATE,
Washington, July 28, 1958.

Hon. MIKE MANSFIELD,
Chairman, Subcommittee on State Department Organization and Public Affairs, Committee on Foreign Relations, U.S. Senate.

DEAR SENATOR MANSFIELD: Reference is made to your letter of June 13, 1958, and to my letter of July 1, 1958, relating to your request for information and a report concerning the sale of personal property by U.S. Government employees and contract personnel serving abroad.

As you know, the Department of State for many years has had an established policy and appropriate regulations to govern the disposal of personal property overseas by employees of the U.S. Government and their dependents. The regulations are designed to provide a general code of ethics and to require that such sales not reflect adversely on the United States or its employees or adversely affect our relations with other nations or provide propaganda advantages for nations unfriendly to the United States. Policies and procedures similar to those promulgated in Karachi, which I sent you with my letter of July 1, are in effect at all of our oversea posts where local conditions resulting from general inflation, declining foreign exchange, and scarcity of imported items require administrative regulations including currency controls to assure adequate control over the sale of personal property by U.S. Government employees or their dependents. As is the case in Karachi, these regulations generally authorize sales only when a person is scheduled to leave the country permanently and require proof that a particular item was imported for the owner's personal use and was in his possession for a specific period of time.

In connection with your review of the Karachi regulations, I wish to point out that as a result of certain apparent excessive requests for permission to sell personal property which were called to Ambassador Langley's attention in March, our Embassy in Karachi conducted a detailed study of the practices of U.S. Government employees and their dependents in selling personal property at that post. The amended regulations issued on April 24, 1958, resulted from this study and modified previous regulations to require (a) the offer through publication in the Karachi Daily Bulletin (a publication for U.S. Government personnel) of sale of personal property to Government personnel at prices comparable to those pertaining to secondhand articles of the same type in the United States, plus shipping charges; (b) procurement of "no objection certificates" from the Government of Pakistan on all sales made to the Pakistanis and the payment of custom duties and sales taxes, as well as the presentation to the Embassy of a bill of sale sworn to before the consul by both buyer and seller; and (c) limiting the sales of personal property to those items which would be sold under more usual resale conditions than those prevailing in Pakistan and specifically prohibiting the sale of luxury items and items of small size and relatively high value such as cameras, shotguns, silver, etc.

It is generally recognized that in countries such as Pakistan, American personnel find it necessary to import articles such as refrigerators and other heavy items of electrical equipment and certain types of fur-

niture which are primarily adaptable to a specific country and therefore, oftentimes not of particular use in other countries. Also, in several countries climatic conditions, inadequate maintenance and repair facilities and fluctuating or inadequate local electrical current quite frequently result in unusual wear and tear and more rapid deterioration than in the United States and some other countries.

In response to your request of July 1, there is enclosed a summary of the information which we have obtained from our Embassy in Karachi relating to the volume of sales for calendar year 1957 and the number of individuals involved in such sales. There are also enclosed sample lists of cars and household items sold in 1957. Based on a review of the classified advertising pages of a recent edition of a Washington and a New York paper it appears that generally items sold in Karachi bring from two to four times more than they would if sold in the United States. However, such sales overseas do save the Government the cost of return transportation of such goods.

As you know, the greatly increased responsibilities which this Government has in the conduct of its foreign relations has made it necessary for the United States to send more American officers and employees abroad to man our embassies, missions and consulates. These increases have been augmented in some countries by sizable numbers of American personnel employed by other Government agencies, including the military, which in the instance of command troops is not subject to Embassy regulations. It might be noted as far as Karachi is concerned that there are 1,600 people in the official U.S. colony. This increase in the number of official Americans abroad who with few exceptions take with them as much as possible of the American way of life and standard of living, obviously has inevitably resulted in an increase in the importation of American goods for personal use by U.S. Government employees.

In view of the important foreign policy considerations which can become involved in the importation and sale of personal property and related transactions in local currency, an interdepartmental committee has been studying this subject since April. This committee is chaired by an Assistant Secretary of State and is comprised also of officers of the Department of Defense, the U.S. Information Agency, and the International Cooperation Administration. Representatives of other agencies concerned have also been invited to participate as appropriate. The primary purpose of the committee's study is to review current policies and practices and to develop and present to interested agencies further guides for use in developing uniform regulations and standards for particular countries relative to the disposal of personal property by U.S. employees. If you are interested, I should be happy to inform you of the committee's conclusions when its study is completed.

While a question of interpretation of the provisions of the Internal Revenue Code of 1954, as amended, is more properly for the determination of the Internal Revenue Service, it is the Department's understanding that a gain realized from the sale abroad of personal property by an officer or employee of the U.S. Government is includible in the vendor's Federal income tax return as a part of gross income, pursuant to the provisions of 26 United States Code 61(a)(3), and consequently, is taxable.

We have also carefully reviewed the need for further remedial action or legislation as suggested in your letter of July 1. We believe that the existing departmental and individual post regulations provide adequate controls and make it unnecessary for the Department to take further remedial action or to recommend any specific legislation at this time. Should the report of the interdepartmental committee now studying this problem indicate that existing regulations should be modified, appropriate action will be taken.

We appreciate very much the interest which you have taken in this matter and will be glad to furnish you with additional information which may be required in connection with your study.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

(Enclosures: (1) Summary; (2) Sample lists (2).)

Conversions, Jan. 1–Dec. 31, 1957

	Number of individuals	Total dollar conversion	Average per employee
U.S. Government	186	$677,773.27	$3,643.9423
Contract	32	106,208.46	3,319.0143
Total	218	783,981.73	

Exchange rate 1957 equals 4.75 rupees to $1.00.

Sample items sold in 1957

Car	Year import	Year sold	Net dollar sale price
Chevrolet, Bel-Air	1955	1957	$4,113.90
Do	1955	1957	3,649.80
Do	1956	1957	4,430.38
Chevrolet, 210	1954	1957	3,205.60
Do	1955	1957	3,585.86
Plymouth station wagon	1952	1957	2,649.37
Nash Rambler	1952	1957	1,898.73
Buick Roadmaster	1956	1957	6,329.11
Pontiac sedan	1955	1957	4,746.84

Tape recorder: Revere	1956	1957	379.74

NOVEMBER 5, 1958.

Hon. WILLIAM B. MACOMBER,
Assistant Secretary for Congressional Relations, Department of State, Washington, D.C.

DEAR MR. SECRETARY: Your letter of July 28, 1958, supplying me with information concerning the sale of personal property by U.S. Government employees and contract personnel serving abroad was most helpful.

I am happy to note that specific remedial steps have been taken in Karachi, but I wonder if these are sufficient particularly in view of the large number of official Americans in Karachi. I must say, I was startled by your figure of 1,600 people in the official U.S. colony and also by your statement that some of them are not subject to Embassy regulations. I had thought we had won the battle to make the Ambassador the unquestioned chief of U.S. functions abroad.

I wonder if you could clarify the table attached to your letter, entitled "Conversions—January 1–December 31, 1957." Is this the average number of dollars converted into rupees by the personnel of the Embassy at Karachi during that period?

Since I am most anxious to obtain as clear an understanding of the Karachi situation as possible, would you be good enough to send me a statement (broken down by month) of the number of employees who left Karachi from the period January 1, 1958, to August 1 1958, and the total rupees converted into dollars by them. For purposes of comparison, I would like to receive a similar monthly statement beginning September 1, 1958.

I hope that the interdepartmental committee to which you refer will assure itself that similar conditions do not arise elsewhere. Your offer to inform me of the conclusions of the interdepartmental committee when it has completed its work is appreciated and I await those conclusions with interest, I hope they will not be too long delayed.

Sincerely yours,

MIKE MANSFIELD,
Chairman, Subcommittee on State Department, Organization and Public Affairs.

DEPARTMENT OF STATE,
Washington, November 21, 1958.

Hon. MIKE MANSFIELD,
Chairman, Subcommittee on State Department Organization and Public Affairs, Committee on Foreign Relations, U.S. Senate

DEAR SENATOR MANSFIELD: Reference is made to your letter of November 5, 1958, in which you request additional information concerning the sale of personal effects by U.S. Government personnel at Karachi and resulting conversions of local currency to U.S. dollars.

You have requested that the table attached to my letter of July 28 entitled "Conversions—January 1–December 31, 1957," be further clarified. The table in reference reports conversions of local currency to U.S. dollars for the period reported. As reflected therein there were 186 conversions on behalf of U.S. Government employees and 32 conversions on behalf of U.S. contract personnel. These conversions totaled $783,981.73, or an average conversion of $3,643.94 for U.S. Government employees and $3,319.01 for contract personnel. It should be noted that the 186 Government employees includes all agencies of the U.S. Government located in Pakistan during the reporting period, and not just those of the Embassy which comprises a small segment of the official American colony.

The Department is seeking the additional information from Karachi which you requested concerning the number of employees who have departed Karachi since January 1, 1958, and the total rupees converted into dollars by those employees, broken down by month. This information will be furnished to you when it is received from Karachi.

The deliberations of the interdepartmental committee studying the conduct of American employees abroad have been concluded and a copy of the report entitled "Guide for Use in Developing Uniform Regulations for a Particular Country Relative to the Importation and Disposal of Personal Property, the Acquisition and Conversion of Local Currency and the Importation, Operation, and Disposal of Motor Vehicles" is enclosed. There is also enclosed a copy of Circular Instruction No. 4025 of October 31, 1958, which comprises a joint State, Defense, ICA, USIA instruction concerning the implementation of the guides.

You will note that both documents are classified "Official Use Only."

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

(Enclosures: (1) Circular Instruction 4025, dated October 31, 1958, "OCG Guides for Use in Developing Uniform Regulations Relative to the Importation and Disposal of Personal Property, the Acquisition and Conversion of Local Currency, and the Importation, Operation, and Disposal of Motor Vehicles," marked for "Official Use Only" (omitted); (2) OCB Guides (omitted).)

DEPARTMENT OF STATE,
Washington, December 30, 1958.

Hon. MIKE MANSFIELD,
Chairman, Subcommittee on State Department Organization and Public Affairs, Committee on Foreign Relations, U.S. Senate.

DEAR SENATOR MANSFIELD: Reference is made to your letter of November 5, 1958, and to my reply of November 21, 1958, concerning the sale of personal effects by United States Government personnel at Karachi and resulting conversions of local currency to U.S. dollars.

As indicated in my letter in reference, the Department requested from our Embassy at Karachi the additional information you desired. This information has now been received and I am enclosing a statement showing the number of U.S. Government personnel departing Karachi, the dollar value of local currency converted and the average amount of such conversions. This information is broken down by month and covers the period January through November 1958. Similar information for the month of December 1958 will be forwarded to you at such time as it is received from the Embassy.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

[Enclosure: Statement.]

Conversions, Jan. 1,–Nov. 30, 1958

Month	Number of U.S. Government personnel	Total dollar conversion	Average conversion
January	11	$31,198	$2,836
February	14	23,646	1,689
March	15	48,781	3,252
April	24	36,854	1,536
May	54	87,859	1,627
June	28	70,098	2,504
July	38	107,372	2,825
August	36	70,569	1,955
September	11	38,174	3,470
October	29	33,070	1,140
November	15	15,132	1,009
Total	275	564,753	2,054

FEBRUARY 2, 1959.

Hon. MIKE MANSFIELD,
Chairman, Subcommittee on State Department Organization and Public Affairs, Committee on Foreign Relations, U.S. Senate.

DEAR SENATOR MANSFIELD: Reference is made to my letter of December 30, 1958, and previous correspondence concerning the sale of personal effects by U.S. Government personnel at Karachi and resulting conversions of local currency to U.S. dollars. With my letter in reference I forwarded to you a statement showing by month for the period January through November 1958, the number of U.S. Government personnel departing Karachi, the dollar value of rupees converted to dollars and the average amount of such conversions.

The Department is now in receipt of similar information for the month of December 1958 which reveals that 30 U.S. Government employees departed from Karachi converting rupees totaling $15,185 for an average of $506.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary.

SUPREME COURT DEFENDED

Mr. KUCHEL. Mr. President, the U.S. Supreme Court is the constitutional defender of American liberties which the Constitution of our country guarantees to all our people. Our unique, tripartite system of government is one reason for the strength of our cherished freedoms; and the judicial branch is an indispensable part of that system. I very much regret the intemperate abuse and vilification which some people, in and out of government, have heaped upon our country's highest tribunal. This is not the first time in our long history that the Court has been so abused. But it stands—and it will continue to stand—as a bulwark of American liberty.

With my voice and with my vote, I have opposed proposals to weaken and undermine the Court. Thus, I deem it most unfortunate that one of my votes in the Senate was on several occasions, misinterpreted by some. I believe that misinterpretation has now been corrected. In that connection, I ask unanimous consent that there be printed in the body of the RECORD certain comments which I have made in the Senate and also by letter, certain newspaper articles and editorial comments, and some correspondence which I have received, all bearing on this subject.

There being no objection, the excerpt, articles, editorials, and correspondence were ordered to be printed in the RECORD, as follows:

[From the CONGRESSIONAL RECORD, vol. 104, pt. 15, p. 18919]

Mr. KUCHEL. Mr. President, as a matter of good, sound, American public policy, I believe that the States of the American Union, as well as the Government of the United States, should—indeed, must—have the right to legislate in the field of antisedition and antisubversion legislation. As a Member of the U.S. Senate, I am prepared—indeed, I am quite anxious—to be given an opportunity to vote in favor of the pending bill, unfettered by amendments, and which, in making specific reference to Federal antisubversion legislation already enacted, states specifically and unequivocally that the Congress does not intend to preempt the field of protecting American Government, State and Federal, but, to the contrary, welcomes the partnership of State laws in ferreting out and punishing those who conspire to overthrow any segment of American Government by force or violence.

No Member of this body whether lawyer or not, has, thus far, risen to condemn the proposed bill as being illogical, untenable, unconstitutional, or susceptible of the imperfect construction.

[From the Los Angeles Times, Mar. 6, 1959]

KUCHEL CHARGES MOSK MISREPRESENTED HIS VOTE

SAN FRANCISCO, March 5.—Senator KUCHEL (Republican, California) states that California's attorney general, a Democrat, in a speech here misrepresented KUCHEL's vote on a proposal to curb powers of the U.S. Supreme Court.

The Commonwealth Club, before which Attorney General Mosk spoke February 6, confirmed today receipt of a letter from KUCHEL in Washington.

KUCHEL, who became a Senator by appointment of Governor Warren, now Chief Justice, said Mosk was quoted in the speech as saying KUCHEL voted to curb the court's powers.

"Judge Mosk is completely wrong in his statement on my position," KUCHEL wrote the Commonwealth Club.

"The fact is that I voted against the Jenner-Butler legislation on a roll call vote in the Senate, recorded in the CONGRESSIONAL RECORD, volume 104, part 15, page 18687." The bill lost by one vote, 41–40.

Stuart R. Ward, executive secretary of the Commonwealth Club, said its board of directors, after getting a report on the letter, voted to invite Senator KUCHEL to address the club on any date convenient to him.

Mosk, in Los Angeles today, said: "He, Kuchel, surprises me a great deal. I think the record will not bear him out. I'm certain he and Knowland (then Senator Knowland, Republican, California) both voted for the Jenner-Butler bill."

KUCHEL'S STATEMENT

EDITOR:

Creditable California newspapers, in reporting a speech by State Attorney General Stanley Mosk to the Commonwealth Club on February 6, attribute the following quotation to him:

"When these diverse forces, goaded by a forthright judiciary, united behind legislation to strip the Supreme Court of some of its authority—partly symbolically, partly an actuality—they dreamed up the Jenner-Butler bill of the last congressional session. Here was a readymade opportunity for the lawyers of America to repeat their heroism of the 1930's.

"By and large they failed to awaken society to the gravest danger experienced by the judiciary since its role was established by John Marshall. Oh, yes, Jenner-Butler was defeated. But the vote was a whisker-close 40 to 41. And ironically favoring this punitive measure against the Earl Warren court were two Warren appointees, both of them California Senators: Knowland and KUCHEL.

Judge Mosk is completely wrong in his statement of my position. The fact is that I voted against the Jenner-Butler legislation on a rollcall vote in the Senate, recorded in the CONGRESSIONAL RECORD, volume 104, part 15, page 18687. Even a most cursory research by Judge Mosk would have demonstrated the complete inaccuracy of the statement he made concerning my vote.

I am proud to have been appointed to the U.S. Senate by Gov. Earl Warren, now the Chief Justice of the United States. The Chief Justice is a man of great capacity, courage, and independence. He possesses the highest judicial integrity. Like all good citizens, I vigorously object to the intemperate and unwarranted abuse which some people have heaped on the Supreme Court. What is more important, I have demonstrated my objection in the Senate by voting against legislative proposals, like the Jenner-Butler amendment, designed to subvert or weaken our Nation's highest Court.

THOMAS H. KUCHEL,
U.S. Senator.

WASHINGTON, D.C.

[From the San Francisco Chronicle, Mar. 11, 1959]

KUCHEL AND THE COURT

In a letter to the editor, which we publish today, Senator THOMAS H. KUCHEL fully clears himself, we think, of a disagreeable charge of having favored punitive legislation against the U.S. Supreme Court.

On February 6, in a speech to the Commonwealth Club here, Attorney General Stanley Mosk charged KUCHEL with having voted in the Senate last summer for the Jenner-Butler bill, which he described as intended to strip the Supreme Court of some of its authority. (The bill would have forbidden the Court to review most State disbarment proceedings.)

Mosk was completely wrong, since the record shows that KUCHEL voted to table the Jenner-Butler bill. In the light of the fact that Mosk, the State's chief lawyer, had plenty of time to get his facts right, the inaccuracy of this imputation becomes the more glaring.

It is true that the Attorney General has since acknowledged that KUCHEL voted to table the Jenner-Butler bill. In a telegram to the Commonwealth Club mentioning this, however, he went on to task KUCHEL with having voted, the very next day, August 21, 1958, in favor of a Bridges-Eastland comparable measure reflecting upon Supreme Court decisions. * * *

"It appears to me," Mosk added, "Senator KUCHEL was trying to vote both for and against respect for the Court on successive days, a curious basis for protest at this late date."

This accusation is unworthy of the Attorney General. A vote for the Bridges-Eastland bill cannot fairly be inferred as a vote against respect for the Supreme Court. This bill was aimed at explicitly permitting States to pass and enforce antisedition laws. It was intended to express the intent of Congress. Its passage had been urged by the Attorney General of the United States, and it was a bill that any Senator was entitled to favor, without having his attitude toward the Supreme Court brought into question.

MARCH 3, 1959.

Hon. STANLEY MOSK,
Attorney General, Library and Courts Building, Sacramento, Calif.

DEAR STANLEY: From a number of friends, I have received clippings from newspapers about your recent speech at the Commonwealth Club and particularly your remarks about my vote on the Jenner-Butler bill last summer.

I have taken the liberty of writing the Commonwealth Club a letter about this vote, a copy of which I am enclosing for your information, in the hope that its members may receive the true facts about how I stood on that proposition.

Since you apparently did not see it, I also am enclosing a photostatic copy of an editorial from the Sacramento Bee which correctly reflects my position.

Sincerely yours,

THOMAS H. KUCHEL,
U.S. Senator.

DEPARTMENT OF JUSTICE,
Los Angeles, Calif., March 6, 1959.

Hon. THOMAS H. KUCHEL,
U.S. Senator, Washington, D.C.

DEAR TOM: Thanks for your thoughtfulness in sending me your letter of March 3 and a copy of your communication addressed to the Commonwealth Club.

You are technically correct and I am pleased to set the record straight with a telegram addresed to the Commonwealth Club. A copy is herewith attached.

Sincerely yours,

STANLEY MOSK,
Attorney General.

Mr. STUART WARD,
Commonwealth Club,
San Francisco, Calif.:

I understand Senator KUCHEL has objected to reference in my address before Commonwealth Club February 6 to his voting with Senator Knowland in support of the Jenner-Butler bill. While it is true that he voted on August 20, 1958, to table Jenner-Butler, he spoke and voted on the very next day, August 21, 1958, in favor of a Bridges-Eastland comparable measure reflecting upon Supreme Court decisions and it was the latter measure which was recommitted to committee and thus defeated by a mere 40 to 41 vote. It appears to me Senator KUCHEL was trying to vote both for and against respect for the court on successive days, a curious basis for protest at this late date.

STANLEY MOSK,
Attorney General.

SACRAMENTO, CALIF., *March 11, 1959.*

Hon. THOMAS H. KUCHEL,
U.S. Senate, Washington, D.C.

DEAR TOM: In view of the San Francisco Chronicle editorial of today, which I am sure has been called to your attention, you may be interested in my response. A copy is enclosed.

Sincerely,

STANLEY MOSK,
Attorney General.

DEPARTMENT OF JUSTICE,
Sacramento, Calif., March 11, 1959.

Mr. CHARLES DE YOUNG THIERIOT,
Editor, San Francisco Chronicle,
San Francisco, Calif.

DEAR MR. THIERIOT: With regard to your editorial entitled "KUCHEL and the Court," while I could debate with you on the effect, both legally and symbolically, of the Bridges-Eastland bill, I am willing to cry "Uncle." It is comforting that Jenner-Butler has become such a dirty word as to stimulate this controversy.

Your criticism was essentially sound, and I accept it. Touché.

Many years ago Chief Justice Taney in an opinion (5 How. 504) cited numerous reasons for recanting a previously announced position and then added: "If there are other ways of gracefully and good naturedly surrendering former views to a better considered position, I invoke them all."

And, to quote from a more current source, one Casey Stengel, "I ain't mad at nobody."

Cordially yours,

STANLEY MOSK,
Attorney General.

[From the Sacramento Bee, Aug. 23, 1958]

JENNER-BUTLER BILL GETS A WELL-DESERVED BURIAL

The Jenner-Butler bill which proposed to put sweeping restrictions on the powers of the U.S. Supreme Court received a merited burial in the U.S. Senate.

The measure, originally spawned by Senator WILLIAM E. JENNER, of Indiana, with amendments by Senator JOHN M. BUTLER, of Maryland, was inspired by a motive which does no credit to its authors—retaliation against the Court for certain decisions with which they violently disagreed.

Only because extremist right-wing Republicans and extreme anti-integrationist southerners make up a majority of the Senate Judiciary Committee did the bill even get to the Senate floor.

It was shocking to see California's Senator William F. Knowland lined up with this group against the motion to table. Happily this State's other Senator, THOMAS H. KUCHEL, voted to kill the legislation.

One of the provisions of the measure, which was most objectionable, proposed to forbid the Supreme Court from ruling on the pertinency of questions asked of witnesses summoned before congressional investigating committees or on their liability for contempt in not answering them.

What would this have meant? The inquisitorial power of the committees would have become absolutely unchecked by the Bill of Rights or any law to prevent abuses.

What would be the effect of such a situation on traditional American freedoms?

And there were other provisions just as dangerous and just as redolent of police state methods.

Senator THOMAS C. HENNINGS, JR., of Missouri, whose motion to table killed the bill, well characterized it as stemming from the low instinct to kill the umpire.

Such foul play, had it been successful, could have hurt Congress in the end more than it would have injured the Court.

The defeat of the Jenner-Butler bill will have a healthy influence in putting an end to all like ill-conceived threats to the usefulness and independence of the Federal judiciary.

[From the Washington Post, Aug. 30, 1958]

SEDITION BILL

In his column of August 27, Drew Pearson erroneously cast me with the enemies of Chief Justice Warren, by reason of my vote on a recommittal motion in the Senate. I regret his unfair comment, particularly since I have the highest esteem for the Chief Justice as a great jurist and as a great American. Please permit a brief comment on the background of the vote to which Mr. Pearson refers.

The Pennsylvania Supreme Court in Commonwealth v. Nelson, 104 At. II 133 (1954), found that it was the purpose of Congress, in passing the revised Smith Act (1948), to preempt the field of sedition. It held its own Pennsylvania sedition law to be superseded and rendered inefficacious by the Federal statute. The U.S. Supreme Court agreed.

There then arose a question of legislative policy: Should the congressional purpose as found by the Court be changed by amending the Smith Act so as to permit States to adopt sedition laws? The U.S. Attorney General urged such a change, and I concluded to support a bill to accomplish it. A motion to recommit the bill to committee, and thereby to kill it, carried 41 to 40. I voted against the motion.

I believe, and I said in the Senate, that it is good public policy to let both the Federal Government and the States legislate in the sedition field. Since Congress failed clearly to spell out that policy in the 1948 statute, I wanted it to do so at this session.

I am a citizen and a Senator who has a profound respect for the U.S. Supreme Court, and particularly for its splendid Chief Justice Earl Warren. That respect is shared, I think, by the great majority of the American people.

I deeply resent the intemperate abuse which has been heaped upon our highest tribunal. And I displayed my resentment by opposing those legislative proposals designed to traduce or to weaken it.

THOMAS H. KUCHEL,
Senator from California.

WASHINGTON.

THE PROUD AND HAPPY COWS OF NEW JERSEY

Mr. WILLIAMS of New Jersey. Mr. President, it is a well-known fact that New Jersey folks are slow to anger when criticized for personal failings. We accept the fact that not everyone has a firsthand knowledge of the true beauty, artistic achievement, and industrial might of the Garden State. We realize that a quick transit of the New Jersey Turnpike does not always make these

facts crystal clear to visitors from other States.

As I have said, we do not mind abuse when it is directed at ourselves. But we cannot countenance criticism of our cows. They are not sacred cows, but we would like to keep them contented cows.

Yet, Mr. President there is afoot a small movement to rile them—or their owners, at least.

I am referring to an advertising campaign now underway in the Washington, D.C., area. Milk producers are debating about their marketing procedures; and some radio announcements criticize what is called "tired old milk" shipped here from other States.

It so happens that some of the imported milk is coming from the Camden area of New Jersey, according to one newspaper account. I cannot allow that charge about "tired old milk," therefore, to stand unchallenged.

New Jersey cows are a proud lot, and with very good reason. The State department of agriculture is continually working to make our cows even happier, and capable of even greater production.

Our consumers have not complained about any "tired old milk."

In short, we are quite convinced that New Jersey milk is, if we can twist the metaphor a little, alert and young in quality, not "old" or "tired."

So far as I can see the only sad thing is that apparently the consumers in the Washington area will consume it only for a limited time during the present conflict. The Garden State is always happy to share its good things with its near neighbors, despite the unfortunate charge made against our good and gentle provider, the cow.

AUSTRIA DEDICATES BOOK ON AUSTRIAN ECONOMIC RECOVERY TO GENEROSITY OF TAXPAYERS OF UNITED STATES

Mr. NEUBERGER. Mr. President, ever since I came to the Senate I have supported the requests of the President and the Secretary of State in the realm of foreign aid. I believe I am among the few Members of the Senate to have done so this consistently. I have reasoned that, when men like Dwight D. Eisenhower and John Foster Dulles continue a program begun by their political opposites like Harry S. Truman and Gen. George C. Marshall, that program must contain real merit for our country and the free world.

Most of my mail from Oregon criticizes me for supporting the administration on foreign aid. Much of this mail charges that other nations are ungrateful, that they never appreciate what America has done for them.

Today, I note with satisfaction that the Austrian Government has published a 368-page volume telling how the Marshall plan enabled Austria to rebuild from the ruins and devastation after the bombings of World War II. The book is dedicated to our American taxpayers. This is the text of the dedication, Mr. President:

Dedicated to the unknown American taxpayers to whose tax contributions the Austrian economy owes the millions contributed in good will toward its reconstruction.

And elsewhere the book adds this accurate and encouraging note:

It is to the historic credit of the United States to have recognized the vital importance of creating healthy economic conditions as an essential prerequisite for a lasting peace.

Mr. President, I also have read the report of the Draper Commission, which cites foreign aid as being essential in our own self-interest. This Commission, composed of outstanding civilian and military leaders, has reported to President Eisenhower that the sole alternative to foreign aid would be an isolationist retreat to Fortress America, there to await the worst. And how can we be isolationist in an era when intercontinental ballistic missiles, bearing terrible hydrogen warheads, can span the Atlantic Ocean more quickly than I drive in my 1954 Ford sedan from the Potomac Plaza Apartments to my office at 348 Senate Office Building?

I ask unanimous consent, Mr. President, to include in the CONGRESSIONAL RECORD a dispatch from the New York Times of March 18, 1959, entitled "Austria Thanks U.S. Taxpayers." In addition, I submit for inclusion in the RECORD an informative editorial on foreign aid from the Oregonian of Portland of March 14, entitled "Key to U.S. Security," and a persuasive column in support of our mutual security program by the syndicated editor, David Lawrence, which appeared in the Oregon Daily Journal of Portland on March 17. All of these materials confirm the wisdom and merits of the foreign-aid program in general, despite certain specific criticisms which fail to go to the roots of the undertaking.

There being no objection, the articles and editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 18, 1959]

AUSTRIA THANKS U.S. TAXPAYERS—VOLUME MARKING 10 YEARS OF RECOVERY IS DEDICATED TO MAN IN THE STREET

WASHINGTON, March 18.—America's man in the street was thanked by the Austrian Government today for his contribution to that nation's reconstruction through the Marshall plan.

Dr. Wilfried Plazer, Austrian Ambassador, gave President Eisenhower a 368-page volume entitled, "Ten Years of European Recovery Program in Austria, 1948–58." The book describes the Marshall plan's contribution in rebuilding the Austrian economy.

The book carries this dedication:

"Dedicated to the unknown American taxpayers to whose tax contributions the Austrian economy owes the millions contributed in good will toward its reconstruction."

Five forewords by members of the Austrian Government precede the dramatic story of the economic reconstruction and psychological rebirth of Austria after the collapse of Hitler's Germany.

CHANCELLOR'S STATEMENT

Chancellor Julius Raab wrote:

"Wherever and in whatever manner we celebrate the anniversary of Austria's rescue from economic collapse, we should be mindful of the fact that the means for our reconstruction were contributed by the American taxpayer in pursuance of a broadly conceived generous plan of his Government. To him, America's man in the street, Austria owes its thanks."

Foreign Minister Leopold Figl wrote the following:

"None of the political steps which Austria took in the past decade would have been possible without the economic help of the United States within the framework of the European recovery program.

"Austria's gratitude has manifested itself in its clear intervention for all peaceful goals and in its maintenance and protection of the dignity of the human individual. Austria has proven this attitude towards hundreds of thousands of refugees. It is proud of the fact that the aid which was granted to it was so well used that Austria itself could become a help to others."

A chapter entitled, "The U.S.A. Rectifies History," says:

"It is to the historic credit of the United States to have recognized the vital importance of creating healthy economic conditions as an essential prerequisite for a lasting peace."

In a review of the book, the Austrian Embassy said:

"This story should convince the American taxpayer, who often may have worried about the effectiveness of his sacrifice to foreign aid, that his investment in Austria through the European recovery plan has paid ample dividends."

[From the Oregonian, Portland, Mar. 14, 1959]

KEY TO U.S. SECURITY

President Eisenhower's message to Congress supporting his budget of $3,390 million for U.S. assistance to 70 nations is so undeniable in its logic that it can only be answered by demagoguery. The attack on foreign aid usually takes the line of "America First"—or why give money to foreigners when we need it for public works and military improvement at home?

The meat of the matter is that the United States is no more secure than the weakest of our allies or other friendly nations. We have reached a condition of world affairs when this country cannot, in its own interest, allow other nations to be swallowed by the Communist world conspiracy by political, economic, or military means. We cannot sacrifice other nations to buy time, for each loss weakens us. The United States could not survive for long should the rest of the world fall under the rule of communism.

Instead of waiting until other free nations are crushed by an imperialist power—as in World War I and World War II—before inevitably joining combat to hurl back the enemy of all freedom, the United States for 13 years has been working to strengthen other nations to resist the Communist aggressor.

There is a latitude for debate in Congress in the details of foreign aid, the division between military and economic assistance, and the fulfillment of the bargain by nations we help. But there is no justification for the meat-axe kind of "economy" which has as its goal the diversion of foreign aid funds to porkbarrel domestic projects to buy votes for Members of Congress.

The strength of the United States to forestall Communist conquest cannot be measured in the military and economic power of this single nation. It must be measured, if it is to meet the test of survival, in the combined strength of the non-Communist part of the world. Our foreign aid program is not designed to buy good will alone. It is designed to assure freedom for Americans as well as freedom for other peoples from an aggressive conspiracy which will make its major play within the next decade.

[From the Oregon Journal, Mar. 17, 1959]

THE COST OF FENDING OFF WAR—CRITICS OF FOREIGN AID CALLED BLIND TO HEAVY OUTLAY IT SAVES NATION

If the American people could express in a single sentence their most important wish today, it would be: "Keep us out of war at any cost."

Yet, when out of a national budget of $77 billion, the President asks for $3,930,000,000 to keep American boys from fighting abroad, and calls for a mutual security program to bolster our allies, this is derided as a "foreign aid" program or a "give-away."

The label is wrong. It's really a keep-us-out-of-war program.

Few of the critics realize the explosive situation that exists in the world today or how interrelated America's fate is with the other free countries—or, if they do realize it, they fail to see how many billions more our defenses would cost if America had to do the job alone. That's why President Eisenhower's television address last night was so important to the country.

For the President had no sooner announced last week that he was asking Congress for $3,930,000,000 when from Capitol Hill—mostly from Democrats—came predictions that the expenditure would be cut by a billion dollars. Acting Secretary of State Herter promptly said that if any such reduction were made it would "serve notice on the world that we are weakening in our determination."

Just why some of the legislators regard any money spent abroad as either a gift or a throw-away is hard to understand unless they think the American people really can be misled by such distortions. Certainly, as sometimes charged, there's waste in the spending of American funds in other countries, because the United States cannot always control how other governments disburse the money they receive. But, conceding that there is some waste, it is a fact that in war itself there is even greater waste. The true test is whether, on the whole, war is prevented, and thus far the United States has managed with the help of strong allies to keep us out of a third world war.

It sometimes isn't realized how much America's own allies have been spending since the close of World War II. Rather, the impression is fostered by the critics that the United States is putting up all the money for international defense or mutual security. The President in his message to Congress a few days ago said:

"Over the years of our combined effort, these allies and friends have spent on these forces some $141 billion, more than six times the $22 billion we have contributed in military assistance. During calendar year 1958, they contributed $19 billion of their own funds to the support of these forces.

"Without the strength of our allies, our Nation would be turned into an armed camp and our people subjected to a heavy draft and an annual cost of many billions of dollars above our present military budget."

What perhaps isn't generally understood in America is that economic assistance plays a vital role in maintaining the stability of other nations. If there were no stable governments among our allies, America would not have strategic bases overseas. The President said on this point:

"Through the mutual security program our friends among the free world nations make available to us for the use of our forces some 250 bases in the most strategic locations, many of them of vital importance. They support ground forces totaling more than 5 million men, stationed at points where danger of local aggression is most acute, based on their own soil and prepared to defend their own homes. They man air forces of about 30,000 aircraft, of which nearly 14,000 are jets, 23 times the jet strength of 1950 when the program started. They also have naval forces totaling 2,500 combat vessels, with some 1,700 in active fleets or their supporting activities."

Dissenting Members of Congress often concede that the military program is logical, but they claim the economic support abroad is questionable and this they would cut. In doing so, they would strike a blow at the morale of the countries affected. For without economic stability, political chaos ensues, and then the Communists find fertile ground for exploitation or even overthrow of existing governments. The Communist intrusion in Iraq lately, for example, has unsettled the entire Middle East. The Communist tactics in Africa, Asia, and Latin America have been supported by Soviet measures in the economic field.

So it's a dangerous international situation which calls for American expenditures to bolster here and abroad our defenses—politically, economically, and militarily. From a strong alliance, moreover, comes firmness in a crisis as is the case today when Moscow is testing the West. The President says the West will not surrender. He can say this convincingly because the Western Alliance in the last 10 years has been built on a strong foundation. It is to maintain that strength that the mutual security program, or what might better be called a keep-us-out-of-war program, is really directed.

ETHICS IN GOVERNMENT AND CONFLICT OF INTEREST

Mr. NEUBERGER. Mr. President, on March 9, I was pleased to join with the able senior Senator from New Jersey [Mr. CASE] in introducing S. 1332, a bill designed to utilize the principle of full disclosure to aid the public in assessing the conduct of top Federal officials and Congressmen.

S. 1332 has four major provisions. It would:

First. Demand full disclosure of the financial interest of all Members of Congress, civil or military officers, and employees of the executive or legislative branches who earn in excess of $12,500 a year. Annual reports would show all income received in the year, value of all assets held, all dealings in securities or commodities, and all purchases of real property.

Second. Require that all communications in regard to a pending case, whether by letter or by word of mouth, to a regulatory or semi-judicial agency, be made part of the public record in the case.

Third. Insure itemized expense accounts for all travel by members or staff of congressional committees, the accounts to be published in the CONGRESSIONAL RECORD.

Fourth. Establish a Commission on Legislative Standards to study and make recommendations concerning problems of conflicts of interest confronting Members of Congress as well as their relations with executive and other agencies.

As the distinguished Senator from New Jersey pointed out in presenting this legislative proposal, secrecy surrounding these matters frequently serves to reinforce adverse stereotypes of public officeholders. I share his belief that the provisions of S. 1332 would not only supply a public source of information against which to judge possible "conflict-of-interest," "junketing," and "influence-peddling" charges, but through full disclosure of financial and political interest would assist materially in destroying the cynical attitude which many persons now profess to hold with respect to Federal officials and Congressmen. I think that such reports would indicate that in the main these men and women are individuals of high integrity.

Last year I introduced a measure which would have extended application of existing conflict-of-interest laws with respect to members of the executive branch to Members of Congress and, in addition, provided for disclosure of outside sources of income and financial interests by both Congressmen and major appointees of the President. This bill, S. 3979, was an attempt to resolve a dilemma which has disturbed students of Government in the United States for many years: How Congress can demand of the officers of executive agencies higher standards of ethics and disinterestedness than Congress is willing to set for itself. My proposal was aimed at applying to Congress the same code with respect to corporate holdings, equities, private business transactions, and related matters which presently is imposed on members of the executive branch. It was an effort to set up a system of "policing the policeman." Mr. President, I ask unanimous consent that a portion of my remarks in the Senate on June 11, 1958, relative to this bill, be included in the RECORD at the conclusion of my remarks.

Because of my belief that Congress must establish for itself codes of conduct at least as rigorous as those used to judge persons in other Federal positions, I was particularly gratified to join with the able Senator from New Jersey in sponsoring S. 1332. Enactment of this bill would be a highly meaningful step in encouragement of public trust in Government officials, elected or appointed, and insurance that equal scrutiny is given the interests and activities of individuals in all branches of Government.

There being no objection, the extract was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR RICHARD L. NEUBERGER IN U.S. SENATE, JUNE 11, 1958

Mr. President, many of us have been concerned for quite a while over the broad general question of who polices the policeman. Committees of Congress require Cabinet appointees of the President of the United States to divest themselves of stockholdings in corporations that have business dealings with Federal departments which these appointees will administer. Yet, Members of the Senate and House can own shares or partnerships of businesses that are directly affected by legislation which these Senators or Representatives are drafting and voting upon.

This does not, of course, necessarily prejudice or corrupt their judgment on the merits of the issue before them, any more than the judgment of executive officials is necessarily prejudiced or corrupted in comparable situations. It should be clearly understood that the overwhelming majority of both elective and appointive officials are persons of exceptionally high standards of honesty and integrity who make the policy choices and decisions that come before them on the basis of their best judgment of the public interest.

The unfortunate truth, however, is that this fact is not clearly and universally understood to be the case. And, the inconsistency between the rules which Congress, with a

great show of righteousness, applies to executive officials and its failure to apply identical rules and standards to its own Members undoubtedly has reflected adversely on the reputation of Congress in the public mind.

Members of Congress are, I repeat, as honest, ethical, and as self-sacrificing as any other class of persons in our society, and yet it has often been remarked that comparatively Congress is the object of much skepticism and cynicism. Why have we thus presented an inaccurate and unflattering image in public opinion?

One reason, I believe, is that Congress never has submitted itself to the objective standards of disinterestedness, of full disclosure, and of other procedures which Congress righteously demands of executive officials and everyone else.

LAWS MAY BE DEFICIENT

I wish to emphasize, Mr. President, that in introducing this bill I am definitely not passing upon the wisdom, adequacy, or desirability of the existing conflict-of-interest statutes which Congress has seen fit to enact for observance by officials of executive departments and agencies. In my opinion, some of these provisions might well be reviewed and analyzed with a critical eye. However, I do not wish to engage in such a review in connection with my present bill in order to avoid complicating the simple question of extension of conflict-of-interest coverage to Congress. What I am saying today is this—as long as these standards are applied to the executive arm of Government, then they should apply equally to the legislative arm of Government. That is the purport of the bill.

I also desire to stress once more that introduction of this proposed legislation implies absolutely no criticism on my part of any Member of the Senate or the House. For instance, Mr. President, a few Senators and Representatives have been singled out from time to time for public comment because they are more affluent or financially successful than the rest of us. Their private wealth has been discussed in the press, and their holdings in industries influenced by legislation or regulation have been searchingly analyzed. Yet I think the record shows that this misses the point and may often be unfair to them. Actually, there are very few of us here in Congress who can be said to be wholly isolated from any and all situations that lend themselves to a charge of conflict of interest somewhere along the line.

To begin with, political campaign contributions from the owners and managers of business corporations and from trade-union, political-education funds involve, in and of themselves, a built-in role for money in politics which pertains to and colors all our elections. After all, nearly all these business and labor organizations are heavily involved in legislative matters every day that Congress is in session.

Secondly, Members of Congress are necessarily men and women who have private lives and careers in the communities from which they come prior to their entry into full-time, professional, public life. Like everyone else, they must either make a living at some form of business or professional pursuit or they must own sources of productive wealth. They may be farmers, property owners, or businessmen. In any case, they normally have some economic stake and interest in their communities when they become candidates for Congress, and it is not expected of them that they should wholly sever these interests in the economy which, after all, involves the ultimate interests and wealth of all of us. Nevertheless, we must recognize that the maintenance of such an economic stake in specific types of property on the part of Members of Congress may give rise to exactly the same questions about ethics and disinterestedness as Congress so often raises with respect to men who are drawn from the economic life of the community into executive positions.

To mention another point, many Senators and Representatives receive handsome speaker's fees from groups and organizations with many legislative interests. This has become necessary to the pocketbooks of many Members without substantial private means, in view of the heavy expenses of maintaining two separate residences—as almost all of us must do—and of meeting the needs of our offices beyond those now provided for by appropriations. My bill would seek to have information about such speaking and writing fees and other sources of outside income made public each year, so as to forestall public feeling that there is no check on possible abuses in this practice.

LEGISLATIVE PROGRAM

Mr. KUCHEL. Mr. President, will the distinguished Senator from Montana yield to me?

Mr. MANSFIELD. I yield.

Mr. KUCHEL. Is it correct to assume there will be no votes today?

Mr. MANSFIELD. I am glad the acting minority leader has raised that question. We will proceed with the business which was laid before the Senate yesterday. There will be no votes in the Senate today, but I wish to put all Members on notice that on Monday very likely there will be votes.

I will say to my distinguished colleague the senior Senator from California, this was an agreement reached by the minority leader [Mr. DIRKSEN] and the majority leader [Mr. JOHNSON of Texas] on yesterday.

Mr. KUCHEL. I will ask my friend a further question. Am I correct in understanding that the pending business is the bill relating to unemployment in depressed areas?

Mr. MANSFIELD. The Senator, as always, is correct.

Mr. KUCHEL. I thank my able friend from Montana.

REFUSAL OF THE PRESIDENT TO RECEIVE REPRESENTATIVES OF THE INDIAN CONGRESS

Mr. LANGER. Mr. President, I rise to express my deep regret that the President of the United States yesterday did not receive the Indians who went to the White House to see him.

The Indian Congress represents practically every Indian tribe in the United States. Those Indians have a just complaint. They are citizens of the United States. As such citizens, they have the authority, under the Constitution of this country, to petition.

Of course the President had a perfect right not to see the Indians if he did not want to see them, but I reiterate that these Indians really have a just complaint. All the Indians wanted to do was to shake hands with the Great White Father and present their claims later to Glenn Emmons, the Commissioner of the Bureau of Indian Affairs.

Mr. President, in this connection I ask unanimous consent to have printed in the RECORD a letter written by the Honorable Clyde Duffy, former president, North Dakota Bar Association, and one of its foremost citizens and a former Lieutenant Governor of the State of North Dakota.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DUFFY & HAUGLAND,
Devils Lake, N. Dak., March 16, 1959.

Hon. WILLIAM LANGER,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: I have just encountered what appears to me to be a horrible example of how Indian allotment should not be handled. One hundred and sixty acres was allotted to Susie Tatiyopa, Devils Lake Sioux Allottee No. 505. She died many years ago and her descendants have increased and increased until now there must be at least a thousand Indians who have an interest in this land. The Fort Totten Agency has a list showing approximately 150 interested parties but I am advised that many of these are now deceased and that their shares have been divided into 20 or more shares, in some instances. Some of the shares shown on the agency records, for instance, are Francis John Azure, share $^{2}/_{10584}$, address unknown.

What brought this to my attention was the fact that a Canadian national came down to see about his interest in this property and that again shows how interesting this thing can become in time. Hdahiyayewin, a Canadian national, inherited $^{12}/_{192}$ share. She died 42 years ago and left a husband and three children. The husband died about a month after the wife did. The three children were Lucy Peoples, Mrs. Charlie Cuwiyuksa, and Joe Doota. Mrs. Cuwiyuksa died in 1937, leaving as her heirs Mrs. Kenneth Eastenon, Mrs. Agnes Younge, and Lanes Duncan. Joe Doota died in 1951, leaving as his heirs John Doota, Joe Doota, Jr., and Pat Doota. All of these people are Canadian nationals except Lucy Peoples.

To clear title, as far as these Canadian nationals is concerned would necessitate about four probate proceedings in State court. Of course, their interest is not worth the cost.

It is a little difficult for me to understand what good an allotment of $^{2}/_{10584}$ interest in 160 acres might do anybody. Undoubtedly there are hundreds of cases similiar to this. I would think that before these things get more involved, it would be desirable to sell the land (preferably to an Indian who could make use of it) and divide up the money. I am certain that the cost of keeping track of what possible income there might be from this land and apportioning it to the multitudinous heirs must be several times the value of the income.

I don't know whether there is anything that can be done but I thought you might deem it worthwhile making some suggestions to the Indian Bureau.

Yours truly,

CLYDE DUFFY.

Mr. LANGER. Mr. President, in the letter it is stated that one of the greatest complaints the Indians have is the fractionalization of the lands or allotments they have. In the letter it is also stated that the question of the title to, say, a quarter section of land, 160 acres, which has passed from person to person through the years by descent, poses a very serious problem. As Mr. Duffy says, in order to get clear title to the land it is sometimes necessary to probate four estates, and perhaps some Indians in Canada own two ten-thousandths of a quarter section, the cost to probate and quiet title would exceed the value of the land.

This is a problem which the Senator from Tennessee [Mr. KEFAUVER] and I investigated. We went from one State to another, and we found this problem existing in a great many places in this country. Sooner or later something must be done about the situation.

In our recommendations in 1954 we embodied one in that regard, along with a great many others.

I ask unanimous consent that those recommendations be printed in the RECORD at this point in my remarks.

There being no objection, the recommendations were ordered to be printed in the RECORD, as follows:

IV. CONCLUSIONS AND RECOMMENDATIONS

The Indian problem in the United States is not a new one and it is one that will confront the Federal Government and a number of the States for many years to come. A relationship of paternalism has evolved with the passage of time since the colonization of America began. The development of this relationship was the result of the changing ethical concept toward the exploitation of the Indian's lands and his acceptance as a human being.

While the Subcommittee to Investigate Juvenile Delinquency held hearings and studied the segment of the problem of juvenile delinquency among Indians, it was found that there are interrelated economic, social, and political factors that contribute to juvenile delinquency among the Indians living on the reservations and those enrolled with the Bureau of Indian Affairs of the Department of the Interior.

The subcommittee does not presume to have prepared a comprehensive study of the entire Indian problem. It does believe, however, that in the course of the four hearings in North Dakota, the hearings in Phoenix, Ariz.; Palm Springs, Calif.; and Washington, D.C., facts were brought out that warrant making certain recommendations. These recommendations, if acted upon, would go far toward reducing the incidence of juvenile delinquency among the Indian population. The incidence of juvenile delinquency was found in many instances to be higher among the Indians than among the non-Indian population of the United States.

It was found that poverty and economic want among Indian families have a causal relationship in contributing to delinquency among their children. While realizing that the task of raising the economic level of the thousands of Indian families is a formidable one, there are suggested plans which, if carried through, would contribute to that objective. The suggestions include:

1. An intensified relocation program to enable more families to leave reservations and locate where employment is available. Such a program should provide for both temporary economic aid which might be required by a family making such a relocation, and the guidance and counseling services which may be needed in making possible the family's adjustment to the changed environment.

2. The development of a comprehensive program providing for direct loans to Indians to enable them to secure the capital needed for farming and ranching enterprises.

3. Intensification of public employment services to stimulate more extensive employment opportunities for Indians. It is necessary to combat the resistance of many employers to hiring Indians.

4. The establishment of Federal and State work projects on or near Indian reservations.

5. The providing of better housing for the Indians. Both the Federal Housing Act and the Farmers' Home Act contain provisions which prevent those who are enrolled as Indians but do not live on the reservations from securing the benefits under those acts. The subcommittee recommends that these acts be amended so that such restrictions would be eliminated. It is urged that low-cost rental housing projects be undertaken on the reservations. The housing project put in operation by the Ute Indians in Colorado should be studied as a model project for all Indian reservations.

6. There is a need for more expeditious handling of land and lease transactions by the Indian Bureau. The delays have resulted in financial loss to the Indians.

7. Legislation should be enacted by Congress to deal with the problem of fractionated land interests. This would improve the economic condition of many Indians.

8. Study should be devoted to the problem of water supply in the Indian reservations. The lack of water for farming and ranching on the Pima Reservation has adversely affected the income of the Indians on that reservation. The area of this reservation once included some of the most fertile lands in Arizona which are now barren because of the loss of their prior water rights.

9. The economic status of the Colorado River tribes has been seriously affected by the Department of the Interior's legal interpretation as to the title to certain lands. The Colorado River tribes had considered that they held title to those lands since 1876, when reservation lines were determined by a series of Executive orders under an act of Congress passed in 1864. This cloud on land titles has prevented the Colorado Indians from obtaining valuable leases which would help to raise their income level.

The need for improved social and welfare services on the Indian reservations can scarcely be overemphasized. One of the greatest needs on the reservation is for expert community organization workers. Such personnel could aid in developing firmer and better organized leadership within the Indian group itself. The placement of such workers on reservations would be fully consistent with the democratic and desirable principle that people are best aided who are helped to help themselves.

There is also keen need for enlarged and invigorated child-welfare services. Many State welfare departments are attempting to give service on reservations but meager funds for this purpose result in a service which, where existent, is on a too little and a too late policy. Special Federal appropriations for the development of adequate child-welfare services on Indian reservations would, in the long run, save the still larger sums which will be required to pay the costs which will be involved in caring for neglected youngsters after they have become grossly inadequate adult citizens.

It is recommended that additional Federal appropriations be made to insure adequate community and child-welfare services on reservations. It is the view of the subcommittee that responsibility for the administration of these services should be shifted to the respective States. As rapidly as this can be accomplished, funds so appropriated should be allotted to the respective States for the development or to insure the continuation of such services.

It is essential, in connection with the welfare of both Indian youth and adults, that the States assume responsibility for the care of those mentally ill. It is recommended that the Indian Bureau enter into the appropriate agreements with States as rapidly as possible.

A serious lack was found in provisions for the granting of general economic assistance to families in real need. The recommendation has been made that additional funds be appropriated to meet that need. It is the opinion of the subcommittee that responsibility for the administration of such assistance should be transferred to the established public-welfare agencies of the several States as soon as the change can be made.

Adverse health conditions may contribute to juvenile delinquency in various respects. The subcommittee believes that greatly enlarging the scope of public-health programs should be a priority to improve the health of Indians on reservations. Recently the Bureau of Indian Affairs inaugurated, on an experimental basis, a health plan on Indian reservations in the State of Washington. The results have been gratifying and it is recommended that sufficient funds be appropriated to establish such a health plan for the benefit of the Indians on all the reservations throughout the United States. The need is especially apparent among the tribes in Arizona which show high incidence of tuberculosis and pneumonia.

It is recommended that the Indian Bureau encourage and propagate more effective action in determining the parentage and the ordering of support payments for illegitimate children. Passage by Congress of Senate bill 1955, better known as the runaway father's bill, would aid in this problem. It is also recommended that desertion by fathers be included in the so-called 10 major crimes covering Federal jurisdiction in the matter.

Additional funds should be appropriated to provide ambulances and mobile health units for those reservations in areas such as Arizona where the Indian settlements are remote from the Indian hospitals. The Indian hospital in the Papago Indian Reservation at Sells, Ariz., should be restored.

A number of the recommendations point to the need for new legislation at both the State and Federal levels, while other recommendations are directed at ways and means of improving coordination and teamwork among the tribal, State, Federal governmental, and other agencies and organizations dealing with Indian affairs.

Two of the very important governmental responsibilities toward the Indians are in the areas of education and the maintenance of law and order. They are both of paramount importance in relation to the problem of juvenile delinquency.

The carrying out of the responsibility for improving educational standards and the furthering of educational opportunities among the Indians would assist substantially in preventing delinquency among the Indian children. To achieve this objective in a practical manner, the subcommittee recommends:

1. Establishment of a comprehensive program which would provide for scholarships for Indian youth, similar to the educational provisions that have been offered under the veterans' benefits. This would enable them to pursue courses of advanced study and training.

2. Additional special courses in vocational and technical training should be provided in both public and Indian schools for adults as well as for youths residing on Indian reservations. This program should include part-time continuation school programs for those unable to attend full-time classes.

The subcommittee recommends that the Bureau of Indian Affairs provide immediate facilities for the education of the 6,000 Navaho children. These children are between the ages of 6 and 18 years, who have not as yet attended any school. Provision for schools is also necessary at certain other Indian reservations, even though they are not confronted with as serious a problem as that found at the Navaho Reservation.

The subcommittee is of the opinion that present efforts to transfer the educational activities of the Indian Bureau to State authorities are sound. If such cannot be accaccomplished under provisions of the Johnson-O'Malley Act, then special legislation should be enacted to achieve this goal.

Laxity in law enforcement contributes to crime and delinquency in both children and adults on Indian reservations. The Congress should consider Federal reimbursement to

the States for the cost of administering law and order if and when the States assume jurisdiction over offenses committed by or against Indians on the reservations, under Public Law 280, which delegated civil and criminal jurisdiction over Indian lands (excepting jurisdiction relative to the so-called 10 major crimes) to the States in which these lands are located, if certain conditions relative to the assumption of such jurisdiction by the States were met. These conditions include the adoption of legislation by States necessary to the exercise of such jurisdiction.

In order to further improve law enforcement on Indian reservations, the subcommittee recommends that the following steps be taken:

1. Allocation of Federal funds to States to assist them in securing the enlarged personnel and additional facilities necessary to their assuming responsibility for law enforcement on Indian lands under Public Law 280.

2. Codification of Federal laws, including treaties and special agreements pertaining to American Indians.

3. Adoption, through legislative enactment, of uniform definitions as to "who is an Indian" and "what is Indian country."

It is the belief of this subcommittee that much could be accomplished through invigorated and extended efforts to bring into being a continuing program of community planning in relation to the local problems on each reservation area. Through such programs involving tribal, county, State, and Federal personnel and efforts, a variety of local activities might be stimulated. With reference specifically to youth, for example, such activities might include their participation in the programs of the Future Farmers of America, 4–H Clubs, and other programs. It might also result in the formation of other types of leisure time as well as in the provision of other recreational outlets.

The Indian Reorganization Act (84 Stat. 984) provided for the organization of Indians into tribal groups with constitutions and charters approved by the Department of the Interior. Not all tribes, however, were thus organized. Several difficulties have developed in these tribal organizations. One of the difficulties relates to questions regarding the effectiveness and adequate representation of the governing bodies on the several reservations.

It is recommended that a thorough reexamination of the Indian Reorganization Act and an evaluation of the self-governing operations of each Indian tribe be made in order to determine if further legislative action is necessary to correct the difficulties encountered.

The subcommittee believes that positive action upon a part of the foregoing recommendations would ameliorate those problems which were found to be contributing to delinquency among Indian children in the United States.

Mr. LANGER. Finally, Mr. President, I wish to say I think this is a strange proceeding. It is very strange to me, because in the Republican platform, when candidates were running for office, it was their position that they would see citizens who called on them. It was said, "Whenever the farmers want to come to see us we will be glad to see them personally." When certain cattle growers got together in a cavalcade to come to Washington they were told by the Secretary of Agriculture to turn back. When the REA people held conventions five different times, the President of the United States declined to address them. This year the President finally did so.

We now observe the spectacle of members of the Indian Congress, which represents all Indians from all over this great country—somewhere between 350,000 and 400,000—not being able even to get an opportunity to shake the hand of the President of the United States.

I merely say in closing that in my opinion if we had a President of the United States, with truly humanitarian instincts toward the Indians, he would have taken 3 or 4 minutes to shake hands with their leaders.

ORDER OF BUSINESS

Mr. STENNIS. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. STENNIS. Has the morning hour been concluded?

The PRESIDING OFFICER. Morning business has not been concluded as yet.

Mr. STENNIS. Mr. President, I wish to seek the floor after the morning business is concluded.

RED CHINA TODAY—ARTICLES BY DR. SRIPATI CHANDRASEKHAR

Mr. CHURCH. Mr. President, a few weeks ago a series of articles was published in the Washington Star on "Red China Today." These were prepared by Dr. Sripati Chandrasekhar, of India.

Such reports as we are getting from Red China are foreboding. On January 23, I had printed in the RECORD an article from the Wall Street Journal showing that 1958 food production was double that of a year earlier, and that an additional 80 million acres of land was brought under irrigation.

If 300,000 mess halls gather 98 percent of the rural Chinese together for their daily meals, it is small wonder that there is success in dinning into the minds of 650 million Chinese, a hatred for the United States, and a conviction that America is the greatest menace to peace.

Mr. President, the significant thing is that we are receiving but fragmentary reports of a revolution which ought to have our closest attention. A part of the reason for this, I believe, has been our policy of restricting and discouraging American newsmen from going to Red China. We do not have a William Shirer or a Vincent Shean reporting the hard, unvarnished facts of Red China's gigantic and frightening revolution. Closing our eyes and ears to it will not make it go away.

I ask unanimous consent that two of the articles of Dr. Chandrasekhar, which were published in the Star on February 20 and 22, be printed in the RECORD at this point in my remarks.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, Feb. 20, 1959]

RIGID CONTROL AND LACK OF SOLITUDE MARK LIFE IN BURGEONING COMMUNES

(By Dr. Sripati Chandrasekhar)

Hard work is the order of the day in the Chili Yin people's commune which I visited during my travels in Red China. The evening brings a dash of recreation—and large doses of Communist training.

After the day's toil in the fields and factories of this pioneer commune in Honan Province, all attend regular classes. There they listen to the radio, which pours out the latest editorial from the People's Daily, the latest production figures from agriculture and industry, the latest government measures to liquidate Chiang Kai-shek, figures on how China has surpassed Britain in the production of various industrial goods.

SELF-CRITICISM

Then here is a movie or a play or an acrobatic show. And last is the party meeting, which every worker attends. Here the matchless art of self-criticism is practiced.

People rise up and confess their drawbacks and failings, criticize their colleagues and swear to increase production if only to regain Formosa, the island bastion of the Nationalist Chinese. Thereafter, everyone retires for the compulsory 8 hours' sleep.

Nursing mothers and those of ailing children can visit the public nurseries or kindergartens, though this is not necessary as children are under the care of trained nurses and teachers. Parents can give up their bourgeois emotional attachments and stop worrying about their youngsters.

SIXTEEN GUARANTEES

This commune which I described is popularly called the commune of 16 guarantees. Everybody, according to the age group and sex of the individual, is given 16 guarantees. They are:

1. Clothing (clothing is still a problem because of the cold climate. Heating is poor).
2. Food.
3. Housing.
4. Transportation (from residence to place of work).
5. Maternity benefits. Expectant mothers are given 45 days' leave and a quantity of red sugar, which is a must for expectant mothers in China.
6. Sickness leave and free medical aid.
7. Free old-age care.
8. Free funeral and burial. The director of the commune told me that they would like to give up burial for cremation but the people were prejudiced in favor of traditional interment. So they are adopting what is now called deep burial. The body is buried at least 10 feet deep so that they can use the land, which otherwise might be a graveyard, for orchards.
9. Free education.
10. A small marriage grant and a free reception for the couple.
11. Twelve free haircuts a year.
12. Twenty free bath tickets a year. (Hot water baths.)
13. Free bringing up of children.
14. Free recreation.
15. Free tailoring.
16. Free electricity.

INCENTIVES CITED

After reciting these benefits—a kind of cradle-to-grave insurance—in return for unquestioning, lifelong hard labor, the director asked me, "What more can one want?"

"Nothing," I confessed, "but can you obtain a pack of cigarettes, for instance?"

"We have not overlooked that," the director replied happily. "Though we have abolished the need for money, we have provided certain incentives to enable a person to earn 5 yuan a month." That is, if any worker shows tremendous integrity and ability, or perfects a new technique, he gets a reward of 1 to 5 yuan a month. (In purchasing power, 1 yuan is about equal to 1 Indian rupee. The rupee is worth about 27 cents.)

"This is a kind of bonus," the director added. "Though no one has yet earned the full amount."

LACK OF PRIVACY

This is the commune where human beings are reduced to the level of inmates in a zoo. But there is a difference. The animals in a zoo do not have to work hard, and, what is more, they don't have to listen to the quasi-compulsory radio.

The lack of peace and quiet in the countryside where no one can retire and reflect, and the lack of privacy and solitude is to me more terrifying than all the hells put together.

PRODUCTION RISING

Communist Party Chairman Mao Tse-tung had hoped that the whole nation would become one big commune in a few years, but there seemed to be some doubt and resistance among the leaders themselves. Time alone can tell what lies ahead for China and the millions confined in her communes.

However, agricultural production is rising, though no one can swallow without a grain of salt the astronomical figures reeled out by officials. The methods adopted to achieve this great leap forward in agricultural production are:

All arable land (except in uneasy Tibet) has been brought under the plow; constant irrigation; deep plowing, 3 to 6 feet deep (on an experimental farm I visited they are plowing by detonating small bombs under the ground); close planting; and dumping enormous amounts of manure, night soil, green leaves, compost, and bacteria—layer after layer interspersed with good earth.

Communist China has solved the problem of food supply for its teeming millions, but it is difficult to check the figures on agricultural production. It is possible that they are generalizing from successes on small experimental farms. It is possible that their bookkeeping may be faulty.

Or, maybe, China's soil has joined the Communist Party's big leap forward campaign. It is anybody's guess.

[From the Washington Sunday Star, Feb. 22, 1959]

CHINESE GET CONTINUAL BLASTS OF ANTI-U.S. TALK

(There was a time when mainland China considered the United States one of its best friends. That time seems remote now—and receding steadily through Peiping's continuing hate-America campaign as reported first hand by a noted Indian social scientist. This article, based on 6 weeks' travel through Red China, is distributed exclusively outside India by the Associated Press. Among other things, it weighs the Communist Chinese challenge from an Indian standpoint.)

(By Sripati Chandrasekhar)

An intriguing, if disconcerting, aspect of the contemporary Chinese scene is the tremendous nationwide political propaganda concerning who Red China's friends and enemies are.

The whole nation has been taught that there is one great Socialist friend of China—the "selfless" Soviet Union—and one irreconcilable "imperialist enemy"—the United States.

The first is understandable, for it is the leader of the Communist camp. It is also true that this friendly Soviet Union, whether selfless or not, is responsible for 90 percent of the heavy machinery, an overwhelming majority of all technical experts and almost all the blueprints of China's industrial progress.

In fact, the Russians are almost exclusively responsible for such industrialization as has taken place in China in recent years.

It is no wonder that Russians receive special, preferential treatment all over China. The Chinese are now building special hotels for Russians so that they can have their own life without meeting or mingling with other foreigners from within or without the Communist world.

At every hotel in which I stayed during my 6 weeks in Red China, from Canton to Harbin in Manchuria, I found that my fellow guests belonged to some Soviet delegation or other. These delegations range from geological teams and steel experts down to acrobats and dancers. China is being rapidly Russianized in dress and manners, language and culture.

RUSSIAN LANGUAGE PUSHED

The only foreign language recognized in China is Russian. From menus to theater notices, from directions at stations and airports to travel information, I found only two languages—Chinese and Russian.

Today Russian is taught at most universities in place of English, French, and German. The English language was fairly widespread as a means of instruction before the Communists took over.

I have heard Chinese speaking Russian, but I discovered that English-speaking Chinese preferred speaking in Chinese rather than English. I have seen students using Russian textbooks in medical colleges and technical universities. All libraries that I visited were filled with Russian books, mostly technical.

In every factory I visited I was told the same story of the selfless help of the Soviet Union in giving technical aid and machinery. Whether it is the heavy machine tool factory in Harbin or the iron and steel complex at Wuhan or the great new bridge on the Yangtze River linking the north and south of China with the triple cities at Wuhan—all have been accomplished with Soviet assistance.

The Russians draw up the plans, bring the machinery, and raise the plant with, of course, the help of Chinese engineers and workers. But the Russian engineers stay behind the scenes and one sees only Chinese manning the machines and directing the factories.

RUSSIAN CULTURE ADVANCES

Russian literature, Russian ballet, Russian teaching, and Russian thinking have invaded China from Mukden to Canton. In every city of importance the Chinese have erected massive structures in honor of Sino-Soviet cooperation, and these buildings usually house permanent exhibitions of the Soviet Union's technological achievements, which are extremely impressive.

The Communists have gone about this business of Russianizing China in a thorough fashion. In a word, China is fast becoming an image of Russia.

On the other hand, there is the painful contrast of China's attitude to America. America has acquired the permanent adjective of "imperialistic" in the Chinese language. Everyone, from a village schoolgirl to a cabinet minister, will tell you that China's enemy No. 1 is the United States.

In every town the visitor is greeted, at the station or in the market place or a busy thoroughfare, by a huge poster—some 40 by 60 feet—showing a picture of Communist China crushing America and Secretary of State John Foster Dulles.

The most common of these posters were of three kinds. One showed molten steel pouring out of mainland China on Mr. Dulles and President Chiang Kai-shek of Nationalist China on the fast-sinking island of Formosa. The second type showed an American GI being pierced to death by a Chinese soldier's bayonet. The third showed a cringing Chiang and a shivering Dulles hanging from a Chinese noose.

UNITED STATES DEPICTED AS MENACE

All mass media—press, platform, radio, and the inevitable loudspeaker—have been harnessed to din into the Chinese that America is the greatest menace to peace and prosperity. One can see films and exhibits purporting to show American interference, espionage, and subversive activities on the mainland.

And, I believe, they have largely succeeded in training a nation of 650 million to hate the United States.

Various American campuses have been renamed, and the American-educated Chinese staff has been de-Americanized. After going round in Tsing Hua University in Peiping I asked whether this was the campus run with the Boxer Indemnity Fund. I was told that only a paltry few thousand dollars had been spent on that campus in the past, but that this was just as well, as Tsing Hua trained only "lackeys of American imperialism."

They have also closed down the Peiping Union Medical College—donated and run by the Rockefeller Foundation for a number of years. This institution, by all accounts, rendered valuable service to the people, but it had to be closed to erase the memory of its past connection with America.

I visited Union Medical and found that the college was no more, but that the attractive hospital had grown enormously and continues to minister to the ill. The Union Medical College has now become the Chinese Academy of Medical Sciences.

I met a few members of the staff—Chinese graduates of American medical colleges. In our talks I discovered that none had any warm recollection of the United States. (This surprised me considerably, for I can remember how happy most of my Chinese fellow students at American universities were and how much they seemed to appreciate the warm and generous treatment they received on American campuses.)

WHY THEY DISLIKE US

But what is China's case against the United States? It is a simple one. America should withdraw the 7th Fleet and get out of Formosa so that the Communists can occupy it. To them, the Formosa issue is purely a domestic problem.

"Taiwan (Formosa) is an internal problem. It is a continuation or an extension of our civil war, if you like. We know how to deal with Chiang Kai-shek. We may appoint him a governor or liquidate him for his past criminal acts. But the Americans are in the way." This, I think, correctly sums up their attitude.

The second grievance is that the United States is preventing China from taking her place in the U.N. These twin grievances stem from the basic fact of America's nonrecognition of Communist China. If communism is the barrier, they ask, then how is it that America has recognized the Soviet Union, Czechoslovakia, Poland, etc.?

It is obvious that all this ignores numerous historical factors which account for the two Chinas of today, and even more basic is the recognition of regimes which come to power through force, violence, and bloodshed.

At any rate, the psychological need for creating anti-American hysteria is evident, from the Communist point of view. The creation of an external enemy, who threatens to destroy the very existence of China, is a powerful force to cement internal unity and secure support for the existing regime—a regime which is not entirely loved by all the 650 million Chinese.

It is interesting that one hears very little in China about the British possessions of Hong Kong, Kowloon, and the New Territories or Portugal's of Macao. Maybe the time is not ripe officially to brand them as "imperialists" and agitate against them on a national scale. It must be added, though, that the Chinese "spontaneously" agitated against Britain when her troops landed in Jordan during the Middle East crisis.

THE FORMOSA PROBLEM

There is no denying that the Chinese Communists feel strongly about their dispute

with the United States. Peace in Asia may well be threatened by the way the Formosa problem is solved.

There are three ways to dispose of it. One is to declare the island independent and let the people of Formosa choose whatever government they like. The second is to make it a United Nations trust territory, as suggested recently by Lord Attlee, former British Prime Minister. The third way out is to hand it over to the Peiping regime.

Whatever the ultimate solution, the need for preserving peace in the area is imperative. Here is an area where India can exert its energies to enable the parties to reach agreement. But then, there is no guarantee that peace will endure, for the Communists may open the question of Kowloon, Hong Kong, and Macao.

Supposing that these issues are also settled, there is always the instinctive urge on the part of the Communists to spread their tentacles into other parts of Southeast Asia, "to liberate the poverty stricken masses from their bourgeois, capitalistic, and reactionary native masters."

Before we in India realize what is happening, Red China may be breathing down our neck. And whether it will be the healthy breath of a welcome friend or the scorching breath of a Chinese dragon will perhaps be decided by the firmness with which we state our belief in freedom and democracy and the fervor with which we are able to build up our free institutions.

THE AGRICULTURAL SUPPORT PROGRAM

Mr. YOUNG of North Dakota. Mr. President, I was very much pleased to note the interest in problems of agriculture on the part of the Daniel F. Rice Grain Co., with home offices in Chicago.

Their analysis of the agricultural problem, and particularly the budget, is to be commended.

Mr. President, I ask unanimous consent to have their four recent commodity letters printed in the RECORD as a part of my remarks.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

COMMODITY LETTER OF FEBRUARY 18, 1959

The time has come in matters of agricultural legislation to get on one horse and ride off in one direction. It has been clear to us for a long time that an agricultural support program cannot be all things to all people; that it cannot repeal the immutable laws of supply, demand, and price. If a price program is designed to support prices above levels that would otherwise exist it has to have enough teeth in it to command the supply so that the price can be put where it is wanted.

This simple principle has either not been clear to the administration and the Congress or they have chosen to ignore it. The Congress has tried to gallop off in two directions at once—toward higher prices than would prevail in the market place and unlimited production. The Department of Agriculture has thrashed about in all directions at once. They have advocated lower price supports but have never wanted to go the whole hog and eliminate supports as the reasoning of their position would dictate. They have argued that lower supports would cut production and have sat for 6 years with the same argument while prices went down and production up. They have taken huge quantities of grain off the market through loans to support prices and at the same time have sold huge quantities which have weighed very heavily on prices. The Department tried a soil bank scheme. It was never clear whether this was to cut production or to improve land so that we could get more production.

The result of all of this confusion has been lower prices, the accumulation of huge stocks, expenditure of vast sums of public funds, and reduced farm income. In early 1953 when this administration took office wheat was selling for $2.45 per bushel, corn $1.65, oats 92 cents, and soybeans $3. Now wheat is $2, corn $1.20, oats 68 cents, and soybeans $2.24. By way of contrast the Dow-Jones industrial stock price was 287 in January 1953 and now is 590. The agricultural situation is becoming critical. How long farmers can continue to take the kind of economic punishment that they have been submitted to in recent years is conjectural. There is no doubt that justice calls for an immediate reversal of the recent trend.

During this session of Congress the agricultural problem is getting more than the usual amount of attention. Three things appear to be behind this interest: (1) attempts to capture the farm vote, (2) concern over the high cost of farm programs, and (3) concern over the ineffectiveness of existing programs. The administration continues to beat the same old drum for lower supports. With regard to wheat they seem to think that some varieties and qualities would go as low as $1.12. The Congress is kicking around two price proposals. One is for direct income deficiency payments on the amount of the commodity used domestically and the other is a scheme to use food as an instrument of peace. The second presumably means to increase our export dumping programs. One wonders if there are any more ways to dump than are already being used.

None of the suggestions get to the point of a fair price in the marketplace. There is no reason to think that a fair price to farmers cannot be determined and production and inventories adjusted and managed so that this fair price can be maintained. There is no reason why agriculture cannot be run as a business so that it produces when there is a profit and does not produce when there is a loss. There is no reason why farmers should be expected to subsidize consumers, both domestic and foreign, and why Government should in turn be forced to heavily subsidize farmers.

To put agriculture in a profitable position a four-step program needs to be adopted:

1. Establish fair prices for the main agricultural products. A new system needs to be developed to take into account new technology and new methods.

2. Establish production goals that will result in the desired prices. These goals need to be established by a board of nonpartisan experts.

3. Enforce multiple cross compliance. No system of control will work if land is taken out of one crop and put into another, creating a problem somewhere else. Land taken out of one crop has got to go out of production.

4. Freeze existing surplus stocks. When production and use are brought into balance these stocks can be appraised and their disposition determined. We may want to keep them as a reserve against atomic attack. Stocks can be frozen. If one bushel of corn in Crossroads, Iowa, needs to be sold because it is going out of condition, CCC can buy a bushel at Crossroads to replace it.

This program cannot be compromised and made to work. Either we adopt this program or we return to a non-Government situation. We cannot continue to ride two horses in opposite directions.

COMMODITY LETTER OF FEBRUARY 26, 1959

The price supports for 1959 crops were announced and fell on commodity markets like a load of bricks. A similar impact on farm income will be felt when 1959 crops start to market. With the huge carryover and the extreme willingness of Commodity Credit Corporation to sell in competition with farmers, the result will be a further reduction in the already low income of grain farmers.

Crop	1959 loan rate	1958 loan rate	1947-56 bushels per acre	Gross at 1959 loan	Gross at 1958 loan	Change	
						Dollars	Percent
Wheat	$1.81	$1.82	17.7	$32.04	$32.21	−$0.17	−1
Corn	1.12	1.06	38.8	43.46	41.13	+2.33	+6
Soybeans	1.85	2.09	20.3	37.56	42.43	−4.87	−11
Oats	.50	.61	34.3	17.15	20.92	−3.77	−18
Barley	.77	.93	27.2	20.94	25.30	−4.36	−17
Rye	.90	1.10	12.8	11.52	14.08	−2.56	−18
Grain Sorghums	.85	1.02	19.6	16.66	19.99	−3.33	−17

Gross income reductions ranging up to 18 per cent per acre are of ruinous proportions. Agriculture cannot survive under this load. The Secretary of Agriculture has just about had his way in the matter of flexible price supports. The results of the flexible program have now come home to roost.

The impact of this reduction on net farm income is a bitter measure. It costs about $38 per acre to produce corn, if we leave out return on money invested in land, land taxes, and labor. For soybeans, that cost is $32.50, and for oats, barley, and grain sorghums the cost of production is about $26. Under these circumstances a farmer does a little better than breaking even on wheat, corn, and soybeans, if he throws in his land and labor free, and is forgiven his land taxes. If land taxes must be paid, he is just about able to meet out of pocket costs. For the other grains there is no hope of avoiding a loss. It is no wonder that in every quarter we hear from farmers who are up in arms about the new loan rates. How long does this have to go on?

The infinite wisdom of the Department of Agriculture is shown in the apparent changes in relationship among the various grains. Most of the decreases in loan rates are in those commodities that have the smallest stocks in CCC inventory. The decrease in wheat, however, is very small, while there is an increase in corn. The largest inventories in CCC's larder are wheat and corn. A medium sized problem exists in soybeans, so there is a medium sized decrease in soybean support.

The effect of these changes in the relationships of anticipated gross returns on the various crops can be clearly foretold. Much of the fall planted rye will be plowed up and planted in corn. The acreages of barley, oats, and grain sorghums will shift to soybeans and corn.

Before this latest onslaught, soybeans and corn were on a fairly even footing. Now the scales are heavily balanced in favor of corn. Land that was in soybeans on corn acreage allotment farms, it is anticipated, will shift to corn. Add to this the land in the discontinued acreage reserve and it becomes clear that a major increase in corn acreage is to be expected.

This behavior of the Government makes it seem that every action is bottomed on a deliberate plan to increase the already bulg-

ing grain bins, to expand the Government's domination of every phase of grain marketing, as well as continually to drive farmers' income down. Every action is in contradiction of the avowed wish of the administration to return to free markets and free prices.

For 7 years the production of corn has been greater than consumption. The powers seem to be trying their best to make it 8 years. When will Washington understand that something must be done to turn off the deluge of production from farms?

COMMODITY LETTER OF MARCH 6, 1959

The urban press of the United States has unleashed a vicious attack on agricultural programs by repeatedly talking about the high cost to the taxpayer. The Congress and the general public appear to be taken in by this. The Department of Agriculture has taken hold of this tool to help push through its policy of liquidating price support programs and with them the liquidation of the American farmer.

Truly astronomical figures are bandied about. The lowest estimate of agriculture costs one hears these days is on the general order of 7 billion. It is not unusual to hear 12 or 13 billion mentioned. Another look needs to be taken. These are gross exaggerations and not much of it goes to farmers.

Agricultural appropriations for fiscal 1959 (millions of dollars) were:

Regular activities:			
Agricultural Research Service	$160.6	C	
Extension Service	63.2	C	
Farmer Cooperative Service	.6	C	
Soil Conservation Service	128.6	C	
Agricultural conservation program	235.0	C	
Agricultural Marketing Service (includes school lunch)	146.0 (110.0)	C	
Foreign Agricultural Service	4.0	S	
Commodity Exchange Authority	.8	P	
Soil-bank programs	809.5	F	
Commodity Stabilization Service	115.7	P	
Federal crop insurance programs	6.4	F	
Rural Electrification Administration	9.0	C	
Farmers' Home Administration	29.1	F	
Forest Service	130.3	C	
General overhead	7.9	C	
Subtotal			$1,846.7
Restoration of CCC capital	1,760.4	P	1,760.4
CCC administrative expense	35.4	P	35.4
Permanent appropriations:			
Removal of surplus agricultural commodities (30 percent of customs receipts)	235.9	T	
Other	61.9	T	
Subtotal			297.8
Loan authorizations	594.0	L	594.0
Special activities:			
Agricultural Research and Marketing service activities	20.1	C	
Emergency relief	125.8	S	
Public Law 480 and barter	1,509.7	S	
Soil bank programs	567.5	F	
Subtotal			2,313.1
Grand total			6,847.4

All of these costs in fiscal 1959 are keyed with a letter showing who really benefited. C-consuming public, F-farmers, S-State Department as part of our foreign policy, L-loans, repayable and bearing interest, P-price programs, and T-transfer of funds. Under the C there is $892.3 million. This went for research, teaching, disease eradication, monoply control, school lunch, etc. Some of these programs are as old as the Land Grant College Act of 1862. These activities have enabled farmers to make the production increases that have enabled food production to keep up with population. Under the S there is $1,639.5 million that went to feed hungry people throughout the free world and advance our interests against communism. Under the L there is $594 million, sound and repayable and shouldn't be changed. Under the T is $297.8 million that is mainly customs and forest lands receipts, not costing taxpayers a dime. Under the P there is $1,796.6 million. This went to support a vast bureaucracy, pay storage to nonfarmers on a mountainous inventory, and to take losses on commodities sold. A well-run program would cost only a fraction of this amount. By no stretch of the imagination can over $850 million be considered as benefiting farmers. This leaves $1,412.5 million under the F. At the outside high, programs for the benefit of farmers costs $2.3 billion dollars. Of this, $1,377 million was for the soil bank, most of which has now been discontinued. The real cost of farmers to the taxpayers stands at about $1 billion.

Farmers got about a billion, and the consuming public got about a billion. Where did the rest go? We believe that at this time, Congress, the press, and the public should recognize the true facts concerning the farmers and realize that the prosperity of the farmer is the backbone of the Nation.

COMMODITY LETTER OF MARCH 13, 1959

What happens to the price of corn and other grains between now and summer depends on the sales policy of CCC. Any relationship between what CCC does and what Congress intended by its enactments is purely coincidental. The present price of corn to farmers, for example, is below the legal loan. There is enough corn going into the loan system, however, to force prices up to the loan level plus an amount at which redemption will be profitable.

If CCC would stop selling corn now, the price of corn would be under the control of farmers where it belongs. The price would go up to a point at which farmers would be willing to sell.

CCC, as administered by the Secretary of Agriculture and his staff, seems to have gained a stature above and beyond the law. The law says that Government inventories can be sold only when the price is 105 percent of the support price, or the grain is non-storable or in danger of becoming nonstorable, or is for export under special programs. CCC continues to undersell corn that grades No. 2 yellow. This corn is not out of condition or in danger of going out of condition. These sales of corn can be very sharply reduced anytime CCC is forced to comply with the law.

Not only is perfectly good corn being sold, but it is being sold in locations that wreak the greatest havoc in the price structure. The two groups who are most important in setting the commercial price of corn are processors and exporters. The processors of corn in the United States know they do not have to carry inventories or go into the market and bid for farmers' corn to be assured of a supply. They can sit with their bins full of CCC corn stored at the get-rich-quick Government rate and know that all they have to do when they need supplies is to make an offer to CCC and get high quality corn right where they want it. CCC policy has made it possible for processors to make fabulous profits. If they were required to carry their own inventories they would incur interest and storage costs. Much of the excess profits now realized would disappear.

The exporters deal in payment in kind script that lets them have high quality corn in locations where sales will have the maximum price depressing result. Possibly the subsidy in kind program should be eliminated in favor of a subsidy in cash arrangement, since the subsidy in kind program has permitted CCC to oversell commercial centers by providing not only the normal export subsidy, but also has provided additional grain available at less than the normal market differentials, thus providing an additional transportation subsidy.

When one looks at the way CCC inventories are used to depress prices, one must conclude that either the people running the program are incompetent or are in league with processors and exporters. A faint indication in that direction may be gained by reviewing current business affiliations of former high-ranking officials of the Commodity Stabilization Service.

The responsibility for the administration of the law rests with the Secretary of Agriculture. Apparently, Mr. Benson doesn't like the Washington climate. He spends most of his time stumping the country, speaking to all and sundry who will listen, on matters of high policy. It is time that he stayed home and kept the store.

The grain inventory programs can be run for the benefit of farmers as the law intends. The Secretary of Agriculture should appoint an advisory committee to plan sales and reconcentration programs in such a way that disposal programs will have minimum market depressing effects. Such a committee could force merchants and processors to go into the market place and pay harvest prices for their supplies.

The ultimate responsibility for administration of the law rests with Congress. The duties of Congress do not end when the law is written. Congressional committees should call officials of the Commodity Stabilization Service on the carpet frequently and force them to establish that every single sale of grain made during the past 12 months was in compliance with law. Congress should appoint an independent grain committee: (1) To investigate sales of all alleged out-of-condition corn to see how much of it really needed to be sold, and (2) to point out to the CCC how sales could be made with the least market effect.

Anyone looking at the inner workings of the Government inventory programs must conclude that those programs are run by, for, and of the grain merchants, exporters, and processors, rather than for the farmers as the law intends. The Congress is derelict in its duty until it straightens this situation out.

REPRESENTATIVE LESTER JOHNSON'S FIGHT FOR LIFTING BARRIERS FOR INTERSTATE MARKETING OF WISCONSIN MILK

Mr. PROXMIRE. Mr. President, at this time I desire to publicly commend and endorse the efforts which are being made by Wisconsin's distinguished Representative, LESTER JOHNSON, to establish an orderly and open nationwide market for fluid milk.

The principal instrumentality for creating a national market for milk is adoption of a uniform national milk sanitation code. Representative JOHNSON is the principal author of legislation to accomplish this in the present Congress, as he was in previous years. I am proud to be a cosponsor, with the senior Senator from Minnesota [Mr. HUMPHREY], my senior colleague from Wisconsin [Mr. WILEY], and the junior Senator from Minnesota [Mr. MCCARTHY], of the Senate companion bill to LESTER JOHNSON's milk sanitation bill. This bill would provide the basic foundation for a national milk market. It would provide that milk which meets the U.S. Public Health Service sanitation code cannot be barred from any local market in the country where there is someone who wants to buy it.

It is extremely unfortunate, in my opinion, that the organization of local dairy farmers which enjoys a favored position in respect to the Washington,

D.C., milk market, has chosen to misrepresent the merits of Wisconsin milk and of the U.S. Public Health Service code. This is grossly unfair to Wisconsin and other Western producers of milk—who produce some of the finest, most wholesome milk, and other dairy products in the world. It is grossly unfair to consumers, who are entitled to know that they can place complete confidence in the U.S. Public Health Service and its uniform milk sanitation code.

Mr. President, LESTER JOHNSON has performed a tremendous service to his District, to his State, and to the Nation, in the able way in which he has sorted out the misrepresentations and excesses which have been injected into the dispute over whether to allow Wisconsin milk to be sold in Washington, and kept the record clear and straight.

In his speech in the House on this subject recently—March 9—LESTER JOHNSON touched on one matter of great importance which I should like to call again to the attention of the dairy farmers in the Washington milkshed.

Mr. JOHNSON noted that he was the author of a dairy bill in the other House in the last session—H.R. 13800—which would provide a way in which all dairymen could get together to develop nationwide bargaining power. This was an excellent dairy bill; I was the author of very similar legislation in the Senate.

Mr. President, the dairy farmers of Wisconsin realize full well that they will not find their economic salvation by destroying the bargaining power of other dairy farmers. It is not Representative JOHNSON'S intent, nor mine, nor of any important group of dairy farmers anywhere in Wisconsin, to wreck the Maryland-Virginia Milk Producers' Federation, or any other cooperative owned and controlled by dairy farmers. The Maryland-Virginia dairy farmers work hard for their livelihood; they produce good, wholesome milk, and they are entitled to an adequate return on their labor and investment.

But Wisconsin dairy farmers are entitled to adequate returns on their labor and investment also, and they are not getting them now. In fact, because Wisconsin is located far from the major markets for fluid milk, its farmers suffer a severe economic disadvantage in comparison with producers located closer to markets. Wisconsin and other distant milk producing areas are forced to bear most of the surplus burden for the entire national milk industry.

In the long run, milk producers in Wisconsin and those in Maryland and Virginia, and elsewhere throughout the Nation, must work together for the mutual welfare of all before they can secure a stable and orderly basis for decent returns for farmers anywhere. They must be brought together through a program which gives full consideration to the public interest, such as is provided in the national dairy legislation which has been proposed by LESTER JOHNSON and myself and other Members of Congress.

A uniform national milk sanitation code is an indispensable part of any effective, sensible milk marketing system of the future for this great country.

Only through such a national dairy program based on legislation such as we have proposed can Wisconsin and Minnesota and other surplus burdened areas be assured of equitable access to the Nation's market for milk, on a regular, orderly basis.

And in the long run—even in the fairly short run—the only real security for milk producers in Maryland and Virginia and in the other great milk consuming areas of the eastern seaboard, lies in the establishment of a national dairy program to give milk producers nationwide bargaining power.

In no other way can dairy producers anywhere hope to obtain and hold a favorable market situation without the constant threat of competitive pressure from other sections which enjoy less favorable market conditions.

PANAMA CANAL: PROTECTION AND DEFENSE

Mr. MARTIN. Mr. President, the problems of protecting and defending the Panama Canal, dramatically brought into public focus by recent overthrows of Caribbean governments and revolutionary agitations in the area near the Canal Zone, are matters to which I have devoted much time and study, with numerous resulting statements in the CONGRESSIONAL RECORD.

Thus, it was with keen interest that I read in the February 22, 1959, issues of the New York Times and the Washington, D.C., Sunday Star, two significant news stories, quoting Lt. Gen. Ridgeley Gaither, Commander in Chief, Caribbean, and giving some details of this complicated and important task.

In this connection, it is well to note that there are two problems involved: First, normal police protection of the Panama Canal and its installations under direction of the Governor of the Canal Zone; and, second, their defense against aggression under the military commander, but with both efforts aimed at maintaining the security of the waterway.

I ask unanimous consent that the news stories I have cited be printed at this point in the RECORD.

Without objection, the stories were ordered to be printed in the RECORD, as follows:

[From the New York Times, Feb. 22, 1959]

ONLY 3,000 GUARD THE CANAL ZONE—ECONOMY AND STRATEGY CUT U.S. FORCES—NAVAL AND AIR POWER LACKING

(By Jack Raymond)

QUARRY HEIGHTS, C.Z., February 21.—Economies and strategic policy have reduced the U.S. forces protecting the vital Panama Canal Zone to a single reinforced battle group, about 3,000 men.

There were 65,000 troops in the Canal Zone during World War II.

The Army here has no missiles such as the Nike-Hercules, which guard the key cities of the United States and overseas military installations with nuclear warheads.

The Caribbean Command's area of responsibility is the entire land mass of Central and South America south of Mexico. But it has no airpower and no war vessels, although it has headquarters on paper for air and sea operations.

"We are phasing down now and are as low as we can get," Lt. Gen. Ridgeley Gaither declared today. "If we went any lower we would be out."

PROBLEMS OF SECURITY

General Gaither, commander of the Caribbean forces, discussed canal security and related problems at his headquarters here. His comments related to joint Army-Air Force maneuvers in this region.

Although the war games were held in an atmosphere of political tension in the Republic of Panama, General Gaither's remarks were directed to a possible outside enemy such as the Soviet Union.

The Panamanian crisis, which involved a protest against alleged corruption on the city council of nearby Panama City, had no effect upon the maneuvers.

At the peak of the political crisis, United States soldiers were within the Canal Zone. The maneuvers in the Rio Hata region, 75 miles from here, were not affected.

The maneuvers, dubbed Exercise Banyan Tree, were designed to test the United States capability in limited war operations. More than 1,300 paratroopers flew 2,000 miles from Fort Bragg, N.C., and jumped to battle positions here ready to fight.

Although General Gaither said he hoped his command would be reinforced with missiles of atomic capability, he responded to questions about the security of the canal with a wisecrack.

"Having enough security is like your wife having enough dresses," he said with a laugh.

LOW MILITARY PRIORITY

General Gaither, who is a veteran paratrooper, appeared resigned to the low order of military priority assigned to this area by the Joint Chiefs of Staff in Washington.

The three-star general called attention to the absence of any direct contact with Soviet forces that face United States military positions.

"We are surrounded here by friendly countries," he said.

General Gaither stressed that the protection of Panama Canal, completed in 1914 and jealously guarded by the United States since then, was the primary mission of his command.

General Gaither said that last year, of some 4,000 vessels that crossed the Atlantic Ocean, more than half has used the 50-mile waterway across the Panamanian Isthmus.

General Gaither stressed the significance of the Banyan Tree war games. The smoothly completed combat jump by an airborne battle group of the 82d Division after a 7-hour flight showed that his forces could be bolstered in a day, he said.

Aircraft and shipping could quickly be brought here to protect the canal in the event of hostilities, he added.

[From the Washington (D.C.) Sunday Star, Feb. 22, 1959]

LACK OF MISSILE DEFENSE ON CANAL EXPLAINED

(By Elton C. Fay)

PANAMA, February 21.—The Panama Canal once ringed by the most modern of weapons, today has no missile defenses.

Moreover, there seems little air of urgency in establishing missile defenses for the U.S. Canal Zone—in an era when rocket weapons are becoming of major importance.

Why is the primary defense of the Canal Zone still based on antiaircraft guns not much different from those of World War II?

It doesn't necesarily mean that the Joint Chiefs of Staff in Washington question the value of missiles.

KEY REASONS GIVEN

Military commanders stationed here or visiting the area for recently concluded exercises point to some of the factors back of

the policy. And there are other obvious ones which they do not mention.

1. The assumption is that an enemy would aim at seizure rather than destruction of the canal. For a conquering nation it would have high economic value. Its military value to the United States is lessened in these days by the fact that the U.S. Navy now is a two-ocean fleet. Destruction of the canal could be more probable through sabotage of dams and locks than through air or missile attack.

2. The canal, at this time, is well removed from the area of Soviet threat. Lt. Gen. Ridgely Gaither, chief of the combined Army-Navy-Air command for the Caribbean, said today: "My command is not bellied up against any Communist or satellite country; we are in the midst of friendly countries."

3. Because defensive tactics apparently might be needed more against attempted seizure of the canal than its attempted destruction by overt attack, the need is for ground, air, and sea forces to repel invaders.

GUNS VALUE DUBIOUS

Today the resident garrison of the Canal Zone, about 3,000 troops, is smaller than in any year since World War II. The big coastal guns of other wars are gone. In their place are 90 and 120 millimeter antiaircraft guns. They are good against slow-moving propeller-driven aircraft, but of doubtful value against jets.

How would the Caribbean commander repel an attempt to capture the Canal Zone?

During the past week the military has tested out, again, its plan. In exercise Banyan Tree, two organizations for coping with small wars and similar aggressive efforts were used—the Army's Strategic Army Command (STRAC) and the Air Force's composite strike force.

Seven hours after taking off in big C130 turboprop transports from a base in the United States, 1,300 paratroopers parachuted into mock battle in the light jungle 70 miles north of the Canal Zone.

REFUELED IN AIR

Flying with them was an Air Force composite strike force of light jet bombers and fighters. The bombers are able to carry tactical size atomic weapons. Tankers planes refueled the jets in flight, extending their range to match the 2,000 miles flown by the big transports.

It could be asked: Exercise Banyan Tree demonstrated the capability to put a battle group of 1,300 men into the canal area, but what about putting in a bigger force, say an airborne division of 12,000 men?

Maj. Gen. Robert F. Sink, commander of STRAC forces, thinks that, as an example, the 82d Airborne Division (of which the battle group now here is a unit) might be moved to Panama from its Fort Bragg, N.C., station in 4 or 5 hours more than the time required for bringing down just the battle group.

SEVEN HUNDRED PLANES NEEDED

But there are some reservations. The 21 planes which brought the 1,300 paratroopers to the jump zone at Rio Hato obviously couldn't have a whole division. General Sink's estimate is based on the idea of using approximately 700 four-engined, long range planes to airlift a division of troops.

The Air Force's tactical air command doesn't have that many planes ready at all times for immediate use. But by diverting big transports from other services and borrowing from other Air Force units it might be possible to muster that total.

ROY WILLIAM HEBARD: ENGINEER, EXPLORER, AND BUILDER

Mr. MARTIN. Mr. President, one of the most satisfying compensations for public life is its occasional opportunities for participating in great undertakings and in the friendships such efforts bring forth. This is notably true of my work in the Congress having to do with the Panama Canal, which has brought me in touch with many leaders in the several fields concerned with the construction, operation, maintenance, and protection of that vital waterway.

Of these leaders, I have been tremendously impressed with the great stature attained by the distinguished graduates of the construction era of Panama Canal history, many of whom, after leaving canal service, achieved continuing fame in other pursuits.

In 1954, when the Panama Canal problem needed a forthright clarification, a number of them rose to the occasion in a ringing memorial to the Congress of the United States, a paper that contributed materially toward authorization of the Isthmian Canal investigation now being conducted under the direction of the Committee on Merchant Marine and Fisheries of the House of Representatives. One of the signatories of that memorial was Maj. Roy William Hebard, of White Plains, N.Y. A celebrated construction engineer, he started his distinguished career in engineering work during construction of the Panama Canal under the inspiring tutelage of John F. Stevens, historically recognized as its basic architect.

He was known to thousands over two American continents. Thus his death on February 5, 1959, is a matter of hemispheric interest.

Mr. President, I ask unanimous consent that an admirably written obituary, published in the Reporter Dispatch, of White Plains, N.Y., on February 6, 1959, be printed at this point in the RECORD.

There being no objection, the obituary was ordered to be printed in the RECORD, as follows:

MAJOR HEBARD DIES—HELPED BUILD THE PANAMA CANAL

Maj. Roy William Hebard, of 204 Soundview Avenue, who founded the construction engineering firm, R. W. Hebard & Co., Inc., in 1909 when in his middle twenties and who had previously spent 5 years as a resident engineer on the Panama Canal construction, died yesterday at his home. He was 85.

His interest in Latin America continued through his lifetime. In April 1954, he was given the Gold Medal of the Pan American Society of the United States for "distinguished services in developing and improving United States-Latin American relations and better understanding with the American Republics and people." Major Hebard had been a member of the society since its founding in 1912 and for more than 30 years had served as officer and director.

Major Hebard was also president of R. W. Hebard Associates in New York, agents for Brazilian mining interests. He had lived in White Plains many years and when not in Latin America had been a commuter from this city to New York since 1919. In 1956 he wrote to the Westchester Board of Supervisors recommending the requested fare boost of the New York Central, calling the railroad service "the best of its kind in Greater New York, or in fact, the United States."

Major Hebard and the thousands who had worked on the Panama Canal project expected that its inauguration on August 15, 1914, would be an occasion for appropriate recognition throughout the civilized world.

But as Major Hebard related later in an address, "Fate is not always kind to the engineering fraternity. Instead of hitting the front pages of the world's newspapers, the news of the canal was thrust in an obscure spot on an inside page and confined to a few lines. The front pages all told of the victorious march of the Kaiser's armies into Belgium. It was the irony of fate that World War I should have erupted in Europe almost on the day that the first ship passed in a man-made canal between the two great oceans, the Atlantic and Pacific."

SERVED AEF WITH DISTINCTION

Major Hebard had his chance to get back at the Kaiser for stealing the headlines. When the United States entered the war in 1917, Major Hebard and most of his associates volunteered for duty with the U.S. Engineers Corps, all serving with distinction in the AEF. Major Hebard was commanding officer of an engineering regiment and attained the rank of major.

In Latin America Major Hebard was regarded much the same way as Henry Kaiser was in this country for a time. He both tackled and mastered gigantic projects.

Major Hebard's company did pioneering work in primitive sections of both Central and South America, building roads, railroads, airports, communication systems, sanitation projects and buildings. From 1925 to 1931 his company worked on engineering and construction projects in seven countries, employing a labor force of more than 12,000 men.

The initial contract after the incorporation of Hebard & Co. was the construction of the first electric tramway ever built in Panama, together with a modern powerplant.

In 1911 Major Hebard met Minor C. Keith, brilliant American builder and entrepreneur in Latin America, an event that was to influence his entire future. The two men hit it off famously from the start, in spite of a great age discrepancy, and Mr. Keith and his associates took a substantial financial interest in the Hebard company.

STUDIED COLOMBIA'S TRANSIT

A New York banking group engaged Major Hebard in 1919 to make a study of transportation in Colombia. After a survey Major Hebard's company carried out highway and railroad work there and designed plans for water supply and sanitation in many important Colombian cities. Later the company located and constructed the famous Carreteraal-Mar (highway to the sea), a mountain road that required the heaviest construction ever undertaken in South America up to that time.

The Guatemala-Salvador Railway, the initial rail connection between any two Central American Republics, was built by the Hebard company.

During World War II the company was engaged on military installations for the U.S. Army at Panama and also built the Asuncion, Paraguay, airport, one of the most modern in South America. The company also served as consultants for Pan American World Airways airports on the north coast of Brazil. They played an important part in aerial transportation between Brazil and Africa during World War II.

Born in Augusta, Wis., Major Hebard was a graduate of the University of Wisconsin. He had lived in White Plains about 40 years and was a member of the White Plains University Club, the Westchester Hills Golf Club, and honorary member of the White Plains Hospital board of governors. During World War II, Major Hebard was active in civil defense.

AN ELECTOR

He was also a past president of the Panama Canal Society, a member of the American Brazilian Association, and treasurer and director of the Pan-American Society of New York. Major Hebard was an elector for the State of New York for the election of President Eisenhower.

Major Hebard leaves his wife, Mrs. Anita Hebard; a daughter, Mrs. Francisco deSola, of San Salvador; two sons, Roy F. Hebard, of Glen Ellyn, Ill., and Richard K. Hebard, of Scarsdale; 10 grandchildren, and a sister, Mrs. Ward Byers, of Kansas City, Mo.

Mr. MANSFIELD. Mr. President, is morning business concluded?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is concluded.

The Chair lays before the Senate the unfinished business.

UNEMPLOYMENT IN DEPRESSED AREAS

The Senate resumed the consideration of the bill (S. 722) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

MILITARY RETIRED PAY INCREASES

Mr. STENNIS. Mr. President, there has been introduced proposed legislation which would authorize pay increases for the military personnel retired prior to June 1, 1958, under current pay laws. This increase would be accomplished by permitting those persons to recompute their retired pay in accordance with the new scales for military basic pay. As the Senate knows, the Congress in the recent Military Pay Act did not adopt the view now being urged. Instead, the act contained, with slight modification, a flat 6 percent increase for those retired prior to its effective date of June 1, 1958.

In August of 1957 I was appointed by Chairman RUSSELL as chairman of a subcommittee to conduct hearings on the military pay legislation then pending in the form of proposed amendments to the Career Compensation Act. This legislation embodied the recommendations of the Cordiner report. The subcommittee held extensive hearings not only on this measure, but the legislation passed by the House. The subcommittee in April of 1958 reported a bill which was adopted without change by the full committee of the Senate, and with a slight modification was finally enacted into law.

This year, especially in view of the recomputation bills, S. 269 and S. 541, which constitute proposals rejected in the new Military Pay Act, many have requested me to present for the record the legislative history and some of the issues involved with respect to the new military pay law and the pending proposed amendments.

In response to these requests and with a sense of continuing obligation to the Senate on the subject, I shall briefly review the highlights of this subject.

POSITION OF CORDINER REPORT

Mr. President, an appropriate place to begin is the Cordiner report on military pay, which provided most of the basic concepts for the recent military pay bill. This report, which was issued in May 1957, did recommend that those already retired under current laws should be allowed to recompute their pay in accordance with the increased scales recommended for active duty personnel. It should be noted, however, that under this approach there would have resulted large increases, ranging as high as 58 percent, for the upper commissioned ranks of those retired. For the retired enlisted personnel and for the lower grade officers there would have been substantially no increase.

POSITION OF MR. CORDINER

Mr. President, Mr. Cordiner himself had reservations about this feature of the pay report. He stated during his testimony before the Military Pay Subcommittee that the retired pay feature was one of the weakest things in the Cordiner report and that it would be very difficult to make it consistent with other portions of the report's recommendations.

There was a difference of opinion among the Cordiner Committee members on his question, although Mr. Cordiner noted that the issue did not go so far as to result in a minority report.

POSITION OF THE EXECUTIVE BRANCH

Mr. President, thereafter there was introduced legislation that would have implemented the pay recommendations of the Cordiner report. The Department of Defense in commenting on this legislation opposed applying the increased pay scales to those on the retired list. The Department of Defense indicated that the primary objective was to provide increased incentives to retain personnel on active duty. The Department indicated that "it is not considered appropriate to reflect these compensation changes to personnel already retired," and, moreover, that "disproportionate increases would accrue to some and none to others," and furthermore, the Cordiner report and bill was not "the proper approach to the retired pay system." As I have already indicated, if recomputation had been permitted there would have been little or no retired pay increases for those in the enlisted and lower commissioned grades, but substantial increases for the higher commissioned grades.

Thereafter the Department of Defense submitted its own military pay legislation that embodied with slight modifications the concepts of the Cordiner committee. This legislation, however, provided that there would be no increase for persons already retired. During hearings on this proposed legislation the Department of Defense testified that the fairest approach to the whole retired list would be to award a flat across-the-board percentage increase.

During the Senate hearings, Mr. President, the House passed its own military bill. This measure, although a redraft of the administration's bill, was aimed at accomplishing the same improvements in the military pay system. The House, with a slight modification, provided a flat 6-percent increase for those already retired. The Military Pay Subcommittee, of which I was chairman, requested the precise views of the executive branch on the House bill. Mr. Quarles, Deputy Secretary of Defense, in responding to this request, had the following to say with respect to retired pay:

> With respect to the action of the House of Representatives in providing in section 4 of H.R. 11470 a 6-percent increase in the retired pay of personnel currently retired, the Department of Defense does not oppose this provision; however, the Department of Defense recommends against any amendment of section 4 of H.R. 11470 which would further increase the pay of personnel currently retired.

It is my clear understanding that the President of the United States himself carefully reviewed and approved the letter stating this position.

HOUSE AND SENATE ACTION

Mr. President, the House bill, as I have indicated, provided, with one exception, a flat 6-percent increase for those already retired. The Senate adopted the 6-percent feature that became a part of the act. The exception related to the retired pay of those of three- and four-star rank whom the House would have permitted to recompute under the new scales on the premise that no pay scales for the O–9 and O–10 pay grade existed previous to the new act. The Senate deleted three- and four-star feature. As the bill was agreed to in conference and signed by the President, those of the three- and four-star rank were not permitted to recompute under the new scales. They were, however, allowed to add to their retired computation base the amount of $100 a month for three-star, and $200 a month for the four-star which had already been a part of the active pay for these ranks.

RESULTS OF RECOMPUTATION ON THE PAY BILL

Mr. President, I should now like to consider the results, if a recomputation provision had been adopted under the scales as finally enacted in the new pay law rather than a 6-percent provision. There would have been the extremes of a 74-percent increase in the top pay bracket of an O–10 general officer ranging downward to no increase for those retired in the lower commissioned and enlisted grades. Except for the usual saving clause some retired enlisted personnel and lower grade officers would have suffered a reduction in pay. Specifically, the increase would have been as follows: O–10, former Chief of Staff, 74-percent increase; O–10, general, 58-percent increase; O–9, lieutenant general, 39-percent increase; O–8, major general, 26-percent increase; O–7, brigadier general, 22-percent increase; O–6, colonel, 22-percent increase; O–5, lieutenant colonel, 15-percent increase; O–4, major, 6-percent increase; O–3, captain, 2-percent increase; O–2, first lieutenant, reduction of 8 percent except for saving clause; O–1, second lieutenant, reduction of 16 percent except for saving clause.

With respect to enlisted men: E–7, master sergeant, 9-percent increase; E–6, technical sergeant, 1-percent increase; E–5, sergeant, reduction of 7 percent except for saving clause; E–4, corporal, reduction of 13 percent except for saving clause; E–3, private 1st class, reduction of 14 percent except for saving clause; E–2, private, reduction of 19 percent except for saving clause; E–1, recruit, reduction of 2 percent except for saving clause.

The cases cited are typical of the grades concerned, that is, those who

complete the average years of service before retirement.

Mr. President, let us examine the reason for these disproportionate percentages. The fact is that this new pay legislation was not the usual type extending a flat percentage increase to all grades. On the contrary, it was a broad and basic revision of the entire military pay structure designed principally to provide an incentive system which would attract and retain qualified personnel. It was to form the basis of a merit system aimed at properly encouraging progress and achievement. Specifically, these changes included for the first time two new officer and enlisted pay grades, proficiency pay systems for enlisted personnel, responsibility pay system for officers, and a substantial reduction in the importance of longevity increases.

In view of these disproportionate percentages resulting from changes in the system and in view of the need for recognizing the increase in the cost of living, the question therefore presented was whether it would be best to adopt recomputation, with the result that thousands of retired enlisted men and junior officers would receive nothing and those in the higher ranks would at the same time be awarded large increases.

The 6-percent feature was adopted as providing the most equitable treatment for the entire retired list in an attempt to provide a cost-of-living increase for all concerned.

FLAT PERCENT USUAL METHOD OF INCREASE FOR OTHER RETIREMENT SYSTEMS

Mr. President, for the reasons I have outlined, the 6-percent feature was adopted. This was a departure from the usual method of granting retired increases for those retired under current laws. I point out, however, that rather than recomputation the flat percentage has been applied in the past to a category of some thousands on the retired list. These are the persons retired under the laws in effect prior to 1949. The Military Pay Act of 1955 awarded this group a flat 6 percent and did not permit them to recompute.

Moreover, Mr. President, I should like to emphasize that the usual method of extending retired-pay increases under other retirement systems is some form of a cost-of-living percentage increase not involving recomputation. This is certainly true with respect to the increases granted to retired civil service employees and retired Members of Congress.

By way of example, I will review what has occurred with respect to increases for retired Members of Congress. All of these have been purely cost-of-living increases. I am advised that in 1952 there was a maximum increase of $324 a year, in 1955 a maximum of $410 a year, and in 1958 a maximum limitation of $500 a year.

I refer to these examples to show that recomputation has certainly never been used for the retired civil service employees and retired Members of Congress, and, furthermore, I know of no industrial or private systems where automatic recomputation is a feature. The issue is, therefore, presented as to why recomputation should necessarily be a part of the military system alone, keeping in mind also the disproportionate results that would have occurred under the current pay legislation.

RESULT OF REPEATED RECOMPUTATION

Mr. President, there are some members retired prior to June 1, 1958, who, after they received the 6-percent increase, are today receiving more retired pay than they ever received in the form of basic pay while on active duty. Moreover, there are some retired members in this group whose retired pay today, with the 6-percent increase, is greater than the highest pay they ever received on active duty, including all allowances.

If recomputation were extended over and above the 6 percent, there would, of course, be an increase in the number in these groups. The various systems with which I am acquainted compute the pay of the retired person on the salary he earned, with subsequent increases being based on the cost-of-living and separate action or legislation.

EFFECT OF INCREASES UNDER PENDING LEGISLATION

Mr. President, the 6 percent increase has already been granted. If the pending bills permitting recomputation should be enacted, the great preponderance of increases would still go to those in the upper grades, ranging from 39 percent for the top O–10 grade, down to 9 percent for the O–5 lieutenant colonel. Those in the lower commissioned grades would receive no increase. The E–7 enlisted grade would receive a 3-percent increase. Except for this slight adjustment all of the thousands of other retired enlisted personnel would receive no increase. The bills contain a saving clause that prevents any reductions in pay. Except for these provisions, however, there would be substantial reductions in retired pay in the lower grades. I point this out merely to show the effect of an outright recomputation.

Mr. President, the figures I have discussed are based on the pay grades for typical persons retired on the basis of length of service. I am inserting in the RECORD a somewhat detailed chart, setting forth each of the examples which are typical because of the fact that they represent the normal years of service before retirement in the various grades. Column 9 of the inserted chart indicates the percentage of increases which would be granted under this proposed legislation to those retired prior to June 1, 1958, with normal years of service.

Mr. President, I ask unanimous consent that the chart be printed in the RECORD at this point in my remarks.

There being no objection, the chart was ordered to be printed in the RECORD, as follows:

Typical examples of military retired pay under the Career Compensation Act nondisability retirements

Grade	Pay grade	Years of service	Paid prior to June 1, 1958		Paid after June 1, 1958				Percent increase compared to old pay scale		Percent increase for recomputation compared to Jan. 1, 1959, retired pay [1]	
					Retired before June 1, 1958		Retired after June 1, 1958 [2]		Retired before June 1, 1958	Retired after June 1, 1958 [2]	With saved retired pay	Without saved retired pay
(1)	(2)	(3)	(4)		(5)		(6)		(7)	(8)	(9)	(10)
			Monthly	Annual	Monthly	Annual	Monthly	Annual				
Chief of Staff	O–10	30	$807	$9,684	$1,015	$12,180	$1,406	$16,872	26	74	39	39
General	O–10	30	807	9,684	1,015	12,180	1,275	15,300	26	58	26	26
Lieutenant General	O–9	30	807	9,684	935	11,220	1,125	13,500	16	39	20	20
Major general	O–8	30	807	9,684	856	10,272	1,013	12,156	6	26	18	18
Brigader general	O–7	30	725	8,700	769	9,228	881	10,572	6	22	15	15
Colonel	O–6	30	608	7,296	645	7,740	739	8,868	6	22	15	15
Lieutenant colonel	O–5	27	453	5,436	480	5,760	523	6,276	6	15	9	9
Major	O–4	26	385	4,620	408	4,896	410	4,920	6	6	0	----------
Captain	O–3	25	322	3,864	341	4,092	[3] 328	3,936	6	2	0	−4
1st lieutenant	O–2	25	258	3,096	274	3,288	[3] 238	2,856	6	[4] −8	0	−13
2d lieutenant	O–1	27	253	3,036	268	3,216	[3] 212	2,544	6	[4] −16	0	−21

Do	W–3	24	257	3,084	272	3,264	292	3,504	6	14	7	7
Do	W–2	24	233	2,796	247	2,964	264	3,168	6	13	7	7
Do	W–1	24	212	2,544	224	2,688	234	2,808	6	10	4	4

[1] Applicable only to persons retired prior to June 1, 1958, and receiving retired pay at Career Compensation Act rates.

[2] Cols. 6 and 8 also indicate the amounts and percentages which would result from recomputation for those retired prior to June 1, 1958, except for those in the enlisted and lower commissioned grades who would be affected by the saved-pay provision.

[3] If those in these grades had completed at least 4 years' active enlisted service the figures would be O–1, $270 instead of $212; for O–2, $281 instead of $238; and for O–3, $334 instead of $328.

[4] This result would occur except for 1 relatively small percentage of individuals on saved active duty pay. Even those on such pay would receive less than those retired before June 1, 1958.

Typical examples of military retired pay under the Career Compensation Act nondisability retirements—Continued

Grade	Pay grade	Years of service	Paid prior to June 1, 1958		Paid after June 1, 1958				Percent increase compared to old pay scale		Percent increase for recomputation compared to Jan. 1, 1959, retired pay

Mar. 10, 1959.

POSSIBLE CHANGES IN SYSTEM

Mr. STENNIS. Mr. President, because of the custom of recomputation I can well appreciate the feeling of the particular individuals retired prior to June 1, 1958, who now receive less than a person retired after that date in the same grade. For the entire retired list, however, a 6 percent feature was adopted as the fairest approach.

With respect to those retired after June 1, 1958, the only way to prevent some particular grades from receiving more than others who retired prior to June 1, 1958, would have been to change the entire retirement system for those retiring in the future.

I might add at this point, Mr. President, that these differences work both ways. There are some persons who will retire in the future who will receive less than those retired prior to June 1, 1958, with the same rank and service. This result is caused by the changes in the pay system I have already referred to.

It was, of course, not practical, during the limited period of the pay hearings, to attempt to reexamine the basic rules for those retiring in the future.

There were a number of alternatives which the committee might have considered. These include, first, a phase-in system for the future whereby minimum periods of service would have been required in order to retire under the higher scales; and, second, a change in the method of computation whereby the retired pay would be based upon the average earned in the past 5 years rather than the pay of the rank held on the day of retirement.

I might point out, Mr. President, that the current laws provide that in the case of the Navy, an officer may be retired in the highest grade in which he satisfactorily served, even though he may not have held that grade at the time of retirement. This rule also applies to the Army and Air Force, except that the officer must serve at least 6 months in the higher grade.

Third. The requirement of some personal contributions to the military retirement pay system if it were proven that such would assist in reducing the ultimate cost. Possibly these or other alternatives might be considered in the future. They would necessarily require intensive study.

If the recomputation bills are to be considered, the three above alternatives, as well as others, should be studied and considered as possible statutory changes in the present system of retired compensation. A major revision of the entire military retired pay system doubtless would result. I want to emphasize, Mr. President, that I am not implying that hearings should be held on the recomputation bills.

RELATED ISSUES

Mr. President, I should now like to discuss certain other issues which are directly related to this entire military retired pay matter.

A. COST OF PENDING LEGISLATION

Mr. President, the total estimated cost of enacting the legislation permitting recomputation would be approximately $400 million. That is in accordance with the terms of the bills which have been introduced.

For the first year the estimated cost would be about $27 million, a figure that diminishes throughout succeeding years for the lifetime of the group.

Mr. President, as I have already noted, the pending legislation does not permit recomputation for all those retired, but only those retired under current pay laws. If those retired under the old laws were permitted to recompute, the total cost would be increased by about $50 million, or a complete total of about $450 million.

The military pay legislation of 1955 did not permit those retired under the old laws to recompute, but awarded them a flat 6 percent increase.

B. INCREASING RETIRED COSTS

Mr. President, a fact that Congress must recognize is the tremendous increase in the cost of retired pay. In fiscal year 1950 the cost was $219 million. This amount had been growing annually. In fiscal 1958 it was $561 million; in fiscal 1959 it will be $640 million. The pending defense appropriation requests $715 million for fiscal year 1960. Within the next few years this figure will cross the billion dollar mark, going up in terms of annual cost. These figures and estimates are undoubtedly on the low side since they are based only on current military pay scales. In the years ahead there will probably be additional military retired pay increases. I might note that the legislation enacted last year was the fifth military pay act since the end of World War II.

C. EARLY RETIREMENT PROBLEM

Mr. President, I shall now speak about the matter of early retirement. By this term I refer to the present arrangements that relieve a man from active duty at the prime of his career when his services could still be effectively used. This is accomplished under either the 20-year retirement law that permits an officer to voluntarily apply for retirement, or the mandatory retirement laws that eliminate most people after about 30 years of service. We continually observe the fact that many able officers, in the higher ranks of colonel and general, voluntarily retire in their early or middle forties in order to take positions in defense or some related industry. It is to the advantage of these officers to retire, since they can receive both retired pay and private remuneration at the same time. These officers should not necessarily be censured, since the laws offer this advantage, and it is certainly to their personal gain.

With respect to the 30-year statutes I should like to note that a man completes 30 years at about age 53. Many of these officers, especially those with professional qualifications, such as doctors and lawyers, are forced to leave the services at the prime of their experience and when they could render further valuable service.

These remarks, Mr. President, are not intended to imply that an officer should be retained who cannot fully meet the required physical and mental standards.

There is also the added fact that early retirements generally result in increasing substantially the cost of military retirement. This result is due principally to the fact that early retired pay, even though reduced because of fewer years of service, will be received over a longer normal lifetime.

Early retirement admittedly presents a complex problem. As we know, the promotion system in the services operates on what is generally called the flow system. The argument is therefore made that unless there are substantial retirements, there will be no vacancies to which to promote the able young men

from lower grades. Nevertheless, despite all these factors, there remains the question of whether on balance this continued retirement policy is in the overall best interests of the services.

Mr. President, I know of no retirement system, such as the military, where a person, after no contributions, may retire without regard to age on one-half of his basic pay after only 20 years of service. We must exercise some caution, in view of the very liberal nature of the law, to make certain that military retirement does not become an end in itself, rather than a means of providing adequate compensation after the conclusion of a career of useful service.

Mr. President, I hope that these remarks will serve to clarify the legislative history and some of the complex questions involved in this matter.

Mr. SALTONSTALL. Mr. President, as ranking minority member of the full Committee on Armed Services, and also as ranking minority member of the subcommittee which reported the military pay legislation last year, I should like to add a few facts in addition to those expressed by the Senator from Mississippi [Mr. STENNIS] on the question of whether pay increases should now be enacted for those retired prior to June 1, 1958, beyond those already provided for in the Military Pay Act of last year. I shall discuss the reasons for granting a 6 percent increase rather than providing for recomputation, with its disproportionate results.

First. It was felt that the 6 percent cost-of-living increase was the fairest method for the entire retired list. As the Senator from Mississippi has already pointed out, if instead of a 6 percent increase the committee had allowed recomputation, there would have been extreme increases in the upper grades, with practically no increases for the junior officers and for the retired enlisted man. These extremes would have resulted from the fact that the pay legislation changed to a large degree the entire military pay system.

Mr. President, we could not equitably ignore the cost-of-living element, for thousands of retired persons who would have received no increase under outright recomputation.

Second. The flat cost-of-living percentage increase is the normal method of increase under most retirement systems. As the Senator from Mississippi has pointed out, this is the method used for both retired civil service employees and also retired Members of Congress. Those retired under military laws are certainly not penalized when compared to those retired under other retirement systems.

The argument has been advanced that by making a 6 percent increase in retired pay last year, Congress set a precedent which will operate to reduce retired pay in the future of personnel now on active duty. It should be noted that if a flat percentage increase in retired pay were to be made in the future by Congress, it might provide a greater increase in retired pay for some than recomputation would provide, just as occurred in the new Military Pay Act. It all depends on which particular rank is in question.

For example, if a future military pay bill carried no increase or a very small increase in basic pay for high-ranking personnel, a flat percentage increase in retired pay might be greater than recomputation would provide.

The vital consideration in any retired pay increase is that all those then on the retired list be treated equitably. Congress must deal with each pay bill on its merits. Many times the requirements for the active forces are greatly different from those which apply to the retired list.

I feel certain that in each pay bill which may be considered in the future Congress will do its utmost to deal equitably with all retired personnel.

Third. The pay bill as it passed the House, Mr. President, provided a flat 6 percent increase, except for the slight modification mentioned by the Senator from Mississippi [Mr. STENNIS]. The executive branch also advised the Senate committee that it would support the 6 percent feature of the House bill, but would oppose any further increase.

Mr. President, we now have pending proposed legislation proposing further retired pay increases by permitting those retired prior to June 1, 1958, to recompute under the new pay scale. The only persons who would benefit thereby would be those who would receive more pay by recomputation. The persons who would benefit by this legislation are those in the high commissioned grades. There would be no increases for typical retired enlisted personnel or junior grade officers. Therefore, this means that the Congress is now being asked to reverse itself, after it passed what it considered to be the fairest method for retired pay increase.

Mr. President, I should like to add that if further retired pay increases are to be reconsidered, that might certainly open up the whole question of major and fundamental revisions in the entire military pay system.

One item which the Congress cannot ignore is the growing cost of retired pay. In the fiscal year 1950, the cost was $219 million. The pending appropriations bill contains a request for $715 million for the fiscal year 1960. Within a few years, this figure will cross the billion dollar mark, and the annual cost will continue to increase. The pending proposed legislation would add a total estimated cost of $400 million, over the lifetime of the entire retired pay group.

Mr. President, I hope my remarks will serve to clarify some of the questions involved in this issue, and to supplement the remarks made by the able Senator from Mississippi [Mr. STENNIS].

Mr. STENNIS. Mr. President, will the Senator from Massachusetts yield briefly to me?

The PRESIDING OFFICER (Mr. BYRD of West Virginia in the chair). Does the Senator from Massachusetts yield to the Senator from Mississippi?

Mr. SALTONSTALL. I yield.

Mr. STENNIS. Mr. President, I remember very well, during the long hearings and consideration of this very voluminous and most difficult measure, the extremely fine cooperation and very constructive suggestions and efforts of the Senator from Massachusetts, who almost always was present for the entire hearings and the consultations on the bill. I remember well his approach of absolute fairness and sincerity and his deep concern that, as nearly as could be, equity be done the individuals involved, and that at the same time a sound system be evolved.

I remember that one day he and I summed up our thinking as follows: We were convinced that there had to be a new pay scale for those on active duty, and that a career incentive feature had to be placed in the legislation. With the latter's being one of the primary objectives, we also agreed that the growing cost of the retirement system for the military—approaching $1 billion within a few years—is a factor of growing concern. So we adopted, after considering all the elements involved, the cost-of-living increase as the fairest and also the soundest approach.

Mr. President, I know that perhaps some who have retired under either system may be receiving too much, and there are some who are not receiving enough. But we cannot legislate for every individual; we had to recommend a system. That is what we tried to do.

Again, I wish to thank the Senator from Massachusetts for his very fine, constructive contributions to our labors.

And let me say that I appreciate very much the sentiments he has expressed.

Mr. SALTONSTALL. Mr. President, in reply, let me say that I appreciate the statement of the Senator from Mississippi. He was extremely conscientious and extremely thorough in his work on the bill, which was most difficult to develop because of its many computations which might lead to unfairness in certain ways.

As the Senator from Mississippi has said, what we tried to do was develop a bill which would provide sufficient incentive to retain in the services good men who would make lifetime careers of the military services, and at the same time be fair to those who had retired, although not to make the latter the subject of our principal concern. Therefore, we provided the increases called for by the bill. The contributions made by the Senator from Mississippi were extremely valuable.

Mr. President, I appreciate very much, indeed, what the Senator from Mississippi has said.

I yield the floor.

Mr. STENNIS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXCESSIVE NUMBER OF LIMOUSINES IN EXECUTIVE AGENCIES

Mr. DOUGLAS. Mr. President, we should seek to prevent waste wherever

it can be found. Some administrators, however, excuse excessive luxuries and loose practices—which are paid for by the taxpayers—on the ground that they do not cost very much. By this, they generally mean that the taxpayers are not gouged by any one practice by more than a few hundred thousand or a few million dollars. But it is out of the accumulation of such waste that enormous sums are lost. We should be careful with the millions, as well as with the billions.

Like most Members of Congress, I have been appalled by the traffic jams created on Capitol Hill when the administrative officials and the "high brass" of the Pentagon come to the Senate or House on business. Our streets and parking areas fairly swarm with huge limousines, each with its stone-faced chauffeur.

All this costs large amounts of money which someone has to pay. It excited my curiosity, as I am sure it has excited the curiosity of others. So, some time ago, I requested that the Budget Bureau furnish me information in regard to the number of Government limousines—7-passenger Cadillacs, Lincolns, or comparable vehicles—which are assigned to administrative officials in the Washington area, and to which office or official they were assigned.

I have since received from the Director of the Bureau of the Budget a reply which shows that some 99 limousines or comparable heavy sedans are assigned to administrative officials or agency heads in the Washington area. These limousines are in addition to some 1,450 Government-owned passenger automobiles which were in the Washington area as of June 30, 1958.

After analyzing the facts, I have come to several conclusions.

NUMBER OF LIMOUSINES COULD BE GREATLY REDUCED

First, the number of limousines or equivalent automobiles in the Washington area could be greatly reduced. I believe we could quite properly reduce the total number from 99 to 35, or a reduction of 64.

At the present time, not only do the President, the Secretaries of the Departments, and the members of the Joint Chiefs of Staff have limousines, but the Pentagon has a total of 37, of which 14 alone are assigned to various Assistant Secretaries.

I may say, in this connection, that the present administration has created an administrative monstrosity in the Pentagon. In the previous administration there were, I believe, some 13 Secretaries, Under Secretaries, and Assistant Secretaries. There are now 31 Secretaries, Under Secretaries, Deputy Under Secretaries, Assistant Secretaries, and Deputy Assistant Secretaries; and, of course, there are assistants to Deputy Under Secretaries and assistants to Deputy Assistant Secretaries. The situation which now exists in the Pentagon is largely matched by that in the State Department, and also to a large degree, by that in the Department of Agriculture. This system carries with it, as among the prerequisites of many of these officials, elaborate Cadillacs and Lincolns.

I may say here that while we, the Congress, are not always perfect, and often are subjected to severe criticism on some of these matters, we are not all that bad. If we were to follow the practice of the Pentagon, each of the 98 Senators would be assigned a limousine and a chauffeur.

We also find that every member of the Atomic Energy Commission, as well as the director or chairman of a great many agencies below Cabinet level, such as the Director of the Bureau of the Budget himself—the man who is supposed to watch over economy in the Government—the Director of the Federal Mediation and Conciliation Service, the Administrator of the Veterans' Administration, the Director of the National Gallery of Art, and the Governor of the U.S. Soldiers Home all have limousines assigned to them.

Quite frankly, this is excessive, and the numbers should be reduced. I think that an administration which has labeled the passage of legislation to clear the slums as inflationary and reckless should begin to practice what it preaches.

I think, too, that a President who believes that compensation to the unemployed can rightly be curtailed or limited at a time when 4.7 million are fully unemployed should be able to get along with a lesser number than the eight limousines which are now assigned to the White House.

I propose that the total number of the limousines be cut from 99 to a total of 35.

I would cut the number of White House limousines from eight to six. I think the President could get along with six limousines.

I would cut the number of limousines now assigned to the Pentagon from 37 to 11, or a reduction of 26.

I think it quite adequate for the total to be limited to six limousines for the President, and one each for his Cabinet officials, Secretaries of the Departments of the Army, Navy, and Air Force, the Commandants of the Marine Corps and Coast Guard, as well as the Chiefs of Staff of the services, and perhaps the Chairman of the Atomic Energy Commission and the Director of the Central Intelligence Agency.

Since the patients at St. Elizabeths Hospital are now assigned a 1947 Chrysler limousine, I believe that its age is such that it should not be denied to them for their transportation and enjoyment.

However, except for the limousines for the White House, Cabinet officials, the Chiefs of Staff and Commandants, the heads of the Atomic Energy Commission, and Central Intelligence Agency, and the patients at St. Elizabeths Hospital, the others should be relinquished and the officials who now ride in them should learn to live more simply and to help us save money and balance the President's budget.

BELOW-COST RENTALS RAISES SERIOUS QUESTIONS OF PROPRIETY

Secondly, Mr. President, the practice of renting limousines for the President and his Cabinet officials should be discontinued.

Apparently some 39 limousines are now rented by private industry to the Government for a yearly fee of $500 each—which includes maintenance, but not gas and oil—for the use of our top officials. I may say that the depreciation alone on these cars is certainly in excess of $500 per year.

According to the Bureau of the Budget, the limousines which were provided on a rental basis included 24 Cadillacs—manufactured, of course, by General Motors—2 Imperials, 5 Lincolns, 7 Chryslers, and 1 Buick. Thus, General Motors, Ford, and Chrysler were all renting limousines to the Government at below cost and for only nominal fees.

Personally, I believe that this is a bad practice and one which raises serious questions of propriety. One should note that these companies have huge Government contracts amounting to many millions of dollars a year. In these circumstances, I believe that the top officials of our Government should not be in a position of receiving services from these companies which are very costly, but for which the officials and the Government are not properly charged. I do not believe that our Government should be forced to exist on handouts from General Motors.

I would note also, in passing, that such service was not provided either by American Motors or by Studebaker-Packard.

Mr. President, much has been made in recent weeks of the so-called back-door financing of Government expenditures. Now I desire to raise the issue of hidden financing. I would note that while we in the Congress are not perfect in all of these matters, it is true that the limousines which are provided for the legislative branch are all provided by specific authority in an appropriation bill. Further, we require that each agency include a statement in the budget of proposed obligations for purchase and hire of passenger motor vehicles for the fiscal year involved.

Yet it is to be noted that nowhere in the budget for the Executive Office of the President or for the various departments and agencies are these rented automobiles listed. There is thus no obvious check on them as there is for the number of passenger automobiles which are provided for the legislative branch, or which are purchased by direct appropriation.

Thus, while on page 27 of the fiscal year 1960 budget there is a specific item for the Vice President's automobile—as well as those for the President pro tempore and the majority and minority leaders of the Senate—the money for the automobiles which are rented for the White House is not listed at all, and is hidden away under the object classification "other contractual services" for the White House budget.

In this respect, the legislative branch—with all its faults—does a good deal better than the President and the White House who have made such a hue and cry about back door financing, but who here are practicing hidden financing.

At this point, I should like to read an article on the subject of limousine rentals which appeared in the Washing-

ton News of April 22, 1957. It reads as follows:

SUMMERFIELD GETS A CADILLAC

Three days before he stopped mail service because he didn't have enough money, Postmaster General Arthur Summerfield took delivery of a new 1957 Cadillac, furnished him as a Cabinet officer. Cost of the car was $8,900, but the Government didn't pay that much.

The Post Office Department has an arrangement with General Motors to rent a Cadillac each year from the company at $500 a year. GM keeps the car in repair. The Government buys gas and oil.

SUMMERFIELD USED TO BE A CHEVROLET DEALER

What does General Motors get out of it? Well, publicity (such as this).

HOW CUTS COULD BE MADE

Mr. President, it should also be noted that the Federal Government has 20 limousines which were originally obtained by seizure or forfeiture. Most of these are now used by the Treasury.

What could be done is this:

Reduce the number of limousines which are now rented from 39 to none because of the possible conflicts of interest.

Reduce the number which are now purchased from 40 to 15, or a drop of 25.

The 15 which are purchased could be assigned to the White House and Cabinet officials according to rank. Of the remaining 20, which were obtained by seizure or forfeiture, 15 could be used to supply the remaining Cabinet and very top military officials and the patients at St. Elizabeths with a limousine, in lieu of those now rented or purchased.

The remaining five limousines could be pooled for use by the State Department, the ICA, the USIA, or other agency heads when an ordinary Chevrolet, Ford, or Plymouth or—in the case of need for seven-passenger vehicles—a low-priced seven-passenger station wagon could not be used, when these officials would need, in their opinion, to be equipped with magnificent cars in keeping with the high station to which they have been appointed.

CONCLUSION

In this way, Mr. President, the number of limousines now assigned to administrative and military officials could be reduced from 99 to 35, and a considerable savings could be made; a possible conflict-of-interest situation could be avoided; our top officials in the administration could begin to practice what they preach about inflation and economy; hidden financing could be avoided, and all of those but the very top and most important officials could demonstrate in their official actions that they try to live simply and act frugally with the taxpayers' money, as those who serve the people should try to act.

A rough estimate would seem to indicate that from $400,000 to $500,000 a year, including chauffeurs' salaries, could be saved in the cost of providing transportation to administration officials by the reforms I have suggested. This estimate is based on an average hourly wage of $2 for chauffeurs and the price of from $8,000 to $9,000 for a limousine.

I commend this matter to the attention of the administration and of Congress. In later brief speeches, from time to time, I shall point out other wastes and inefficiencies in the administration of our affairs and indicate further economies.

I ask unanimous consent that the detail sheets supporting the statements which I have made be printed in the RECORD at the conclusion of my remarks.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

ORDER FOR ADJOURNMENT TO MONDAY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the Senate concludes its deliberations today, it adjourn until Monday next, at 12 o'clock noon.

The PRESIDING OFFICER. Without objection, it is so ordered.

UNEMPLOYMENT IN DEPRESSED AREAS

The Senate resumed the consideration of the bill (S. 722) to establish an effective program to alleviate conditions of substantial and persistent unemployment and underemployment in certain economically depressed areas.

Mr. RANDOLPH. Mr. President, I rise to associate myself with my many colleagues in this body who are in support of S. 722. We heard last evening the factual and eloquent presentation of the subject by the junior Senator from West Virginia [Mr. BYRD], who now presides over the Senate. I pay deserved tribute to the effective efforts he has put forth on behalf of the proposed legislation, which has for its purpose needed area redevelopment.

Later this afternoon and early next week we shall hear statements from other Senators who advocate the passage of the

bill, S. 722. Among the Senators will be our esteemed and able colleague from Illinois [Mr. DOUGLAS]. The Senator from Illinois will indicate forcefully the contribution this measure can make to the potential redevelopment of our Nation, to the strengthening of the economy of the State of West Virginia and of the other States of the Union.

I should like, Mr. President, to offer some reflections of my own which will have a somewhat different emphasis from those set forth so well by my colleague from West Virginia.

We hear much talk, Mr. President, about the mandate which the people gave to the Congress of the United States in November of 1958. This bill affords the 86th Congress the opportunity, in line with its responsibility, to apply that mandate in decisive terms; if necessary, in terms which will override a possible Presidential veto such as that which resulted when the Congress passed similar legislation in the 85th Congress, and the Chief Executive of the United States saw fit on that occasion to use the pocket veto.

We hear much talk also on the question of balanced budget. I may say I am not a spender per se. I believe it is the responsibility of an individual Member of the Senate to check objectively those items on which moneys could be saved and those on which moneys should be expended, but we should now attend to the budget of human misery and want, to the budget of deprivation and despair—afflictions visited upon so many of our communities in West Virginia and throughout many other States by reason of chronic unemployment.

I say to my colleagues in the Senate that I was privileged for 2 days to sit in the hearings conducted in West Virginia in regard to the bill, which hearings were under the chairmanship of the diligent junior Senator from West Virginia [Mr. BYRD].

We listened to the grim recital of stories that are rivaled only by memories of the Great Depression of the 1930's; stories of men who have been without work, not for weeks and months, but for years; stories of children kept from school for lack of clothes to wear; stories of desertion of their families by fathers so that the wives and children might go on relief; and reports of thievery by other fathers so that their children might eat. And some of those, Mr. President, who have not stolen have starved.

This is a shocking revelation to America in a time of so-called high prosperity. We understand full well that our people are in dire distress. Their plight is pitiful.

It is not easy for a West Virginian to speak of his State and of its people in these terms, but I say that tonight, as was true this morning and as is true this noon, the unwelcome guest at the tables of tens of thousands of West Virginia families will be hunger.

Almost 300,000 of our people are living on what they call—and perhaps it is an expressive word—"mollygrub"—though existing is perhaps a better word than living. I think perhaps they do not live, they but exist. That is a better and more correct word.

For almost 300,000 West Virginians this term stands for a life of bare subsistence on surplus commodities. For a family of four it represents a monthly food ration of 10 pounds of flour, a 5-pound bag of cornmeal, 4 pounds of powdered milk, 2 pounds of rice, and 2 pounds of butter. According to State health department officials, for almost 300,000 West Virginians the term stands for a life of slow starvation.

The distinguished Senators who have spoken before me have referred to the cost of unemployment throughout the Nation, and the earnest junior Senator from West Virginia last night set forth the statistics for my own State. Economists and legislators must deal with figures and statistics; but I say the figures must be clothed with faces and the statistics must be pointed up in human values. So, as we consider the bill, let us remember that the figures about which we speak are mere abstractions of human beings who stand behind them. We must remember that $50 million spent in unemployment compensation in the State of West Virginia last year is a mere abstraction of human costs for which we can never compensate.

We can measure much of the effects of unemployment, such as the costs of compensation, the man-hours lost in work, and the gross product loss as a result of an idle labor force; but we cannot measure the effects on the lives of the people thus involved.

I have known the able Senator from Wisconsin [Mr. WILEY] for many years. I say to the Senator from Wisconsin, because of his intense interest in humanity, that last year in the campaign which I was privileged to carry forward to a seat in this Chamber I remember very well that on one occasion I talked to three men who were sitting on the steps when I went to a company store in a coal camp which was practically inoperative. I shook hands with these three men. I asked their names.

They said, "Mr. RANDOLPH, what are we going to do? We cannot find work." I asked the men how long they had been unemployed. I say to Senators present, particularly to the Senator from Wisconsin [Mr. WILEY] that those men had been unemployed for an average of a year and one-half—one man for almost 2½ years. I emphasize the fact that those men want to work. West Virginians are hardy and self-reliant. They want the opportunity to work.

This is a situation which causes me, frankly, to be a little slower in my speech than I would ordinarily be, because I feel the tug of the memory of the occasion to which I have referred, and which was repeated over and over again.

We cannot measure the spiritual impoverishment in the men and women who face a life of unrelenting physical poverty.

We cannot evaluate the erosion of morale in the parents who daily face the imploring eyes of their children.

We cannot determine the despair of men bound by the iron chain of circumstance.

I saw hundreds of men with dull eyes, fighting against the enforced tedium of unemployment. We need to consider these facts when discussing the provisions of Senate bill 722. These are some of the human facts, Mr. President, of which the figures are mere shadows and abstractions.

The facts of urban unemployment in West Virginia have already been ably presented by my distinguished colleague.

I remember that last night as he stood here, he talked about the human values. I repeat and reemphasize that there are human facts, of which the figures are the mere shadows and abstractions. Therefore, I can add but little to the statement of my colleague in that respect.

Therefore, I focus my remarks upon the provisions in the pending bill for rural redevelopment and the increasing problems of chronic rural poverty. These are problems, Mr. President, that are national and endemic, and they must be treated on a national rather than a local basis, with attention to the causes rather than the symptoms of distress. It is in this respect that S. 722 shows one of its chief advantages over the administration bill as well as the so-called compromise bill, S. 268. For, while the administration proposal offers nothing for rural redevelopment, and S. 268 offers only $50 million for rural areas, the Douglas-Cooper bill, cosponsored by many other Senators on both sides of the aisle, offers $100 million. This is hardly an extravagant sum to apply to the widespread and chronic conditions of rural poverty.

There are in the United States 562 counties which the Department of Agriculture characterizes as serious low-income areas. The Department uses three criteria in establishing the classification: first, economic areas with less than $1,000 average residual income to operator and family labor on commercial farms.

I digress to say that the family farm must be rebuilt. We need more emphasis upon the family farm than we have given it in the past few years. I speak of the necessity for the family farm because the able and distinguished Senator from Kansas [Mr. CARLSON], who has just entered the Chamber, has given much thought to that subject.

The second category includes economic areas with level of living index the lowest fifth of the Nation; third, economic areas having 50 percent or more of commercial farms in which the annual sales are $2,500 or less. If all three of these conditions are met the area is classified as serious; if two conditions are met it is classified as substantial; if one, it is classified as moderate. The entire State of West Virginia falls in one category or another.

According to the census of Agriculture of 1954, there were in West Virginia, 41 counties of a total of 55, in which one-third or more of the commercial farms sold products whose gross value was less than $1,200. There were nine additional counties in which 35 percent or more of the commercial farms sold products whose gross value ranged from $1,200 to $2,500. That is gross value, Mr. President, not net income. Thus, there were

only 5 counties in West Virginia which did not come under one classification or the other. While in the United States as a whole there were 458 counties in the first classification and 500 counties in the second.

In hearings before the Joint Committee on the Economic Report in 1955, an Under Secretary of Agriculture, Hon. True D. Morse, stated:

> There are large numbers of rural people with incomes so low they cannot afford the goods and services most of us take for granted. Many of them need special assistance if they are to improve their standard of living.
>
> The poverty existing among some of our people, in good times and bad, has a weakening effect on the entire Nation. Production lost because of lack of education and skills, poor health, and insufficient employment, can never be recovered. It is gone for good. The social conditions arising from low production and low incomes often generate an apathetic attitude.
>
> Community, education, religious, and civic affairs suffer. Confronted with the overwhelming handicaps of chronic poverty, many people with very low incomes see no possibility of improvement using the inadequate resources and few opportunities available to them.
>
> The development of agriculture's human resources is one of this Nation's most important economic and social problems. Very low incomes, that is, incomes in the range of less than $1,000 a year, are concentrated in agriculture. Less than one-fifth of the farmers in areas of low rural income produced and sold $2,500 worth of products in 1949. Investment in land and buildings is only about one-third of what it is elsewhere. Average schooling of adults on farms is 7 years. There are few outside jobs, and little use of machinery on low-income farms.

This statement, Mr. President, is from a high official of the very administration which today claims there is no need for, or that the budget cannot support, funds for rural redevelopment. I would ask the supporters of the administration bill, in the name of what concept of fiscal responsibility can they deny the provision of $100 million in loan funds, while continuing to accumulate the deficit in human resources described by the Under Secretary of Agriculture?

What concept of budget, Mr. President can justify such a policy? Surely it demonstrates the old nursery rhyme of the battle lost for want of a nail. And though I do not fear the outcome of the battle to extend to the farmers the full benefits of our society, this administration's policy in respect to the bill before the Senate would most assuredly create needless casualties among America's farm families.

The kind of relief offered by S. 722 to rural poverty is long overdue, Mr. President. We violate the faith of the farmers of America if we fail to act now. For, within the field of agriculture there are approximately 1 million families with an annual income of less than $1,000, while in West Virginia the average farm income is substantially less than $1,000.

Perhaps even more important than the substandard income level, Mr. President, is the fact that these people have little prospect of improving their situation, little hope of new opportunities in the field of agriculture.

Generally speaking, these are the families who also have inadequate farming resources, insufficient capital, little credit, and land too depleted to provide full-time productive use of their labor under modern farming conditions.

Thus, off-the-farm employment is becoming increasingly important as a source, not only of supplemental income, but frequently as the chief source of income. With continued technological developments in farming, and with the attendant process of larger and larger farm units being operated by fewer and fewer people, off-the-farm employment will continue to grow in significance.

I say to the distinguished Senator from Illinois [Mr. DOUGLAS], who sits next to me, that I have read on the ticker a United Press-International news story to the effect that the figure for the Nation's unemployment was approximately 25,000 greater in February than it had been in January. A Government spokesman said this was insignificant. I say to the Senator that the loss of a job to the man who needs the job is significant to him. Ten jobs are significant; 100 jobs are significant. Certainly 25,000 jobs, to the people who lose them, are significant. The loss of a job is never insignificant.

We hear not infrequently the expression of the view that these people are inefficient and marginal producers anyway, and should therefore leave the farms and seek employment in the city. That would seem to be the view held by this administration, if one might infer it from the policies of Secretary Benson. But, apart from the disregard of human values implied by such policies, they are impractical and unrealistic.

How is the farmer to prepare himself for skilled employment in urban areas? And how, when we already have almost 5 million men and women unemployed, is he to find work, especially when he is often over age and underskilled? If he fails, then he and his family become one more increment to the dispossessed urban slum dwellers—thus creating new burdens for public welfare and blighting more lives that otherwise would hold promise.

Although S. 722 does not presume to supply a complete solution to this grim and depressing problem, it offers promise of a constructive beginning. Not only should such a rural redevelopment program engage our support for humanitarian reasons, but by enabling currently underemployed farmers to seek full time off-the-farm employment it would decrease the surplus production of some commodities to that extent.

Finally, Mr. President, by relieving the political pressures from large numbers of underemployed farmers it would help create conditions favorable to the development of truly constructive and effective farm programs for the Nation.

Mr. President, I turn now to a brief consideration of the range and intensity of the continued unemployment in nonagricultural areas of West Virginia.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. DOUGLAS. Before the Senator touches upon that point, I wish to commend him for going into the question of rural underemployment and rural poverty, because sometimes this feature of the problem is neglected. We have placed at the rear of the Chamber a map which attempts to show, in red, the counties of the country which, as the Senator from West Virginia has said, suffer from all three defects. Those shown in red include a large portion of West Virginia, counties in eastern Tennessee, eastern Kentucky, western North Carolina, the coastal regions of South Carolina, most of Georgia, northern Florida, most of Alabama, most of Mississippi, a large part of Arkansas, eastern Oklahoma, eastern Texas, and western New Mexico.

Those shown as having two of these characteristics, represented in yellow, include large sections of Pennsylvania, Virginia, West Virginia, South Carolina, Louisiana, Arkansas, Oklahoma, west Tennessee, northern Michigan, Washington, Oregon, and northwestern Montana.

Those having one of those serious characteristics, shown in blue, include virtually the remainder of West Virginia, a large section of Missouri, a large section of Louisiana, eastern Arkansas, southern Alabama, northwestern Georgia, Minnesota, and large sections of northern Michigan.

So the idea that the American rural population is living in luxury is simply a complete misapprehension. I thank the Senator from West Virginia for making this fact abundantly clear.

Mr. RANDOLPH. I thank the Senator from Illinois. I remember an old poem:

> The doctor heals, the lawyer pleads,
> And the miner follows precious leads.
> But, this or that, what ere befall,
> The farmer feeds them all.

I think that is the substance of the poem as I knew it 25 years ago.

Mr. President, the figures from the 21st annual report of the West Virginia State Department of Employment Security, covering the period from July 1957 to July 1958 reveal quite clearly that our problem is not merely that of a temporary downswing, nor is it one of localized soft spots.

The distinguished Senator from Michigan [Mr. MCNAMARA] knows that in his State such a statement as I have made would apply with equal emphasis as it would in West Virginia.

Mr. MCNAMARA. And in many other States.

Mr. RANDOLPH. Yes, and in many other States, also.

The President of the United States has called a conference for next Monday to consider unemployment. At least eight Governors will come here to counsel with him about these matters. I am glad the conference will be held. I think perhaps it should have been held many months ago. But it is an indication that the President wants information on this subject. Perhaps he recognizes the importance of hearing first hand from the Governors of the States.

I have stated that this problem is chronic and endemic. For example, all major manufacturing industries in West Virginia registered losses in employment during the past 12-month period, ranging from 2,400 in chemicals to 3,500 in primary metals.

Included among those reporting losses were: Food, 200; petroleum and coal products, 200; textiles, 400; fabricated metals, 500; apparel, 300; lumber, wood products, furniture, and fixtures, 900; machinery, 1,900; and stone, clay, and glass, 3,300.

We know what the picture is in Michigan, even with the so-called good production of automobiles. Nevertheless, unemployment continues to exist.

Nonmanufacturing industries in West Virginia showed a combined employment loss during this period of 30,200, with mining heading the list at 16,200; transportation, communications, and public utilities, 8,000; trade, 4,000; contract construction, 3,100; and finance, insurance, and real estate, 100.

Only services and Government showed increases, with 900 and 400, respectively.

Even in Texas there are some problems which justify the need for a close look at the situation. I have talked on occasion with the distinguished junior Senator from Texas [Mr. YARBOROUGH] about these matters.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. YARBOROUGH. I express my appreciation to the distinguished Senator from West Virginia for his interest in these problems, not only in West Virginia but in all the States of the Union. It is a privilege to work with him on this matter and to support the bill which he has done so much to further in the Senate.

The Senator has referred to my home State. I am very familiar with the 36 counties which, unfortunately, are in the red area on the map displayed on the floor of the Senate. Those counties were among some of the first settled by the Colonial American settlers in my State. I was born and reared in that area, where my people have lived for more than 110 years. I have been in each and all of those counties a good many times.

The labor supply in that area is among the best in the United States. Actually the problem is one of wornout land, because of which farmers are being forced to go to the cities and other areas, especially to the gulf coast, to seek the means of earning their livelihood. It is land having abundant water resources and timber resources, together with an abundant labor supply. It simply needs a touch of organized capital, which the bill would provide. The area is favored with a mild climate and plenty of water, which most of our State does not have.

It is a pleasure to support the bill. I commend the distinguished Senator from West Virginia [Mr. RANDOLPH], and the distinguished Senator from Illinois [Mr. DOUGLAS], and other Senators, who have given so much leadership to the Senate and the country on this measure.

Mr. RANDOLPH. Mr. President, the Senator from Texas speaks with characteristic knowledge of his own State. We appreciate the support which he is giving in a vigorous way to the bill.

The current situation shows no improvement. According to the West Virginia Department of Employment Security, in January of this year the estimated civilian labor force of the State was 657,500, of which an estimated 89,700 were unemployed. In other words, approximately 15 percent of the State's labor force were ready to work but were unable to find employment. The estimate I have given includes, of course, those covered by unemployment compensation as well as those who are not covered.

Yet these figures themselves do not depict the full scope of our problem; for while the population of other States has been increasing, West Virginia registered a decline of 100,000 from 1950 to 1954. A disproportionate number of these emigrants are comprised of our sturdiest and most vigorous young men, as evidenced by the fact that 40 percent of the Korean bonus payments were sent to veterans living outside West Virginia.

There are bleak figures which represent widespread conditions of hunger, humiliation, and human misery. This situation will continue in West Virginia and in many other States if the Federal Government, in concert with the States, does not accept its responsibilities of alleviating the situation. It is idle rhetorical chatter of a theoretical and abstract sort of talk about principles of local responsibility and local resources when families are without adequate food, clothing, and shelter, and entire communities are near bankruptcy.

The people of West Virginia and the Nation demand deeds, not dogmas. Their need is for action, not idle doctrine.

I hope I shall not be misunderstood. I remember serving in the House of Representatives in the 1930's with men whom I see in the Chamber this afternoon. I shall not speak in partisan vein, but I shall say to Senators that I was a militant Member of Congress in those years when action came on Capitol Hill. I do not want to raise a hand to overdramatize, but I say that the President of the United States then, Franklin D. Roosevelt, was a man of action. He enunciated programs which were carried forward with the approval and vigorous support of Congress.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. RANDOLPH. I will yield; but before yielding, I may say that I remember the Senator from Texas saying in this body a few weeks ago that apparently the administration wants to wait. Sometimes this administration also seems to say, "It can't be done."

I am sorry that I took that moment, but I remember how moving the Senator's remarks were on that occasion. I yield.

Mr. YARBOROUGH. I congratulate the Senator from West Virginia again. I should like to compare the dramatic action taken by a great American leader, which he has just described, with the present attitude of no new starts. I ask the Senator from West Virginia, who is a historian as well as a Senator, what, throughout our history of expansion, the attitude has been of Americans of dramatic action, as contrasted with the "Don't do anything" attitude of the present administration.

Mr. RANDOLPH. In reply, let me say to the Senator from Texas that our Nation was founded by the bold, and it cannot be maintained by the timid. I realize that some of us disagree on the budget and on the nature of the budget. Yet I shall say—I had no desire to say it earlier, and perhaps it has no bearing here, but I wish to say it now—that my colleague has spoken of President Franklin D. Roosevelt in terms of precious memory, and I remember him in that way, too. He was unable to walk, but he placed the Nation on its feet.

I think it important that today the membership of the Congress rekindle that spirit of action, in which I participated a quarter of a century ago, on Capitol Hill. I know that some of us differ in our approaches. But I say that the people of the States want action. They are not interested now in weak explanations.

Mr. BYRD of West Virginia. Mr. President, will my colleague yield to me?

The PRESIDING OFFICER (Mr. MCNAMARA in the chair). Does the Senator from West Virginia yield to his colleague?

Mr. RANDOLPH. I yield.

Mr. BYRD of West Virginia. Mr. President, my senior colleague has spoken most succinctly and cogently today concerning the need for action in alleviating the poverty, the suffering, and the unemployment which exists in West Virginia and in some of the other States of the country.

It was Benjamin Franklin who said:

> He that riseth late shall trot all day, but shall scarce overtake his business at night.

Mr. President, I join my colleague in urging that action be taken quickly upon this proposed legislation.

A little earlier my colleague spoke about the decline in the manufacturing industries in West Virginia. I think it pertinent to read into the RECORD at this time a portion of a statement which was submitted during the testimony taken recently in West Virginia at our hearings, to which I have referred upon several occasions within the past week or 10 days. The following statement was made by Dr. Henry L. Ash, director of the West Virginia Department of Employment Security:

> To me, two things are crystal clear about the coal industry in West Virginia. The first of these is that coal will remain a very vital part of our economic life in this State. The second is that mechanization has and will continue to decrease the number of employees needed. To me, this is not an argument against mechanization, but a fact to reckon with.
>
> In the area of the production of natural gas in West Virginia, it is worth noting that the peak year of production was 1917, when 309 billion cubic feet was produced. In 1958 the production totaled only 187,300 million cubic feet. Then, if we may turn to the production of oil, in 1958 West Virginia produced 2,185,000 barrels of crude petroleum as against 12 million barrels in 1912, the peak

year. In other words, between 1912 and 1958 the production of crude petroleum in West Virginia fell to one-sixth of its former production.

In 1924 West Virginia produced 1,017 million board-feet of lumber. In 1958 the production was scarcely more than one-fourth of what it was 34 years before.

Mr. President, if I may impose for a moment further upon the time of my colleague, I should like to point out to the Members of the Senate who are present today the diastrous effects upon the revenues of our State government of this decline in the industries I have mentioned.

I think it most appropriate that I quote words which were spoken to the subcommittee during the field hearings; I shall quote now from the testimony given by the tax commissioner of West Virginia, the Honorable John Field:

The tax commissioner's office does not reflect the total State revenue, but it does reflect, I think, those sources of revenue that indicate the economy of the State and the condition of its economy.

That was the reflection on June 30 1957. By December 31 of that year we showed only a gain of $9,600,000 over the previous calendar year, so our attrition was beginning to appear.

Then at the end of the fiscal year, on June 30, 1958, we showed only a gain of $3,373,000.

So we realized that we were shipping water fast.

That trend continued, and at the end of the calendar year 1958 we showed a loss of general revenue through our office of $4,400,000 compared to the calendar year 1957.

With that picture in mind, the board of public works in the latter part of December felt called upon to invoke the statutory reserve of 5 percent, and that, of course, curtailed every participant of the general revenue appropriation 5 percent of its overall appropriation for the fiscal year.

I know my colleague will agree with me when I say that a State is in bad condition when it has to cut 5 percent from the budget of every department.

The tax commissioner went on to say:

Since we had only 6 months to go, in fact, it amounted to a 10 percent curtailment from that time on out.

Of course, while it creates difficulties in State agencies and State departments, by far the most serious effect of that is in our country schools.

I know that this matter is particularly close to the heart of my colleague, because of his long and useful experience in teaching in our public schools, and also because of his experience in serving as a member of the governing groups of higher institutions of learning.

Mr. RANDOLPH. Let me interrupt my colleague to point out that there is a possibility that in West Virginia a special session of the legislature will be called, to deal with the unemployment situation. I believe that is a possibility, even though the legislature closed its regular session on Monday of this week. The possibility of the calling of such a special session at this time indicates the seriousness of this problem.

Mr. BYRD of West Virginia. Mr. President, in his testimony, the Tax Commissioner of West Virginia further stated that "the State of West Virginia is now faced with that loss of State aid, and many counties may have to curtail their school term to 8 months or curtail their activities and their curriculum," because of the cutback to which I have already referred.

So, Mr. President, I say—and I shall not impose further on the time of my able colleague—that the State of West Virginia is in a most serious condition. Unemployment there is exceedingly high, and the State's revenues are diminishing in the face of increasing expenditures which are so very much needed.

I compliment my colleague on his excellent presentation. I trust that his words will not go unheeded by the other Members of this body and the Members of the other House and by those in the executive branch of the Government.

I think my colleague has made valuable contributions today. I know he is very sincerely and very conscientiously dedicated to the furtherance of legislation of this nature, because we see in it some hope—certainly in the long run—for our suffering constituents in West Virginia.

Mr. RANDOLPH. I thank my colleague.

Mr. KEATING. Mr. President, will the distinguished Senator from West Virginia yield to me?

Mr. RANDOLPH. I yield to my friend, the Senator from New York.

Mr. KEATING. On the map displayed in the rear of the Chamber, does the white area indicate the part of the country which would not share in this program?

Mr. RANDOLPH. That is correct.

Mr. KEATING. And that, I know, includes the State of New York. I appreciate the position of both distinguished Senators from West Virginia who have been speaking, and I am sympathetic with their position. It is one which it is only natural for them to take. I know that West Virginia has suffered probably more than any other State in the Union—at least, it is one of the very hardest hit. I am not a member of the committee, and I speak with some reticence on the subject, but as I envision and study the bill, it would cover about 16 percent of the total number of unemployed in the Nation. If I am in error in that statement, I shall be happy to have the Senator set me straight. If the statement is accurate, is it not a rather difficult thing to call upon all the taxpayers to put up some $390 million, which I think is the amount involved, in order to aid such a relatively small proportion of the areas of the country?

Mr. RANDOLPH. I know the Senator is familiar with the loan features of the proposed legislation—not the outright grants, but the revolving loan which will have to be repaid. I go back 25 years, and I remember that when we loaned men and women money with which to hold their homes together, $1 billion was provided. I remember the opponents of such aid at that time said the money would not be repaid. I remind the Senator that the money was repaid. I remind the Senator that, while it is true that States such as West Virginia, and other areas, which need help will be given help under the bill, I think there is a oneness in this country and in our responsibilities to the people of the Nation. I certainly would attempt to aid the State of New York if it needed aid, just as I am sure, if the Senator were convinced of the merits of the proposal, he would want to aid the State of West Virginia.

We must not think of legislation as sectional; we must think of this country as a nation of people who are knit together. Sometimes the poverty existing in one area today may exist in another area tomorrow. No one knows what next year may bring to industrial sections of New York, some of which are already beginning to feel the pinch.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. DOUGLAS. Is it not true that the labor market areas of Amsterdam, Auburn, and Gloversville, N.Y., are areas of high unemployment and would be eligible under the provisions of this bill?

Mr. RANDOLPH. That is correct.

Mr. KEATING. So, there are three small areas in New York which would be eligible for assistance, if they are properly represented by the chart in the rear of the Chamber.

Mr. RANDOLPH. That is correct.

Mr. KEATING. The Senator from West Virginia is concerned about his area, and properly so; and I am concerned about the State of New York, and I believe properly so.

Mr. RANDOLPH. Yes.

Mr. KEATING. I am very worried about the provision on page 9, lines 20 through 24 of the bill, which sets forth that the financial assistance shall not be used to "assist establishments relocating from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment."

That would be a very difficult provision to administer. It would be very difficult to determine in advance whether there were going to be unemployment in one area if an industry moved to another area. I would not want to support a measure which would further draw industry away from New York, even if it should go to the State of West Virginia, notwithstanding the affection I hold for my colleague. If such legislation were placed on our statute books, I think certainly the basic purpose of it could not be served if we allowed any funds to be used to assist establishments in relocating in one part of the country rather than in another.

We in the Northeast, and in the State of New York, have suffered seriously from the removal of industries to other areas. I would not want to feel that I was sitting idly by and permitting legislation to be enacted which would further that process, and leave it to a board or bureau to determine whether it would give aid to an industry in West Virginia, or North Carolina, or some other area, before the situation developed.

I should like to hear the views of the Senator on that question. I believe there may be an amendment offered to cover that situation. I do not know what the views of the Senator are on

that question. I would appreciate hearing them.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield to the Senator from Illinois, who is one of the leading sponsors of the bill.

Mr. DOUGLAS. I am interested in the comment which has been made by the Senator from New York. It seems to imply that New York does not have much unemployment; it is the other sections of the country which are in trouble.

I should like to remind my good friend from New York that, as of last February, 385,154 workers in New York were insured for unemployment; and, in addition to that, there were large numbers of other workers unemployed who were not insured.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. DOUGLAS. I would further remind my good friend that there were 269,265 persons in New York receiving surplus foods.

Mr. KEATING. Will the Senator yield?

Mr. DOUGLAS. Certainly.

Mr. KEATING. If those persons were covered by this bill, I would feel quite differently about the bill, but they are not eligible under its provisions.

Mr. DOUGLAS. They might well be.

Mr. KEATING. A very small number are eligible.

Mr. DOUGLAS. They might well be eligible tomorrow or next year.

Mr. KEATING. The taxpayers of New York will have to put up money, under the provisions of the bill, in order to help those in other areas. If the benefits of the bill were evenly and equitably divided among all the people of our country, I would be in favor of it; but I do not think the provisions of the bill are fair to the people of a State like New York.

The PRESIDING OFFICER. The Senator from West Virginia has the floor. Does he yield further; and if so, to whom?

Mr. RANDOLPH. Mr. President, I say in all good humor that the Senator from New York is not provincial; the Senator from New York, I am sure, is broad gaged. But I would remind those who are on the floor that those who today live on the ragged edges of an economic area which is depressed, as West Virginia is, may be joined by literally hundreds of thousands of other persons in a similar situation within a few weeks or a few months.

No one can suggest a cutoff point in connection with this problem.

The State of West Virginia alone, Mr. President, has needs which would almost exhaust the paltry provisions of the administration bill, if they were all to be met. For, according to the executive director of the West Virginia Industrial and Publicity Commission, to reduce unemployment in West Virginia to the national average of 6 percent would require the construction of 250 new plants employing 100 workers and a capital expenditure of $75 million.

Of course, not under this bill nor any other bill do we expect such accomplishments. West Virginians do not expect miracles; nor do they seek manna from heaven in the form of Federal handouts. They do, however, expect—and they have a right to expect—responsiveness from their elected officials, at the Federal, as well as the State level, at a time of desperate need. They have a right to expect constructive leadership from the Federal Government in giving the necessary stimulus to redevelopment.

Senate bill 722 offers the provisions for such a stimulus. I need not repeat its provisions, which have been presented so clearly by those who have spoken on the matter. However, there is one facet of the bill which may bear more relevance to West Virginia's problems than those of some other areas. I refer to the proposal for vocational retraining, and the authorization of $10 million for the purpose of subsistence payments to unemployed who are being retrained and are not entitled to unemployment compensation.

I stated a moment ago that this provision has particular relevance to the conditions in West Virginia because, due to the heavy reliance of our State economy on coal mining and the railroad industry, the inevitable technological developments in those fields have had an unduly harsh effect in the displacement of our workers. Thus, West Virginia, more than any other State, has felt the impact of technological unemployment. Those workers who are still young enough to transfer to other types of employment can benefit immensely from vocational retraining and the subsistence payments authorized under this bill. West Virginia has a laboring force of high skills and native intelligence, Mr. President, and to allow these abilities and capacities to atrophy, to wither away through neglect, is not only to deny the right of the individual to a creative life, but to deny the Nation itself the fruits of his creation. It should not be necessary to remind ourselves, when we are faced with the prospect of total mobilization of resources in the relentless contest with the Soviet Union that such a denial constitutes a shameful and wanton waste of human resources.

Mr. President, I address a few words to the opponents of this bill—not to personalities, but to their philosophy of government responsibility in regard to this measure.

The stark truth is, Mr. President, that there is no private enterprise willing or able to occupy the vacuum against which this bill is directed. This is a bill to assist private enterprise and to make more viable a national economy based upon private enterprise. Only the most fanciful and fantasy-ridden doctrine could interpret S. 722 as governmental usurpation of the domain of private enterprise. On the contrary, S. 722 is an imaginative, creative, and realistic proposal to extend the domain of private enterprise where it is most needed.

Nor should we be distracted by the contention that area redevelopment is the sole function of State and municipal authority. For, as the Senator from Illinois [Mr. DOUGLAS] indicated during the hearings, the same interests who oppose Federal action when contemplated and advocate placing the responsibility upon the States and municipalities, then in turn oppose State and local governmental action on the ground of private responsibility. The results of such arguments are there for all of us to see in the pinched faces of hungry children, in the long lines before the employment security offices, and in the dazed and stricken looks of men who are willing to work but can secure no work.

I am ready to conclude, Mr. President, but before I do so I wish to make one additional statement: I do not desire to overstress my feelings, but I believe this is the time when the Senate needs to have not only purpose but also perhaps a little prayer in its heart. I feel we have the opportunity to serve, but also that perhaps some Senators, who think in terms of their own constituencies rather than the Nation, might well think a little of sacrificing something in the interest of the whole Nation.

I trust Senate bill 722 will be brought to very speedy passage in this body.

Mr. PROXMIRE and Mr. DOUGLAS addressed the Chair.

Mr. RANDOLPH. I yield first to the Senator from Wisconsin.

Mr. PROXMIRE. First, I wish to congratulate the distinguished Senator from West Virginia for his excellent, effective, and dramatic speech. I think the State of West Virginia is extremely fortunate in having the kind of Senators it has, both of whom have made such strong speeches in favor of a bill which means so much to the State they represent.

To carry on a little bit the colloquy I began the other day with the distinguished junior Senator from West Virginia [Mr. BYRD] the present occupant of the Chair, I think the main point of the bill is that it is designed to help people who are located in an area in which there is no other way for them to get help.

Mr. RANDOLPH. The Senator is correct.

Mr. PROXMIRE. The fact is that these people are not going to be aided by seasonal work which may come along, or by cyclical work. These people are not in an area or a community where help can be provided them, because the industry of the area in which the community is organized has largely disappeared. These people are not in a State which can assist them. These are people who cannot help themselves at all.

A great Republican, perhaps the greatest of all, Abraham Lincoln, said:

> The legitimate object of Government is to do for the people what needs to be done, but which they cannot by individual effort, do at all, or do so well, for themselves.

Mr. RANDOLPH. The Senator is correct.

Mr. PROXMIRE. If ever there as a bill before the Congress which fitted Lincoln's standard to a "T" it seems to me this bill does, because if we do not help the needy people of West Virginia the fact is they are going to continue to be destitute and to be without work. They are going to continue to be anxious to work, who have the ability to work,

and who want to work, but who simply cannot find work. They need the work and they want the work.

I congratulate the senior Senator from West Virginia for an excellent speech.

I should like to add one further point. In the course of the colloquy which took place between the distinguished junior Senator from New York [Mr. KEATING] and the senior Senator from West Virginia [Mr. RANDOLPH] the Senator from New York raised the point that the bill might result in increasing unemployment in New York because it might take industries from New York and give them to West Virginia. In the course of that colloquy there was no opportunity to reply to the Senator from New York.

I point out that on page 9 of the bill, in line 20, the following language occurs:

Such financial assistance shall not be extended for working capital, or to assist establishments relocating from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment.

That language was put into the bill for precisely the reason which was voiced by the Senator from New York, that is, to make sure that the national economy as a whole is not damaged in any way, and that no section or area of the country will be damaged by the bill.

Mr. RANDOLPH. That is a protective amendment, as the Senator has well said.

Mr. CARLSON. Mr. President, will the Senator yield?

Mr. RANDOLPH. I yield.

Mr. CARLSON. The senior Senator from West Virginia has very ably discussed a very important subject, of concern not only to West Virginia, but to many other areas of the country, including some sections of my own State.

While the picture he has painted seems dark, there are also some bright spots in the State of West Virginia. One of them, which he should have mentioned, is West Virginia's basketball team. It so happened that Kansas State was the No. 1 team in the Nation, but it had some difficulty in a regional contest, in which it was eliminated. Our team cannot now win. I not only assure the Senator from West Virginia that we are proud of his team, but I hope it will win the national championship.

Mr. RANDOLPH. I thank my colleague. Tonight at Louisville we hope the Mountaineers of West Virginia will win, and go on to the finals in tomorrow night's contest.

One of the boys on that team is Jerry West. He is 6 feet 5 inches tall. Returning to the subject, let me say—not facetiously—that we in West Virginia want all of our people to stand tall. We believe that the proposed legislation, if it is passed and properly administered, will help us to help ourselves. If it becomes law it will not only return the original monetary investment, but it will also return dividends in the form of an improved economy and a strengthened morale.

Mr. SCOTT. Mr. President, it is my intention, at the appropriate time—and when the vote is taken on the area redevelopment bill, S. 722—to offer S. 268, which I introduced on January 14, as an amendment in the nature of a substitute.

I do not ask to have S. 268 reprinted as an amendment to S. 722, because I do not think it is necessary. Copies of S. 268 are available, and I have had a brief summary mimeographed for the use of the Senate. I ask unanimous consent that the summary may be printed in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

BRIEF ANALYSIS OF AREA REDEVELOPMENT BILL INTRODUCED BY SENATOR HUGH SCOTT

(Intended to be offered as amendment in nature of a substitute to S. 722)

1. Authorizes appropriation of $200 million for a revolving loan fund: $100 million to industrial areas; $50 million to rural areas; and $50 million to public facilities.

2. Provides for Federal loan participation of 50 percent, with State, local government or nongovernment sources providing matching 50 percent.

3. No outright grants for public facilities.

4. Provides for loans over period of 30 years.

5. Places program under Department of Commerce.

6. Authorizes Secretary of Commerce to determine realistic rates of interest on all loans.

7. Authorizes loans to industrial areas with following unemployment levels: 15 percent unemployment for 6 months, or 12 percent unemployment for 1 year, or 9 percent for 15 out of 18 months, or 6 percent for 18 out of 24 months, preceding date of application.

8. Contains special urban renewal section to permit Housing and Home Finance to give financial assistance to urban renewal projects in municipalities, without regard to predominantly residential requirement.

9. Contains Davis-Bacon Act provision to assure prevailing wage and 40-hour week on contracts.

10. Authorizes technical assistance of $3.5 million for surveys and evaluation studies.

11. Requires State or its instrumentality to establish local redevelopment plans.

12. Establishes Cabinet-level Advisory Board and 25-member public advisory committee.

Mr. DOUGLAS. Mr. President, I rise to speak on the area redevelopment bill, S. 722, which I reported 2 days ago on behalf of the Senate Committee on Banking and Currency. I shall discuss the desperate need for action, our national responsibilities in this regard, how S. 722 would help, the European experience with area redevelopment programs, and the background of attempts to establish such a program in this country.

THE DESPERATE NEED FOR ACTION

It is only with the greatest difficulty that one can discuss this measure. Were I to talk about the issue purely from my heart, I fear that many of my colleagues would mistakenly think I was exaggerating. On the other hand, were I to analyze the bill in cold statistics and pure economic reasoning, I would lose its basic purpose.

The hard fact is, however, that in this, the richest and most powerful Nation the world has ever known, the specter of prolonged unemployment and poverty still stalks the streets and the rural routes in numerous and vast areas of the country. This joblessness is no short-run affair. It is not made up of workers temporarily between jobs. Like a heavy, acrid smog, it has lingered for years over the entire State of West Virginia, as the two distinguished Senators from that State have made clear, stifling initiative and morale, smothering hope itself. It has pervaded huge sections of New England, the Middle Atlantic, and the South. And it has invaded sections of the Midwest, the Southwest, and the Far West.

This specter of prolonged unemployment does not walk alone. In its presence we often find hunger, disease, and mental anguish. It is visible in the wan faces of hungry and ill-clad children, relatively helpless as their parents slip deeper and deeper into the abyss of utter despair. Stouthearted womenfolk fight back only to be met with defeat after defeat. Jaunty, good humored, hardworking fathers have been worn down by enforced idleness.

Breadlines? There are few breadlines. But in West Virginia, a quarter of a million people line up for free food from surplus commodities. In some counties, 40 percent of the population is on relief. Twenty-five percent is common.

Not only in West Virginia, but all over the country, large numbers of people are receiving surplus foods. In January of this year no fewer than 5,605,824 people were receiving the barest amount of surplus foods, such as cornmeal, cheese, powdered milk, a little butter, and a little flour.

The two Senators from West Virginia pointed out that in that State approximately 283,000 people were in receipt of surplus commodities. In Pennsylvania no fewer than 851,000 persons are in receipt of surplus foods; in Oklahoma 252,000; in the State of New York 369,000; in the State of Mississippi 408,000; in the State of Michigan 534,000; in the State of Kentucky 267,000; and in the State of Arkansas 279,000. This is indicative, in some measure, of the great need which exists all over the country.

I ask unanimous consent to insert at this point a table showing the number of persons receiving surplus foods in the various States as of January 1959.

There being no objection, the table was ordered printed in the RECORD as follows:

Number of persons receiving surplus foods January 1959

Alabama	130,118
Arizona	42,221
Arkansas	278,852
California	67,333
Colorado	25,845
Connecticut	1,246
District of Columbia	37,000
Georgia	43,307
Illinois	80,549
Indiana	101,338
Iowa	93,513
Kansas	11,476
Kentucky	267,016
Louisiana	170,465
Maine	59,442
Maryland	47,006
Massachusetts	4,303
Michigan	533,914
Minnesota	46,960
Mississippi	407,756
Missouri	117,548

Number of persons receiving surplus foods January 1959—Continued

Montana	11,031
Nebraska	2,107
Nevada	1,301
New Hampshire	8,289
New Jersey	21,965
New Mexico	42,159
New York	369,265
North Carolina	964
North Dakota	11,299
Ohio	68,883
Oklahoma	252,301
Pennsylvania	851,203
Puerto Rico	602,749
Rhode Island	12,777
South Carolina	2,248
South Dakota	39,307
Tennessee	165,415
Texas	142,446
Utah	25,453
Vermont	13,924
Virginia	37,765
Washington	7,494
West Virginia	282,575
Wisconsin	55,902
Wyoming	8,959
Trust territories	5,835
Total—United States	5,605,824

SOURCE.—Department of Agriculture

Mr. DOUGLAS. How can this be? Nationwide there is somewhat more than six percent unemployment, which is far higher than it should be when we take into consideration involuntary part time, but it would not seem in itself to be disastrous. The output of goods and services is rising. Total personal income and profits are heading up. How can we have this destitution in the midst of what is sometimes said to be an affluent society? The answer is simple. Averages and totals cannot tell the true story.

Suppose the average income of five families is $5,000 a year. This would seem to indicate that they are not in dire need. But suppose one of the families makes $25,000 and the other four families make nothing at all. Their average income is still $5,000, but the fact is that 4 out of 5 of these families are poverty-stricken.

The latest figure shows that 4.7 million persons in the United States are walking the streets hunting work. This is a little more than six percent of all workers. That is seemingly not disastrous. However, in addition to those persons, there are the involuntary part-time workers. These would amount to an equivalent of approximately a million full-time unemployed workers, making a total average of around 7½ percent of the labor force. But let us part the curtains and look behind the totals, for we often fail to see the trees for the forest, as well as the other way around.

HIGH DEGREE OF UNEMPLOYMENT IN MANY AREAS

In the Altoona, Johnstown, Scranton, and Wilkes-Barre areas in Pennsylvania, one worker out of six has failed to find a job. In the areas of Beckley, Bluefield, Logan, Morgantown, and Welch in West Virginia, the proportion was nearer to one out of every five.

Almost 13 percent of all workers in the areas of Bristol, Norwich, and Thompsonville, Conn., were without work.

I should like to call these latter figures particularly to the attention of the senior Senator from Connecticut [Mr. BUSH]. Unemployment hovers around 17 percent in the Harrisburg, Herrin, Murphysboro, and West Frankfort areas in my own State of Illinois. Unemployment is also high in the southernmost tip counties of Illinois around Cairo, and in those counties are included the labor market area across the river in Kentucky. The Jasper, Ala., area, had more than 13 percent unemployed, as did the Muncie and New Castle areas in Indiana.

I am stating the areas, not merely the towns.

In the Kentucky areas of Corbin, Hazard, Madisonville, Middlesboro, Paducah, Paintsville, and Pikesville, the rate of unemployment ranged from 12 to nearly 23 percent. Maine, Maryland, Michigan, Missouri, Montana, New York, North Carolina, and Tennessee all had areas with over 12 percent unemployment.

I have mentioned only some of the areas with currently high rates. But unemployment, as such, is not disastrous, if it continues for only a brief period of time. What is disastrous is being without a job for a year, 2 years, or even longer.

Now let me refer to a chart I have had prepared, which indicates the persistence of unemployment in the major areas of employment.

This is indicated, for the major areas, in the third chart in the back of the Chamber, and for the minor areas in the fourth chart.

In the Terre Haute, Ind., area, unemployment has ranged from 6 to over 12 percent every month for 4 solid years. The same is true of the areas of Lawrence, Mass.; Johnstown, Scranton, and Wilkes-Barre, Pa.; Providence, R.I.; and Charleston, W. Va. These are the so-called major areas of substantial labor surplus. There are also numerous smaller areas in the same situation. Southern Illinois areas have been in grave difficulties for many years on end.

In the southern Illinois communities, unemployment has been more than 16 percent for at least 4 continuous years, and more than 20 percent for a large portion of the time.

Mr. President, in conjunction with the moving addresses which have been delivered before I took the floor, I hope we shall have established the need for a sound program to combat joblessness in the many distressed areas of the Nation.

Yesterday the distinguished junior Senator from West Virginia [Mr. BYRD], who is now in the chair, presiding over the Senate, produced a great mass of evidence regarding West Virginia. The Senator from Kentucky, who will follow me in a few minutes, will produce equally strong evidence affecting the people of his State. This evidence could be multiplied by various other sections of the country. I could go on with the growing evidence of malnutrition, rickets among children, actual death by starvation; of family desertions by defeated fathers; of growing crime rates—the stealing not so much of money as of food; of children trudging to school through snow in worn-out tennis shoes. Our committee hearings are replete with proof of the human misery in these areas this very day.

I regret that the national press so largely ignores these facts, and that national officials so largely ignore them. I shall, however, dwell no longer on these deep human needs, which the press and national officials so largely ignore. However, let us never forget what is going on as we struggle to enact a program to deal with this situation.

OUR NATIONAL RESPONSIBILITIES

I know that some will ask a question at this point, and it is a logical one. Why do these people stay in these places? Why do they not leave and seek work elsewhere? The answer is that they do. That is why unemployment rates are 12 instead of 25 percent, or 20 instead of 40 percent. But migration cannot solve the problem.

In the first place, many of the persons thrown out of work are over 40 or 50 years of age and face discrimination because of their age when seeking a job. They leave their families only to return more defeated than before. Second, they lack training for the available jobs in other areas. We must remember moreover that there is a ceiling on jobs in the other localities. The total number of employed in manufacturing is diminishing. The number of job opportunities elsewhere is limited.

Fourth, the roots and homes of these people are in these areas. They keep up their hopes for the future in these areas. It is hard for a man to give up all he has worked for in his home, his neighborhood, church, and local groups, especially after investing most of his life in them.

Fifth, some families have gone deeply in debt and do not like to run out on their obligations. Moreover, those who migrate and find jobs are, because of low seniority in their new employment, the first to be laid off in a recession. So they head back home.

There are other reasons. But the basic answer to the question "Why do not more persons in these areas move?" is that they would if they could but they cannot.

The next question, also logical, might be "Well, what can we do about it? Why send good money after bad? What good would it do? Anyway, is this not a local rather than a national problem?" The overtones of this argument were heard a few minutes ago when the distinguished junior Senator from New York, who has recently joined us, implied what does New York have to do with the unemployed people of West Virginia?

Mr. President, we are one Nation. We cannot keep these pockets of distress isolated from the rest of the Nation any more than we can keep cancer cells isolated from the rest of the body. Once the cancer begins to move and to concentrate, it will spread. I say it is in the interest of the Nation to try to eliminate cancerous areas of high and persistent unemployment.

In some cases, perhaps, little can be done. For the program envisaged by our area redevelopment bill is not a handout or a dole. It is not a relief measure. Rather, it is a program of long-term investment in repayable loans to help these areas to help themselves.

The fact is that many of these areas have natural resources, strategic locations, and an available labor supply. They are ripe for new industries, but private capital is not available. In such depressed communities local capital is normally limited and less venturesome than in places where greater prosperity prevails.

Furthermore, a long period of unemployment will have drawn down local savings and other local funds in local banks. Local capital is less venturesome because there has been a long period of decline.

NEED FOR ADDITIONAL CAPITAL

Moreover, outside capital is reluctant to enter these communities. Insurance companies do not want to put money into areas which are distressed and where employment and production have been on the downgrade. Investment bankers do not wish to make loans. What is needed in these localities, among other things, is credit on favorable terms and at low rates of interest, so that they can both develop their public facilities so as to make them more attractive to new industry, and establish new enterprises to create new jobs in the area. The Federal Government can be most helpful in assisting such communities, with the cooperation of private lending institutions and State and local governments, to raise the funds necessary to expand the economic base. A long-term loan at a low rate of interest granted by the Federal Government in some cases may be just the added incentive necessary for the unleashing of other private capital to develop many of these areas.

In a sense, what we are proposing is to provide a locality with "seed capital" which can help start new enterprises around which local capital, local community facilities, outside capital, and all the rest, can cluster.

Failing to aid badly distressed areas which might recover with a little help would be a waste of valuable resources. What is a prolonged depression? A prolonged depression in an area means the gradual disintegration of community facilities—schools, stores, hospitals, banks, office buildings, homes, churches, paved streets, sidewalks, sewer and water supply systems, and all of the community services which were required at great expense and which are now wasting away. Moreover, a successful area redevelopment program would serve to reduce public outlays for unemployment compensation, relief, and various other forms of public assistance—payments for which no current production is received in return. The best remedy for unemployment is work and jobs. That is the purpose of this bill, S. 722.

S. 722 IS NOT INFLATIONARY

The Employment Act of 1946 declares that the Federal Government should promote maximum employment. But there is a limit to the effectiveness of broad-scale programs to alleviate joblessness. Many—probably most—of the cities of the United States are not badly depressed. Moreover, a nationwide program to alleviate joblessness and poverty, which affects all areas alike, might create inflationary pressures by causing new investments where unemployment is small. In these cases, there would be no slack, or little slack, for the additional expenditures to take up, and pouring new money into such areas would tend to bid up prices instead of actually increasing production.

Channeling investments into areas of high unemployment or underemployment is, however, a different matter. Large reservoirs of idle manpower would be put to work and production would increase. This added output would offset in whole or in large part the extra monetary purchasing powers added to the industrial sector of the country, and hence cannot be called inflationary.

The other day I placed in the RECORD an algebraic formula which describes the quantity theory of money. I pointed out that "P," the general price level, is equal to MV plus M'V' over T, or

$$P=\frac{MV+M'V'}{T}.$$

"M" is the symbol for the cash; "V" is the velocity of circulation of the cash. "M'" is the quantity of bank credit or demand deposits. "V'" is the velocity of circulation of bank deposits. The denominator "T" is the symbol for the physical production or real national income.

The unimaginative interpretation of the quantitative theory of money is that if the numerator is increased, it necessarily means that P must increase. So it would, if the denominator T were not increased at the same time.

But if by adding additional bank credit and monetary purchasing power, idle labor is put to work, together with resources which otherwise would be unemployed and idle, the denominator T would be increased at the same time that M' is increased.

The consequent increase in T would certainly diminish the increase in P which would otherwise result, and might indeed compensate for the increase in M' and prevent any increase in the price level at all.

I invite the naive advocates of the quantitative theory of money to read the CONGRESSIONAL RECORD tomorrow morning and examine this equation. If they do, they will find that what I have said is correct. The trouble is that many so-called orthodox folk who think that every time bank credit is increased prices will necessarily be increased, assume that such an increase will have no effect whatsoever upon production. But to the degree the increase in the circulating medium does cause the volume of production to increase, this serves as an offset, in whole or in part, for the increase in the quantity of money or credit.

This is one of the greatest weaknesses, I may say, in the economic reasoning of the so-called orthodox school. They assume full employment and the full utilization of resources. Under such conditions, if the labor supply and resources are fully employed, then if more purchasing power is added, it does overflow and spills over in an increase in the price level.

But if there are idle resources and idle labor, the addition of monetary purchasing power may put to work labor which otherwise would be idle, and thus increase the real national income. So let there be no talk about the inflationary effects of the bill by exponents of the half-baked orthodox quantitative theories.

Thus, the area redevelopment bill reported by the Committee on Banking and Currency would reduce unemployment and poverty where they are the worst. The minority, in their views, complain because the program is not distributed evenly over the Nation. The junior Senator from New York [Mr. KEATING] seemed to be complaining about this point. The bill is intended to reduce unemployment in areas where unemployment is the worst. That is the purpose of the bill.

We believe also that the bill will have a beneficial effect upon the Nation, because it will build up purchasing power in the distressed areas, and the people in those areas will then buy products from other sections of the country, and reduce unemployment there, or prevent conditions from getting worse there; moreover there will not be the same pressure for the migration of labor which there otherwise would be.

Let me make it clear, this is not a program designed to cure either great industrial depressions or seasonal unemployment. We do not claim that; we never have claimed it. But it would reduce the persistent and deep pockets of the unemployed, and hence decrease so-called structural unemployment. General monetary and fiscal policy cannot reach structural unemployment, due to shifts of demand, diminishing natural resources, and improved technical methods, and other factors, which have left so many American families stranded.

Unemployment in the depressed areas cannot be reduced appreciably by a general monetary or fiscal policy. It is necessary to have a sound plan designed specifically for the situation, and that, we believe, is what S. 722 would provide.

HOW S. 722 WOULD HELP

Senate bill 722 proposes the establishment of an Area Redevelopment Administration, headed by an Administrator with power to designate redevelopment areas and allocate help to them in the form of loans and assistance. To be eligible for help, an area would have to qualify under certain criteria. There would be two types of areas—industrial and rural.

As of January of this year, the Department of Labor designated 76 major areas located in 25 States as "areas of substantial labor surplus," namely, those with unemployment in excess of 6 percent. One hundred and eighty-three smaller areas in 35 States fell into this category.

I wish to emphasize that these are areas, not merely towns. On the map, we have had to designate them at the

location of the towns on which they are centered; but the labor areas cover not only the towns, but also the surrounding regions of indefinite extent. So the designation applies not only to the towns, but also to the regions which surround them.

In general, this means that after making allowances for temporary and seasonal changes, those seeking work in the area and unable to find it must account for at least 6 percent of the total working force.

Mr. President, I ask unanimous consent to have a list of these areas printed in the RECORD at this point.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

AREAS OF SUBSTANTIAL LABOR SURPLUS, JANUARY 1959

MAJOR AREAS

Alabama: Birmingham, Mobile.
Connecticut: Bridgeport, New Britain, New Haven, Waterbury.
Illinois: Chicago, Joliet.
Indiana: Evansville, Fort Wayne, South Bend, Terre Haute.
Kentucky: Louisville.
Maine: Portland.
Maryland: Baltimore.
Massachusetts: Brockton, Fall River, Lawrence, Lowell, New Bedford, Springfield-Holyoke, Worcester.
Michigan: Battle Creek, Detroit, Flint, Grand Rapids, Lansing, Muskegon, Saginaw.
Minnesota: Duluth-Superior.
Missouri: Kansas City, St. Louis.
New Jersey: Atlantic City, Newark, Paterson, Perth Amboy, Trenton.
New York: Albany-Schenectady-Troy, Binghampton, Buffalo, New York, Syracuse, Utica-Rome.
North Carolina: Asheville, Durham.
Ohio: Canton, Lorain-Elyria, Toledo, Youngstown.
Oregon: Portland.
Pennsylvania: Allentown-Bethlehem-Easton, Altoona, Erie, Johnstown, Philadelphia, Pittsburgh, Reading, Scranton, Wilkes-Barre-Hazleton, York.
Puerto Rico: Mayaguez, Ponce, San Juan.
Rhode Island: Providence.
Tennessee: Chattanooga, Knoxville, Memphis.
Texas: Beaumont-Port Arthur, Corpus Christi.
Virginia: Roanoke.
Washington: Spokane, Tacoma.
West Virginia: Charleston, Huntington-Ashland, Wheeling-Steubenville.
Wisconsin: Racine.

SMALLER AREAS [1]

Alabama: Alexander City, Anniston, Florence-Sheffield, Gadsden, Jasper, Talladega.
Alaska: Anchorage.
Arkansas: Fort Smith.
California: Eureka, Ukiah.
Colorado: Pueblo.
Connecticut: Ansonia, Bristol, Danbury, Danielson, Meriden, Middletown, Norwich, Thompsonville, Torrington, Willamantic.
Georgia: Toccoa.
Illinois: Canton, Centralia, Decatur, Harrisburg, Herrin-Murphysboro-West Frankfort, Litchfield, Mount Carmel-Olney, Mount Vernon.
Indiana: Anderson, Columbus, Connersville, Michigan City-La Porte, Muncie, New Castle, Richmond, Vincennes.
Iowa: Ottumwa.
Kansas: Coffeyville-Independence-Parsons, Pittsburg.
Kentucky: Corbin, Hazard, Hopkinsville, Madisonville, Middlesboro-Harlan, Morehead-Grayson, Owensboro, Paducah, Paintsville-Prestonsburg, Pikeville-Williamson.
Louisiana: Opelousas.
Maine: Biddeford-Sanford, Lewiston.
Maryland: Cumberland, Frederick, Westminster.
Massachusetts: Fitchburg, Greenfield, Haverill, Marlboro, Milford, Newburyport, North Adams, Pittsfield, Southbridge - Webster, Taunton, Ware.
Michigan: Adrian, Allegan, Ann Arbor-Ypsilanti, Bay City, Benton Harbor, Escanaba, Holland-Grand Haven, Ionia-Belding-Greenville, Iron Mountain, Jackson, Marquette, Monroe, Owosso, Port Huron, Sturgis.
Mississippi: Greenville.
Missouri: Cape Girardeau, Flat River-De Soto-Festus, Joplin.
Montana: Butte, Great Falls, Kalispell.
New Jersey: Bridgeton, Long Branch, Morristown-Dover, Plainfield-Somerville.
New York: Amsterdam, Auburn, Batavia, Corning-Hornell, Elmira, Glens Falls-Hudson Falls, Gloversville, Jamestown - Dunkirk, Kingston, Newburg - Middletown - Beacon, Olean-Salamanca, Oneida, Watertown, Wellsville.
North Carolina: Fayetteville, Kinston, Mount Airy, Rockingham-Hamlet, Rocky Mount, Rutherfordton-Forest City, Shelby-Kings Mountain, Waynesville.
Ohio: Ashtabula-Conneaut, Athens-Logan-Nelsonville, Batavia-Georgetown-West Union, Cambridge, Defiance, East Liverpool-Salem, Findlay-Tiffin-Fostoria, Kent-Ravenna, Kenton, Marietta, New Philadelphia-Dover, Portsmouth-Chillicothe, Springfield, Zanesville.
Oklahoma: Ardmore, McAlester, Okmulgee-Henryetta.
Oregon: Albany, Coos Bay, Eugene, Pendleton, Roseburg.
Pennsylvania: Berwick-Bloomsburg, Butler, Clearfield-DuBois, Lewistown, Lock Haven, New Castle, Oil City-Franklin-Titusville, Pottsville, Sayre-Athens-Towanda, Sunbury-Shamokin-Mount Carmel, Uniontown-Connellsville, Williamsport.
Rhode Island: Newport.
Tennessee: Bristol-Johnson City-Kingsport, La Follette-Jellico-Tazewell.
Texas: Laredo, Texarkana.
Vermont: Burlington, Springfield.
Virginia: Big Stone Gap-Appalachia, Radford-Pulaski, Richlands-Bluefield.
Washington: Aberdeen, Anacortes, Bellingham, Bremerton, Everett, Olympia, Port Angeles.
West Virginia: Beckley, Bluefield, Clarksburg, Fairmont, Logan, Martinsburg, Morgantown, Parkersburg, Point Pleasant-Gallipolis, Ronceverte-White Sulphur Springs, Welch.
Wisconsin: Beliot, Eau Claire-Chippewa, La Crosse, Oshkosh, Watertown.

[1] These areas are not part of the regular area labor market reporting and area classification program of the Bureau of Employment Security and its affiliated State employment security agencies.

Source: Department of Labor.

Mr. DOUGLAS. Mr. President, in order to qualify for help under the terms of Senate bill 722, an area must have been subjected to persistent as well as high unemployment; and the 6 percent test is an absolute minimum. In addition, the joblessness of an area must have been 50 percent above the national average for 3 out of the 4 years, or 75 percent above for 2 out of the 3 years, or 100 percent above for 1 out of the 2 years immediately preceding its application. These criteria have been criticized by our friends of the minority. Of course, it is very interesting that these criteria are the same as those used by the administration in its objections to the bill. These criteria were adopted by the committee in a move to meet one of the administration's objections to the bill. These are the same as those proposed by the administration, except that the qualifying time periods were reduced by one year.

In other words, Senate bill 722 would make eligible for loans only the most hard-hit industrial areas among those already classified as having substantial labor surplus.

Of course, if we attempted to apply this program to everyone, the minority would say we were trying to spread it too thin over the entire Nation. But now that we propose to apply it only to the areas most in need, the minority says we should apply it to the entire Nation. In short, when one deals with the minority, one cannot win, because the minority will say that the proposal is either too thick or too thin, too hot or too cold, too young or too old. So in dealing with the minority, one simply cannot win; according to the minority, a Democrat is never correct.

According to the best estimates of the Department of Labor, 112 industrial areas spread over 26 States qualify for the designation of "industrial redevelopment area" under the terms of Senate bill 722.

Mr. President, I ask unanimous consent to have printed at this point in the RECORD a list of these areas.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

AREAS WHICH MAY QUALIFY FOR FEDERAL ASSISTANCE AS AREAS WITH SUBSTANTIAL AND PERSISTENT UNEMPLOYMENT UNDER S. 722,[1] MARCH 1959

MAJOR AREAS [2] (23 MAJOR AREAS)

Indiana: Evansville, South Bend, Terre Haute.
Massachusetts: Fall River, Lawrence, Lowell, New Bedford.
Michigan: Detroit, Flint, Grand Rapids, Muskegon.
New Jersey: Atlantic City.
North Carolina: Asheville.

[1] This listing is preliminary and tentative, and is based largely on bimonthly or semiannual data compiled from area labor market reports prepared in connection with the Bureau of Employment Security's program for the classification of areas according to relative adequacy of labor supply. Data used cover a 2 to 5 year period extending through the closing months of 1958; early 1959 data, now becoming available for some areas could result in several changes in the above listing. A more comprehensive review of area data on a monthly—rather than bimonthly or semiannual basis, and in the light of whatever criteria may be included in the bill finally enacted, would be required to determine which areas are eligible for assistance as areas with substantial and persistent unemployment.

[2] Major areas are areas included in the Bureau of Employment Security's regular area labor market reporting and classification program. This program covers 149 of the country's leading employment centers. Unemployment and labor force data for these areas are generally available on bimonthly basis.

Ohio: Lorain-Elyria.[4]

Pennsylvania, Altoona, Erie,[3] Johnstown, Scranton, Wilkes-Barre-Hazleton.

Rhode Island: Providence.

Tennessee: Knoxville.

West Virginia: Charleston, Huntington-Ashland.[4]

SMALLER AREAS [5] (89 SMALLER AREAS)

Alabama: Florence-Sheffield, Jasper, Talladega.[3]

Alaska: Anchorage.

Connecticut: Bristol, Danielson, Norwich.[3]

Illinois: Centralia, Harrisburg, Herrin-Murphysboro-West Frankfort, Litchfield, Mount Carmel-Olney,[3] Mount Vernon.

Indiana: Michigan City-La Porte, Muncie, New Castle,[4] Vincennes.

Kansas: Coffeyville-Independence-Parsons,[3] Pittsburg.

Kentucky: Corbin, Hazard, Hopkinsville, Madisonville, Middlesboro-Harlan, Morehead-Grayson, Owensboro, Paducah, Paintsville-Prestonsburg, Pikeville-Williamson.

Maine: Biddeford-Sanford, Lewiston.[3]

Maryland: Cumberland.

Massachusetts: Milford,[3] North Adams, Southbridge-Webster, Taunton.[3]

Michigan: Adrain, Bay City, Escanaba, Ionia-Belding-Greenville,[4] Iron Mountain, Marquette, Monroe, Owosso,[4] Port Huron.

Missouri: Joplin.

Montana: Butte, Kalispell.[3]

New Jersey: Bridgeton, Long Branch.

New York: Amsterdam, Auburn,[4] Gloversville.

North Carolina: Fayetteville, Mount Airy, Rockingham-Hamlet, Shelby-Kings Mountain.

Ohio: Portsmouth-Chillicothe, Springfield,[3]

Oklahoma: McAlester.

Oregon: Coos Bay.[3]

Pennsylvania: Berwick-Bloomsburg, Clearfield-DuBois, Lewistown, Lock Haven, New Castle,[4] Pottsville, Sunbury-Shamokin-Mount Carmel, Uniontown-Connellsville, Williamsport.

Mr. DOUGLAS. Mr. President, there is, in the Chamber, a chart which indicates the degree and persistence of unemployment in the major areas covered by S. 722. I ask unanimous consent, at this point, to insert a table in the RECORD which indicates the degree and persistence of unemployment in the smaller areas.

[3] Borderline.

[4] Appears eligible solely on the basis of unemployment 100 percent above national average for 1 of the preceding 2 years.

[5] Smaller areas: Areas with a labor force of 15,000 or more which are officially classified as "smaller areas of substantial labor surplus" by the Bureau of Employment Security. Data for such areas are generally available on a semiannual basis. Information for smaller areas which are not classified, or for areas with a labor force of less than 15,000, is not available in Washington on a consistent basis.

Source: U.S. Department of Labor, Bureau of Employment Security, Office of Program Review and Analysis, Washington, D.C., Mar. 13, 1959.

There being no objection, the table was ordered printed as follows:

Mr. DOUGLAS. Mr. President, about 6.3 million workers, or roughly one-tenth of the total national civilian labor force, are located in these areas. However, the same areas account for about 17 percent of total national unemployment. In addition, 12.2 percent of the work force—or one worker out of every eight—in these 112 areas is unemployed, a rate twice as high as the current national average. Thus, it becomes apparent that Senate bill 722 strikes directly at unemployment only where help is needed most. This bill also strikes at it indirectly over a much wider area.

The needs of the low-income rural areas are no less urgent than those of the industrial areas with surplus manpower. Available data indicate that some rural areas have not shared during recent decades in the growth of the country as a whole. In many rural counties in the United States, the average per capita income is as little as one-fourth that of the average person in the United States.

Under the terms of Senate bill 722, the Administrator of the program could designate "rural redevelopment areas" from among those with the largest number of low-income farm families, taking into account also "the proportion that such low-income families are to the total farm families of each of such areas, the relationship of the income levels of the families in each such area to the general levels of income in the United States, the current and prospective employment opportunities in each such area, the availability of manpower in each such area for supplemental employment, and the proportion of the population of the area which has been receiving public assistance."

Mr. President, as the senior Senator from West Virginia [Mr. RANDOLPH] has stated, the Department of Agriculture has prepared lists of the 500 counties in the United States with 100 or more commercial farms which ranked, according to the 1954 Census of Agriculture, lowest in terms of level of living for farm-operated families. The Department has also prepared lists of the 500 counties with the highest proportion of the commercial farms having gross sales of farm products of less than $2,500. A total of 336 counties appeared in both lists. These areas would probably pro-

vide the core of the low-income rural areas which would be eligible for assistance under Senate bill 722.

I ask unanimous consent to have printed at this point in the RECORD a table showing the incidence of such counties in the several States.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Counties with lowest farm income and levels of living, by State, 1954

State	500 counties with lowest level of income		500 counties with highest percentage of commercial farms having sales of less than $2,500		336 counties appearing in both lists

Source: Bureau of the Census. 1954 Census of Agriculture.

Mr. DOUGLAS. Mr. President, three revolving loan funds of $100 million each would be created by Senate bill 722. These would be devoted to loans for first, industrial areas; second, rural areas; and third, public facilities in both industrial and rural areas where such facilities would encourage economic development.

In addition to the three revolving-loan funds, the bill provides authorization for $75 million in grants for public facilities in areas which cannot repay loans.

Loans for private projects in industrial and rural areas could be used for the purchase or development of land and facilities, including machinery and equipment, for industrial purposes. Maximum Federal participation would be 65 percent of the total cost of such projects, although, of course, it is hoped that the Administrator will be able to get the new enterprises under way with less than a 65-percent loan. State or local participation must be at least 10 percent, and private participation at least 5 percent, of the total cost of the project.

Of course, I think it follows that the private groups would have to be prepared to furnish at least 25 percent of the entire amount, since the Federal Government would provide 65 percent, and the State and local governments would provide at least 10 percent. So the private groups must be ready to furnish at least 25 percent of the amounts needed for land and buildings and machinery and equipment; and of course they must, in addition, be prepared to provide all the working capital—namely, the amounts needed for the purchase of raw materials, and to finance the wage bill, and so forth.

The loans to private industry could be made for periods of up to 30 years, with possible extensions to 40 years in some cases. This period was scaled down from previous proposals in another effort to meet the criticisms of the administration. The interest rate chargeable would amount to about 4½ percent, which would be the current average yield on outstanding marketable obligations of the United States of comparable maturities, plus one-half of 1 percent. Half of this added percentage would be allocated to a sinking fund to offset losses.

I may say that in the original bill we included a loading of only one-fourth of 1 percent. But in an effort to meet the administration more than halfway, we added another one-fourth of 1 percent as a sinking fund.

I also wish to remind the Senate that we have adopted the criteria the administration laid down, and we reduced from 40 years to 30 years the period for which the loans would normally be made. So we have leaned over backward in our efforts to meet the criticisms of the President.

Under the terms of Senate bill 722, applications for loans for private projects must normally be approved by an agency of the State, and the project must be consistent with an overall area development program approved by the Administrator.

The terms of the loans for public facilities would be similar to those applicable to private loans, except that the maximum period would be 40 years instead of 30 years. The interest rate would be the same as that for private loans, except that the added percentage would be one-fourth of 1 percent instead of one-half of 1 percent, taking as its base the average interest rate on Government loans for all comparable maturities; but the loading or added percentage would be one-quarter of 1 percent instead of the one-half of 1 percent as for the loans to new private enterprises.

Now I should like to say a word, if I may, about the purposes for which these loans for public facilities would probably be used. They would be used for facilities which would help a locality to attract and to hold industry. The two purposes which would be most common would be provision for industrial water, which is an absolute necessity to attract new industry today, and also provision for what are called industrial parks, whereby buildings are constructed which are capable of subdivision for use by a number of small concerns, and which have access roads, water, sewage, electric light, and telephone service connections, so that all a small business need do is move in. In certain other cases perhaps a water or sewage system might be eligible for such a loan, but, in the main, the emphasis would be on industrial facilities rather than community amenities.

In our report we point out that a depressed area may have many assets which can be used by industry, such as labor and water facilities, but it may lack one public facility by which all the others may be utilized; for example, adequate water supply for industrial use, adequate sewage facilities, or access to a navigable river or a railroad.

Let me touch, if I may, upon the subject of loans for rural development areas. The need for new industry in such areas is quite apparent, and is admitted by all students of the problem. There is a large supply of idle time in those localities—the idle time of farmers during off seasons and the idle time of members of a farm family. In fact, the idle time of farm workers in areas of low-income probably constitutes the greatest unused resource such communities have, if that idle time could only be translated into productive effort much good would result.

It is hoped and believed that these loans will permit the establishment of small plants, many of them processing plants to handle local farm products, thereby enabling labor in those areas to be more fully employed, and hence increase off-the-farm income.

This has been a recommendation of all students of agriculture. The Department of Agriculture has set up what it calls its rural redevelopment program, but the Department has insisted that each locality must finance its own efforts and there is to be no aid from the Federal Government.

The rural redevelopment program in the South has just been surveyed by a very distinguished committee of the National Planning Association, and I should like to read what the agriculture committee of the association stated about the program of the Department of Agriculture so far as it relates to rural redevelopment:

> The low-income rural problem is far too vast and deep seated to be solved by the rural development program as presently conceived. While the cautious grassroots approach of this program may have been

largely justifiable up to date, it will have to become much more sharply focused, better integrated and coordinated, much bolder in its objectives, and far better financed if it is to make significant inroads in reducing the South's widespread rural poverty. Emphasis has been placed too exclusively on only one essential ingredient of progress—local initiative and enterprise. The other essential ingredient—outside financial and technical assistance, both public and private—has been too often ignored and neglected. Such a one-sided approach—

I take it they are referring to the program of the Department of Agriculture—

(a) seriously obscures the basic fact that, given their own very limited resources, low-income rural communities cannot solve their problems with the best of local leadership and cooperation; and (b) reinforces the unfortunate cultural heritage and narrow sociopolitical outlook of many State and local leaders, thereby tending to preserve rather than to change the status quo in low-income rural areas. Particularly needed are large increases in Federal appropriations and grants-in-aid for improved general and vocational education, for a much greater amount of supervised farm credit, for more special agricultural research and extension services, for more adequate labor market information and employment services, and for better health facilities, in rural areas. Costly though such programs would be, they could be easily financed by diversion to this purpose of a relatively small part of the amounts now expended on farm price-support programs. In view of the present stupendous waste of human resources in our low-income rural areas, can we afford to do any less?

Mr. President, who do you suppose were the members who issued that report? Were they extreme radicals or left-wingers? Not at all. The chairman of the committee was Mr. Lauren K. Soth, editor of the editorial pages of the Des Moines Register and Tribune, the central newspaper of the great Cowles chain, which publishes a newspaper in Minneapolis, and has given to the world Look magazine.

Vice chairman of the committee was Donald R. Murphy, director of Editorial Research, Wallaces' Farmer and Iowa Homestead.

Another vice chairman of the committee was A. C. Hoffman, vice president of Kraft Foods Co.—a large food processor.

Other members of the committee were: John App, of the Seabrook Farming Corp.; John A. Baker, director, legislative services, National Farmers Union; Murray R. Benedict, professor of agricultural economics, University of California—an extremely conservative agricultural economist; John D. Black, professor of agricultural economics, Harvard University; Robert K. Buck, Waukee, Iowa; Harry W. Culbreth, vice president, Nationwide Insurance; John H. Davis, director, program in agriculture and business, Harvard University; Arval L. Erikson, economic adviser, Oscar Mayer & Co.—a distinguished packing firm in my own city of Chicago; Oscar Heline, Marcus, Iowa; Frank W. Hussey, vice president, Maine Potato Council—his name ought to strike a soft spot in the hearts of the representatives from Maine; E. W. Kieckhefer, farm editor, the Courier-Journal; Herschel D. Newsom, master, National Grange; R. J. Odegard, of the O. J. Odegard Potato Co.; William H. Nicholls, chairman, department of economics and business administration, Vanderbilt University; James G. Patton, president, National Farmers Union; and Theodore W. Schultz, chairman, department of economics, University of Chicago.

This is a group of trained men who are saying that the program of the Department of Agriculture is vitally defective in that it does not provide for outside national aid and financing to help improve the condition of the low-income farms and counties of the United States.

The depressed Indian reservations and communities would also be eligible for such redevelopment loans. This would help many additional groups in numerous other States.

In addition to the three revolving loan funds other services are provided by the bill. There is an outright one-shot grant of $75 million to be parceled out to communities which cannot fully repay the loans which might be made to them. This amount would be supplementary to the loans for especially hard-pressed communities. In addition, information available to the Government would be supplied to the designated areas and to Government procurement divisions, and an authorization for appropriation of $4,500,000 a year would permit the Administrator to make technical assistance grants to designated areas.

The Housing and Home Finance Agency would be enabled to give additional financial assistance to municipalities in industrial redevelopment areas, and urban planning grants would be made available to designated areas having a population of 25,000 or more.

The bill would provide for Federal assistance for vocational training in designated areas, and as has been mentioned several times, a fund of $10 million for the purpose of making subsistence payments to unemployed persons being retrained and not entitled to unemployment compensation.

THE EUROPEAN EXPERIENCE

The enactment of S. 722 would not result in a radical new program which has never been tried. As a matter of fact, the countries of Western Europe have had similar programs in effect for some time, and part of the financing for such programs has undoubtedly been made possible by U.S. foreign aid dollars. Certainly, I would never question the wisdom of such aid. Marshall plan dollars have helped the nations of Western Europe to recover their economic potential and thus stave off the onslaught of communism. Nevertheless, we can hardly blame the unemployed worker and the hard-hit businessmen in our own depressed areas if they wonder why, if we help Europe do it, we cannot help our own people.

I have always defended the program of foreign aid. I have believed in it. I have supported it. I have voted for it.

In 1954 when I was a candidate for reelection I spoke on the floor of the Senate for the foreign aid program, and voted for it on every yea and nay vote, only to be immediately attacked by my Republican opponent, who denounced me for supporting the President's program. Then the President paid me the courtesy of making a special trip to the State of Illinois to plead for my defeat. Nevertheless, I was reelected by a majority of 241,000. This may indicate why some of us feel a little pained at the pleas of the administration that we should not cut a dollar from the foreign aid program. For, when a Democrat supports the administration to the hilt on this issue, he is immediately attacked by the followers of the administration, and the national administration indeed "eggs" its followers on to attack those who have supported it. This apparently is the administration's way of cooperating in the field of foreign policy.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am glad to yield.

Mr. MANSFIELD. The administration not only asked for $3.9 billion for foreign aid, but 2 days later, when the interim Draper committee report came in, an additional $400 million was asked for.

Mr. DOUGLAS. I am struggling to control myself.

I think it is a monstrous thing for an administration which demands aid for people in other countries to refuse to provide proper aid for starving people in this country and to condemn as "wild spenders" those who would feed hungry Americans and provide work for the American unemployed.

I may end up by voting for foreign aid, and if I do, I suppose the administration and its followers will once again pay me the compliment of denouncing me with all the strength they have. If so, I will welcome the denunciation.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. DOUGLAS. I am glad to yield to the Senator from Kentucky.

Mr. COOPER. The distinguished Senator knows I am supporting him fully with respect to the bill now under consideration.

Mr. DOUGLAS. I am well aware of that.

Mr. COOPER. I agree with every argument the Senator has made in support of the bill. Would not the distinguished Senator agree, however, that the two measures about which he has been talking are separate? One deals with support and aid for our own people, and that is closer to my own heart than aid and support for any other people. The other measure deals with our foreign policy and with the defense of this country. Those ought to be separate problems.

Would the distinguished Senator not agree that we should make our fight for this measure, which the Senator has introduced and which I have supported, and for all the measures to help our own people, because helping our people is our first concern, but that we should consider aid to other countries upon the merits of that issue?

Mr. DOUGLAS. I agree with my friend.

Mr. COOPER. Yes.

Mr. DOUGLAS. But I find it hard to understand the President of the United States, who, on the one hand, says, "You cannot give aid to the people at home," and, on the other hand, says, "You must lavish assistance on people abroad." I cannot understand an administration which puts the needs of people abroad far above the needs of people at home, and condemns equally those who try to relieve the need at home and those who think some economies could be made in expenditures abroad. I cannot understand that psychology. I cannot understand the reasoning behind it.

Mr. COOPER. I do not wish to minimize the importance of the bill we are considering today. I am in favor of it with all my heart.

Mr. DOUGLAS. I know that.

Mr. COOPER. Without question, when it comes to the point of considering whether we should take care of our own people or of the people in another country, the people of our own country come first. There can be no question about that.

I agree also with the Senator that it would be much easier, for all of us who have supported foreign aid because we believe it has a connection with the defense of our country and its security, if the administration showed more interest in the welfare of the people of our country. I must make that statement, although I am a Republican and a member of the minority party. That would make it much easier for us. For myself, though, I approach each one of these proposals upon the merits of the case for each of these great programs.

Mr. DOUGLAS. I appreciate the position of the Senator from Kentucky, which is characteristically high-minded. I do not think the Senator suffers quite as much, however, as those of us on this side of the aisle, who, when we support the administration on proposed foreign aid legislation, are immediately denounced by the followers of the administration, and who then find the administration also coming forward to attack us. For instance, I voted in favor of every foreign aid proposal in the last session. I then went back to my State of Illinois, and I found that the Republican State Committee had primed people to get up and say, "On so many rollcalls you voted against economy." I found that the rollcalls they were citing were the foreign aid rollcalls, in connection with which I had supported the administration.

In other words, the administration condemns us in Washington if we do not support it, and the Republicans condemn us at home if we do support it. I object to this schizophrenia—not on the part of the Senator from Kentucky, because he is a well-integrated, noble man—but on the part of the Republican Party, at least in the Middle West. Some of us with the best will in the world are becoming sick and tired of these tactics. Some day the cheek will turn. We cannot be expected to be Christians all the time, while the other group holds us around the neck and pummels the life out of us.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. COOPER. I cannot, of course, pretend to suffer the same anguish as does the Senator from Illinois.

Mr. DOUGLAS. The toad underneath the harrow knows the sharpness of the blade, whereas the man who rides in the seat does not know quite what is happening.

Mr. COOPER. I think I have had some experience with the problem, because I am a Republican from a Democratic State.

Mr. DOUGLAS. I think the people of Kentucky recognize the qualities of my good friend. But I say that the administration shows both poor judgment and hardheartedness in opposing measures for the relief of Americans.

Mr. President, I had not intended to discuss this other subject, but my emotions are very deep.

Now, may I turn to this foreign experience.

GREAT BRITAIN

Great Britain has had the longest and most rounded experience with legislation to aid depressed areas. The U.S. Department of Labor study, "Experience With Development Areas in Great Britain," by Flexner and Ritter—Monthly Labor Review, May 1957—and the article by Prof. William H. Miernyk—Industrial and Labor Relations Review, October 1958—summarize the British legislation and experience from 1934 through 1956. Mr. Sar A. Levitan, of the Legislative Reference Service of the Library of Congress, has reviewed these and other studies for me, and I am grateful for his help.

In the black 1920's and 1930's, unemployment was concentrated in the depressed areas of coal, steel, and textiles in South Wales and the industrial north. I was twice in England at that time and went through these areas. The people and the Government seemed at their wits end, not knowing what to do about the situation.

The first legislation was passed in 1934 to "facilitate the economic development and social improvement" of four areas suffering from unemployment, commissioners were empowered to make plans, to assist or start industrial projects in cooperation with local and national agencies and private groups, and to distribute grants for these purposes. Later, amendments strengthened these efforts. In 1945, the Distribution of Industry Act was adopted to apply to four large areas or, more accurately, regions.

In July 1958, following the rise of unemployment in England, the British Parliament—again under Tory control—amended the Distribution of Industry Act which has been summarized in the two articles previously referred to. Instead of designating special regions as eligible for aid, the new act qualified for preferential treatment any community having a high rate of unemployment which was likely to persist.

The amendment also widened the scope of the act by extending aid to trade establishments as well as industrial undertakings locating in the depressed localities.

In defending the amendment and the vigorous application of the distribution of industry—industrial finance—bill befor the House of Commons, the spokesman for the Government asserted that the most effective means to combat unemployment is to concentrate allocation of economic resources in areas where chronic unemployment prevails, and pledged that the fight to reduce unemployment in these areas would not be frustrated for want of capital. He also pleaded for the enactment of a flexible program, which would permit the Government to "act swiftly in any locality where serious unemployment had arisen and was likely to persist"—London Times, May 1, 1958.

The amended act brings the British approach closer to the legislation proposed in S. 722. The original act specified eight regions which were qualified for assistance, while the present legislation makes assistance available on a labor-market basis, the same as S. 722. It should, however, be noted that under S. 722 only areas having an unemployment rate of over 6 percent are eligible for assistance, which is 50 percent greater than the British requirement of a 4-percent rate of unemployment, which qualifies communities for assistance.

The Labor Department study does not attempt to evaluate the effectiveness of the British Distribution of Industry Act, but Prof. Ben W. Lewis, in a study for the Twentieth Century Fund, concluded in 1952 that the British measures to aid depressed areas broadened the economic base of these areas:

> Many new industries have started in the [depressed] areas bringing a diversification which should protect them in the future from concentrated employment. This is particularly true because many of these industries are of a new lighter type for which the prospects of expansion are great. ("British Planning and Nationalization," pp. 182–3.)

Prof. William H. Miernyk in his article, "British and American Approaches to Structural Unemployment," concludes that the British experience to reduce unemployment in depressed areas has been "impressive." He argues for the adaptation of similar policies in the United States.

Finally, an excerpt from the International Labor Review briefly summarizes existing provisions to combat chronic unemployment in several European countries and in the United States.

Mr. President, I ask unanimous consent to insert these articles in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, the articles may be printed as requested.

(See exhibit 1.)

SPECIFIC BRITISH PROGRAMS

Mr. DOUGLAS. In the listd areas, the Distribution of Industry Act empowered the Board of Trade to improve sites and

to build factories; to acquire land, if necessary by compulsory purchase, for industrial sites or for access thereto; to acquire and improve derelict land either for industrial sites or for community facilities; to give financial assistance to local authorities or nonprofit agencies for such work. Government grants or loans were made available for basic services and facilities, for example, transportation, power, lighting, sanitation, and housing, necessary for industrial development.

With the consent of the Treasury, the Board could also make loans to nonprofit industrial or trading estate companies to provide industrial premises. In addition, the Treasury was empowered to give annual grants or loans to enable industrial undertakings, either already established or proposed, to pay interest on borrowed capital.

The Distribution of Industry Act also vested in the Board of Trade responsibility for securing the proper distribution of new industrial development throughout the country. All persons were required to notify the Board of Trade if they intended to erect an industrial building of more than 5,000 square feet and to furnish particulars of the type of production, floor space, and the number of workers to be employed. The Board of Trade then discussed with the industrialists where it would be to their interest, as well as to the advantage of the country, to locate the proposed building. Information concerning the economic structure of a large number of districts containing possible sites, and the availability of labor, power, transportation, housing, and other relevant matters was assembled by the Location Office of the Board of Trade to facilitate planning concerning industrial sites, both with the Government agencies concerned with planning and with the industrialists.

In 1948, the triennial review required under the Distribution of Industry Act was presented to Parliament by the Board of Trade. The Board estimated that between 1939 and 1948 there had been a net increase of 250,000 jobs in the 6 areas then scheduled, of which more than 104,550 were manufacturing jobs accounted for by firms moving into or expanding in the areas, as follows: 56,600 employed by 271 firms in Government munitions factories converted to peacetime uses; 17,750 in 210 new projects—factories or extensions—financed by Government; 14,100 in 233 new projects—factories or extensions—privately financed; and 16,100 in existing premises.

At the beginning of 1955, one and a half years before the Government's assistance to factory building in these areas was discontinued, employment in the assisted factories had reached 185,900, which was one-third higher than the employment anticipated by the Board in 1948, on the basis of plans then made.

I ask unanimous consent to have printed in the RECORD at this point a table showing the progress of unemployment declines in the affected areas.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Percent of insured employees registered as unemployed in Great Britain and 8 development areas, by sex, 1937, 1948, and 1955 [1]

Areas	Male			Female		
	1937	1948	1955	1937	1948	1955
Great Britain	11.0	1.6	0.9	7.0	1.0	1.1
Northeastern	16.0	2.9	1.5	8.0	2.3	2.3
South Wales and Monmouthshire	22.0	4.6	1.2	12.0	6.3	2.3
Scottish	19.0	3.8	2.5	14.0	2.8	2.7
West Cumberland	28.0	3.1	2.1	10.0	2.1	1.9
Wrexham	19.0	3.3	1.1	10.0	8.6	2.3
South Lancashire	21.0	2.8	1.1	12.0	2.4	3.1
6 areas combined	19.0	3.6	1.8	12.0	3.3	2.5
Merseyside	(2)	5.3	2.5	(2)	2.0	2.0
Northeast Lancashire	(2)	1.3	2.1	(2)	.3	4.5
8 areas combined	----	3.8	1.9	----	3.0	2.5

[1] Data for 1937 relate to July; for 1948 and 1955, to June.
[2] Areas not scheduled until after World War II; separate data not available for 1937.
Source: Data for 1937 derived from Board of Trade, Distribution of Industry, Cmd. 7540, London, H.M.S.O., October 1948 (app. 4). Figures for 1948 and 1955 computed from data supplied by Ministry of Labor and National Service, London.

Mr. DOUGLAS. The table shows the rate at which unemployment was decreased in the affected areas.

I remember being in Great Britain in the 1920's and 1930's when the British were going through an industrial depression which left large areas of the country in a depressed state, similar to that in our depressed areas of the present day. I remember going into the South Wales coal fields, and into the steel towns, and into the textile sections of Yorkshire and Lancastershire, as well as into the coal, shipping, and steel sections of Northumberland. I found conditions there very similar to what they are now in this country. Yet they finally took constructive steps very similar to those which we are recommending for the United States.

ITALY

The experience of Italy in dealing with depressed conditions in the southern part of that country have been reviewed for me by Vladimir N. Pregelj, also of the legislative reference service of the Library of Congress.

During the first few years following World War II, the Italian Government was primarily concerned with the reconstruction of the war-torn economy as a whole and did not take any steps designed specifically for the development of its depressed southern sector, although this sector had—in addition to its generally depressed condition—also suffered most by the ravages of war. The Government did, however, within the framework of its existing policies, create industrial credit sections at the Banks of Naples, Sicily, and Sardinia to act as the main financing agents for the revitalization of the economies of the southern mainland, Sicily and Sardinia, respectively.

The earliest Italian legislative measure on area development was a legislative decree in late 1947, which was designed to stimulate the growth of Italian industrial capacity in southern Italy by means of various fiscal incentives, transportation subsidies, and financing facilitations granted for establishment of new industrial plants, and for reconstruction, reactivation or expansion of old ones. A few minor supplemental measures were enacted during the following few years.

By 1950, the measures put into effect by the legislation for the industrialization of the south were quite numerous. They comprised exemption from payment of customs duties and license fees on imports of construction materials, and of machinery and equipment required for construction and operation of industrial plants; 50 percent reduction of general sales tax on such materials and equipment; exemption from payment of income tax on earnings derived from new industrial investment; and reduction of fees for transfer and registration of title to real estate necessary for industrialization.

In 1950, first major advance was made in the active participation of the Government in the economic development of the Mezzogiorno—southern Italy. The Government created the fund for the south, a Government agency given the task of carrying out a large-scale plan of public works designed to create such environmental conditions as are indispensable for the formation and effective operation of new agricultural and industrial activities. This task has often been given the name of "pre-industrialization."

In 1957, the Government prepared a program of more extensive public industrialization measures designated as the provisions for the south. In addition to increasing the annual endowment payments, it authorizes a number of public grants, credits, and incentives of particular benefit to the industrial sector of the southern economy. It also extends the coverage of provisions contained in some earlier legislation, particularly to associations and consortia established for the pre-industrialization and industrialization purposes, and contains provisions especially favoring development of small industry and handicrafts.

Thus has Italy gained experience with area redevelopment programs.

Mr. President, I ask unanimous consent that Mr. Pregelj's study be inserted in full at the close of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. DOUGLAS. I also ask unanimous consent to have printed in the RECORD at this point a statement outlining specific operations of the Italian program.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SPECIFIC OPERATIONS OF ITALIAN PROGRAM

The 1957 Italian law creating the "Provisions for the South" contains a large number of provisions facilitating the financing of pre-industrialization and mostly industrialization projects. Thus, up to 40 percent of expenditures for the purchase and improvement of boats and fishing gear, for the establishment of oyster and mussel beds, and for the processing, refrigeration and transportation of fish and fish products, may be covered by the fund. The fund is authorized to

pay in full for the construction of water and sewerage systems in small communes of under 10,000 population, or to assume part of such costs for larger communes. In addition, postal savings system grants credits necessary for the financing of these public works projects whenever they are carried out by the fund. The fund is further authorized to make grants for the construction of electric powerplants and distribution systems in land improvement areas, and may also undertake the restoration of tourist sites of particular historic, artistic, or archeological interest.

In small communes of under 75,000 population, lacking industrial facilities, the fund for the south is authorized to make direct grants covering up to 20 percent of cost of establishment of small and medium industry, including construction of buildings, installation of machinery, and connections to existing roads, railroads, and water and power systems. Furthermore, up to 30 percent of expenditures for transformation, modernization, and mechanization of small industries may be covered by contributions granted by the fund.

The law also provides for the covering by grants of up to one-half of expenditures incurred by local consortia, the organization of which for the purpose of creating industrial zones is also authorized by the new fund law, in carrying out their pre-industrialization and industrialization projects. Such consortia are also given access to credits granted by the various semipublic insurance and credit institutions. In addition, the Cassa depositi e prestiti is authorized to grant to southern communes loans for the purchase of real estate for purposes of industrialization or employment increase.

In order to make it possible for the southern regional medium-term credit institutions, created by an earlier law, to expand their operations, the new fund law authorizes the fund to grant to these institutions subsidies to alleviate the cost of their bond issues which exceeds the interest charges on their loans. The law also authorizes the industrial credit sections of the banks of Naples and Sicily to utilize the repayments on their earlier loans for granting certain additional credits. Such credits may be used to supplement loans granted earlier by these sections, as medium-term developmental financing, not to exceed 50 million lire, of small and medium industries, and to enable medium and small industries to acquire stocks of raw materials and finished products.

Besides direct grants, expanding the availability of industrial credit, and extending fiscal exemptions, the new fund law provides for direct public investment for public works.

ATTEMPTS TO ESTABLISH AN AREA REDEVELOPMENT PROGRAM IN THE UNITED STATES

Mr. DOUGLAS. The problems which S. 722 is designed to meet have been recognized for several years. The Joint Economic Committee in the 84th Congress called for Federal action to help chronically distressed communities. Later, in its 1955 report, that committee urged that the public works program be speeded up, and that loans and technical assistance be extended to help these distressed communities to improve their economic conditions.

Also in 1955 the Joint Economic Committee made a careful study of low-income families in the United States under the direction of Senator SPARKMAN and called attention to the persistence of low income in various rural areas in the country, as well as the problems of depressed industrial areas. The committee urged a Federal program to combat the basic causes of economic distress both in depressed industrial areas and in low-income regions.

In 1956 the committee reiterated its conclusion that a Federal depressed areas program was needed, and the majority of the committee endorsed a comprehensive program which was embodied in a bill which I introduced, S. 2663, 84th Congress. That bill was the subject of long hearings by the Committee on Labor and Public Welfare. It was passed by the Senate during the last days of the session, but the House did not have time to act upon it before the 84th Congress adjourned.

I hold the hearings on this bill in my hand. We took testimony which covered nearly 1,200 pages. The bill was passed by the Senate during the last days of the session, but the House did not have time to act upon it before the 84th Congress had adjourned.

Both major parties called for Federal legislation to aid economically depressed areas in their respective 1956 platforms.

The Democratic Party platform stated:

> We pledge our party to support legislation providing for an effective program to promote industry and create jobs in depressed industrial and rural areas so that such areas might be restored to economic stability.

The Republican Party pledged to—

> Provide assistance to improve the economic conditions of areas faced with persistent and substantial unemployment.

In the 85th Congress, along with 39 cosponsors, I introduced S. 3683, which was referred to the Senate Banking Committee. This bill, with modifications, was passed by both Houses of Congress last year, but did not become law because of a Presidential pocket veto.

I charge the President and his advisers with responsibility for preventing this measure from going into effect. The record shows that is just what they have done.

Again in the 86th Congress, I introduced, with 38 cosponsors, similar legislation in the bill S. 722. This bill was the subject of committee hearings not only in Washington but also in Detroit, Mich., and in Charleston, Beckley, and Morgantown, W. Va. The committee has now reported S. 722 with amendments.

We have now taken over 5 years a total of 3,500 pages of testimony, in the Senate committees alone. I have been somewhat disappointed, execept for an interjection by the distinguished junior Senator from New York [Mr. KEATING], that the opposition has not shown its hand. It has remained silent. With the excepticn of one or two Senators, they have stayed off the floor. We do not quite know, aside from the minority views, what their objections are going to be. I have studied the objections which they have made in their minority views, indeed, I have studied them very thoroughly. I have studied the objections which have been advanced informally, and the objections which have been advanced by various financial journals. I should like to deal with some of them, before they are sprung on us on the floor on Monday.

One objection is that we are setting up a separate administration to deal with this subject. It is alleged that what we should do instead is to place it under the jurisdiction of the Department of Commerce.

Let me say that the Department of Commerce has been the determined and indeed the irreconcilable opponent of all programs for community development and adequate care for the depressed areas of the Nation. We do not confide a child to the tender care of a nurse who dislikes children. We do not use wolves to take care of sheep.

If we place the bill under the jurisdiction of the Department of Commerce, we can be certain that they will anaesthetize it, that they will refuse to administer it, that they will administer the program in the same way in which Ezra Taft Benson administers the farm program, namely, to besmirch it and to weaken it. These are harsh words, Mr. President, but I think they are truthful words. I regret to have to say them, but candor compels me to do so.

Another objection is that the criteria which we have laid down for the testing of the areas which are to be eligible are inadequate.

Mr. President, these criteria are the criteria advanced by the administration itself. Instead of taking absolute figures of unemployment, they wanted to use an absolute minimum but then to relate the unemployment in a given locality to the average for the country as a whole. That is the test which we have adopted. I am frank to say that this is a better test than the one which we originally provided. We are willing to learn from the administration when it presents something that is worthwhile. It seldom does, but when it does, we are willing to learn. Now that we have adopted their criteria, the opponents of the bill come forth and say, "Oh, those are not proper criteria."

In colloquy with the junior Senator from New York and in later discussion I believe we have made it clear that this bill is not intended to deal with all types of unemployment. By it we cannot deal with cyclical unemployment, when there is a scarcity of effective demand. It is not intended to deal with seasonal employment. It is intended, however, to deal with structural unemployment and to provide capital to start new industries in areas of substantial labor surpluses, provided the localities themselves also contribute, and provided private capital also comes forward and provides a large share of the fixed capital and all of the working capital.

I suppose that objectors will say: "Let private enterprise do it. Let the Government keep its hands off." In fact, this is about what is said in the minority views, at page 43, where it is stated:

> The basic defect of the approach of this bill is this: It runs counter to the precepts of what is still essentially a private market mechanism operating within a dynamic and growing economy.

This is the kind of talk we heard on the floor of the Senate in 1930, 1931, and 1932, and which had its repudiation by the people in 1932, 1934, and 1936.

It was said of the Bourbons that they learned nothing and forgot nothing. I would say that the industrial and economic Bourbons of this country do not seem to learn anything, but they seem to forget a great deal.

The purpose of S. 722 is to help to some extent, at least, to channel some of our growth of industrial capital into areas of substantial labor surplus. This is far better than to subsidize airlines, railways, the oil industry, ship builders, and other groups, who enjoy Government largess. It is far better than a protective tariff, which is advocated by many of those who are opposing the bill.

The idea that government must be essentially sterile and negative is a very limited idea. It sometimes is sterile, but it need not be.

Mr. COOPER. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. COOPER. I have read the minority views, and I too have been struck by the fact that only objections were made to the bill and that I could find no alternative affirmative suggestions toward meeting the problems which the bill seeks to meet. Did the minority suggest any remedies for the problems the Senator has been discussing?

Mr. DOUGLAS. I wish to be charitable in what I say. I did not find any constructive suggestions. All I found was negative criticism. Undoubtedly an amendment will be proposed by the able senior Senator from Connecticut [Mr. BUSH], which will be presented under the guise of preventing a transfer of a plant from one locality to another. Let me say that we have guarded adequately against that in the text of the bill, which the Senator from West Virginia has read. I shall read it again. It is contained in section 6(a) on page 9 of the bill:

> Such financial assistance shall not be extended for working capital, or to assist establishments relocating from one area to another when such assistance will result in substantial detriment to the area of original location by increasing unemployment.

We may quarrel about whether the language is tight enough. Certainly it is our intent to have it tight. It is spelled out on page 22 of the committee report, and I should like to read that part of the report. This report will have a persuasive influence upon the Administrator. Let me read the section of the report dealing with this subject:

> If the proposed transfer of a plant from one area to another will create as much unemployment in the area it leaves as it absorbs in the area it moves to, nothing has been gained from the point of view of the overall economy of the United States. The use of Federal funds for a transfer of this sort would not be justified. Expansion of existing firms and the creation and development of new business or new branches of firms in business elsewhere, without at the same time substantially reducing existing employment opportunities, is the aim of this Federal assistance. In an expanding economy ample opportunities can be found to develop the depressed areas without injury to other areas of the country.

The purpose of the bill is to channel economic growth, or to help channel a portion of that growth, into areas which otherwise would be neglected, not to transfer plants from one locality to another. That is the clear purpose of the present text of the bill. It is further reinforced by the report, and attempts to change the wording still further will simply be attempts to divide the forces which may be supporting the bill by conjuring up nonexistent dangers.

I understand an amendment will be offered by the very able senior Senator from New York [Mr. JAVITS], who is one of the finest Members of this body, to limit the loans which can be made to land and buildings, but to exclude machinery and equipment as bases of loans. I think I should make a statement on this point, so that it may appear in the RECORD, and so that Senators and the press may study it over the weekend and make up their minds about it.

The cost of land is relatively small in depressed areas because the area is depressed. The cost of the buildings will not be much either, because it is to be hoped that an existing old building will be taken over and rehabilitated with a relatively small amount of capital.

I think I can say, in this connection however that three- and four-story plant buildings are not very effective in modern industry, which increasingly moves into one-story buildings. But the consideration which really will make or break the deal is whether the new industry can finance the equipment and machinery which is the very heart of the whole enterprise.

It is unquestionably true that most machinery and equipment manufacturers are prepared to finance the sale of equipment on time loans with notes. But just as is the case when one buys an automobile on time over a 2-year or 3-year period through a finance company, so with the machinery and equipment: the interest rate which is charged is so very high that in many instances it will break the deal entirely, first, because of the large amount of capital equipment which is required to start the industry; and, second, because of the time payments and the notes by which it is financed carry too high a rate of interest.

As regards tying up money in specialized machines, I am certainly not an expert in the machine-tool business, but I had thought there were certain general-purpose machines, such as lathes and punch presses, and so on, which could be applied to a multitude of uses, and that, therefore, if a concern failed, such machines could be removed and either sold in the secondhand market or used by someone else.

I do not propose loans for highly specialized machines or for a steel mill requiring the investment of $50 million, or for a powerplant; but in certain industries, in which the ratio of capital to labor is not too high, generalized machines could be installed on the basis of these loans. Then if payments were not made, the machines could be repossessed.

Ordinarily, when machinery and equipment are placed in a factory building, it is done subject to someone else's mortgage. That is one reason why the interest rate is so high. When we come to this kind of situation, where there is one first mortgage, and then a second mortgage which covers the whole plant, equipment, and machinery, naturally, the interest rate will be lower. If one intends to sell a machine tool in Connecticut or Pennsylvania, he will have to place the machine subject to someone else's mortgage.

How would the Administrator determine what are reasonable terms for loans from private finance companies which would have to be refused by the financial institutions before granting such a loan? It occurs to me that he would have to use a certain amount of judgment and discretion. If the interest rate were around 12, 13, or 15 percent, as it usually is for these things, he would decide that it was not reasonable under the circumstances.

I am perfectly willing to leave this matter to his discretion. I do not think industries should be made to pay an exorbitant rate of interest.

In my judgment, the amendment to be proposed by the Senator from New York, while offered with the best motives in the world, will if it is made effective virtually kill the program.

Mr. President, I am about ready to yield the floor, but I wish to refer to one or two other matters. It is reported that another amendment may be offered which would restrict the application of the bill to so-called one-industry towns. This would miss the basic purpose of the program. Senate bill 722 is designed to help areas of persistent and substantial unemployment or areas of low income and underemployment. Areas such as the Huntington-Ashland area of West Virginia and Kentucky can be depressed by lack of work in the coal industry, although the area also has chemicals and steel. But it is still badly distressed and in need of help.

Moreover, a community could have two or more depressed industries, such as textiles, coal, and railroading. This, I think, is true of some Pennsylvania areas.

The Altoona area suffers for example not merely from a depression in the coal industry, but also from a depression in railroad repair work. The anthracite regions of Pennsylvania suffer not merely from a depression in the coal industry, but also from a depression in the textile industry.

Moreover, there are areas of general decline because of shifts of demand and shifts of plant locations. The one-industry concept would knock out these areas despite their genuine need.

In short, we aim to help distressed areas and low-income areas, not merely those with one industry, but those depressed from whatever causes. The one-industry concept would drastically restrict the program.

I have already dealt with the inflationary argument and have pointed out that

it is a very superficial argument. I have said that the use of additional capital would put idle labor to work producing commodities which otherwise would not be produced; and that hence the physical production or the physical volume of production would be increasing at the same time that the volume of the circulating medium was increasing. I have pointed out this might compensate in whole, but certainly it would compensate in part, for the increase in the circulating medium, and therefore there need not be an increase in prices.

I hope that before the session is concluded today, the opponents of the measure will take the floor and state their objections to it. I submit that on the record S. 722 should be passed by an overwhelming vote.

EXHIBIT 1

[From Monthly Labor Review, May 1957, vol. 80]

EXPERIENCE WITH DEVELOPMENT AREAS IN GREAT BRITAIN

(By Jean A. Flexner and Ann S. Ritter [1])

Areas of labor surplus persisting in certain parts of the United States during periods of high general employment have given rise to various legislative proposals, and suggest the need for a review of British assistance to distressed areas.

The British experience covers a quarter of a century. The first legislation was passed in 1934 to "facilitate the economic development and social improvement" of four areas which were suffering from exceptionally severe unemployment. Commissioners were empowered to make plans, to assist or start industrial projects in cooperation with local and national government agencies and private groups, and to distribute grants for these purposes. Later amendments provided special inducements which strengthened the commissioners' efforts to attract new industries into these areas.

After World War II, new legislation was passed incorporating much of the earlier acts. It was more comprehensive, giving the central Government a greater influence on the location of new industrial plants, in the interests of overall social, economic, and strategic planning. Government aid for these areas continued until June 1956, when, following a parliamentary inquiry, the Government announced that it would suspend grants for factory building in the development areas except in cases of special importance or emergency. The decision was protested by the Trades Union Congress, which feared that these areas had still not achieved balanced local economies although unemployment had reached a very low level.

The post-World War II period from 1945 to the present has been characterized in Great Britain by general shortages of labor, capital goods, buildings, and building materials. Industries which in the 1920's and 1930's seemed to have entered a permanent state of depression have been hard pressed to produce enough to satisfy the demands of the home and foreign markets. This transformation of the economy greatly complicates the task of evaluating effects of the Government's rehabilitation programs for the development areas.

It would be useful to know whether the plants which were steered into development areas by governmental policies have been able to operate without increasing their costs, for only if costs are truly competitive is there a likelihood of the industrial shift remaining permanent. Studies are being made by the National Institute of Economic and Social Research of Cambridge University on the economics of establishing branch factories, but those published thus far have not yielded definitive conclusions, partially because of the difficulty of making cost comparisons and partially because, during the entire postwar period, costs—both at branch plants and main works—were affected by shortages and bottlenecks of various kinds.[2]

Reviewing the period from 1934 to 1956, the British started with a limited program in respect to funds, assistance powers, and size of the areas. They ended with a much more sweeping program than was required to deal with the postwar state of unemployment. Meanwhile, the depression which had set the program in motion disappeared, even in the most depressed areas. However, dread of an eventual return to lower levels of economic activity kept the program going, although the danger of inflation had supplanted the danger of depression.

ORIGINS OF THE PROBLEM

During the 1920's and 1930's, basic industries such as coal mining, shipbuilding, and iron and steel, which were highly dependent upon export markets, suffered severely from depression. Areas where these industries constituted the chief source of employment suffered from severe and prolonged unemployment. In northeast England, particularly Durham and parts of neighboring counties, in western Cumberland, in South Wales and Monmouthshire, and in western and central Scotland, coal mining, iron and steel, shipbuilding, and marine machinery employed about half of the total labor force in the interwar years. The plight of these four areas was worsened by a scarcity of jobs for women. Lack of other work opportunities for those discharged from the principal industries reduced workers' spending power and, in turn, led to layoffs in other employment, including the service industries. In July 1932, unemployment ranged from 35 to 46 percent in the 4 areas, compared with 22.5 percent for all of Great Britain. (See table 1.) The unemployment rate in these areas was about twice the national average during the entire period 1929–39. The plight of these areas led to special investigations by the government in early 1934, which resulted in legislation.

Meanwhile, industries were expanding and new industries were starting in other parts of the country. Between 1932 and 1938, only 235 new factories opened in the 4 special areas and these were balanced by the closing of others. In Greater London and in the Midlands, on the other hand, there was a net gain. The result was migration from the north and Wales to the Midlands and the south. Between 1921 and 1937, half a million people migrated to the London area alone, and 300,000 left Wales and the northeastern counties, although the exodus was not sufficient to remove all the surplus workers.

PREWAR MEASURES

Under the 1934 act for development and improvement of the four depressed areas mentioned previously, Commissioners were appointed, one for Scotland and one for England and Wales, responsible to the Minister of Labor. Funds were placed at their disposal, and they were given a free hand in coordinated existing economic and social programs of national and local government and private agencies, or in initiating new ones. The Commissioner for England and Wales appointed district commissioners for each of his three areas, consulted with local government bodies, and with national associations of employers. Several ministries lent him staff and gave assistance, in particular those dealing with labor, health, unemployment relief, and agriculture.

Among the numerous projects aided by the commissioners were local public works for the long-range economic or social improvement of the areas and the settlement of unemployed persons on small farms or cooperative groups of farms. They also assisted in obtaining preference for the areas in the award of government contracts and, after 1936, of defense contracts, and in locating arsenals and munitions plants in the areas.

TABLE 1.—*Geographic area and number of insured employees, 1955, and percentage of insured employees unemployed, 8 development areas, 1932, 1937, and 1955*

Development area	Year designated	Size of area (square) miles)	Estimated insured employees,[1] 1955		Percent unemployed [2]		
			Number	Percent of total for Great Britain	1932	1937	1955
Northeastern [3]	1934	1,247	1,013,700	5	38	15	2
West Cumberland [3]	1934	767	57,200	(4)	46	26	2
South Wales and Monmouthshire [3]	1934	1,406	693,900	3	41	21	2
Scottish [3]	1934	3,849	1,197,200	6	35	18	3

Newman, Costs in Alternative Locations: The Clothing Industry, Occasional Paper XV, National Institute of Economic and Social Research, Cambridge University Press, 1952; D. C. Hague and J. H. Dunning, Costs in Alternative Locations: The Radio Industry (in Review of Economic Studies, 1954–55, vol. XXII (3), No. 59, Cambridge, England, pp. 203–213).

The commissioners wished to attract to these areas some of the expanding industries of the types that were developing in the Midlands and in the south of England, but they were handicapped by the lack of industrial premises in these regions and, in certain places, even by a lack of land suitable for building—e.g., in the narrow Welsh coal valleys where old underground workings had caused some of the land to cave in or to threaten to do so.

Outside the depressed areas, a type of industrial development called a "trading estate" had been set up with private funds. These estates bought land, erected or remodeled buildings, provided utilities, and rented premises to manufacturing firms. Thus, industrial enterprises were attracted to planned communities such as Welwyn Garden City (near London). Benefiting by the experience of the private companies, the commissioners, with Government funds, organized public nonprofit corporations to operate trading estates in the special areas.[3] Several large tracts were purchased, railroad sidings and roads built, power lines installed, and buildings erected, each designed for lease to several light manufacturing industries. Later, single sites for individual factories were prepared at Government expense and leased by the trading estate companies.

The first efforts to persuade industries to locate in the special areas met with almost complete failure.[4] In a period when raising industrial capital was not easy, banks and investors were particularly diffident about investing in the depressed areas. The need for more direct Government assistance was emphasized in the first three annual reports of the Commissioners for England and Wales. In 1936 and 1937, Parliament passed a series of amending acts, and under one of these, the Special Areas Reconstruction Association was formed in 1936 to make loans, for a maximum of 5 years, of up to £10,000 each to firms which had reasonable prospects of succeeding; shares in the association were subscribed by investment trusts, insurance companies, industrial undertakings, and the banks, headed by the Bank of England. The British Treasury agreed to guarantee a fourth of any losses the association might suffer and to reimburse it for administrative expenses. In 1936, also, the Nuffield Trust was established with private philanthropic funds to assist the development areas. The trustees decided to supplement the work of the association and the Treasury by subscribing to shares of capital stock in firms that intended to operate in these areas.

The Special Areas (Amendment) Act of 1937, enabled the Treasury to make direct loans to firms in the special areas, as well as in other areas of severe unemployment. In practice, the Nuffield Trust and the Treasury combined to assist large undertakings in the coal utilization and metalworking industries. The association assisted smaller firms.[5] The Commissioners were further empowered by the 1937 act to contribute toward rent and rates (local taxes) and to adjust income taxes of industrial undertakings for periods up to 5 years. The rent and rate contributions were varied in accordance with the needs of the area and the type of industry. The income tax provision was interpreted to exempt profits up to an average annual return of 4 percent on capital for a certain number of years. The Treasury, also, was authorized to exempt firms moving into the special areas from the special national tax on defense profits, in whole or in part.

The various sources described made the following expenditures for the establishment of new industry in the four development areas during the years 1934–40:

	Pounds	Dollars [1]
All sources	9,665,500	47,360,950
Government funds	6,715,500	32,905,950
Factory sites and buildings	5,500,000	26,950,000
Loans to manufacturing firms	1,160,500	5,686,450
Contributions to rent and rates	55,000	269,500
Private funds	2,950,000	14,455,000
Special Areas Reconstruction Association loans	750,000	3,675,000
Nuffield Trust, industrial capital	2,200,000	10,780,000

Source: Data for 1939 for men and women estimated from Employment for Women in the Development Areas, 1939–51, by J. H. Dunning (in the Manchester School of Economic and Social Studies, Manchester, September 1953, vol. XXI, No. 3, table III, p. 274). Data for 1955 provided by Ministry of Labor and National Service, London.

Beginning in 1936–37, Government expenditures for munitions factories in those areas greatly exceeded the subsidies for civilian factory sites and buildings.

Ministry of Labor manpower transference schemes helped young men and women to train for and to find jobs in other parts of the country. Between January 1936 and July 1939, 124,337 trainees and others were assisted in transferring from the special areas. The Government also paid for moving dependents of transferees and their household goods in 25,538 cases.

The Commissioners' report for 1938 noted as a new development that the Ministry of Labor had started training schemes to meet local needs as a result of progress in providing new employment opportunities. However, the Ministry's powers in respect to education were limited to courses for unemployed persons aged 18 or over. The Commissioners pointed out that training for 16- and 17-year-olds was needed and that it would be reasonable to require recipients of unemployment assistance (not insurance) to attend the Ministry's instructional centers or physical fitness classes.

At the outbreak of World War II, the special areas were more prosperous than at any time during the previous decade; however, their unemployment rate was still 13 percent—almost twice the national average. At that time, only 12,000 workers were employed in civilian factories built and leased by the Commissioners. The construction of many factories was still in progress. The improvement in the employment situation in these areas can be ascribed chiefly to the placement of Government contracts and the location of munitions plants and to the revival in basic industries caused by rearmament.

During the war, further employment opportunities were provided as additional war plants began operating in these areas; shipyards, coal mines, and agriculture were also straining to produce the maximum possible output. Moreover, industries were dispersed to these areas from more congested or more vulnerable regions. Employment rose to a peak in 1943, when it was about 200,000 above the 1939 level. A large part of the male population was in the Armed Forces.

POSTWAR MEASURES

The prewar programs for the rehabilitation of the chronically depressed areas merged after World War II into a broader policy aimed at obtaining a more rational distribution of industry and population. The resolve to deal effectively with the unemployment problems which had eluded solution during the interwar period crystallized during World War II and was implemented in a series of acts passed by the Labor Government in 1945 and subsequent years.

Planning for the location of industry and for a redistribution of population on a national scale, for economic, social, and strategic reasons, had been recommended by the Royal Commission on Distribution of the Industrial Population appointed in 1937. Its 1940 report stressed the disadvantages of "allowing the heavy influx of new industry into London and the Midlands to continue at the expense of the rest of the country."[6] In 1944, the wartime coalition Government announced its proposals for maintaining a future high and stable level of employment in the economy as a whole, and its intention to take special measures for the diversification of areas that had been too dependent on certain industries and were, therefore, particularly vulnerable to unemployment.[7] It promised (1) to steer new industries into these areas; (2) to remove obstacles to the transfer of workers from one area, or one occupation, to another; and (3) to provide facilities to train workers employed in declining industries for work in expanding industries.

The Distribution of Industry Act (1945) embodied recommendations from both reports and some features of the earlier legislation on special areas. However, the special-areas Commissioners were dropped and the Board of Trade became the Administrator. The term "development area" was substituted for "special area." The act ap-

[3] Trading estate companies were formed in the northeast and South Wales in 1936, in Cumberland in 1937, and in Scotland in 1937 and 1938. The 1934 act permitted Government assistance only on a nonprofit basis.

plied to the four prewar special areas and redefined them to include districts large enough for economic and social development; it could also be applied, subject to the approval of both Houses of Parliament, to any area in which the Board of Trade found, after consultation with the local authorities, there "is likely to be a special danger of unemployment." The Board of Trade was directed to reconsider the list of areas within 3 years.

In the listed areas, the Distribution of Industry Act empowered the Board of Trade to improve sites and to build factories; to acquire land, if necessary by compulsory purchase, for industrial sites or for access thereto; to acquire and improve derelict land either for industrial sites or for community facilities; to give financial assistance to local authorities or nonprofit agencies for such work. Government grants or loans were made available for basic services and facilities, e.g., transportation, power, lighting, sanitation, and housing, necessary for industrial development.

With the consent of the Treasury, the Board could also make loans to nonprofit industrial or trading estate companies to provide industrial premises. In addition, the Treasury was empowered to give annual grants or loans to enable industrial undertakings, either already established or proposed, to pay interest on borrowed capital. The provision of the Special Areas (Amendment) Act of 1937 for subsidies on account of rent, income taxes, and local taxes was omitted. An amendment in 1950 enabled the Board of Trade to contribute to removal costs of firms going to development areas.

The Distribution of Industry Act also vested in the Board of Trade responsibility for securing the proper distribution of new industrial development throughout the country. All persons were required to notify the Board of Trade if they intended to erect an industrial building of more than 5,000 square feet [8] and to furnish particulars of the type of production, floor space, and the number of workers to be employed. The Board of Trade then discussed with the industrialists where it would be to their interest, as well as to the advantage of the country, to locate the proposed building. Information concerning the economic structure of a large number of districts containing possible sites, and the availability of labor, power, transportation, housing, and other relevant matters were assembled by the Location Office of the Board of Trade to facilitate planning concerning industrial sites, both with the Government agencies concerned with planning and with the industrialists.

The Town and Country Planning Act (1947) provided for coordination of the industrial planning activities of the Board of Trade with the control functions vested in local planning authorities, which were under the direction of the Ministry of Town and Country Planning. Regulations made under the Town and Country Planning Act (1947) required that, with minor exceptions all applications for licenses to erect or extend industrial buildings be supported by certificates from the Board of Trade stating that the development could be carried out consistently with the proper distribution of industry. Once a certificate was issued, a building license for developing a particular site was issued by a local government authority provided the project was in accordance with plans for the locality. (These locality plans were similar to zoning regulations in United States cities except that they could be reviewed by the Minister of Town and Country Planning, at his discretion.)

[8] Changed from 10,000 to 5,000 square feet by the Town and Country Planning Act (1947).

Operation of the postwar program: In 1946, two areas were added to the original four—both dependent on coal mining and on wartime munitions plants which had closed down: Wrexham in Wales, and the Wigan-St. Helens area in South Lancashire. In 1949, the Scottish Highlands (dependent on small farms and cottage industries) were added to the Scottish development area, and Merseyside, a port and shipbuilding district around Liverpool, was scheduled. In 1953, a small area was added; it consisted of several northeast Lancashire towns specializing in cotton weaving, where older mills had closed.

In 1948, the triennial review required under the Distribution of Industry Act was presented to Parliament by the Board of Trade.[9] The Board estimated that between 1939 and 1948 there had been a net increase of 250,000 jobs in the 6 areas then scheduled, of which 104,550 were manufacturing jobs accounted for by firms moving into or expanding in the areas, as follows: 56,600 employed by 271 firms in Government munitions factories converted to peacetime uses; 17,750 in 210 new projects (factories or extensions) financed by Government; 14,100 in 223 new projects (factories or extensions) privately financed; 16,100 in existing premises.

During 1948, many factories were still under construction or in the blueprint stage, and those completed were not yet fully staffed.

The other 150,000 jobs which had been added between 1939 and 1948 resulted from construction activities, expansion in Government services, and from a rise in service trades brought about by the higher consumer spending and the general revival of industries.

Included among the factories built by the Government in South Wales were 10 standard factories of 25,000 square feet each, called Grenfell factories,[10] which were rented to firms that agreed to employ a quota of men suffering from pneumoconiosis or other partial disability, equal to at least half of the total number of their employees. The firms received a rebate of half the normal rent. Sheltered workshops, called "reemploy" factories, were also operated by a Government corporation for men whose disability did not permit them to enter normal employment.

At the beginning of 1955 (1½ years before the Government's assistance to factory building in these areas was discontinued), employment in the assisted factories had reached 185,900, which was one-third higher than the employment anticipated by the Board in 1948, on the basis of plans then made. These were employed by 1,086 tenant firms, occupying 41.3 million square feet of factory space; 22.8 million square feet of space had been built since 1945; 13.3 million square feet was in converted munitions factories; and 5.2 million square feet represented war and prewar building by the trading estate companies.[11] A total of $158 million (at the current rate of exchange) had been spent by the Government since 1945 on this space. Most of the factory space, tenants, and employees were in three of the older areas (Northeastern, South Wales, and Scottish). Employment in assisted factories, constituted about 16 percent of all manufacturing employment in 1955 in these three areas.

Northeast Lancashire	(2)	1.3	2.1	(2)	.3	4.5
8 areas combined	----	3.8	1.9	----	3.0	2.5

[1] Data for 1937 relate to July; for 1948 and 1955, to June.
[2] Areas not scheduled until after World War II; separate data not available for 1937.

Source: Data for 1937 derived from Board of Trade, Distribution of Industry, Cmd. 7540, London, H.M.S.O., October 1948 (app. 4). Figures for 1948 and 1955 computed from data supplied by Ministry of Labor and National Service, London.

Discontinuance of the program: In mid-1956, the Government decided to discontinue aid to factories in the development areas except in very special cases, on the grounds that restraints on investment were being imposed, that employment in the areas had reached satisfactory levels, and that private building, with a volume 3 times that of Government building since 1945, could be relied on to continue the rehabilitation program.

In criticizing the Government's decision, the British Trades Union Congress (TUC) noted that although unemployment ratios were low throughout Great Britain, in the development areas they still exceeded the national average. In addition, the TUC claimed that even though local industry in these areas is more diversified now than in the 1930's, they can still be considered particularly vulnerable to cyclical depression.

EMPLOYMENT AND UNEMPLOYMENT TRENDS

During the years 1934 to 1956, when Government programs for development areas were in operation, the employed labor force increased, the heavy dependence of these areas on certain basic industries lessened, employment opportunities both for men and women became more diversified, and the basic industries revived. Unemployment declined sharply in the development areas and throughout the country, but in 1955, almost 40 percent of all unemployed workers were in the 8 development areas.

In assessing the significance of the changes that occurred, the different industrial distributions of men and women must be taken into account.

EMPLOYMENT OPPORTUNITIES FOR MEN

The earliest year for which a comparable series of data on the insured population of six development areas has been estimated is 1939.[12] By that time, a considerable shift in

[12] British statistics show: (1) the insured employees, (2) those actually employed (including those on temporary layoffs), and (3) the registered unemployed (including those temporarily laid off, casuals, and wholly unemployed). We shall deal here primarily with the insured population—a measure of the wage-and-salary-earning labor force—and with the unemployed, both temporarily laid off and wholly unemployed. Data on age and duration of unemployment relate to the wholly unemployed.

A change in the statistical series on labor force and employment in 1948, resulting

male employment had already occurred. However, mining and quarrying (chiefly coal mining) still accounted for one-fourth of the insured male workers in six development areas; [13] in 1955, the proportion employed in mining and quarrying in these areas had declined to 16.0 percent, representing undoubtedly the most significant change that occurred in the employment of men in these areas. (See table 2.) Outmigration from the coalfields accounted for a considerable portion of the drop. In other parts of Great Britain, the number of men engaged in coal mining also declined, but not so steeply as in the development areas. The chief factor in the general decline was the diversion of young men and boys to other industries, either in the same area or in other parts of the country. The development areas did not succeed in attracting the type of industry which could offer many jobs to the older ex-miners.

Since the early years of World War II, efforts to rebuild the coal mine labor force have conflicted, to some extent, with development area policy. However, the Government was unwilling to sacrifice its industry diversification program. Instead of relying upon unemployment to recruit miners, it improved the miners' conditions of employment in order to attract recruits, and it planned to develop production in the better seams, which were mostly in other areas. Many of the poorer mines and exhausted seams were in the development areas.

TABLE 4.—*Unemployment in Great Britain and 8 development areas combined, by duration, age, and sex, June 1955*

Labor force status	Great Britain (number)	8 development areas combined	
		Number	Percent of total for Great Britain
MEN			
Insured employees	13,960,000	2,610,600	19
Unemployed, total	130,334	49,378	38
26 weeks or more, all ages	32,319	15,188	47
26 weeks or more, age 40 and over	26,888	12,076	45
WOMEN			
Insured employees	7,500,000	1,242,800	17
Unemployed, total	80,209	31,015	39
26 weeks or more, all ages	10,518	5,736	54
26 weeks or more, age 40 and over	5,834	2,871	49

Source: Ministry of Labor and National Service, London.

Manufacturing industries employed 28.8 percent of the insured male workers in 1939, and 43.0 percent in 1955. Shipbuilding, machinery, and electrical manufacturing constituted an important area of growth, with 8.6 percent of the insured male workers in 1939 and 14.4 percent in 1955. It would be revealing if the total for this group could be broken down; the increase for the whole group certainly meant an influx of new plants and considerable diversification of product. However, major credit for increased employment must go to the revival in shipbuilding. And for this, the world economic situation, and not the development area program was responsible.

Other industry groups in which employment of insured men increased over the entire period were: Primary metal manufacture; vehicles; miscellaneous metal fabricated products; food, drink, and tobacco; and textiles. In the nonindustrial sectors, gains occurred in professional services and government, and in transport, utilities, and communications.

From 1939 to 1955, the number of insured men in the six development areas increased by about 50,000, or almost 3 percent. Most of the increase occurred in the postwar years. During the entire period 1939–55, registered unemployment among men decreased almost 60 percent.

EMPLOYMENT OPPORTUNITIES FOR WOMEN

Opportunities for insured women workers showed more substantial gains than those for men. The net gain in the number of insured women from 1939 to 1955 in six areas was more than 300,000, or about 50 percent. (However, insured men in these areas still outnumbered women 3½ to 1 in 1955, whereas for the whole country the ratio was not quite 2 to 1.) Before World War II, industries employing large numbers of insured women were underrepresented in these areas, compared with all of Britain. This was, in fact, an important cause of distress because, if the men were laid off, there were no other breadwinners in the family.

The insured women's gains occurred in manufacturing industries, particularly in chemicals, metalworking industries, electrical products, vehicles, clothing, and other manufacturing. Very few manufacturing industries failed to show increases in the employment of women—among the exceptions was the textile industry. Many of the firms which were induced by government policies to open factories or branch plants in the development areas employed women as an important part of their work forces, for example, clothing, radio assembly, and fabrication of small metal products.

There were also large gain for insured women in communications, public utilities, and transportation, and in professional services and government. The striking increase in insured women's opportunties outside of manufacturing must be related to the general revival in the local economies. Unemployment among insured women was more than halved (from 56,000 prewar to 25,000 in 1955 in six areas).

UNEMPLOYMENT IN DEVELOPMENT AREAS

In June 1955, the average unemployment rate for Great Britain was 0.9 percent of all insured male wage and salary earners, and 1.1 percent of all female. In the eight development areas combined, the rates were 1.9 and 2.5 percent for men and women, respectively (table 3). However, at these low levels, the difference between the rates shrinks to insignificance. Realistically, the labor market in 1955 was generally so tight as to drain even the local pockets of unemployment in areas where it had been at its worst.

The hard core of unemployment (individuals reported as continuously out of work for 26 weeks or more), of which much was heard before World War II, remained larger in the development areas than in the rest of the country. (See table 4.) With 19 percent of the country's insured male workers in 1955, the eight development areas accounted for 47 percent of all of the unemployed men in Great Britain who had been out of work for 26 weeks or longer, most of them 40 years old or over. And, with 17 percent of the insured women workers, these areas had 54 percent of the long-jobless women, of whom half were 40 years or more of age.

Migration away from the hard-hit areas involved chiefly the younger workers, boys and young men, rather than women. If, in spite of the decline in available younger workers, and in spite of rising new industries and revival of trade, the older workers continued a vain search for work (and eventually many of them may have ceased to register as unemployed), this points to a problem which resisted solution.

---

from expanded coverage under social security, hampers comparisons with earlier years. However, estimates for 6 areas for 1939 have been used here, derived from the studies of a British economist, J. H. Dunning, on the development areas. Data for 8 development areas were supplied by the Ministry of Labor and National Service for 1948, 1951, and 1955. It was not possible to obtain data for the development areas on employment and unemployment for the same prewar year. In some tables, 1937 data had to be used, in others, 1939.

[13] Excluding Merseyside and Northeast Lancashire, for which 1939 data are not available.

[From Industrial and Labor Relations Review, October 1958]

BRITISH AND AMERICAN APPROACHES TO STRUCTURAL UNEMPLOYMENT

(By William H. Miernyk)

(In the continuing controversy in this country over the approach which should be taken to combat chronic unemployment in depressed industrial areas, little reference has been made to the experience of other countries in dealing with this problem. Yet, as early as 1934, the British Government was investigating the causes and extent of structural unemployment and since that time has enacted a series of measures which have proved highly successful in reducing this type of unemployment to relatively low levels. This article describes and compares the very different approaches taken to this problem by British and American policymakers and concludes that British experience has demonstrated that this country could and should take more effective steps to solve what the author calls "the most intractable unemployment problem of the post-war period."

William H. Miernyk is professor of economics and director, Bureau of Business and Economic Research, Northeastern University. This article was written while the author was visiting professor of economics at the Massachusetts Institute of Technology. He wishes to express his appreciation for helpful comments on an earlier draft to Professors William H. Scott of the University of Liverpool, Charles A. Myers and Abraham J. Siegel of M.I.T., and Myron J. Spencer of Northeastern University.—EDITOR.)

It has been more than a decade since the nations of the free world pledged themselves, separately and jointly, to the task of maintaining full employment.[1] In spite of this pledge, unemployment and underemployment remain serious problems in many undeveloped countries. While there is general agreement that the developed countries of the Western World have been largely successful in their efforts to maintain high and relatively stable levels of employment, many of these countries have nevertheless been confronted with the persistence of structural or chronic, localized unemployment.

There is no single and universally accepted definition of "full employment."[2] But whatever definition is accepted, no one expects every worker in an unplanned economy to be employed at a full-time job all the time. In free market economies, and even in those which are partially controlled, there is always a certain amount of frictional unemployment. This unemployment stems from job changes, temporary shutdowns, and according to some definitions, seasonal variations in the demand for labor. The distinguishing feature of frictional unemployment is that it is temporary. In an economy

[2] For a discussion of various concepts, see Albert Rees, "The Meaning and Measurement of Full Employment," in "The Measurement and Behavior of Unemployment" (National Bureau of Economic Research: Princeton University Press, 1957), pp. 13–55.

as large as that of the United States, more than a million workers might be frictionally unemployed even under conditions of full employment. But if this unemployment is truly frictional, the same individuals will not remain out of work for any significant length of time.

The full employment policies of Great Britain and the United States are compared in this article. In making such a comparison a number of questions arise: Does the concept of full employment have the same meaning on both sides of the Atlantic? What positive steps were contemplated in the two countries to achieve and maintain full employment? Are any steps being contemplated to reduce further the level of unemployment? Particular emphasis, however, is placed upon an analysis of what has been done in each country to combat structural unemployment, for this has been without doubt the most intractable unemployment problem of the postwar period.

DIFFERING CONCEPTS AND POLICIES

The American full employment policy was embodied in the Employment Act of 1946.[3] This act is brief and quite general. The declaration of policy states that:

"It is the continuing policy and responsibility of the Federal Government to use all practicable means * * * to coordinate and utilize all its plans, functions, and resources for the purpose of creating and maintaining, in a manner calculated to foster and promote free competitive enterprise and the general welfare, conditions under which there will be afforded useful employment opportunities, including self-employment, for those able, willing, and seeking to work, and to promote maximum employment, production, and purchasing power." [4]

The remainder of the act deals with provisions for the establishment of the Council of Economic Advisers and the Joint Committee on the Economic Report, detailing their respective duties and functions. There is no discussion in the act of the causes, magnitude, or nature of the problems which it seeks to solve or avoid.

By way of contrast, the British white paper of May 1944 [5] discusses the causes of large-scale, chronic unemployment and spells out in considerable detail the policies which the coalition government at that time proposed to follow. There was explicit recognition of chronic, localized unemployment, which the Government proposed to attack in three ways:

(a) By so influencing the location of new enterprises as to diversify the industrial composition of areas which are particularly vulnerable to unemployment;

(b) By removing obstacles to the transfer of workers from one area to another, and from one occupation to another; and

(c) By providing training facilities to fit workers from declining industries for jobs in expanding industries.[6]

The program which evolved in Great Britain to combat localized unemployment will be discussed in considerable detail in a later section of this article. As indicated, no such program was proposed in the American Full Employment Act. The declaration of policy of the act contains only broad principles to which legislators with widely varying political philosophies could subscribe. In practice, monetary and fiscal policies and various built-in stabilizers have helped maintain the aggregate demand for labor at a high level during the postwar period. Also, not the least important among the factors contributing to full employment in the United States in recent years has been the steadily rising level of defense spending.

We turn now to some of the questions raised in an earlier paragraph. Does the concept of full employment have the same meaning in Great Britain and the United States? Speaking generally, full employment in any country means that the number of jobs, filled and open, is approximately equal to the number of workers employed or seeking work. There are various approaches to this ideal goal. One approach is to maximize the number of jobs by maintaining an adequate demand for the products and services of labor, and thus for labor itself, without intervention in the labor market, which is expected to match up idle workers and open jobs. This is the approach to full employment which has been followed in the United States. A second approach goes beyond the maintenance of a high demand for labor and includes positive measures to create new jobs in places where unemployment is high. The object of this approach, which has been followed in Great Britain, is to minimize unemployment. Under either approach there will be some residual unemployment, but the second approach will reduce unemployment to a lower level than the first.

Early discussions of full employment policy assumed a minimum level of frictional unemployment ranging somewhere between 4 and 5 percent of the labor force.[7] This still appears to be the generally acceptable minimum level of unemployment in the United States.[8] In Great Britain, however, there is widespread support of a more literal interpretation of full employment which would keep frictional unemployment between 1 and 2 percent of the labor force.[9]

If the best year in both countries during the decade preceding World War II is taken as a basis for comparison we find that in 1937 the rate of unemployment for insured male workers in Great Britain was 11 percent, and for females it was 7 percent. In the United States that year, unemployment averaged 14.3 percent of the labor force.[10] In 1955, a decade after the British full employment policy was adopted, unemployment of insured males in Great Britain had dropped to 0.9 percent, and for insured females it was 1.1 percent. In the United States, 1955 was a year in which employment, production, and incomes reached new record levels, but unemployment that year averaged 4 percent of the labor force.[11] In terms of the acceptable minimums of the two countries, there was full employment in both,[12] but unemployment rates obviously differed markedly. In part at least, this is due to differences in the two full employment policies and programs. In Great Britain there has been a coordinated, and largely successful, attack on structural or chronic, localized unemployment, while in the United States efforts to develop such a program have been frustrated by resistance to the concept of Federal aid to depressed areas.

THE BRITISH EXPERIENCE

As early as 1934, the British Government was investigating the causes and extent of unemployment in certain depressed areas.[13] These areas, which were dependent upon iron and steel production, coal mining, shipbuilding, and tin plate, were experiencing a higher level of unemployment than other areas with a more diversified industrial base. During the interwar period, an average of more than half of the insured labor force of the areas was tied to these exporting, raw material, and capital goods industries,[14] and these were the industries which suffered most during the depression. In certain communities in these areas, unemployment reached crisis proportions. In the town of Jarrow, in Durham, and in Methyr Tydfil, South Wales, unemployment at times totaled between 70 and 80 percent of the insured workers.[15]

The investigations into the plight of these areas led to enactment of the Special Areas Development and Improvement Act of 1934. Six of the seven areas investigated were designated as special areas, and commissioners were appointed to undertake the initiation, organization, prosecution and assistance of measures designated to facilitate the economic development and social improvement of the areas.[16] Two Commissioners were appointed, one for England and Wales, one for Scotland. Subsequently, the Commissioner for England and Wales appointed three district commissioners for the areas under his jurisdiction.

The Commissioners were able to aid the depressed areas in a number of ways, including public works and assistance in the settlement of the unemployed on farms. They were also able to obtain preference in the award of Government contracts and to attract some arsenals and munitions plants to the special areas. During this period the Government worked through "trading estates" operated by private, nonprofit companies, to aid in industrial development. These estates, which were similar to the local industrial development organizations currently operating in this country, were active both within and outside the depressed areas. However, under the prevailing conditions of a high level of national unemployment, "the first efforts to persuade industries

[8] Although Robert S. Weinberg has suggested "a minimum acceptable level of frictional unemployment of 2.5 percent." See his article, "Full Employment 1955–60—A Feasibility Test," American Economic Review, vol. 43, December 1953, p. 863.

[9] Please, loc. cit. In the United States estimated unemployment is expressed as a percentage of the civilian labor force, while in Great Britain it is expressed as a percentage of the insured labor force. Since most workers in Great Britain are insured, however, discrepancies between the two measurements, if they exist, will be small.

[10] Jean A. Flexner and Ann S. Ritter, "Experience With Development Areas in Great Britain," Monthly Labor Review, May 1957, p. 6; and "Productivity, Prices, and Incomes," materials prepared for the joint committee by the committee staff (Washington: GPO, 1957), p. 87.

to locate in the special areas met with almost complete failure." [17]

In 1936 the Special Areas Reconstruction Agreement Act was passed to provide financial assistance to companies which would locate in the special areas. Such assistance was limited to "firms which had reasonable prospects of succeeding." [18] A Special Areas Reconstruction Association was formed to administer the program, and the Treasury guaranteed approximately one-fourth of any losses which the association might incur. In the same year the Nuffield Trust was established through private philanthropy to aid in the rehabilitation of the special areas. Because this was a private agency it enjoyed more freedom of action than the Commissioners. It was able to assist directly in such ways as the purchase of shares in companies which located plants in the areas. The trust operated with a fund of £2 million.[19] The following year an equal amount was provided under the Special Areas (amendment) Act of 1937 to establish a fund to be used by the Treasury to provide financial aid to firms located in the areas. In addition, under this act the Commissioners were authorized to make limited contributions toward the rent and local taxes of these firms and to "adjust income taxes of industrial undertakings for periods up to 5 years." [20]

There was another significant development in 1937. In that year the Royal Commission on the Distribution of the Industrial Population, better known as the Barlow Commission, was appointed to "inquire into the causes which have influenced the present geographical distribution of the industrial population of Great Britain and the probable direction of any change in that distribution in the future." After exhaustive study the members of the Commission reported that the existing distribution of industry was one of the causes of localized unemployment. They also reached the significant conclusion that the problems thus engendered were national in character, and that solutions to the problems "must be sought along the lines of national inquiry and national guidance." [21]

After 1936, Government expenditures for munitions factories in the special areas increased. Also, the Ministry of Labor was empowered to assist in the retraining and transfer of unemployed workers from the depressed areas to more prosperous parts of the country. Almost 125,000 trainees were thus encouraged to move from the special areas to new jobs elsewhere during the period 1936–1939.[22]

Conditions in the special areas continued to show improvement as Great Britain moved ahead with its rearmament program. At the beginning of World War II these areas were "more prosperous than at any time during the previous decade; however, their unemployment rate was still 13 percent—almost twice the national average." [23] The principal causes of improvement, however, were not basic changes in the structural characteristics of the depressed areas. Only a limited number of new civilian job opportunities had been created as a result of the various activities pursued under legislation enacted to solve the problem of localized unemployment in Great Britain. Most of the new employment was directly or indirectly dependent upon the rearmament program, although it must be pointed out that the Commissioners were successful in obtaining preferential treatment for these areas in this respect. During the war years, of course, employment in the special areas rose further as war production increased, and unemployment continued to decline as young male workers entered the armed forces from these areas.

After the war there was again an upsurge of unemployment in the depressed areas. In 1946 two new areas dependent upon coal mining and munitions, Wrexham (Wales) and Wigan-St. Helens (South Lancashire), were added to the original special areas under standing board of trade powers conferred by earlier legislation. In 1949 the Scottish Highlands and Merseyside were also added to the list of areas to receive special assistance. In 1953, a number of communities in northeast Lancashire, heavily dependent upon cotton weaving, were also included, as textile mills in this area were liquidated.[24]

POSTWAR LEGISLATION

But while localized unemployment was rising during the early postwar period, the Government was not idle. In 1945 the Labor government passed the Distribution of Industry Act based in large part on the 1944 white paper on employment policy and the earlier Barlow report. This act was to provide the administrative machinery required to carry out the white paper's proposals for attacking the problem of localized unemployment. The commissioners who had administered the program during the prewar period were eliminated, and the board of trade took over administration of the new program.[25] In this legislation, too, the term "special area" was replaced by the more positive designation of "development area."

The Distribution of Industry Act gave the board of trade authority to construct factories, improve sites, acquire land on its own initiative, and also to provide financial assistance to local authorities for such activities. Grants and loans were made available to communities to assist in industrial development and in the procurement of basic facilities such as improved transportation, power, lighting, sanitation, and housing. An amendment to the Special Areas Act of 1937, passed in 1950, permitted the board of trade to contribute toward the moving expenses of firms locating in the development areas. In carrying out this program, the board of trade relied heavily on regional boards for industry for advice and consultation.[26]

Following the recommendations of the Barlow report and the white paper on employment policy, the Board of Trade was given a measure of responsibility for directing the location of new industry in an effort to achieve an optimum distribution throughout the country. A special location office was established by the board to collect and analyze information about industrial sites, labor supply, availability of power, housing, transportation, and other factors relevant to location decisions. All firms planning to construct new industrial buildings above a minimum size were required to register this information with the Board. Initially this minimum was 5,000 square feet, but this was later raised to 10,000 square feet.

The authority of the Board of Trade was considerably strengthened by enactment of the Town and Country Planning Act of 1947. Under this law, applications for industrial development certificates, which were required for the construction or expansion of industrial buildings, were granted only if approved by the Board. This again was consistent with the policies developed in the white paper which said: "On the one hand, power will be taken to prohibit the establishment of a new factory in a district where serious disadvantage would arise from further industrial development. On the other hand, the Government will be able to use their influence to steer new factory development into areas which call most urgently for further industrial diversification." [27]

A special committee, the Development Areas Treasury Advisory Committee, was established to review requests for financial aid. Members were drawn from banking, labor, management, and public administration. In all cases, Board of Trade approval was required before aid was granted, and there had to be a showing that any project aided would, in due course, be able to stand on its own feet as a successful business venture.[28]

In addition to the negative control over the location of industry granted the Board of Trade by the Town and Country Planning Act of 1947, various positive measures were taken to encourage or direct the location of new industry in development areas. In South Wales, for example, 10 Grenfell factories were built by the Government and leased to firms which agreed to fill at least half of their jobs with workers suffering from partial disability.[29] Other shops, called "reemploy factories," were operated by the Government to employ workers whose health did not permit them to accept normal employment.[30]

It is apparent that during the postwar period the British Government launched a many-sided attack on localized unemployment. The objective was not to provide palliatives, but rather to initiate a long-term program of development. This involved a planned redirection of earlier locational trends and both positive and negative measures to insure that the distribution of industry would conform to a pattern which would eliminate pockets of persistent unemployment. To do this the Government directed the location of industry to development areas through compulsory certification of new factory construction. The Government, on its own, constructed some factory space and made this available to private enterprise on a lease basis. Loans and grants were made to businesses which located in the development areas. A program of retraining for the unemployed was launched, and some unemployed workers were given financial assistance to migrate to other areas. In general, the Government followed Lord Beveridge's dictum that it is better to bring jobs to workers than to force workers to leave their homes in search of new employment. But it was not doctrinaire in this respect. In the main, new jobs were brought to the

[24] For a discussion of the economic characteristics of these areas and the causes of their unemployment, see Fyot and Calvez, op. cit., especially pp. 51–55, 126–131, 182–188, 234–235, and 146–148.

[25] The Board of Trade is the British counterpart of the U.S. Department of Commerce. It has, however, more administrative power than the American agency.

[26] For a discussion of the relationship between the Board of Trade and the regional boards, see Fyot and Calvez, op. cit., pp. 29–37.

[27] "Employment Policy," p. 12. Even prior to 1947 there was some direction of new industry to the development areas through the activities of the Capital Issues Committee of the Treasury. A number of capital issues were used to finance new plant construction in the areas especially in the immediate postwar period.

[28] Lewis, op. cit., p. 181.

[29] These factories were named after the Member of Parliament, D. R. Grenfell, who first suggested their construction. They were of standardized design and covered an area of 25,000 square feet.

[30] Cf. Flexner and Ritter, loc cit., also Fyot and Calvez, op. cit., ch. II.

workers, but some workers were aided and encouraged to move to new jobs.[31]

In the earliest statement of its full employment policy, the British Government recognized that if the problem of localized unemployment was to be dealt with effectively, it must be attacked at the national level. This is not to say that there was complete acceptance of this principle from the outset. As steps were taken to put this policy into practice, opposition to the principle had to be overcome. During the debate in 1945 on the distribution of industry bill, for example, the opposition contended that the proposed legislation represented sectional rather than national interests, and the bill which finally became law was considerably modified over the original version.[32] Gradually, however, the view that such legislation was sectionalist in character waned, and by 1947 a majority of Members of Parliament accepted the nation that an effective national full employment policy must be concerned with the problems of persistent unemployment in local areas.

EVALUATION OF THE BRITISH APPROACH

How successful was this program of rehabilitating depressed areas? Was it possible for the Board of Trade, through persuasion, coupled with authority to deny permission for the construction of factories wherever builders might choose, to steer new industry to the development areas? The record shows that the overall program of the redevelopment of depressed areas was impressive. Lewis reports that more than half the new factories established in Great Britain between 1945 and 1950 were located in development areas. "By August 1950," he reports, "1,122 new factories and extensions had been built in the areas * * * and 249 were then under construction."[33] Government factories accounted for about 42 percent of the completed structures. The number of new jobs provided by factory employment alone up to that time was in excess of 200,000. "Whereas in 1932 the number of unemployed in the areas constituted 38 percent of the insured workers, the figure in February 1950 had fallen to 4 percent of a much larger insured population."[34] This, it is worth repeating, was the level suggested in early discussions of full employment as an acceptable measure of frictional unemployment.

But the program did not stop once unemployment had been reduced to this level. The Board of Trade continued to direct new industry to the development areas and, by the end of 1955, unemployment in the eight areas then classified as development areas had fallen to 1.9 percent of the insured male labor force and 2.5 percent of the female work force. This compares with national figures for that year of 0.9 percent (male) and 1.1 percent (female).[35]

By mid-1955, the Conservative government decided that unemployment in the development areas had been reduced to satisfactory levels, and the program of aid was discontinued. In support of this decision the Government reported that private building, with a volume 3 times that of Government building since 1945, could be relied on to continue the rehabilitation program.[36]

The Trades Union Congress criticized the Government for this action, but on the whole there was satisfaction with the progress which had been made up to that time. Not only was unemployment reduced to relatively low levels, but the industrial structure of most of the development areas had been altered. They were now more diversified industrial communities less susceptible to mass unemployment in the event of a downturn in activity in a single industry. There were, of course, other forces at work in Great Britain which contributed to the reduction of unemployment in the development areas. In addition to the growth of new, diversified industries in these areas, there was a revival of some of the basic industries upon which these communities had formerly depended for employment.

The rehabilitation of the depressed areas could not have been accomplished without a high level of employment in the nation as a whole. It does not follow, however, that the depressed areas would have recovered as they did even in the absence of the Government measures described above. Before these measures were enacted, a substantial shift in the location of British industry was under way. The third report of the commissioner for England and Wales had pointed out that "the drift to London was gaining in volume—while 213 new factories were established in London in 1935, only 2 new factories and 6 extensions were reported in the whole of the special areas."[37] It was this uneven growth of industry which led to the appointment of the Barlow Commission in 1937 and subsequently to an effective program for creating new jobs in the depressed areas of Great Britain.

There can be no doubt that many workers would have followed geographical shifts in industry if the earlier trends had been allowed to continue. But as Beveridge has pointed out, beyond a point there are obstacles to the geographic mobility of labor which cannot be overcome.[38] It is extremely unlikely that in the absence of steps to control the location of industry, unemployment in the development areas would have been reduced to the relatively low levels achieved in recent years.

The problem of localized unemployment in Great Britain has not been completely solved. In 1958 unemployment in some areas was as much as four times the national average. In Greenock and Port Glasgow, both tidewater communities on the south bank of the Clyde, unemployment rose sharply as the result of layoffs in shipbuilding and sugar refining and the displacement of dockers by mechanical unloading devices. The Board of Trade has already moved, however, to create new job opportunities in this area. The expansion of a business machines factory has been authorized, and a new drydock and ship repair facilities at Greenock are under consideration.[39]

Unemployment has also increased in south Wales due to the closing of more than 20 older tinplate and sheet-steel works and to the introduction of automatic processes in others. Trade union leaders have called for vigorous action to eliminate this unemployment and have urged that a proposed new integrated strip mill be located in this area.[40] Members of Parliament from this region are also urging Government action to revive industrial growth in south Wales. In the face of these pressures it is quite likely that the Government will participate more actively than it has since 1955 in the direction of new industry to areas with a substantial volume of unemployment.

One final question must be considered, if only briefly. Has the direction of manufacturing plants to the depressed areas of Great Britain led to the "uneconomic" location of industry? In other words, are the costs of operating these plants at their present locations higher than they would have been if market forces had been permitted to determine the selection of sites? These questions canot be answered definitively. Studies are currently under way in England which should shed some light on these important issues, but they have yielded no final results as yet.[41] Even if it should be found, however, that the direction of industry to the development areas has resulted in somewhat higher costs for individual plants, these must be set against the social gains produced by the reduction of structural unemployment. From the point of view of the economy as a whole, the added product and income and the savings in unemployment compensation payments resulting from these various government measures could outweigh by a considerable margin any net additions to manufacturing costs due to deviations from least-cost locations as determined by market forces.

THE AMERICAN EXPERIENCE

The British full employment program has included measures to deal specifically with the problem of chronic, localized unemployment. In the United States, however, there has been a different emphasis. We have depended upon built-in stabilizers and upon monetary and fiscal policies to help maintain a climate conducive to a high level of employment. We have not developed a national policy which would create new jobs for workers in areas of above average unemployment or to assist workers to move from such areas to other places with more promising job opportunities. Thus, while we have committed ourselves to the maintenance of a high level of employment in the aggregate, we have retained a strong faith that the market mechanism is the appropriate means to bring together idle workers and open jobs—on the assumption that job openings somewhere exist.

It would be unfair to leave the impression that the Federal Government has done nothing to bolster employment in surplus labor areas. Government contracts have been placed with firms in these areas,[42] and rapid tax amortization privileges have encouraged some firms to expand plant facilities in some of the areas.[43] What is lacking, however, is a coordinated Federal program designed to encourage the growth of new economic activities in the Nation's depressed industrial areas.

There are no statistical data to show the relative distribution of unemployment among local labor market areas prior to 1940, but there is no doubt that even during the depression some areas experienced greater unemployment than others. Unemployment was unusually severe in such communities as Providence, R.I., and Lawrence, Mass., where the exodus of textiles from New England had already begun. Also, the anthracite coal

[31] See Flexner and Ritter, loc. cit., p. 7.

[32] The original bill, for example, would have given the Board of Trade negative control over the location of industry via the power to prohibit new factory construction in certain areas. It was not until the Town and Country Planning Act was passed in 1947 that the board was given this authority. See Lewis, op. cit., p. 177. Cf. also, Fyot and Calvez, op. cit., p. 30.

[42] It has been reported that defense contracts amounting to more than $400 million were awarded to firms in 97 labor surplus areas in fiscal 1957. See the Manchester (N.H.) Union Leader, December 29, 1957.

[43] For a discussion of these and other Federal activities, see William H. Miernyk, "Depressed Industrial Areas—A National Problem" (Washington: National Planning Association, Planning Pamphlet No. 98, 1957), pp. 37–40.

areas of Pennsylvania were in particular distress during the depression. At that time, however, our concern was with the broader problem of nationwide mass unemployment.

During the war, labor shortages disappeared in most places, and during the "catching up" phase of the postwar period unemployment in the Nation remained below 4 percent of the labor force. With the recession of 1948–1949, the problem of localized unemployment reappeared. Between 1947 and 1951, for example, unemployment in the Nation ranged from 3 to 5.5 percent of the civilian labor force, but a study of 87 labor market areas in New England revealed that during that period 44 of these areas had an unemployment rate of 10 percent or more.[44] Much but not all of this unemployment was due to the secular decline of textile employment in the region. There were similar pockets of unemployment at that time in Pennsylvania, southern Illinois, the coal fields of West Virginia, and other areas scattered among a number of States.[45]

The Council of Economic Advisers recognized the existence of such structural or "spot" unemployment in its report of January 1955, but at that time the council eschewed measures to deal with the specific problems of the communities affected. Instead, its members concluded, "a large part of the adjustment of depressed areas to new economic conditions both can and should be carried out by the local citizens themselves." [46] The Council felt that the most effective contribution which the Federal Government could make to this problem was to pursue those policies "that promise a high and stable level of employment in the Nation at large." [47] This was a restatement of the view that if the aggregate demand for labor could be maintained at a sufficiently high level, unemployed workers and open jobs would be matched up through the operation of the labor market.

The Joint Congressional Committee on the Economic Report did not agree, however. In their report of 1955, the committee called for Federal action to aid depressed areas. In the same year, the committee conducted comprehensive hearings on low-income families in the United States which included an investigation of the causes and magnitude of localized unemployment in industrial and mining areas.[48] Somewhat earlier that year, the Committee on Labor and Public Welfare had held hearings on the causes of unemployment in specific industries and, in the course of these hearings, had touched upon the problem of depressed areas.[49]

In the election of 1956 the depressed area problem became a campaign issue. Both parties promised action to alleviate persistent, local unemployment. By January 1956 the Council of Economic Advisers had also come to the conclusion that the fate of depressed areas was "a matter of national as well as local concern." [50] It proposed a program of Federal assistance to depressed communities built upon four basic principles:

(a) Federal assistance should aim at helping communities to help themselves.

(b) The program should aim at lasting improvement of job opportunities by the establishment or expansion of productive industries.

(c) Federal assistance should be contingent on the active participation of governmental authorities who are close to the troubled community.

(d) Federal aid must not be extended to the community if the proposed project will create unemployment in some other area.[51]

The Council further suggested that an Area Assistance Administration be established in the Department of Commerce to administer a program of aid to depressed areas. This program, it was suggested, would include grants for the improvement of facilities, loans to firms which would locate in surplus labor areas, and technical assistance to communities qualifying for such aid.

THE DOUGLAS AND SMITH BILLS

A number of bills were introduced into the 84th Congress to provide Federal aid to depressed areas. One bill which embodied the suggestions made by the Council of Economic Advisers, and which was approved by the Eisenhower administration, was introduced by Senator H. Alexander Smith of New Jersey. Under this bill the Secretary of Commerce would have been authorized to make loans from a fund of $50 million for the construction of new factory buildings and the improvement of existing facilities in depressed areas. It also would have provided a fund of $1.5 million to support a proposed program of technical assistance.[52] The Secretary of Labor, had this bill become law, would have been authorized to assist local communities in establishing vocational retraining programs for unemployed workers, but no provision was made for payments to the workers while undergoing retraining.

A second bill was introduced by Senator PAUL H. DOUGLAS, of Illinois. This bill called for a separate agency under the executive branch of the Government to administer the entire program of Federal aid to depressed areas. It called for a revolving fund of $100 million to provide loans for the construction of new industrial facilities, and an additional $100 million to be used for loans and grants for public works. This bill would have provided supplementary unemployment compensation to workers undergoing vocational retraining. It also would have granted accelerated tax amortization privileges to firms locating in depressed areas and urged that Federal procurement contracts be granted to firms in these areas to the extent that this would not conflict with other procurement objectives.[53]

After these bills had been introduced, further hearings were held by a subcommittee of the Committee on Labor and Public Welfare under the chairmanship of Senator DOUGLAS. The report of these hearings was the most comprehensive discussion of the causes of chronic, localized unemployment published up to that time.[54] A majority of witnesses testified to the need for a program of Federal aid to revitalize the economies of surplus labor areas. Following this investigation the original bill introduced by Senator DOUGLAS was amended in a number of respects. The original bill, for example, had been concerned with depressed industrial areas only; the amended bill was broadened to include depressed rural areas as well. Total loan funds under the revised bill were raised to $275 million, with an additional $50 million to be used for grants for the improvement of public facilities. The revised bill did not contain provisions for rapid tax amortization, and the references to Federal procurement contracts contained in the original bill were also deleted.

A compromise version of the Douglas bill was passed in the Senate during the closing days of the 84th Congress, but administration leaders successfully prevented a vote in the House of Representatives. Undaunted, however, proponents of Federal aid to depressed areas (now called redevelopment areas) introduced new bills into the first session of the 85th Congress. Again there was one bill, similar to the earlier Smith bill, which had administration approval, and another introduced by Senator DOUGLAS. The latter was similar in its essential outlines to the Douglas bill introduced into the prior Congress.

Extensive hearings were once again held. Senators and Representatives from States with surplus labor areas, labor leaders, spokesmen for Indian tribes, State and local officials, and various others appeared before the committee in support of a program of Federal aid to communities with substantial local unemployment.[55] At the time of the hearing employment in the Nation was high; we had not yet entered the recession which started later in 1957. These are the conditions that would be most propitious for the launching of a successful attack on localized unemployment, but under such conditions it appears to be most difficult to enlist the required congressional support. As one business magazine put it, depressed area legislation in the 85th Congress became "lost in the economy shuffle." [56]

This does not mean that the problem of chronic, localized unemployment had been solved, nor has it been solved to the present day. In March 1957, the month which marks the beginning of the recession of 1957–58, 20 major labor market areas were still classified as substantial labor surplus areas. In that month there were also 59 minor labor market areas in the same category.[57]

It is true that there had been some improvement prior to the onset of the recession. In December 1956 a spokesman for the U.S. Chamber of Commerce could report jubilantly that no major continental labor market now suffers unemployment in excess

of 12 percent.[58] He might have pointed out, however, that nearly a score of the Nation's major labor market areas, had unemployment ranging from 9 to 12 percent, and more than two score of the minor areas in the country had this much or more unemployment at a time when unemployment in the Nation averaged only 3.7 percent. It is clear that a disproportionate share of the Nation's unemployed were concentrated in the depressed areas.[59]

These areas are also extremely sensitive to a cyclical downturn in employment. Since they begin with a fairly large base of unemployed, even a fairly modest downturn in economic activity is enough to move them into the surplus labor category. In March 1958, 70 major labor market areas were classified as substantial labor surplus areas. A number of these, including some of the textile areas of New England and the coal communities of Pennsylvania, have a history of persistent unemployment extending back for a decade.[60]

THE OPPOSING VIEWS

A coordinated program of Federal aid to depressed areas has thus far been rejected in this country.[61] To some this has appeared as a repudiation of our full employment policy. Indeed it can be argued that, the automatic stabilizers excepted, there has been little positive action to maintain full employment per se. To some extent monetary and fiscal policies have been directed to this end, but we should not ignore other policy ends which undoubtedly have been of far greater influence in determining the size of the Federal budget, tax policies, and other Government measures which have helped sustain the demand for labor at a high level. Our position of world leadership and the scientific and technological competition with the Soviet Union have called for a tremendous military budget. Also, since the end of World War II we have witnessed an enormous upsurge in private capital formation which to no small degree has resulted from technological changes, many of an exogenous character. The result has been a high level of employment nationally throughout most of the period since the adoption of our full employment policy.

The one challenge to what many would consider as effective full employment has been that of chronic, localized unemployment and we have chosen, as a matter of national policy, to ignore that challenge. As mentioned earlier, some defense contracts have been placed with firms in depressed areas, and a modest amount of plant expansion has been stimulated by the rapid tax amortization program. Also, the Area Development Office in the Department of Commerce and the Bureau of Employment Security of the Department of Labor have been able to provide some technical assistance to labor surplus areas. As Levitan has pointed out, however, "special assistance offered the labor surplus areas is a byproduct of broader programs."[62] A coordinated program designed specifically to aid depressed areas has not been acceptable thus far to our lawmakers.

Although opponents of Federal aid to depressed areas have recognized that many communities are faced with serious employment problems, they have insisted that these problems can and should be solved at the local level by the age-old standby of the market mechanism plus local industrial development programs.[63] Such opposition has come from local development groups, some local chambers of commerce,[64] the U.S. Chamber of Commerce, and the American Farm Bureau Federation. Some of the opposition has come from the areas affected. For example, the New England Council, a region-wide promotional and development organization, has publicly gone on record as opposing Federal aid to labor surplus areas.[65]

Instead of Federal aid, most of these groups or organizations argue that the rehabilitation of depressed areas should come through local industrial development activities. It has been estimated that there are about 3,000 community industrial development corporations in the Nation.[66] The vast majority of these are in communities which are not classified as surplus labor areas. A growing number of such organizations have been established in depressed areas, however, and in some cases have been quite successful. In others, their records have been less than impressive. Industrial development agencies in depressed areas are in competition with their counterparts in expanding areas, and often the latter have much more to offer in the way of locational advantages than many of the depressed areas can without developing new compensating advantages. The causes of chronic, localized unemployment are varied and complex.[67] They are often beyond the control of the citizens of a community. In spite of the best intentions, local action might not always be enough to solve localized unemployment problems.[68] Some communities lack the financial and technical resources required. The object of proposed Federal aid is to compensate for these deficiencies in an effort to assist the local communities to help themselves. Not even the most ardent advocate of Federal aid has suggested that it is the responsibility of the Federal Government to create jobs at any cost for all unemployed workers in depressed areas, nor has anyone suggested that it should be the sole responsibility of the Federal Government to rehabilitate these communities. This has often been implied, however, by opponents of proposed Federal assistance to depressed areas.[69]

SUMMARY AND CONCLUSIONS

The full employment policy of the United States may be described as one which attempts to maximize the demand for labor; that of Great Britain as one which attempts to minimize unemployment. Although the goal of each is to achieve full employment, as defined earlier in this article, the two policies are not identical.[70] The American policy strives to maintain an "adequate" demand for goods and services to insure a high level of derived demand for labor; it is up to the labor market to see that unemployed workers are directed to job openings. The British policy, however, goes beyond the maintenance of adequate demand; it includes the use of measures, when necessary, to direct the location of new private enterprises to areas of above average unemployment and to direct Government participation in the long-term economic development of such areas.

The British experience has shown that a high level of structural unemployment need not be tolerated in a free society. As the result of a concerted attack on this problem, the British have revised downward their estimates of what constitutes "frictional" unemployment. Indeed, as one eminent British economist, Colin Clark, has said: "We are likely to achieve much better results, both in knowledge and in action, if we make no claim about any supposed 'necessary minimum of unemployment,' but confine our efforts to gage the degree of overemployment to measuring it in a converse manner, by studying the number of unfilled vacancies recorded at labor exchanges."[71] It is also worth noting that Clark does not consider overemployment as a primary cause of inflation. While, in his opinion, overemployment "may be a persistent menace, we cannot blame it as the outstanding factor in forcing up prices and wages."[72]

It scarcely needs to be said that the difference between the full employment policies of the United States and Great Britain is a reflection of the different political philosophies in the two countries. Despite the increased importance of the Federal Government in the United States, ours remains essentially a free market economy, and this applies to labor as well as product markets. The price we pay for this is a relatively high level of unemployment even under conditions of "full employment." The British Government is committed to a greater amount of central planning in both product and labor markets. "Ten years' experience of rates of unemployment of around

[59] Elsewhere I have estimated that in March 1955 surplus labor areas accounted for 10 percent of the Nation's labor force and 19 percent of national unemployment. See Miernyk, op. cit., p. 9.

[60] See ibid., pp. 10–11, and "The Labor Market and Employment Security," April 1958, pp. 7–8.

[61] Interest in the problems of these areas remains high, however. For the results of recent investigations, see Richard C. Wilcock, "Employment Effects of a Plant Shutdown in a Depressed Area," Monthly Labor Review, September 1957, pp. 1047–1052; and Vincent F. Gegan and Samuel H. Thompson, "Worker Mobility in a Labor Surplus Area," ibid., December 1957, pp. 1451–1456.

[62] Federal Assistance to Labor Surplus Areas, p. 2. For further discussion of Federal activities which have provided aid to depressed area, see Miernyk, op. cit., pp. 37–42.

[63] For typical expressions of this viewpoint, see Guy Waterman, "Federal Aid to Depressed Areas?" American Economic Security, March–April 1956; "Depressed Areas and Facts," ibid., July–August 1956; and "Adjustment to Localized Unemployment," ibid., November–December 1956. See also the statement of Robert P. Lee, representing the Chamber of Commerce of the United States, in Area Redevelopment, March–May 1957, pp. 613–642.

[64] Some local chambers of commerce, however, have supported a program of Federal aid to depressed areas. See, for example, Area Redevelopment, March–May 1957, passim.

[65] See William H. Miernyk, "The Problem of Depressed Areas," Monthly Labor Review, March 1957, p. 305.

[66] Waterman, loc. cit., p. 55.

[67] On this, see my testimony before the Subcommittee on Low-Income Families, in Low-Income Families, especially pp. 597–598.

[68] See the remarks of Senator DOUGLAS in Area Redevelopment, March–May 1957, pp. 624–625.

[69] For example, even the relatively moderate Committee for Economic Development has recently stated that "leaving area development to Washington would be wrong, expensive, and an abdication of private responsibility." Economic Developments, July 1957, p. 5.

[70] Nor are these terms used in the same sense as the "maximum employment" and "minimum unemployment" approaches described by Rees. In his study, Rees was concerned with the statistical measurement of full employment rather than with policy goals which are the subject of discussion in the present paper. Cf. Rees, loc, cit., pp. 16 and 29.

[71] Colin Clark, "The Cost of Living" (London: Hollis & Carter, 1957), p. 10. Some American economists, by way of contrast, might think that even the early estimates of fractional unemployment were too low. Clark Kerr, for example, has stated that a 5-percent level of unemployment appears to be "normal" for the American economy. See American Economic Review, vol. 41, May 1956, p. 221.

[72] Op. cit., p. 12.

1 and 2 percent have led, it seems, to a widespread belief that it is undesirable for the rate ever to rise above this very low level—a belief which both the major political parties in the United Kingdom would probably find it suicidal to repudiate."[73]

The proposals that have been made thus far for Federal aid to depressed areas in the United States are nevertheless entirely consistent with our present political philosophy. They envisage no government action which we have not seen before either on a temporary or continuing basis. The Federal Government has provided loans to business in the past, through the Reconstruction Finance Corporation. Technical advice and assistance is regularly provided to business by a number of Federal agencies. Loans and grants for public facilities are certainly not a novel suggestion. Vocational retraining would be carried on through established agencies and institutions. The nonrecoverable expenditures contemplated, incidentally, would represent only a slight fraction of the amounts we have spent to provide for an orderly decline in the agricultural sector of our economy.

In many ways the thinking of proponents of Federal aid to depressed areas has been comparable to that of the advocates of "pump-priming" measures during the early days of the New Deal. The thought has been that if the Government could stimulate a revival in these areas through loans, technical assistance, and vocational retraining, private investment could be counted on to complete the recovery.[74] While it is unlikely that this approach would reduce structural unemployment to the levels achieved in Great Britain, there can be no doubt that it would lead to improved conditions in the depressed areas of this country.

Why has Congress until recently failed to accept the relatively modest proposals for Federal aid to depressed areas advanced thus far?[75] For one thing, most of the surplus labor areas in the United States are concentrated in a small number of States. To many Senators and Congressmen the proposed legislation has undoubtedly appeared to be "sectionalist" in character.[76] Also, while our policymakers have accepted the principle of maintaining an adequate demand for goods and services, and thus a high level of demand for labor, they have been unwilling to experiment with a national policy designed to minimize unemployment.

[From International Labour Review, v. 74, July 1956:1-22]

EMPLOYMENT AND UNEMPLOYMENT: GOVERNMENT POLICIES SINCE 1950

UNEMPLOYMENT IN DEPRESSED AREAS

Unemployment in depressed areas is best considered separately from other types of unemployment. A part of the remedy for such unemployment may be found in measures to facilitate the movement of labor away from the depressed area. Many workers are, however, reluctant to uproot themselves and to disrupt family and social ties. Moreover, such measures may involve the heavy social costs of abandoning schools, land development, powerplants and other community facilities in depressed areas and expanding these facilities in the areas into which unemployed workers are moved. In many cases it is a better remedy to move capital into the depressed area rather than to encourage workers to move away from it, unless of course the area is considered hopeless for further development at a reasonable social cost even if more capital is moved into it.[1]

Especially in countries where unemployment is otherwise at a low level, interest in the problem of depressed areas has increased considerably in recent years. In the United States attention was called to this problem in the report of a joint committee of Congress. In testimony before the committee it was shown that unemployment was often substantial in textile-producing areas of New England and in coal-mining areas, especially in Pennsylvania. Unemployment is also high in some communities where railroad work is important. In his latest annual economic report the President of the United States recommended the organization of a new Area Assistance Administration for aiding communities that have persistent and substantial unemployment. This body would extend capital improvement loans for projects that promise to improve a community's longrun economic outlook but for which financing cannot be obtained on reasonable terms from private sources. The loans should be made in participation with the State or local government, acting either directly or through a proper community agency. The Federal loan should not exceed, say, 25 percent of the cost of the project, while the State or local share must not fall short of, say 15 percent. This loan program should be confined to communities that have had an unemployment rate of around 8 percent, or more during the greater part of the preceding 2 years. But the loans should be available for a wide range of projects, such as the construction of industrial facilities, the purchase and alteration of existing facilities, or the consolidation and development of tracts for industrial sites.[2]

In addition to this proposal there are a number of laws and administrative practices in the United States that provide for assistance to depressed areas. The Office of Defense Mobilization in the administration of the Defense Mobilization Act of 1950 is authorized to grant permission for rapid depreciation to firms engaged in defense work in areas that are certificated by the Secretary of Labor to have a "current or imminent surplus of labor." In the rules governing the procurement of supplies for Government agencies there are also provisions for assistance to areas with substantial unemployment. Where there are no differences in prices charged for supplies between areas of substantial unemployment and other areas, orders are required, if possible, to be placed in the former areas. When contracts for Government work are let out by competitive bidding, in case of tie bids between a firm in an area of substantial unemployment and some other firm the contract should be awarded to the former. In an executive order of the President issued on December 17, 1954, under the so-called Buy-American Act of 1933, the President has authorized the rejection of a foreign bid "in any situation in which the domestic supplier offering the lowest price for furnishing the desired materials undertakes to produce substantially all of such materials in areas of substantial unemployment." In a regulation of June 29, 1955, issued by the Secretary of Labor, criteria for the determination of areas of substantial unemployment were set out as follows: [3]

"1. The number of workers seeking employment in the area is in excess of currently available job opportunities, and this situation is expected to continue through the next 2- and 4-month period.

"2. Unemployment is 6 percent or more of the total labor force.

"3. Net nonagricultural labor requirements for 2 and 4 months hence indicate declining employment levels or no significant increase in labor requirements.

"4. The current or anticipated labor surplus is not due primarily to seasonal or temporary factors."

Special attention was given to depressed areas in Europe in the United Nations Economic Survey of Europe in 1954.[4] This survey pointed out that in some countries with a relatively high level of income and employment there were nevertheless some regions with substantial unemployment or a low level of income. These included Brittany and Massif Central of France; the Grisons and Valais in Switzerland; Northern Ireland in the United Kingdom; Schleswig-Holstein in Germany; Groeningen and Friesland in the Netherlands; and the northern parts of Norway, Finland, and Sweden. In Italy there is a great difference in the level of income and employment between the northern and southern provinces. This problem is, however, on such a scale that it may be considered a problem of economic development rather than a depressed area problem.[5]

Some of the measures taken in Europe against depressed areas may be summarized briefly. In the United Kingdom under the Distribution of Industry Acts of 1945 and 1950, the Government is empowered to gain possession of land and construct factories to be leased for private use and to extend financial assistance to industrial undertakings setting up or already established in so-called "development areas," which, among other things, are areas of high unemployment. The Town and Country Planning Acts of 1947 provide that any firm, before it can build a factory above a certain size, must obtain approval of the Board of Trade.[6] In practice these laws have been used to promote the growth of developments areas, of which there are eight in Great Britain, and to prevent further development of already overexpanded industrial areas. These development areas, in addition to having an initially high degree of unemployment, were selected with the requirement in view that they should be of sufficient size to provide

---

[73] Please, loc. cit., pp. 119–120.

[74] The revised Douglas bill called for termination of Government assistance when an area no longer met the requirements for original aid. In practice, this would mean that if unemployment could be reduced to less than 6 percent, the area would no longer be eligible for further Federal aid. See S. 964, 85th Cong., 1st sess., secs. 5 and 15, pp. 4–5 and 22–23.

[75] After this article had gone to press, Congress passed and sent to the President the Area Redevelopment Act (S. 3683) which calls for $279 million in loans and grants to surplus labor areas. At this writing, it is uncertain whether the President will sign this bill. While passage of the bill does not mean that our policymakers have fully accepted the principle of minimizing unemployment, this is an important step in that direction.

[76] We have long since recognized, however, that many allegedly sectionalist measures, the Tennessee Valley Authority, for example, have benefited the entire economy.

[1] In principle the problem of depressed areas differs from the problem of underdevelopment in that, within countries with depressed areas, unemployment can be overcome by reallocating some of the available supply of capital to the depressed area. In underdeveloped countries, per se, there is not enough capital to provide full employment even if capital is reallocated in the best possible way.

[2] Economic Report of the President, January 24, 1956 (Washington, 1956), pp. 61–62.

[3] U.S. Federal Register (Washington), Document 55–5419, July 6, 1955.

[4] Geneva, 1955, Ch. 6. See also Economic Survey of Europe in 1955, op. ct., pp. 148–150.

[5] There may be an overall shortage of capital rather than a problem of reallocating the existing supply of capital.

[6] These acts are based to a great extent on the reports of the Barlow Commission and the Uthwatt Committee. For a summary of these reports see Sir William Beverage: "Full Employment in a Free Society" (London, George Allen and Unwin, 1944), pp. 166–170.

an employment market large and diversified enough to enable the simultaneous development of several complementary industries. Special stress has been laid on avoiding overspecialization in any one industry in these areas. For Northern Ireland, where unemployment is considerably higher than in the rest of the United Kingdom, the Government has granted special subsidies for house building, and for the fuel and transport costs of agricultural produce.[7] Grants have also been made available by the Northern Ireland Government to finance part (usually one-fourth) of the cost of privately built factories and the reequipment of existing industries.

Since 1952 there has been in the Netherlands a regional development plan for eight development areas. The general aim of this development plan is similar to that of the development areas scheme in the United Kingdom. Development areas are selected regions where unemployment cannot be easily overcome by migration and where the costs of industrialization of the region are not unreasonable. The Government provides subsidies to local governments in development areas for investment in industrial land. Special stress is placed on the provision of necessary transport facilities, for which subsidies are also provided. The Government, for example, has paid 75 percent of the costs of building or improving certain roads, bridges, and wharfs and two-thirds of the cost of improving a number of canals and harbors. For new industrial establishments setting up in locations designated as "industrial nuclei" the Government provides, subject to certain conditions regarding size and construction costs, subsidies of 25 percent of the building costs provided that (a) at least 10 persons are hired in the new establishment, and (b) 1 unemployed worker is hired for every 50 square meters of floor space.

With respect to the Scandinavian countries reference has already been made to measures to aid the wood pulp industry in northern Finland. In Norway an 8-year plan for the northern part of the country was adopted in 1952. A development fund of 225 million kroner was set up, from which loans are granted or guaranteed under very favorable terms for the modernization and expansion of industry. Of special importance to the economic development of northern Norway is the expansion program of the Mo I Rana iron works.[8] The steel mill in Luleå in northern Sweden also contributed to the development of that area. In addition to the direct operations of the development plan, northern Norway has benefited from special tax privileges. As in the United Kingdom and the Netherlands, building licenses are used to influence the location of industry.[9]

In France the Commissariat du Plan has listed six regions that may be considered depressed areas. In the Durance region in the French Alps a combined power and irrigation scheme entailing heavy expenditure has been set up by a special regional committee.[10] A development plan is also being worked out by a regional committee for the Bas-Rhone-Languedoc area. In other parts of France less has been done to combat local unemployment and underemployment. The Government has, however, certain powers that enable it to act to overcome unemployment in depressed areas. For example, it may draw on the national land development fund in order to acquire land on which new industries may be established. By the decree of September 14, 1954, subsidies from this fund are provided for the establishment of new factories in depressed areas and to encourage the moving (or extension) to depressed areas of firms or plants that are now located in areas where industry is overconcentrated. In depressed areas new plants or extensions to existing plants are exempt from certain local taxes and from part of the taxes on property transfers. In order to encourage the expansion of industry in depressed areas rather than in the very heavily industrialized Paris area, a decree of January 6, 1955, provided that the building or extension of industrial firms above a certain size must be approved by the Ministry of Housing and Reconstruction.

In the Federal Republic of Germany during the years following the Second World War unemployment was aggravated by a very large influx of refugees. In recent years the situation has much improved but unemployment is still substantial in Schleswig-Holstein and the eastern parts of the Federal Republic. The West German Act of March 10, 1952, provided for the establishment of a tripartite Federal Institution for Placement and Unemployment Insurance.[11] At first the institution appears to have been intended to deal only with the administration of the unemployment insurance program and the improvement of the organization of the employment market. On August 4, 1953, however, the law was amended to provide that the powers of the institution might be broadened to include the extending of loans and subsidies. These funds are to be used for the development of regions of the country—mainly those with large numbers of refugees—where unemployment remains substantial. Financial assistance from the institution is required to be matched by at least equal contributions from the state governments involved.[12] Under this program aid has been extended to the Länder of Schleswig-Holstein, Bavaria, Hesse and Lower Saxony. The Federal Government also gives priority to depressed areas in the placing of public contracts. Another source of aid to areas in the Federal Republic with substantial unemployment is a special tax on property not damaged by war, the proceeds of which are used to aid those who have suffered war losses. Loans have been made in this way to firms that undertake to engage a certain number of unemployed workers, and by April 1955 a total of 280 million deutsche marks had been advanced to employers who agreed to provide about 82,000 new jobs.

In Ireland a special Government corporation known as An Fóras Tionscal was set up in January 1952. The Minister for Industry and Commerce with the approval of the Ministry of Finance may make grants not exceeding 2 million Irish pounds to the corporation. The corporation may make land available and provide half the cost of machinery and equipment for new enterprises in depressed areas. It may also recommend that the Minister of Industry and Commerce fix special rates for these enterprises on electricity and other public services. As in the United Kingdom, the Government of Ireland has used its licensing powers to encourage the establishment of new industries in depressed areas.

EXHIBIT 2

DEPRESSED AREAS IN WESTERN EUROPE—IL MEZZOGIORNO (SOUTHERN ITALY)

(By Vladimir N. Pregelj, Economics Division, Library of Congress, March 11, 1959)

SETTING OF THE PROBLEM

The unification which, in 1860, joined into a single Italian state the several kingdoms and principalities of the Apennine Peninsula, also gave the economy of this new state a headache which has plagued it ever since—the economically underdeveloped and chronically depressed Mezzogiorno (the south). The Mezzogiorno comprises the regions of Abruzzi and Molise, Campania, Puglie, Basilicata, Calabria, and the Provinces of Frosinone and Latina in the Lazio, as well as the islands of Sicily, Sardinia, and Elba, and covers, on the mainland, the area south of a line crossing the peninsula slightly above its narrowest part.

Through the centuries, the Mezzogiorno has been almost exclusively—and essentially still is—an agricultural economy. Its depressed condition is primarily due to physical causes, but was intensified by politico-economic factors. The predominance of mountainous terrain restricts the available arable land to 14 percent of the land areas as a whole, and to almost negligible proportions in some regions (Calabria). The growing demand for food has pushed cultivation to marginal lands, often denuded of their original forest vegetation. This deforestation has, in turn, had serious consequences for the already precarious condition of water resources.

The mountains of the south follow irregular courses and are very rugged, thus making construction of surface transportation routes difficult and expensive as well as giving a torrential character to the water streams of the region. The latter, coupled with concentration of precipitation during relatively short periods of the year, intensifies the erosion of high-lying lands and facilitates the depositing of detritus and mud by torrential waters in the plains.

Another natural factor, which makes agriculture in the south the more difficult, is the general lack of permanent surface streams aggravated by scarcity of precipitation and its seasonal concentration in the autumn and winter with its consequent erosive force. Lack of water is accentuated by the high summer temperatures, both resulting in extreme droughts limiting the growth of vegetation to early and late spring and late autumn. Thus intensive cultivation of pastures is impossible, and consequently, the number of livestock, sorely needed in an agricultural economy so lacking in mechanized equipment as that of the Mezzogiorno, is far from sufficient. The exigencies of extensive agriculture have also been one of the important factors in the establishment, years ago, of the feudal-like system of large, mostly absentee-owned "latifondi," which has in part persisted to this day, and substantially contributed to the exploitative nature of southern Italian agriculture.

Historically and politically the south has been, for many centuries, part of non-Italian states ruled by the Angevins, who decisively curtailed its financial autonomy, and by the Spanish Bourbons who treated Naples and Sicily more like colonies to be exploited than like Provinces to be governed with enlightenment. Foreign rule has also brought with it feudalism which left its mark in the form of the "latifondi." Although the Bourbon state had a fairly well balanced budget and a relatively low public debt, this equilibrium was one of poverty and scarcity.

The unification made the situation even worse, at least in a relative sense. The introduction of the Piedmontese system of personal taxation instead of that of real taxation in effect under the Kingdom of Naples placed on the south a burden disproportionately heavy in comparison with the wealth of the region, and the assumption by the new state of the public debts of the former principalities weighed much more upon the south, since, for example, the public debt of Piedmont, a region much smaller in area and population than the south, was almost 2½ times that of the former Bourbon Kingdom.

In contrast, the per capita ratios of national revenues to expenditures which in some regions of the north were about 1 to 1, reached in the south 2 to 1 or even less favorable proportions, representing thus a constant drain on the wealth of the already depressed south.

Despite the fact that the economic misery of the south revealed itself in its earliest contacts with the other regions of the new state, long years had passed before any attempts were made to remedy the situation. In most cases, they did not go beyond the study stage; in some instances, where tangible results were achieved, these were too localized to have any significance for the general economic development of the south. Thus, despite some natural, though slow, progress the south found itself after World War II in essentially the same depressed condition which had plagued it through the centuries: Low-yield agriculture, lack of industry, inadequate transportation, widespread unemployment and underemployment and, in general, a very low living standard. As a result, over one-third of the natural growth of population migrated to other countries.

World War II brought greater disaster to the south than to the north and widened the spread between the economy of the south and that of the north.

GOVERNMENT MEASURES

During the first few years following World War II the Italian Government was primarily concerned with the reconstruction of the war-torn economy as a whole and did not take any steps designed specifically for the development of its southern sector, although this sector had—in addition to its generally depressed condition—also suffered most by the ravages of war. The Government did, however, within the framework of its existing policies, create industrial credit sections at the banks of Naples, Sicily, and Sardinia to act as the main financing agents for the revitalization of the economies of the southern mainland, Sicily, and Sardinia, respectively.

The earliest legislative measure limited the economic development of the Mezzogiorno was the legislative decree 1598 of December 14, 1947, which was designed to stimulate the growth of southern industrial capacity by means of various fiscal incentives, transportation subsidies, and financing facilitations granted for establishment of new industrial plants, and for reconstruction, reactivation, or expansion of old ones. A few minor supplemental measures were enacted during the following few years.

By 1950, the measures put into effect by the legislation for the industrialization of the south were quite numerous, although for the most part characterized by a rather passive nature of governmental intervention. In the fiscal field they comprised exemption from payment of customs duties and license fees on imports of construction materials, and of machinery and equipment required for construction and operation of industrial plants; 50-percent reduction of general sales tax on such materials and equipment; exemption from payment of income tax on earnings derived from new industrial investment; and reduction of fees for transfer and registration of title to real estate necessary for industrialization to a fixed rate of 200 lire.

In the field of transportation, the subsidies consisted of 10 to 50 percent reductions of low-speed freight charges on state railways for construction materials and machinery needed for industrialization of the south; and of 20-percent reduction of freight charges for such cargo on subsidized maritime lines servicing the island of Sardinia.

In the field of financing, industrialization credits totaling 10 billion lire were made available through the industrial credit sections of the banks of Naples, Sicily, and Sardinia, and guaranteed in full by the state treasury. These credits could not be used for reconstruction of industry damaged by the war, and borrowers had to provide at least one-third of the needed capital from their own resources. The interest rate on these loans was set at 3.5 percent above the official discount rate. However, the treasury was authorized to assume part of the interest charge up to a point where the burden on the borrower could be as low as .5 percent below the discount rate.

In addition, some sundry measures were enacted providing for exemption of southern industrialization projects from any other regulations applicable to new industrial plants; and giving such projects the power of expropriation over real estate needed for industrialization.

In 1950, first major advance was made in the active participation of the Government in the economic development of the Mezzogiorno. Law 646 of August 10, 1950, created the Cassa per opere straordinarie di pubblico interesse nell Italia meridionale (fund for extraordinary works of public interest in southern Italy), or with its shorter title Cassa per il Mezzogiorno (fund for the south), a Government agency given the task of carrying out a large-scale plan of public works designed to create such environmental conditions as are indispensable for the formation and effective operation of new agricultural and industrial activities. This task has often been given the name of "pre-industrialization."

Specifically, it involves such projects as regulation of river basins and courses, land improvement, irrigation, agrarian changes, including those falling under the land reform programs, construction of non-State ordinary roads, aqueducts and sewerage systems, establishing of plants for processing and marketing of agricultural products, and promotion of tourism. In fulfilling its task, the fund may delegate the execution of individual projects to appropriate governmental or local agencies, or—in specified fields—create subsidiaries for this purpose.

The financial means of the fund are derived primarily from annual endowments consisting principally of Treasury appropriations, but also of various earmarked revenues. Annual endowments, originally set at 100 billion lire, have been gradually increased to 180 billion lire, and aggregate endowment for the duration of the program rose from 1,000 billion lire for the originally planned 10-year term to 2,040 billion lire for the 15-year term based on a later extension of the program until June 30, 1965. The fund is also authorized to acquire additional funds necessary for the execution of its projects by issuing obligations or borrowing at home and abroad.

The fund is administered by a board of directors, and its activities are planned in general lines and supervised by the committee of ministers for the south, created by the organic law of the fund. This committee is responsible to the Parliament for the functioning of the fund and has been given considerable discretionary authority in regard to its operations.

In 1957, after the first phase of the industrialization program—the pre-industrialization—launched by the fund law had been, with more or less success, in operation for 7 years, the necessity of giving further impetus to the work of developing the economy of the south led the Government to prepare a program of more extensive public industrialization measures. This program was enacted as law 634 of July 29, 1957, designated as the "provisions for the south." This law is not an organic law, but primarily amends, extends, and above all supplements in great detail the existing legislation, especially the fund law of 1950. In addition to extending the life of the fund through June 1965 and increasing the annual endowment payments, it authorizes a number of public grants, credits, and incentives of particular benefit to the industrial sector of the southern economy. It also extends the coverage of provisions contained in some earlier legislation, particularly to associations and consortia established for the pre-industrialization and industrialization purposes, and contains provisions especially favoring development of small industry and handicrafts.
